THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VIII.—No. 1.] YOKOHAMA, SATURDAY, JANUARY 6, 1877. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Either we have no power of expressing our thoughts—which, however lamentable, is possible,—or our contemporaries both here and in China are in a conspiracy against us—which is improbable,—or they read us more carelessly than we should like—which, though very uncomplimentary, is both probable and natural. But one and all persist in saying that our attitude in regard to the Press-laws is wholly changed. The *Japan Herald* says we are pursued by a monster of our own making, and repent us of our impious deed; the *Hiogo News*—a paper which pays us at least the compliment of constant and sometimes very flattering notice—thinks we have come round to its own way of thinking on this subject; while the *Celestial Empire* says we have faced right about, and, with some kindly pity, expresses its satisfaction to find that we have at last come to our senses, though it wonders we have been so long on the road. We have no cause for complaint against our critics; indeed, all things considered, they treat us with something of the tenderness shown to the lost sheep that was restored to the fold, or the lost piece of silver that was found. Or, at all events, if not exactly this, they come together as friends and neighbours, to rejoice over the fact that they have been so wise and we so foolish—that, in opposing the Press-laws *in toto*, they have shown such foresight, and that, in supporting them, we have shown so much blindness. If they do not joy, like the angels, over our repentance, they chuckle, like men, over our supposed conversion or change of front, peradventure with some self-gratulation at their own deeper insight and foresight. We fear, therefore, that they will think worse of us than ever for saying that we have not changed our ground, attitude or front by the breadth of a barley-corn, the relaxation of a muscle, or the second of an angle. We are as convinced as ever of the necessity for the Press-laws, which, as the *Hiogo News* justly says, we alone upheld from the first against all other opinion. And indeed, if the truth must be told, we are sadly elated to think that we stood alone. With Lucretius we feel that "It "is a pleasure to stand upon the shore, and see ships tossed "upon the sea; a pleasure to stand in the window of a castle, "and to see a battle, and the adventures thereof, below; but "no pleasure is comparable to the standing upon the vantage "ground of truth, and to see the errors, and wanderings, and "mists and tempests, in the vale below." We are incorrigible and even shameless. We deny the conversion, and, far from crying *Peccavimus*, insist that we are hardened sinners, beyond the reach of remorse or the possibility of repentance. To speak truly also, we derive an extreme of satisfaction from being in a minority of one. It is so clearly useless to hold opinions which all the world holds. What is existence under such circumstances but a superfluity? Might we not make room for a prophet, whom to nourish demands no more aliment—not so much indeed—as would sustain one of the "tag-rag people" as cynical Casca calls them? Why should one of a mob cumber the earth any longer? Hath it more need of those who come before, or those who stand after, the decimal point?

Yet, seriously—for humility is our forte—it has been extremely gratifying to us to see how entirely our views on the Press question have been supported in the home journals most relied on for opinions at once sound and liberal. It really requires some courage for an Englishman to argue for restrictions of the Press. It is so much easier to hoot, and clap hands, and throw up night-caps, and cry out "Liberty for ever." You are sure of sympathy, sure of a chorus, sure of applause. But some of us always dread the question the the old Greek put to himself, "What have I done amiss that the people applaud me?" and hereon arise searchings of heart.

Yet when Hector asks Troilus

> Is your blood
> So madly hot, that no discourse of reason,
> Nor fear of bad success in a bad course,
> Can qualify the same?

Troilus rejoins

> Why, brother Hector,
> We may not think the justness of each act
> Such and no other than event doth form it.

And this applies exactly to the whole question. We have no manner of doubt whatever that the Press-laws were necessary, and a large majority of the most sagacious men with whom we have had the advantage of discussing the question, has sided with us. What we did not foresee, we have frankly confessed, is that these laws would be enforced with such merciless rigour. But, be it remarked, our critics and the opponents of the code equally failed to foresee this. Their argument was, "The Press-laws are bad in themselves—arbitrary and unnecessary, certain to do far more harm than good." They did not say, "These laws will be mercilessly administered, and therefore there should be no such laws"—a very illogical position even had they assumed it. They desired an altogether uncontrolled expression of public or individual opinion, limited only, we will do them the justice to assume, by laws against slander and sedition. And, so far, they seem to us to have erred much more seriously than ourselves. The corrective to our own want of complete apprehension of all the bearings of the question, lay in urging a milder interpretation and administration of the code, and this we have constantly done. But *their* views, if acted upon, would, in our humble opinion, have brought anarchy upon the country. It is very difficult to know what a judge in Japan can or can not say to a person brought before him for violating the Press-laws. A judge in Europe or America could, at a small expenditure of weighty words, lay down a few comprehensive and philosophical principles in rebuking excessive zeal or intemperate expression, which would have a great influence upon all public writers, and place such excess and intemperance clearly in the wrong. Lord Stowell, by one single charge, did more to make the people in England who were or are unhappily married,

Original from UNIVERSITY OF CALIFORNIA

patient of their lot, than all the philosophers and divines who ever talked, wrote or preached; and a few wise and practical remarks made to the public writers by one or two judges, while leniently administering the Press-laws during the early days of their imposition, would have prevented nearly all this trouble and scandal—for such it certainly is.

The public must not be impatient with us for recurring so perpetually to this question. Much of the future welfare of this country, and of every foreigner in it, depends upon the manner in which the problem is solved, and an earnest desire for the good of both has animated every word we have said on the subject. Governments which claim exemption from legitimate criticism on the ground that they know better what is good for the people than the people themselves, are utterly wrong in their conception of the true relations which ought to exist between a nation and its rulers. A Government may well lead a nation, but must not drag it. The Government of Japan has undoubtedly been well in the van of its people in most things; but it has a tendency to drag them along, and to suppress their remonstrances against the process. Hence all this struggling and harshness of treatment, this friction, want of harmony, loss of effective power and sense of oppression. It is the development of a more harmonious relation between the Government and the people that we so earnestly desire to see, and towards this we have incessantly pointed in treating this subject. If the people of this country are to be built up into a strong race, capable of united action in the direction towards which their leading men have set their faces, more scope must be given to the expression of public opinion than is now possible under the severe administration of these Press-laws. A race of cowed and oppressed men can never absorb and enjoy a civilization developed by free men. They may accept its externals and imitate its modes and accidents, but more than this they cannot do, and it is on this account that we have paid such unceasing attention to the Press question. If our contemporaries would only give a little more heed to what we actually have said upon it, and join us in remonstrating against all that harshness and severity to which we have so often called attention, some real good might be done. But they do far more harm than good at present by protesting against laws which are absolutely necessary in the present condition of this country, and by misrepresenting—however unintentionally—the only line of argument—we speak with submission yet in all confidence—which has a chance of being listened to or adopted.

The following are the text of the new Shooting License and Covenant to which those who take out a license have to subscribe, both of which are referred to elsewhere:—

"FORM OF LICENSE.

"Nationality .....
"Name .....
"Age .....
"Resident .....

"This license is only for the present shooting season, viz.: from the day on which it is issued, until the 15th day of the 4th month of the 10th year Meiji (April 15th, 1877). The sum of ten gold yen has been paid for this license, and conditions upon which it is issued are as follows.

"I.—That the above named.....shall not shoot or pursue game between sunset and sunrise, nor wantonly shoot and kill, merely for amusement, birds not used for food.

"II.—That he shall not at any time shoot in any of the following places, viz :—

"In any city or town, or in any place where there is a collection of people.

"In any place where there is fear that the projectile may reach any dwelling house.

"In any place outside of the treaty limits.

"In any place where a notice prohibiting shooting is posted up, such notice showing two fowling pieces crossing each other, and over them four Japanese characters signifying "shooting prohibited here."

"In any place covered with standing crops.

"In any enclosure around any temple, or in any other place surrounded by a cord or temporary fence."

FORM OF COVENANT.

"E. B., citizen or subject of....., hereby convenants and agrees to, and with the Kenrei of..... (in Tōkiō, with the Chief of Keisicho), in consideration of a license to shoot, granted this day to him, the said E. B., by the said authority of....., that he, the said E. B., will strictly observe the following conditions, to wit :—

"I.—That he shall not shoot or pursue game between sunset and sunrise, nor wantonly shoot and kill, merely for amusement, birds not used for food.

"II.—That he shall not at any time shoot in any of the following places, viz. :—

"In any city or town, or in any place where there is a collection of people.

"In any place where there is fear that the projectile may reach any dwelling house.

"In any place outside of the treaty limits.

"In any place where a notice prohibiting shooting is posted up, such notice showing two fowling pieces crossing each other, and over them four Japanese characters signifying 'shooting prohibited here.'

"In any place covered with standing crops.

"In any enclosure around any temple, or in any other place surrounded by a cord or temporary fence.

"III.—That on the demand of any Japanese officer, he will exhibit the said license for inspection and will not allow the use of the said license to any other person, and will not use the said license himself after the 15th day of the 4th month of 10th year Meiji (April 15th, 1877), but will, within 20 days after that date, surrender the said license to the authority from whom the same has been obtained; and he, the said E. B., further covenants with the said authority of..... that for the violation by him, the said E.B., of any of the aforesaid conditions, he shall pay to the said authority of.....the sum of ten dollars, and thereupon the license shall become null and void.

"..... day of..... month
"of..... year Meiji."

The P. & O. Company's steamer *Khiva*, with English mails on board to the 24th November, left Singapore on the 25th ultimo at 5 p.m., and should the weather prove favourable we may look for the arrival of the *Malacca*, with the Yokohama portion of this mail, some time on Wednesday next, the 10th instant.

We would remind our readers that the Amateur Dramatic Corps give their next performance on Wednesday evening next, the 10th instant, when *The Critic* and Arthur Sullivan's *Cox and Box* will be represented. The merits of both pieces lead us to hope that the Amateurs will have a good house on the occasion, which we have no doubt their acting will itself deserve.

The first number of the *Tōkiō Times* made its appearance this afternoon, and we ought not to deny it a cordial welcome because we have recently expressed the opinion that there are far too many newspapers here already. Of the talent of its conductor the paper gives ample evidence, for the writing is smooth and easy, and of excellent texture. So far as we can judge, from the key-notes already sounded, of the views which will probably be urged by the journal, it will lay stress upon the excision from the treaties of the extra-territoriality jurisdiction clauses, and the necessity for basing the trade of the country upon a system of purely protective duties. In regard to the first point, we sincerely wish the time had come for this desirable consummation, or, to place the matter in a more practical form, for the establishment of mixed courts into which, with sufficient guarantee to the foreigner, cases between ourselves and the Japanese might be brought with confidence. (That cases between foreigners and foreigners will ever be entrusted to even a partly Japanese jurisdiction, we can hardly think). But experience so far has decided that these mixed courts work very badly, and anything like purely Japanese jurisdiction is not to be thought of for an instant during the existence of this generation. In regard to the second question, the *Economist* has lately analysed, with its usual ability, the question so much discussed lately in England of the result of the protective system as applied to America, and has disposed of the arguments put forward by the supporters of that system, by showing that although America has undoubtedly got the command of her own markets by its means, there is not a tittle of evidence to show that she can support competition with England in other parts of the world, and meanwhile, of course, she has been paying very extravagantly for everything which she might have had very cheaply. It is certain that the free-trade party is growing rapidly in the United States, and equally certain that some of the most eloquent and powerful refutations of the fallacies underlying the whole protective system, have been from Americans. We shall not pretend that these facts determine the question at issue. But we do assert that they should induce any thoughtful man to take the greatest care lest he lead away a young country into paths which *the greatest economists of all nations* have shown to be beset by fallacies equally seductive and ruinous.

The volcano on Vries Island is reported to be in a state of activity.

From the "Japan Mail Daily Advertiser."

Wednesday, 3rd.

The Agent of the Great Northern Telegraph Company informs us that communication between Nagasaki and Shanghai was re-established on the 1st instant.

From the *Hôchi Shimbun.*

A letter from Kaga dated the 21st ultimo states that a feeling of dissatisfaction exists among the farmers of the province of Yettchu, though they have not yet committed any act of violence.

From the same.

A lecture hall has been established in the *Kaisei Gakkô* where lectures will be delivered during the year.

Thursday, 4th.

Nagasaki is not to be outdone by Kiôto, as an Exhibition is to be opened at the former place on the 15th March next, and remain open for 100 days.

The *Mary Fraser* went on the slip at Nagasaki on the 29th ultimo. On examination it was found that she had sustained no damage by going ashore in Akashi Straits beyond losing about half of her false keel and having her timbers somewhat scratched.

Friday, 5th.

A letter has been sent by the Hon. Secretary of the Amateur Athletic Association to the athletes of Hongkong, Kobe, Nagasaki and Shanghai, inviting them to compete in athletic sports to be held in April next, immediately after the Interport Boat Race. The following will be the programme for the occasion :—

AMATEUR ATHLETIC ASSOCIATION OF YOKOHAMA.

Proposed programme for Spring Meeting, to be held on Thursday and Friday, 21st and 22nd April, 1877.

1.—100 Yards Flat, Members' Handicap.
2.—150 „ „ Interport.
3.—150 „ „ Members' Handicap.
4.—440 „ „ Interport.
5.—Race for Boys.
6.—High Jump. Interport and Members' Handicap.
7.—880 Yards (or 600 Yards) Members' Handicap (Ladies' Purse).
8.—100 Yards Flat (Final Heat, Members).
9.—Hurdle Race, 120 Yards, 10 Flights (open, no Handicap).
10.—One Mile Walking, Interport and Handicap.
11.—100 Yards Flat, Interport.
12.—150 Yards Flat (Final Heat, Members).
13.—Long Jump, Interport and Members' Handicap.
14.—440 Yards Flat (Challenge Cup, no Handicap, Members only).
15.—Throwing Cricket Ball (open, no Handicap).
16.—Half Mile Interport.
17.—Pole Jump, Interport and Members' Handicap.
18.—Honorary Members Race, 150 Yards Handicap.
19.—Consolation, 440 Yards, Members only.
20.—Steeple Chase, Interport and Members' Handicap.

E. FLINT KILBY,—*Hon. Secretary.*

From the *Chôya Shimbun.*

NOTIFICATION No. 161.

It is hereby notified that the land tax for Yezo will for the present be settled at 1 per cent per annum on the value of the land.

SANJÔ SANEYOSHI,
Prime Minister.

December 28th, 1876.

From the same.

Two cadets of the Naval College have been allowed to enter on board in the German man-of-war *Vineta* for instruction.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado presided over the opening of the *Daijôkuan* on the 4th instant.

From the same.

Mr. Tachibana, the editor of the *Tôhoku Shimbun* published at Sendai, has been fined 20 *yen* for having violated the 4th article of the Libel-laws.

From the *Hôchi Shimbun.*

A person named Hirobe is about to employ a Chinaman and open a school at Owari-chô, Tôkiô, and will also publish a magazine entitled the *Nissei Shinpô.*

From the same.

It is rumoured that some disturbance has occured in Kôchi *ken* (Tosa) and that the Governor has fled to escape the violence of the rioters.

From the *Mainichi Shimbun.*

The duty received at the Yokohama Custom House during last year amounted to about 1,534,200 *yen.*

Saturday, 6th.

A fire broke out at Bakuro-chô, Tôkiô, at 3.30 a.m. on the 5th instant, which was not extinguished for about three hours nor until it had destroyed upwards of 400 houses. It originated in the breaking of a kerosine lamp—the fruitful source of so many such disasters.

From the *Chôya Shimbun.*

NOTIFICATION No. 159.

It was made known by Notification No. 202, issued in December 1875, that the redemption of the old *satsu* by new would be deferred until December 1876, and it is now promulgated that such redemption is further postponed until December 1877. The taxes due the Government will therefore be still received in the manner set forth in Notification No. 93, of September 1874.

REPORT OF THE POST-MASTER GENERAL.

THE POST-MASTER GENERAL's Fifth Report has been issued to meet the opening of the New Year. It records the work done by his department between the 1st July 1875 and the 30th June 1876, and contrasts it with the proceedings of previous years.

The proper revenue of the department, from all sources, amounted to *yen* 595,201, while the total expenditure amounted to *yen* 713,244—an excess of about 20 per cent, a fraction of which, however, is due to the fact that the salaries of officers and other expenses of the Marine Board, which is under the direction of the Postal Department, and of other sections whose duties are not connected with the Post Office proper, are included for convenience in the accounts. It is satisfactory to observe that the actual revenue of the department exceeded the estimated revenue by *yen* 25,201, while the actual disbursements fell short by *yen* 1,000 of the estimated disbursements.

Compared with the revenues of the previous year, those for the period under review show an increase of *yen* 146,674 or 32.7 per cent; and, compared with the year ending 30th June 1874, an increase of *yen* 302,875 or 103.6 per cent.

The increase of expenditure, on the other hand, is only 20 per cent over that of 1875, and 101.6 over that of 1874, showing that the increased work which brings augmented revenue is done at a decreasing ratio of expense. From this we may infer that when the revenue has risen to a certain point, which need not be very distant, the department will become self-supporting, and as the revenue still continues to rise, the Treasury will derive a profit from the Post Office, as it certainly should do. If we cite the example of England in this respect, it is only because we are more familiar with the figures than with the statistics of other countries, but the British Government derives a clear revenue of £4,000,000 annually from the Posts and Telegraphs, and there is no reason why Japan should not make this department a source of regular yearly income.

The estimated revenue for the year ending 30th June 1877 is *yen* 654,517 or 10 per cent of increase over that of last year; the estimated expenditure for the same period is *yen* 786,096, also showing an increase of about 10 per cent. It will be satisfactory to find hereafter that, as in the case of the past year, the actual revenue exceeds the estimated revenue, and the actual disbursements fall below the estimated disbursements.

In connection with this branch of the subject, Mr. MAYESHIMA says:—

> While upon the subject of revenues and expenditures it is proper to say that the subsidy paid to the Mitsu Bishi Steamship Company is not included in the expenditure of the Department, inasmuch as it was granted for the purpose of affording to the business community and general public the convenience and advantage of regular steamship communication between the different ports of Japan, and between China and Japan, although the direct expenditures have been greatly reduced in consequence of the free transportation of the mails, in return for the said subsidy.

The table of revenues shows that postage stamps have contributed *yen* 518,288, postal cards *yen* 42,146, and fees for money orders *yen* 21,137, towards the sum total of the receipts.

In the table of expenditure the following are among the recorded items:

Salaries of post-masters	*yen*	72,408
Salaries of officers and native employés...	„	103,991
Mail carriers	„	318,769
Foreign employés	„	27,742
Expense of manufacturing postage stamps, postal cards, &c. ...	„	15,856

The subsidy paid to the Mitsu Bishi Company is *yen* 187,500, while *yen* 8,750 are paid for the establishment and maintenance of the Marine School.

The aggregate number of letters, newspapers, books, patterns, &c, transmitted in the mails during the year, was 30,162,614, showing an increase of about 30 per cent over the work of the previous year, and 98 per cent over that of 1874. The large and steady increase is an excellent sign of the benefits conferred by the institution, but these figures point unmistakeably to a very low commercial, economical and intellectual condition of the country. An average man in a large European city will write from five to twenty notes or letters daily, and even in this little settlement few of us fall below the smaller number and constantly go a long way beyond it. But the figures under review show that there is not quite one letter annually written per head by the whole population. It is gratifying to find that 5,409,415 newspapers were transmitted through the post, an increase of 48 per cent over the figures of the previous year, and of 264 per cent over those of 1874. The POST-MASTER-GENERAL remarks upon the small business of the Post Office relatively to the population of the Empire, but quite justly contends that the system is yet in its infancy, and that as it attains greater efficiency it will be of great service to the public and "a source of high honour to the general Government." We are not so solicitous regarding this last point, though we do not wish to undervalue it. The object should not only be honour to the Government, but revenue to the Treasury.

The mail routes in operation at the close of the year aggregated 32,902 English miles, or an increase of 23 per cent over those of the previous year and 30 per cent over those of 1874. The distance of total annual transportation shows a corresponding increase, and the same may be said of the receiving and stamp agencies and street letter-boxes.

The number of letters despatched to foreign countries was 109,835, and the number of newspapers is stated at 73,039. Can these latter figures be correct? The number of native papers sent abroad must be very small, and if we put down the total foreign newspapers at 25,000 or 30,000, it is a liberal estimate. We should have imagined that for every newspaper which leaves this country, at least five or ten must be brought into it. Yet we find that 93,423 only were received from foreign countries against 73,039 sent out. Nor can this be due solely to the fact that the bulk of the papers come in through other agencies. We cannot understand the relations between these two sets of figures. Regarding this part of his subject, Mr. MAYESHIMA says:—

> The number of articles dispatched to, or received from, Foreign Countries during the past year cannot be compared with the actual number dispatched or received during the year preceding, as the Foreign mail service was not in operation until the 1st of January, 8th year of Meiji (1875). However, if an estimate for the whole year ended June 30th, 8th year of Meiji (1875) is made by doubling the actual number dispatched or received, from the 1st January to the 30th June, which gives 157,648, for the number of mails dispatched, and 143,894 for the number of mails received, and if a comparison is made with that estimate, it shows an increase of 25,226 in number of mails dispatched over the estimate for the preceding year, and an increase of 18,757 in number of mails received.
>
> This gain is not unreasonable, and may be readily explained. It was not from any increase of the foreign population in Japan, nor of the number of Japanese abroad; nor were the business interests in this country more prosperous than last year; but when the foreign service was first placed in operation, there was considerable prejudice against it in the minds of Foreigners, and some fear that it would not be properly conducted, or that our mails would only be received in the United States. However groundless these fears and prejudices were, they undoubtedly affected the mails for some time. To a greater extent the increase is due to the reduction in postage, and to the better facilities for the communication afforded by the establishment of a Japanese Postal Agency at Shanghai,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

which has led to the transmission, by way of Japan, of a fair proportion of the correspondence from China, addressed to America and Europe. There has also been a very considerable increase in the number of communications between Japanese residing abroad and their friends and relatives at home.

On the subject of postal relations with other countries, Mr. MAYESHIMA says:—

Our present postal relations with other countries, though still restricted, present an agreeable contrast to the entire absence of such relations a few year since. Until very recently all correspondence dispatched from, or received in Japan, was entirely under the control of Foreign Governments. Now, however, besides our regular exchange of mails with the United States and other countries *via* the United States, a line of steamers has been established between Japan and China, which conveys the mail in either direction under the Japanese flag, and an Agency has been established in a foreign country. So that, in addition to the management of our own mails, we are assisting in furnishing a postal service for our neighbouring Empire, China.

We trust that the restrictions to which he refers will shortly be removed. They have had two good effects, however, which must not be overlooked. They have stimulated the Department to exertions and the exercise of peculiar care, which could hardly have been expected but for them; and have protected interests of vital moment from being prejudiced during its inchoate condition.

The reduction of the postage to the United States to 12 and subsequently to 5 *sen* affords a great boon to the foreign community in Japan. Every year sees an increase of the European correspondence transmitted from Japan through the States, and the low rate charged, in addition to the diminished time of transit, will secure to this route the practical monopoly of the work.

The number of letters and packets stolen during the year was 1,759, of which (too large) number 1,356 were, however, regained and delivered intact. The shortcomings of the Department therefore involve no serious reflections upon it, and it were well if we could all go to confession with so little to answer for.

The Postal Money Order system also affords room for congratulation to the Department, and has been found so useful that it is insufficient to meet the wants of the public. The extension of it is promised so soon as the responsibilities it involves can be safely assumed.

The Post Office Savings Bank system also shows a marked increase in public favour.

The latter part of Mr. MAYESHIMA's Report is devoted to the question of the control of the Mercantile Marine, which has been placed, for apparently sufficient reasons, under his care. Of the subsidy and loan to the Mitsu Bishi Company he says:—

Eighteen steamers purchased from the National Mail Steamship Company, at the request of that Company, and thirteen steamships already in the possession of the Department, were freely made over to the Mitsu Bishi Mail Steamship Company, to which Company a subsidy of Yen 250,000 per annum was granted by the General Government, and a loan of Yen 810,000, in order to enable it to purchase the Pacific Mail Steamship Company's branch line of steamships, thus increasing and facilitating communication between the different ports of Japan, and between China and Japan, and securing it almost entirely to the Japanese flag.

In order to train and educate officers in the mercantile marine service, Yen 15,000 per annum were granted to the Mitsu Bishi Mail Steamship Company for the establishment and maintenance of the marine school, which is also under the superintendence of this Department.

The number of ships of native and foreign construction wrecked and missing during the year 1875 was 457, including 3 steamers, and Mr. MAYESHIMA expresses regret over this serious tale of untoward accidents. Without a knowledge of the total shipping under the control of the Department, however, it is impossible to form any fair opinion as to whether the sum of these casualties is excessive.

The publications of the Department also demand notice: 1°, maps showing the mail routes throughout the country; 2°, postal guides have been compiled, showing all the details of the business transacted by the Department; 3°, a postal history of Japan; and 4°, a directory (not yet completed) giving the names of streets, villages and other localities. In order to improve the Postal Laws and Regulations a selection has been made from those hitherto in use here and those of the western nations. The draft is nearly completed and will shortly be submitted for approval to the central Government.

The Report is an excellent one, and the Department may justly be congratulated upon it. It tells a story of steady and yet rapid advance, of method, order and enterprise, and the good fruits which spring from these.

THE SHOOTING REGULATIONS.

"BETTER late than never," says the old adage, and the Shooting Regulations are out at last. At this time of the year they come almost like snow in hasvest, for the season is half over; but they are welcome for all that, because they show us where we are on the whole question, and the sportsmen can now go a-field with a belt of cartridges and a good conscience, void of all fear that he will be the cause of a war. Of the right on the part of the Government to demand that he shall be furnished with a license to shoot, we have never felt any doubts; nor, truth to tell, have foreigners ever been indisposed to accept this position. The Englishman specially bows to it, for at home he has not only to provide himself with a sporting and gun license, but has to rent his own shooting pretty dearly, or wait for invitations from a friend to "clear the covers," and these do not come to every man who has yet made many a bonnie bag in the East.

The Regulations will be accepted, we think, with satisfaction by all sportsmen. It is obvious that penalties must be affixed to the violation of agreements, but after all the protests recently made here against an excessively severe interpretation of laws, we doubt whether the LAW-SECRETARY, even in his sternest and most conscientious humour, would dare to inflict a penalty of a month's imprisonment with hard labour, on a delinquent arraigned under Sir HARRY PARKES' notification.

The 'form of license' calls for a few words.

That it should demand the name and nationality of the licensee is not only natural but necessary; that it should demand his age is owing, we presume, to that love of the rack in one form or another which characterises all oriental proceedings of an official nature. Possibly, however, the object is to prevent Cupid from using the bow of Hercules, so that if either of them wishes to shoot, though at different times, each must take out his own license—which is fair enough.

It is observable that the license extends to the 15th of April, which in our opinion, is a full month too late, except, for snipe, woodcock and migratory birds, indeed, the 1st of March might fairly be made the limit. The birds begin to pair at about that date, and no housekeeper with a really good conscience and serious views will place a pheasant on her table later than a week afterwards. We allow a week for the same reason that the old law allowed the three days of grace on bills of exchange—a kindly concession to human frailty. True it acts against the poor bird; but the guest has prior claims—at least in the court in which the former neither sits as judge nor pleads as advocate.

The restrictions against shooting between sunset and sunrise will prevent duck-shooting at night; but practically this is no hardship, for it is rarely done, and has no special flavour unless one is given to it by this very pro-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hibition. Those imposed upon the destruction of birds not used for food, will save the life of many a little songster, or, perhaps rather, twitterer, a good friend to the farmer, and of but small estimation in the kitchen.

The prohibition against shooting in cities, towns, or where there is any collection of people, in any place where there are standing crops, or where any projectile may reach any dwelling place, is perfectly reasonable, and, unfortunately, quite necessary. From a real sportsmen nothing of this kind is to be feared; but everything may be feared from a man with a gun who has neither the instincts nor experience of a sportman. Cases have been observed in this country where a suspension of their work among the standing crops has been forced upon the peasants by foreigners out shooting, and this warrants the severest condemnation. The standing rice also affords good snipe shooting, which cannot be pursued without injury to the crop, and against this the farmer will now have ample protection.

The license fee is small, and we suspect that the more ardent sportsmen would willingly have seen it increased, because the more men there are a-field, the less is the chance for any individual gun. But they would certainly not press this argument seriously, and, as we urged a short time ago, their less wealthy brethren who carry horns have indisputable claims. The undue repression of the sylvan and musical instincts of the latter class would be ungenerous—nor, if the truth be told, have any but infant pheasants much to fear from this class of forester.

But we have not yet come any nearer to a close season in the market, and this is what is really wanted to ensure good shooting. So long as the town is supplied with game during the months in which the birds are breeding, so long will they be eaten in the hotels and restaurants, where variety tells in favour of the establishment which provides it. We have even known a *salmi* of pheasants served—with closed doors—during the sacred months, in houses of severe reputed orthodoxy. The stealthy glass of surreptious Tokay has before now prevailed with the Mussulman, much more the prohibited bird with the *gourmet* We do not see any serious objections to a close season, and certainly without this the shooting will never be what it might be. But we cannot expect it until or unless the Japanese themselves become sportsmen, in our sense of the word, and think that it is desirable to make such rules for the preservation of game as exist among the more advanced nations.

We have turned up the number of the *Singpao* in which appears the statement previously referred to in an English article in the same paper, to the effect that foreigners acknowledge themselves indebted to the Chinese for the use of coal as fuel. The passage occurs in the issue of the 21st instant, and is as follows:—"Formerly Western nations "were entirely unacquainted with coal. During the Sung "and Yuen dynasties, a man named Po-lo Fu-tsze [Ser "Marco Polo] who came to China, announced that, in "China, there was a black stone called *mei* [coal] which could "be used instead of fire-wood. Europeans therefore searched "for coal in all directions, and in a few years there was not a "place without coal-mines or without coal." This is headed 'Translation from the French *P'i-wén Pao*'—a publication, however, that we have not been able to identify.—*Shanghai Courier.*

We hear that the Russians are fortifying Vladivostock, and collecting several thousand troops there. The Russian men-of-war are said to be leaving for San Francisco.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

Reflections on the Past Year.

("*Nichi Nichi Shimbun*," 29*th December*, 1876.)

Time flies with wonderful rapidity! The year is just at its close, a few days only of it are left, and men will be, as usual, occupied during the remainder of it in their several callings. Our own pen will be laid aside to-day, and when we resume it the 10th year of Meiji will have opened.

Many are the changes and reforms which the year has seen, and the newspapers have stood their ground well. The public writers have used many arguments in order to advance the welfare of the country, many questions have been asked by their means, comments on and answers to them have been freely circulated, and in this manner they have striven to do their duty. Some have contended for an extension of liberty, others for representative institutions or local assemblies in the *ken*, for the promotion of education, for localization or centralization, for the freedom of the Press, etc.

But let us as ask what effect has been produced by these ample and varied contentions; what good to the nation has actually been done by the Press? It must be confessed that a large amount of labour has been performed with very little result.

The extension of the rights and liberties of the people has been urged, but without any perceptible increase of them; the same may be said in regard to representative assemblies; the treaties have not been revised, nor have the extra-territoriality jurisdiction clauses been expunged from them. It may therefore justly be said again that a large amount of labour has been expended to very little purpose.

How is this? Does the fault lie with the Press? This is not the case. Is the writing which appears that of visionaries or madmen? Assuredly not. Is the Government indifferent to public opinion? Certainly not. Do the officials read the newspapers? Surely they do.

How is it then? We are inclined to believe that the general condition of the people makes them indifferent to what is urged on their behalf, and we trace this condition to the fact that they have been so long impressed with the idea that they have no concern in the doings of the Government. In consequence of this a wide gulf separates them from their rulers, and they have but a faint conception what the Government is. But this is no reason why the Press should be in the slightest degree discouraged, for it is the means by which the opinion of the nation is gradually formed, it renders great and direct service to the Government, and, in civilized countries, it wields the enormous power of forming, reflecting and guiding public opinion.

Our own country is now in a state of transition, and therefore no epoch can be more important for the Press than the present. It has done well in contending for reforms, and must set aside all thought of smiles or frowns, arguing alone for what promises to be beneficial to the nation and thus trying to do it all possible service. We must not throw down our pens in despair at seeing the trifling results produced by our labours. The direct reverse of this must indeed be our course, and with unceasing determination we must continue to labour.

We therefore entreat all our brethren to be ready to take the field next year.

A Plea for the Press.

("*Choya Shimbun*," 4th January.)

Every house is now enchantingly decorated with branches of pine and bamboo, and as the pleasant sun shines into it, we see the inmates celebrating and enjoying the happy new year. This tends to show that the people are free from all anxiety, in a condition of happiness, and for the moment reposing from the labours of their respective callings.

Our own duties lie neither in the management of the affairs of Government nor in tilling the fields. We are one of the units which go to compose the nation and have made it our duty to write. Thus we shall not meddle with the Government nor with the farmers. Knowing, as we do, that an upright administration of affairs by the Government and a consequent contentment of the people are the means by which civilization, peace and prosperity are promoted, our duty is to see whether the public opinion expressed in our journal is heeded by the Government or not.

Glancing back upon the year just now closed, we cannot fail to remember that many of the editors and writers for the newspapers—our own as well as those of our contemporaries—have been punished for faults held to be violations of the Press-laws. Of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

course the writers infringed the laws and brought disgrace upon themselves. It is they who are at fault, and they can accuse no one of injustice.

Yet it should not be forgotten that the punishment of so many men connected with the Press does not speak well for the Government.

The first request we would now make in this 10th year of Meiji, is that the public writers will be more careful in future, and try to keep within the boundaries of the laws, even while arguing and maintaining their opinions with determination, courage and straightforwardness, as demanded by the interests of the nation. On the other hand, we trust the Government will give good heed to the voice of public opinion, and should it find the Press criticising its course of action, that it will act as the people desire, and not inflict heavy punishments upon the public writers for trifling offences, but show as much leniency as possible, and give to the Press all reasonable freedom for the expression of public opinion.

It is a proved fact, and has been so from the most ancient times, that countries have thriven and prospered whose Governments have been submitted to free criticism, while Governments which hear nothing but flattery soon bring a country to ruin. All history shows this, and proves that such harm as the Press may sometimes do in commenting on the action of Governments is more than compensated by the good it effects.

When laws are first issued they seem simple and mild, but when put into operation they may become complex and severe, and the ardour of the people to procure the abrogation of such laws increases proportionately. This leads to a violent action of the popular mind, and hence arises strife between Government and people. The punishments for violations of the law become more and more severe, and as this goes on, serious dangers arise. From olden days downwards eminent writers have inculcated these doctrines, and we must try to guard against the evils which they have connected with this policy of repression.

We therefore earnestly entreat the Government to show the greatest mildness in its administration of the law, and ask the people, on the other hand, to keep within its bounds. In urging this we would not for a moment be thought to be pleading a case to suit our own convenience. No, as before stated, we write in order that the public welfare may be advanced, and for this reason we have taken up this most serious question at the opening of the year, in the ardent hope that the Press prosecutions may cease, or, at least, be greatly diminished during this happy new season.

ASIATIC SOCIETY OF JAPAN.

A regular meeting (deferred from December 27th, 1876), was held on Wednesday, the 3rd January, 1877, at the Society's Library, Tôkiô; the President, Sir Harry S. Parkes, in the Chair.

After the usual reading of the minutes, the names of the following new members were announced:—Messrs. Geo. Cawley, John Hunt, H. R. Elliott, W. N. Whitney, F. B. Walsh and Wm. Bramsen.

The Library Committee reported a considerable number of books as absent from the shelves, and that some one had taken the liberty of cutting out a portion from the Society's book of scientific extracts.

The Secretary *pro tem.* presented a request, made through Mr. Wilkin of Yokohama, from an antiquarian friend in England, asking for a collection of Palœolitic Flint implements, if to be found in Japan, the search for these memorials of the remote past having been renewed of late with great earnestness.

Mr. Longford then read his translation of a Japanese account of the Island of Hachijo; explaining that it was little more than an outline of a fuller account which the native author was about to publish, giving details of his residence of two years at this remote settlement.

The President remarked that the subject of the paper had great interest on many accounts; as exhibiting a condition of things very unlike what appears in other places under Japanese jurisdiction; as illustrating the policy of making penal settlements on the outlying Islands; as a place laid down on our Admiralty charts by the name of "Fatsisio—place of exile "for the grandees of Japan," &c. It is the last of a chain of Islands extending southwards from Vries (Oshima) and is seldom visited: the *Actæon* visited it in 1861 and reported unfavourably of the anchorage. One would wish to know whether the frightful punishments described were things of the past, or were still practised, and if so what could be the necessity for them.* It is to be hoped, therefore, that we may soon have access to the large work promised by the author.

Prof. Grigsby doubted whether it was desirable to publish the account, as we now have it: it might be better to wait until fuller, and perhaps more reliable, statements were before the members.

Mr. Hodges read, as illustrating the subject, some interesting notes he had made of a visit to Vries Island.

The President remarked that the similarity of some of the customs decribed by Mr. Hodges with those observable in Loochoo, added additional interest to the subject of the condition and ethnology of the people living in these various islands.

Mr. Bramsen said that we might even hope to gain more information on this subject, as the Japanese Government were understood to be about establishing communication with the Bonin Islands, by steamers which would probably touch at Hachijo *en route*. He had heared descriptions of this latter island very diverse from that given in the paper.

Sir H. S. Parkes stated, with reference to the second paper which had been announced,—on the monastery of Koya Zan—that the lateness of the hour, and the extent of the subject deterred him from entering on its consideration at the present time. He gave, however, a general outline of the topic, showing its interest and importance.

By a unanimous vote of the meeting the President was requested to favour the Society with a fuller discussion of the subject at his earliest convenience.

INQUEST.

An inquest was held at No. 114, Creek, yesterday morning, concerning the death of Thomas Baker, before Russell Robertson Esq., H. B. M.'s Consul, Coroner, and Messrs Andrew Jaffray, Edward Powys and Thomas Rose, as Jurors.

The Jury, after having been sworn, viewed the body. The evidence of the following witnesses was then taken.

Tone, a Japanese woman, cautioned, stated:—I am a hair-dresser, residing at Onoye-cho, Ichome. I have been engaged as hair-dresser for seven years past by a woman living at No. 171. Deceased lived with Jimmy at 161 for some two years past, and I have known him for about that time. On the 31st ultimo I left the house on my usual round of duty, and was going into a photographic shop at 5 p.m. when a woman in my employ came up to me and asked me to return home at once. I went back with her, and when we entered the house I saw a foreigner lying apparently dead. I was told my husband had gone out before four o'clock. He returned at 5.20, and left immediately he saw what had occured. He came back after a little while in company with the police. I knew deceased from seeing him pass the house several times, and exchanging greetings. I did not examine the body closely. I saw blood flowing from a wound.

I have seen the body, and identify it as that of the man whose body I saw in my house on the 30th.

Edwin Wheeler, M. D., sworn:—On Saturday, the 30th, I was called to see a man who had shot himself near the public gardens. I found the body of a man lying on his back with blood over the face. On examination I found a pistol wound about an inch and a half above and two inches internal to the left nipple. He also had another wound on the right temple. The body was scarcely cold. On Sunday afternoon I performed a post-mortem on the body. Upon opening the thorax, I found that the ball entered that cavity through the cartilage of the third rib, at its junction with the bone, passed through the portion of lung overlapping the heart, entering the heart at the septim between the right and left ventricle. After traversing the ventricle I found the bullet had passed through the third intercostal space, behind which I found the bullet lying in the loose cellular tissue below the skin. The other bullet wound was through the right temple. It had entered the cranium about one inch behind the external angular process of the frontal bone, piercing the right anterior lobe of brain, and also the left anterior lobe. I found this bullet lodged in one of the commissures of the left anterior lobe I may mention that the membranes of the brain and the brain itself were

* The President has since ascertained that these severe punishments have been discontinued.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

slightly congested, but nowhere did I find any adhesions of membrane.

To the Jury:—I think the wound in the heart was the first inflicted.

To the Coroner:—Habitual intemperance would produce the condition of brain I have mentioned above. The wounds are such as the man could have inflicted himself.

Nobu, a Japanese woman, warned:—I am the servant of a Chinaman. I was in the house working at 4 p.m. on the 30th. A tipsy foreigner came in and asked leave to sleep there. I refused to allow him. He insisted, however, and prepared to go to sleep. I had to give him a pillow and a covering. He then asked for a screen, which I gave him. My little sister was the only other person in the house, and I resumed work at once. Suddenly I heard a report, but on looking round I could see nothing out of order, so I continued working. All at once another and louder report was heard. I was frightened and ran out of the house to call my mother. We returned together but did not venture near the screen. My father then came in, and looked at the body, and went for the police. I knew the man's face from seeing him pass the house often and my mother visiting the place where he lived.

Oba Mankichi, Police constable No. 347, warned.—Nakiji Shunkichi came and reported to me on the 30th about 6 P.M. that a foreigner had come to his house whilst he was absent and had gone to sleep there. That after a short time two reports of a pistol were heard; that his daughter immediately ran out for her mother; that he, the father, returning home and seeing what had happened went for the police. I then went with Matsushima, another policeman, to the house, and found deceased lying dead on the floor.

The above mentioned police constable, Mutsushima, then certified to the truth of his companion's statement.

James Donald, sworn, stated: The last time I met deceased was on the 25th ultimo, when I met him by appointment at the "Railway House." I saw and recognised his body on Sunday. A note was sent to Mr Bonneau by deceased, making the same appointment at the Railway, but Bonneau did not go. When I met deceased I told him I would have nothing to do with him further. Our conversation occurred at the "Railway House." The pistol is that of Mr. Bennett.

P. C Hazell, sworn, stated.—I was called by the Japanese police on Saturday afternoon to go to a Japanese house where a foreigner had shot himself. A Japanese woman belonging to the house showed me the body. Deceased was lying on his left side. On the 28th he had come to the station during the night asking for a bed, and on searching him as he lay in the cell I did not find a pistol. He had no money, only a big pocket knife.

Consular Constable White, sworn: On the 30th December, by order of the Consul, I went to a Japanese house near the market, and there found the body of deceased lying in a pool of blood. I recognised Thomas Baker at once. I went for Dr. Wheeler, who came and examined the body. The last time I saw Baker alive was on the 28th, as he was sitting before the fire at the "Brooklyn Hotel." After the examination the body was removed to No. 114. Deceased was habitually intemperate.

Wm. Wood, sworn, deposed:—I knew deceased. He came to my place on the 28th asking for advice with regard to some quarrel existing between him and James Donald. I would not speak to him, so he left. I saw him next morning near the market. He was looking rather downhearted.

James Donald was here recalled and asked to explain this quarrel, and also a telegram found on deceased asking him to return "as Donald is dead" Witness acknowledged having sent the telegram himself, but declined to give any further information. He was informed that he would become liable to a charge of contempt of Court, and at last agreed to give this evidence within closed doors. The Court room was accordingly cleared.

VERDICT.

Thomas Baker, not being of sound mind but lunatic and distracted, did on the 30th of December last put a certain pistol loaded with gunpowder and two leaden bullets, which pistol, he, the said Thomas Baker, then held in his right hand, to and against his body, did shoot off and discharge, by means whereof the said Thomas Baker did then give into himself with the two leaden bullets aforesaid, in and upon the body of him, the said Thomas Baker, two mortal wounds, he, the said Thomas Baker, then and there instantly died. And so the Jurors aforesaid, upon their oath aforesaid, do say that the said Thomas Baker, not being of sound mind, memory and understanding, but lunatic and distracted, in the manner and by the means aforesaid did kill himself.

Law & Police.

IN H. B. M.'s PROVINCIAL COURT.

Before H S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, January 3rd, 1877.

COPELAND & WIEGAND *v.* M. M. SCOTT.

(Continued from yesterday.)

This was a claim for $38, value of beer sold and delivered to defendant.

Mr Wiegand appeared for plaintiffs; defendant appeared personally.

Plaintiff in opening his case produced a number of chits signed by defendant, acknowledging receipt of the beer

Defendant acknowledged all except those signed initially "M. S." The value of the beer he acknowledged having received was $11.

Defendant to plaintiff:—Two of the receipts in your hand I acknowledge. The third, only signed "M. S." I do not acknowledge. I always sign my name in full "M. Scott." "M. S." signifies my name but is *not* my name. I sign all the receipts I give to merchants in Yokohama with my full name.

Plaintiff to Court:—I have witnesses to prove that these signatures are correct. I did not expect defendant to deny them.

Court adjourned till this morning at 10 a.m., to allow both parties to call their witnesses.

Thursday, January 4th, 1877.

Plaintiff called as witness,

Theodor Wilhelm Helm, who was sworn, and stated:—I am salesman at 123, Bluff. I delivered the beer at defendant's request and he signed these receipts in my presence. I saw him write his initials. I dont know that any one else saw him besides myself. I delivered the beer myself, and saw it put into defendant's place. I also delivered the vinegar. The driver can speak as to the delivery of the beer, but he is not here.

Cross-examined by defendant:—On one occasion the vinegar was put into a demijohn.

Defendant to Court:—I acknowledge having received the vinegar named in these chits (produced.) I did not initial these chits (shown). It is untrue that the last witness saw me write these initials. I keep no account of the beer I receive. The last I received was from Wilkin and Robeson, through Mr. Lewis. I think the last beer I received from Copeland and Wiegand was about three months ago. I receive everything that comes into my place. I pay on production of receipts with my signature. I did not sign or initial these chits for the vinegar. I received two gallons of vinegar altogether. It was paid for long ago Since July last I got beer from Mr. Wiegand. I cannot say if I have paid for the two ten gallon casks. I can produce the last bill I paid to Copeland and Wiegand. I know I have not paid for these two last receipts. I think it was in October I paid my last bill.

Court adjourned till 1.30 p.m. and on re-assembling

Defendant, when asked to produce his vouchers, said he could not find the accounts he wanted, but had brought several to show his Honour how often he had dealings with plaintiffs and how payments had been made. He could find no later accounts than July.

His Honour said that it was beyond all doubt that the beer in question had been delivered to and received by defendant, and that defendant had signed all the chits produced, those initialled as well as those signed in full. He had made himself liable to a charge of perjury, though His Honour, considering all circumstances, would not institute proceedings against him.

Verdict in favour of plaintiffs for full amount claimed. Defendant to pay besides $11 costs.

A Frenchman proposes to reach the North Pole by means of a balloon. All other methods of travelling in the Arctic regions having failed, re. course, he says, must be had to aerostation. By this means alone can the hitherto insurmountable difficulties experienced in attempting to traverse the mountains of ice which bar the way to the desired object be overcome. Captain Nares, he maintains, might have reached the Pole in a very few hours had he been provided with aerostatic appliances. Whether it would have been prudent of him on reaching the Pole to have effected a descent is another question, for some difficulty of a serious nature might have arisen as to the return journey; but he might at all events have passed over it and taken observations which could hardly fail to have been of great interest and value. Mr. Stott under the circumstances should consider whether, instead of attempting to sell his ingenious invention to Prince Bismarck, it might not be worth his while to prove its utility by a voyage to the Pole in the first instance.—*Pall Mall Gazette.*

ARRIVAL OF THE FRENCH MAIL.

TELEGRAMS.

(Straits Times Extra.)

St. Petersburg, Dec. 2.—The Grand Duke Nicholas has started for Kischeneff, to assume command of the Russian Army Corps.

Russian papers assert that extensive armaments are being made among the Affghans.

Obituary.—The Right Hon'ble Edward Horseman, M.P. for Liskeard.

London, Dec. 2nd.—At the consecration of the Bishop of Calcutta the new title of "Empress of India," was used for the first time.

Berlin, Deccember 4th.—In a speech at a Parliamentary dinner given to him yesterday, Prince Bismark said he did not yet despair of peace, but he thought that war was probable.

It would be inopportune for Germany to counsel Russia at the present time, but he thought, that when Russia and Turkey dread (?) fighting, Germany would be best able to mediate.

He hoped that England would not openly go to war against Russia, but at most indirectly, similar to the Russian action in Servia.

Should Austria be drawn into war, and danger threaten her existence as an empire, it would be the duty of Germany to come forward and support her.

Austria possessed greater vitality than many thought, and he had told Lord Salisbury so.

London, Dec. 4th.—The home press is unanimous in the opinion that Russia must not be permitted to take Constantinople; otherwise it is adverse to helping Turkey.

Great importance is attached to Bismark's remarks regarding Austria, and it is believed they will tend to localise a war.

The Porte is hastening to promulgate the constitution, which it proposes to give, before the Conference.

The Great Powers have notified that they disapprove of such action.

London, Dec. 4th.—General David Elliott Mackirdy is gazetted Colonel of the 54th, *vice* Colonel Studholme Hodgson, transferred to the 4th.

Paris, Dec. 4th.—The French Ministry has resigned owing to adverse votes of the Chambers.

[The paragraph in the original telegram in which the most important correction is made reads as follows:—"He [Prince Bismark] hoped that England would not openly go to war against Russia, but *almost* [at most] indirectly, similar to the Russian action in Servia." The word "special" referred to the Parliamentary dinner given to Prince Bismark, which was not special—Ed. C. O.]

The above corrections were received by Reuter from the Eastern Telegraph Company.

Berlin, Dec. 6th.—In a speech of Prince Bismark's to the Reichstag, he said: "Russia seeks not great conquests, and asks us only to co-operate in the Conference to ameliorate the condition of the Christians in Turkey. The triple alliance subsists. Germany's friendship for England is equally traditional. I believe the differences between England and Russia may be arranged. Our task is to mediate between the Powers and to localize war. If our efforts are futile I cannot conjecture the future."

London, 6th Dec.—The Home Press publish leaders on Bismark's speech and consider it reassuring.

Constantinople, 6th Dec.—Lord Salisbury, accompanied by his staff, arrived yesterday.

The Conference commences its sittings on Saturday.

Washington, 5th Dec.—A message from President Grant, to Congress, recommends a change in the system of presidential election.

The latest report from Louisiana states that the Returning Board, rejecting returns of votes of several districts, declared the R publican candidate elected.

Philadelphia, 7th.—Contrary to expectation, a Republican majority is declared in Florida, thus securing the election of Hayes.

The electoral colleges met yesterday, and formally recorded the votes according to the results announced, except in regard to Oregon, where the Governor gave a Democratic, instead of a Republican elector right of vote, thereby giving to Tilden the single vote needed to secure the election for the Republicans.

The electors of Oregon voted despite the Governor.

Mr. Secretary Bristowe recommends the silver coinage to be increased by eighty millions of dollars.

The Brooklyn theatre has been destroyed by fire and 289 persons have perished.

London, December 8th.—Sir George Campbell has published the results of his observations during his visit to Turkey. He ridicules the idea of religious connection between the Sultan and the Indian Mussulmans, any interest the latter may feel being confined to a limited class.

General William Munro has been appointed Colonel of the 63rd, vice General Greeman Murray transferred to the 60th Regiment.

The Transport *Crocodile* has arrived home.

England has admitted the American reading of the extradition treaty, as the correct rendering.

London, 9th Dec.—A conference was held at St. James's Hall, yesterday, under the presidency of the Marquis of Westminster.

There were also present the Earl of Shaftesbury, and many members of Parliament, besides upwards of a thousane delegates from different parts of the country.

The speakers, including Mr. Gladstone, condemned the present ambiguous policy of Government, which, it was said, must be made to understand that the English nation is unanimous against defending Turkey.

The speakers urged England's cordial co-operation with Russia on behalf of the Christians.

London, 9th Dec.—Parliament is convoked for the 8th of February.

Constantinople, 9th Dec.—The Marquis of Salisbury had a long interview with General Ignatieff yesterday.

THE *GOLOS* ON LORD BEACONSFIELD.

(Economist.)

The article from the *Golos*, which accused Lord Beaconsfield of pursuing a stockjobbing policy, deliberately conceived with a view to make a fortune for himself as a sleeping partner in the firm of Erlanger, has created nothing but amusement in England. But we can well imagine that in Russia this would be regarded not only as a conceivable, but almost a probable, explanation of the vagaries of any statesman whose character did not stand above the slightest breath of suspicion. Doubtless the editor of the *Golos* was not aware that whatever have been Mr Disraeli's political defects, no one in England has ever imagined him to be avaricious, while the development of avarice so late in life in a peer who has no heir to his peerage would be a much odder event than the caprices of policy which the *Golos* supposes that it has explained. But even though the inventor of this extraordinary explanation had been quite ignorant of the estimate in which Lord Beaconsfield is held by English politicians, he might still have avoided finding this very elaborate mare's nest, if he had but acquainted himself a little better with the English political system. The explanation of an eccentric policy which the *Golos* furnishes might, perhaps, be a plausible one in many of the continental States; but in England it is not even a plausible explanation of such caprices. And the reason is to be found in the strength and intensity of our Parliamentary freedom. It is not in every country that even representative institutions have produced this effect. In the United States, for example, such a charge as the *Golos* has made against Lord Beaconsfield, would not be, on the face of it, wholly absurd. Charges similar, in kind at least, have quite recently been made against very high and responsible officials indeed, and in some of them, as we know, there was found to be a very large amount of truth. And this was so in spite of the most perfect freedom of the press, and a Congress possessing the most ample power to ferret out such misconduct. But the difference between the condition of the two countries is this: that in the United States politics have been too much of a profession, and a profession in whose doings the popular interest is often very slender, while in England politics constitute the crowning interest of all practical life. The difference is no doubt partly due to the maturity and slow growth of our political system, partly also to the greater centralisation in Parliament of political interests which in the States are diffused through a great number of local Legislatures. But the result is that Parliament not only has as much power as Congress to ferret

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

out all instances of political corruption, but affixes in addition an indelible social stain to any name to which corruption appears to attach, so that it is not only all but certain that any immorality, such as the *Golos* ventures to attribute, would be soon found out, but would be visited, when found out, with such crushing penalties that no man with a political ambition at all would ever think of incurring them. And both these results are really due ultimately to our political freedom, and the great influence it has had over English life. No doubt you may have the same amount of political freedom, and yet, as in the United States, it may not play anything like the same important part in the national life; and when that is so, it will not produce the same powerful effect in preventing political profligacy. But then that is only saying that though the freedom has been as great, it has been half unused,—has not had nearly so great a history, or embodied itself so entirely in the mind and thoughts of the people. A profession—and in the United States politicians form almost a profession—may be quite as effective as private persons for the purpose of unmasking what is bad, but it is never so effective for the purpose of making the people feel how bad it is. When the people think, or are apt to think, that if the balance of parties had been the other way, the unmaskers would have been the unmasked, and the unmasked the unmaskers, they are apt also to treat political immorality with a certain impatient scorn, and that is, we fear, the true secret of a good deal of the indifference of popular opinion in the United States. It is not that the instrument with which these practices are brought to light is less effectual, but that the social reprobation which meets them when brought to light, and which alone supplies any high motive for those who bring them to light, is less hearty. Indeed were it otherwise the free representative system of the United States would put an end to this sort of political jobbery as completely as the free representative system of England. In neither country, probably, could such infamy as the *Golos* imagines remain unexposed; but the difference is this, that in America, though it would certainly be exposed, it might *occur*—partly from the lower tone of politics, partly from the comparative apathy of the general public—while in England it could hardly occur at all; the man who had run Mr Disraeli's career could hardly conceive of such a crown of disgrace for it as compensated for by any conceivable gain which it might be in his power to get together.

Indeed, from a variety of causes of which the thoroughness of our political freedom and the value attached to its exercise by the general public, are the chief, there is probably at the present time no country in the world in which there is so little political corruption, and so little reason even to suspect it, as in England. With a public opinion which regards politics as the noblest sphere of practical life, and six hundred and fifty men on the look-out for questions which shall prove to their constituents their zeal for the public service, and their acuteness in laying bare any evils which affect it, it is quite impossible that any scandal should arise without being traced, and without bringing at once great credit on those who thus trace it, and great disgrace on those involved in it. The real defect of Parliament is that its members find too many mare's nests in their zeal to discover something which wants exposure, and so waste the public time which might be used for remedying the evils which exist. If half the skill which is devoted to ferreting out scandals could be secured for the work of carrying through good legislation and exposing the blunders of bad legislative proposals, we should have a great deal fewer fussy measures which do little but mischief, and more sound laws based on principle than we have. If the *Golos* wants to help Englishmen to better their political system, it should not try to excite in us that preternatural suspicion of our leading men which seems to pervade despotic countries, but rather show us how to get members who at once adequately represent public opinion, and are qualified for nobler work than asking disagreeable questions, which the answers prove to have been quite needless. The truth is that political inquisitiveness, though a most useful thing in such a state of politics as that to be found in the United States, admits very easily of being abused and exaggerated in a country like England, and of absorbing energy which is much more needed in other directions. The number of questions asked in Parliament is yearly on the increase, and of the questions asked probably one-half are quite redundant. It is the chief danger of a political system which has attained such maturity as ours that we get more and more men capable only of keen political interrogation, and not capable of wise political construction. England needs no greater activity of the life of political suspicion than there is at present amongst us. What we do need is the exchange of a little of that superfluous suspicion for statesmanlike initiative and deliberative power.

THE WAY TO THE NORTH POLE.

(The Spectator)

Another daring assault has been by man upon one of those regions of his so-called domain into which he would seem forbidden to enter, and once again he has suffered defeat. This defeat, however, is accepted as much more complete than it is, for setting aside the possible invention of methods of locomotion, other than sledging, over the rugged and shifting ice-masses which cover the Polar seas (as, for instance, the adaptation of the lifting-power of buoyant gases to this work), only one of the many routes has as yet been shown to be "impracticable."

It must be remembered that supposing there is a practicable route to the North Pole, no experience yet obtained can enable Arctic voyagers to form any clear idea as to the probable position of that route, so far as those parts of it are concerned which have not yet been reached, and so far as the difficulties depend on the arrangement of land and sea. It is important to notice this, because in the discussions which took place before the last expedition started, a tone was adopted which seemed to imply that the experience of Arctic voyagers as to the regions they have passed over entitled them to pronounce on the probable nature of the regions into which they had not penetrated. The theory that the land on the western side of Smith's Sound and Kennedy Channel extends northwards as far as the Pole, or beyond it, was advocated as confidently by some, as though Kane, or Hayes, or Hall had actually seen the whole of this Polar continent. It turns out that the land supposed to have been seen by Hall far to the north of his most northerly position has no real existence. But if President Land had existed, nothing would yet have been known respecting the three or four hundred miles intervening between that supposed land and the Pole. Yet it was on the hope of land existing farther north that the plans of the last expedition were based, and it was again in this expectation chiefly that the expedition left the line of attack which Nature indicates.

We say that Nature indicates a certain line of attack, and we think we can justify the assertion. It must be admitted that the one great cause of difficulty in advancing towards either pole is the extreme cold. Other circumstances operate, no doubt, to modify the dangers and difficulties of various routes, just as other circumstances render various routes over the accessible parts of the earth more or less difficult or dangerous. But what hitherto has rendered the Polar regions actually inaccessible has been the excessive cold. Consequently, the route which Nature indicates as the safest and easiest, or rather, as the least dangerous and difficult, is the route along which the cold is least intense. Captain Nares's expedition, on the contrary, was directed towards the very spot where it was known long before that the greatest winter cold and almost the greatest summer cold must exist. They made for the Pole of greatest cold, rather than for the Pole of the earth, and truly they seem to have found what they sought. A temperature of seventy-three degrees blow the freezing-point has not yet been recorded by man, nor a fortnightly average of nearly sixty degrees blow the freezing-point. It is singular, indeed, how directly opposed to the evidence of nature were the proceedings of the expedition as planned at home. From the shape and position of the isothermal lines, it appears that there are two Poles of extreme winter cold, and that one of them lies not far from the place where Hall marked President's Land (the other lying to the north of Siberia). It was not very far from this American pole of cold that Captain Nares was instructed to winter. As summer advances this pole of cold shifts eastwards to the extreme north of Greenland (as defined by Nares's easterly sledging party), lying still close by the route along which the expedition was to have voyaged towards the Pole. Both in winter and in summer, therefore, Nares's party were probably as near as they could well be to the respective poles of extreme winter and summer cold.

So far, then, as Nature herself can point the way, it would seem that, despite certain promising circumstances about the first portions of the route followed by the American Kane, Hayes, and Hall, and now by Nares, scarcely any route threatens greater difficulties in the long-run, and specially in the part where the struggle must, in any case, be most critical. Even a route past the Parry Islands would be less directly opposed to the evidence given by the isothermal lines. Indeed, in midsummer the region near the Parry Islands is not so cold as the region from which Nares's party made their nearest approach to the Pole. The route again, by Behring's Strait, directly polewards, promises better than the one Nares followed, if only the cold barrier in the north

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ern parts of the Strait could be crossed early in the summer season, for from thence for a great distance northwards (how far is not known) the cold in summer steadily diminishes. That region also, it may be noted, is of special interest at present, since the northern magnetic Pole has passed from the position determined by Ross in 1833, to some as yet unknown part of this region.

But unquestionably the route towards the Pole which the isotherms indicate is that to which the German geographers have long since pointed; and we believe that if German sailors had as much experience and endurance as our Arctic seamen, they would ere this have made a nearer approach to the Pole along one or other of the three routes between Greenland and Norway than has been made by Captain Nares's expedition. The history of Arctic travel fully bears us out, we think, in this opinion.

We know that Sir E. Parry, following the central route by the north-western shores of Spitzbergen, was able nearly half a century ago to reach north latitude 82° 45′, and was prevented from advancing further by mischance rather than by any insuperable obstacles. For it cannot be supposed that the drift of the whole ice-field southwards before the wind, by which his party were carried southwards, is constantly taking place in those seas. On the contrary, it is probable that the southerly drift is at times replaced by a northerly drift. Again, Parry's party was not nearly so well provided for as Nares's. Had they been so, they would certainly have been able to push fifty or sixty miles farther northwards, so attaining a higher latitude along their route than Nares's party along theirs. Quite possibly they might have carried their sledge-boat to the edge of the great floating ice-field, finding open channels by which they could have approached the Pole still more nearly. The Swedish expedition of 1869 made a very successful effort to reach high latitudes in this direction without leaving their ship, attaining with comparative ease nearly the same latitude which was reached by Captain Hall in 1871 along the Smith's Sound route. But the success of Hudson in 1607, and Scoresby in 1806, in attaining very high latitudes along the Spitzbergen route, shows what might be expected from a well-found expedition in our times, aided by steam, and by numerous other appliances of modern science available against the difficulties of Arctic travelling.

Of the route along the eastern shore of Greenland less can be said than of any of the three between Greenland and the Scandinavian peninsula. Yet the pioneers of the 'Germania' advanced in their geographical expedition (that is, taking observations all the time of the Greenland coast-line) to the 77th parallel, and stated that "nothing but the want of provisions prevented them from extending their sledge journey indefinitely," Along this coast also the Dutch travelled nearly to the 80th parallel more than two centuries ago.

The third route, between Spitzbergen and Novaia Zemlia, is, in some respects, the most promising of all; and a journey along this route seems also more likely than others to be rewarded by results of material value. Payer and Weyprecht pursued this route in 1871, penetrating 150 miles farther north than any of their predecessors along that route. Beyond the 76th degree they still had open sea, the temperature of the surface varying between 5° and 7° above the freezing-point. Want of provisions obliged them to return. But they set forth again along the same route in 1871, aiming, however, not to reach the Pole, but to round the northernmost cape of Asia, and so reach Behring's Straits. Failing in this, and indeed getting their ship so imprisoned amidst ice in attempting the task that they had to leave her, they made sledging excursions towards the north, reaching under exceptionally unfavourable conditions the same latitude which Hall had reached by the Smith's Sound route. They saw beyond the expanse of sea in front of them a stretch of land extending eastwards beyond the 83rd degree, and (now that President's Land has been found to be a mere geographical myth) the most northerly land yet seen, or at least quite as far to the north as the land in 83° 7′ seen by Nares's westerly sledging party.

We believe that along two, at least, of these routes, Captain Nares would have been able to approach the Pole more nearly, and would have encountered fewer dangers and difficulties than along the route which he was instructed to follow.

The Vienna correspondent of the *Standard* says that travellers through the interior of Servia give harrowing descriptions of the population. Distress in the west is fearful. The Vienna journals publish reports that lawless bands of insurgents in Western Bosnia are devastating the country, pillaging, burning and not sparing even the Roman Catholics, because the latter are peaceful.—*Pall Mall Gazette.*

BISHOP STROSSMAYER.

(Saturday Review.)

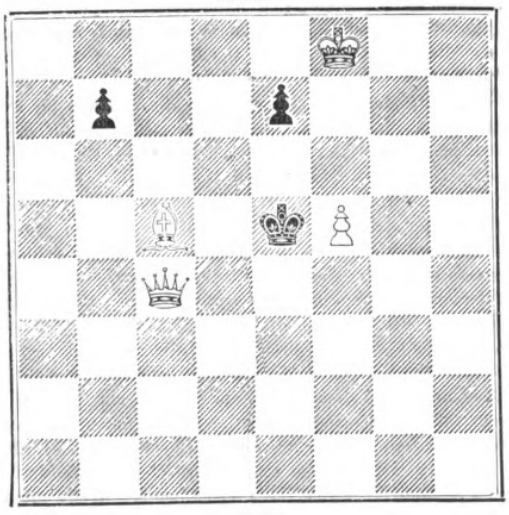
It is probable that not a dozen men in England ever heard of Bishop Strossmayer before the Vatican Council, when he became known not only as a powerful opponent of the doctrine of Papal Infability, but also as an eloquent extempore orator in Ciceronian Latin. It is said that he scandalized some of the venerable Fathers one day by prefacing an eloquent passage with the exclamation, "Per deos immortales!" The story may be only *ben trovato;* yet, whether true or not, it illustrates in an amusing way his easy familiarity with classical literature. But, unknown to English fame as Bishop Strossmayer may have been before the Vatican Council, he has been a long time one of the most prominent figures in the Austrian Empire. Born in 1815 in the Slavonian town of Essek, he received his education at the Universities of Vienna and Padua, and before he reached the age of thirty his reputation was established as the first preacher in Vienna. He became a special favourite with the Emperor, who appointed him Chaplain to the Imperial family and Court preacher. In 1850 he was nominated, at the early age of thirty-five, to his present see of Sirmio and Bosnia, and the eloquent Court preacher of Vienna soon became as known as a political orator and leader. He has been, indeed, for years the recognized and trusted leader of the Slavonian population of Austria; a fact which probably accounts, at least in part, for the comparative indulgence with which his opposition to the dogma of Infallibility has been treated at the Vatican. A weakness in the chest has obliged the Bishop to spend the winters of the last few years in Rome and when he pays his respects to the Pope it is said that they have a pleasant talk about things in general, but never a word about the Vatican dogma. This is wise, no doubt; for discussion might disclose serious differences which it might it might be difficult to pass over; and there would be some risk in pushing matters to extremes with the adored leader of some millions of Slavs who, stout Catholics as they are, have no sympathy with Ultramontane policy. The Bosnian portion of Strossmayer's diocese is of course under the political government of Turkey; so that the Eastern question has for him a very practical reality. He has been face to face with it for six-and-twenty years, and during that time it has occupied the uppermost place in his thoughts. It will be easily understood therefore that two Englishmen, who had started for the East to learn what they could for themselves about the great question of the day, should have accepted with alacrity an invitation from Bishop Strossmayer to visit him at Diakovar (pronounced Djakovar).

But where was Diakovar? Near Agram—so they were told in Vienna by everybody whom they consulted. To Agram accordingly they went, leaving Vienna at 7 A.M. by express train, and arriving at Agram at 8 P.M. Before retiring for the night they deemed it prudent to make arrangements for the morrow by engaging a carriage to take them over the six hours' drive which, according to their information, separated Diakovar from Agram. Their surprise may be imagined on learning that they had come a whole day's journey out of their way, and were, in fact, practically more distant from Diakovar at Agram than they had been at Vienna. However, there they were, and there was nothing for it but to make the best of the situation. As it happened, this turned out to be no difficult achivement; for Agram proved to be so interesting a place that they felt grateful for the accident which had led them to it. It is finely situated at the foot of a richly wooded range of mountains, and is divided into three parts—the free, or upper town; the lower, or chapter town; and the Bishop's town. The first crowns a hill which in Croatian is called "The Bear," and from any point of which the eye wanders over a wide extent of varied landscape, the horizon eastward being bounded by the hills of Bosnia, draped in a veil of purple haze. But perhaps the most attractive sight in Agram to a stranger with an eye for the picturesque is the market-place, especially on a Sunday, when the country people flock into it in their gala costume. And that costume who shall describe?—its brilliancy, its variety, the quaintness of its patterns and devices, and its harmonious blending of colours. We have seen the costumes of most places in Europe, but never have we seen anything so unique and picturesque as the market-place of Agram on a festal day.

As the travellers had come so much out of their way, they judged it best, on the whole, to go straight to Servia, and take Diakovar on their way back. The second attempt was more successful. Leaving Semlin at six in the morning by one of the fine Danube steamers, they reached Vukovar about four in the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

afternoon. Vukovar is some twenty-seven miles from Diakovar, and they anticipated a pleasant drive the following day to Bishop Strossmayer's enchanted palace; for such it seemed to be, since nobody, east or west, north or south, appeared able to give precise and accurate directions where to find it. They stopped at Vukovar in obedience to the "best information," and there discovered that they should have gone on to Essek, Strossmayer's birthplace. At Vukovar they allowed the porter of the hotel to engage a carriage for them overnight. The carriage, he assured them, was good, the horses still better, and the cushions best of all. It was to be at the door at nine o'clock the following morning; and at nine o'clock accordingly they were there to meet it. But they saw nothing answering to the description of the vehicle which they had engaged overnight. So they walked in the shadow of the trees till the carriage with the beautiful cushions should appear. Getting impatient at last they made inquiry, and were told that their carriage had been waiting for them for more than half an hour. On asking where, they were pointed to a thing on four wheels in front of them. It was, in fact, a bad specimen of one of the ordinary country carts; a basket on two poles, poised on four wheels, but innocent of anything approaching to a spring. The beautiful cushions consisted of two sacks stuffed with hay, and the steeds were a pair of shaggy ponies, which proved much better than their appearance. In short, the porter had taken them in; but it was a beautiful day, they were in good spirits, and agreed to forgive the porter and to regard the affair as an amusing adventure. And so they started at full gallop through the main street of Vukovar, in about as queer a vehicle as any two Englishmen ever travelled in. There had been unusually heavy fall of rain before their arrival, and the country, which is very flat, was here and there under water. The road from Vukovar to Diakovar is bad at its best, and it was now at its worst. It was only by a stretch of courtesy that it could be called a road at all in some places. For miles it consisted of deep furrows, and the wonder was that the ponies were able to get along at all, even at a walking pace. Their powers of endurance proved greater than that of the "carriage," for one of the wheels came off three miles after starting, and the machine had to be taken to pieces at a village smithy, which luckily happened to be near. This mishap wasted an hour and a half; but the journey came to an end at last, and the palace of Bishop Strossmayer was reached before it was quite dark. It is unnecessary to speak of the hospitable welcome which the strangers received, or of the views which he expounded on the engrossing subject of the day. Bishop Strossmayer is undoubtedly a born orator, whose great natural gifts are disciplined to perfection. Not the least of these gifts is his voice, which is powerful but admirably modulated, so that its tones as well as its words are eloquent. Now and then one catches an undertone of wailing musical sadness in it which is full of pathos. He is full, too, of fun and humour. It was delightful to hear him interpret the conceptions of the artist who is covering the walls of his new cathedral with frescoes of Old and New Testament subjects. Were he to leave no memorial behind him but this splendid Cathedral, his episcopate would well deserve to be remembered. He has been fifteen years building it, and it will not be ready for consecration for five years more. It would be rash for any one who is not an architect to hazard an opinion as to the probable cost, but it would certainly have to be reckoned in hundreds of thousands of pounds. The frescoes alone will cost a fortune. And the bulk of all this comes out of the Bishop's own pocket. He has indeed princely income, and he spends it like a prince. Nor are his benefactions confined to his own diocese. Is help required for the establishment and endowment of a scholastic institution in Agram? Strossmayer is appealed to, and sends 18,000 gulden. Is money needed in Servia for the wounded, or for the thousands of half-naked and famishing refugees from Bosnia and Bulgaria? Strossmayer sends 3,000*l.*



Strossmayer interprets very literally the Apostolic precept which says that a bishop should "be given to hospitality." Dinner is provided in his palace every day for forty or fifty poor people, and his own table seems to be free to all comers. His grounds are open to the public, who avail themselves freely of the liberty, not merely for the sake of the recreation, but in the hope of meeting the genial Bishop, who has a kind word and a bright look for all. People sometimes drive or walk from a distance for the sake of this pleasure, and then are pretty sure to receive an invitation to dinner. A polyglot party of between thirty and forty, French, German, Italian, and Croatian, met at his table in amicable confusion, while in an adjoining room a Zingari band discoursed wild Rommany music, varied occasionally with the strain of some modern air. One of the most picturesque features of the entertainment was a handsome black-bearded official, gorgeously apparelled in semi-Oriental costume, whose duty it was to exercise a general supervision, and see that there was no hitch. His official designation is Harem Pasha, a somewhat incongruous one in the domestic establishment of a prelate who is not only a celibate, but a man of ascetic habits in addition. It is of course a relic of the olden time when the Turk ruled in Hungary and Croatia. Nor is it the only relic. The people still come to church at Diakovor with a square piece of cloth which they spread out on the floor to kneel upon during their devotions; and close to the Bishop's new Cathedral is an ancient mosque, now used as a church. After dinner the Bishop took his guests over his spacious apartments, and undertook the duty of cicerone in explaining his art treasures, which are all of his own collecting. All schools of painting are represented on his walls, and among his modern pictures there is one fine portrait to which he specially called attention. It was the portrait of the handsome Jellacic, the Ban of Croatia, who played so conspicuous a part in the Austro-Hungarian war of 1848-9. Strossmayer and he were intimate friends.

Perhaps what strikes a stranger most in Strossmayer is the scrupulous equity of his character—that charity which "thinketh no evil," but "hopeth all things, believeth all things," of men and parties of opposite views and principles to his own. He is careful to look at all questions from the point of view which is not his own, and to make every possible allowance for those who differ from him. It is impossible not to feel, with a sigh, that if all Churches were blessed with bishops of the type of Strossmayer, the aspect of Christendom at this moment would be very different from what we see.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.42 to 0.48
Plain Mousseline de Laine	—30 yds.	30 in.	0.17 to 0.19				

Sugar.—The market has of late been very quiet and prices have declined considerably.

Sugar:—Takao in bag	per picul	$4.10	China No. 4 Kook-fah ,, $5.40
,, in basket	,,	$3.90	,, No. 5 Kong-fun ,, $4.80
Taiwanfoo in bag	,,	$3.95	,, No. 6 E-pak ,, $4.10
do. in basket	,,	$3.75	Swatow Brown ,, $3.50
China No 1 Ping-fah	,,	$7.40	Daitong ,, $3.50
,, No. 2 Ching-pak	,,	$6.70	Japan Rice $2.10 to $2.25
,, No. 3 Ke-pak	,,	$6.00	Kerosene Oil $5.00

Kerosene Oil is quoted about $5 but we have no transactions to record.

EXPORTS.

Silk.—The first telegrams of the New Year bring good news from the home markets; they have imported new activity to the demand, and prices, on which we have to report an advance of fully $30, are tending upwards.

Since the 23rd ultimo arrivals are 525 bales, and settlements may be estimated at about 650 bales.

We quote:—

Hanks.—Best	No. 1 and 2	$850 to	$890
,, Good	No. 2	$840 to	$850
,, Medium	No. 2½	$800 to	$830
,, Common	No. 3	$700 to	$780
,, Inferior	No. 4 and 5		
Oshiu.—Best		$800 to	$830
,, Medium to Good		$730 to	$780
Kakeda.—Best		$960	
,, Medium to Good		$850 to	$900
Filature Silk		$900 to	$1,000

Tea.—Businesss during the closing week has been very restricted owing to the general observance of the New Year's holidays, but a little more activity was evident yesterday. Settlements amount to 750 piculs, at unchanged rates. Arrivals have been very small, and stocks in Yokohama almost nominal.

Common	$10.00 to 12.00	Fine	Nominal.
Good Common	13.00 to 15.00	Finest	
Medium	16.00 to 18.00	Choice	
Good Medium	19.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—There has been very little doing during the week, as was expected, but in consequence of higher rates in China there has been a corresponding advance here.

Rates close as follows:—

TRADE MARK.

September 30, 1876. 26ins.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VIII.—No. 2.] YOKOHAMA, SATURDAY, JANUARY 13, 1877. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The announcement of the vast reduction made in the land-tax and the taxes for local purposes hitherto levied upon the farmers, reached us too late for comment last week, and we must even now plead that the time necessary for a full consideration of the measure by which this has been effected, has not been at our disposal during a week broken by the work imposed by the departure of the American mail, and the preparation of such part of the summary of the events of the past year as will be found elsewhere. But the measure is one of vast importance and will relieve the land of annual burdens amounting in all to about 16,000,000 *yen*—8,000,000 of land-tax, and a similar amount of taxation for local purposes. Undoubtedly it may be traced to the late serious disturbances among the farmers all over the Empire, and it will be acknowledged that the promptitude with which their remonstrances have been met is alike creditable to the Government and strong testimony to the justice on which they were based. It is certain that the concession could hardly have been made but for the measure of last August capitalizing the hereditary incomes of the nobles and gentry, so that circumstances *ex post facto* have brought with them something like the justification for it which we stated to be necessary at the time it was passed. Yet we may hardly suppose that the saving afforded by it was entirely available for the reduction of taxation announced last week. Rather may it be suspected that the eight millions of *yen* thus annually saved were to be devoted to the maintenance of the new institutions by which the Government has sought to advance the progress or gratify the ambition of the country, so that reductions of many kinds must now be effected to enable the Finance Minister to make his estimates of revenue and expenditure for the next year balance each other. The greatest commotion exists in Tôkiô in consequence of the contemplated reductions of expenditure, and thousands must be in doubt at this moment whether or not they will dismissed from public employment. The landed interest ought to be thoroughly pacified and contented, and—much more than this—should, under the influence of liberal commercial legislation, extend its area and power of production. We fear that the extension of the roads will suffer, and that the additional sections of railway towards which we looked forward with some confidence, will have to be postponed. But we shall have internal peace and contentment, the land better disposed than of yore towards the Government, and less danger of any disturbance from the *samurai* or other discontented classes.

Since the above was written, an estimate, which will be found elsewhere among the items from our daily issue, has been made of the reductions of expenditure imposed on each department, and from this much may be inferred regarding the direction of the contemplated economies.

The native newspapers have lately contained many portents of troubles in the Kagoshima *ken*, but an authority to whom we can refer with every confidence, both for the extent of his information and the intelligence with which he generalizes it, reports that everything is quiet in the *ken*, and promises to remain so.

A very capable critic has opportunely taken off our hands this week the task of criticising the performance at the Gaiety Theatre on Wednesday evening last. His letter will be found elsewhere, nor shall we doubt that our readers will be glad of a change from the rather serious cast of our own remarks to the more entertaining manner of our correspondent.

A very entertaining and successful Fancy Dress Ball was given on Friday evening last by the members of the Yokohama Fire Brigade, at which a large number of the Residents were present.

From the "Japan Mail Daily Advertiser."

Monday, 8th.

The *Taihei Maru* returned on Saturday from the Bonin Islands, and reports that on the way down from this port the vessel stopped at the island of Fatsisio to land the Governor, but experience some difficulty in finding a suitable spot for doing so, as there are no good anchorage to be found there, nor a convenient landing place.

During their stay at the island the Russian gun-boat *Haidamak* put in disabled, having encountered a cyclone about 500 miles to the eastward of the islands, during which she lost her masts and sustained other damage, besides having used up the greater part of her coal. She left again for Shanghai, having taking in a quantity of firewood and after some few days detention.

At the Bonin Islands the *Taihei Maru* landed some forty Japanese officials and others who went there to take formal possession on behalf of the Japanese Government, and to form the nucleus of a colony.

The increasing use of ice during the summer months by the residents of the capital has developed a new form of industry in the neighbourhood. All over the country between this port and Tôkiô may be seen small ponds specially arranged for the collection of ice. They are screened from the sun by straw mats, so that ice to the thickness of two or three inches speedily forms, which is sawn into slabs about 18 inches square and stored in ice-houses until there is a demand for it. As the pond water of which this ice is formed is none of the cleanest, it is more than likely that the consumption of it will propagate disease in some form or another, but it is, unfortunately, much more likely that no amount of warning will prevent the Japanese from consuming it.

Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun.*

Some disturbance is reported at Takasaki, in the province of Jôshu, on account of the land-tax, and there is also a rumour of some discontent being shown in Nagano *ken*, arising from the same cause.

From the *Chôya Shimbun.*

His Majesty the Mikado presided over the opening of the *Daijôkuan* on the 4th instant.

From the same.

Many officials of the Imperial Household left by the *Nagoya Maru* for Kobe on the 4th instant, in order to proceed thence to Kiôto and make preparations for the reception there of His Majesty the Mikado.

From the same.

The Coreans who were wrecked on the coast of Satsuma some time ago have been sent back to their country.

Tuesday, 9th.

From the *Chôya Shimbun.*

NOTIFICATION No. 1.

It is hereby made known, that in accordance with the decree of His Imperial Majesty the Mikado, the land-tax throughout the country from and after this date is reduced to 2½ per cent. on the value of the land.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

Tôkiô, 4th January, 1877.

IMPERIAL DECREE.

Almost immediately after the Restoration, duties of a novel nature, and many needful improvements were undertaken by the Government both at home and abroad, which necessarily greatly increased the national expenditure. The burden of this fell upon the people and was hard to be borne for which reason We ordered that the mode of taxation should be re-modelled and settled at 3 per cent on the value of the land, thinking thus to afford relief to Our people. But having recently visited various parts of Our dominions, We have carefully observed the agricultural population, and, sympathizing with their condition, have determined to still further reduce the land-tax to 2½ per cent on the value of the land. We therefore order all officials to act in accordance with Our will, and to be as economical as possible in the public expenditure.

4th January, 1877.

NOTIFICATION No. 2.

His Imperial Majesty the Mikado having decreed that the land-tax should be reduced, and that as much economy as possible should be observed in the expenditure, it is hereby declared that the tax for local purposes to be levied upon the people, as made known by Notification No. 272 issued in July 1873, must not exceed one-fifth of the amount of the land-tax.

SANJÔ SANEYOSHI,
Prime Minister.

Tôkiô, 4th January, 1877.

NOTIFICATION No. 3.

His Majesty the Mikado was to set out for the province of Yamato and city of Kiôto on the 14th instant, but His Majesty's departure has been postponed until the 22nd instant. The departure of H. M. the Empress Dowager was to have taken place on the 8th instant, but has also been postponed until the 11th instant.

SANJÔ SANEYOSHI,
Prime Minister.

6th January, 1877.

From the *Akébono Shimbun.*

Branch offices of the Army Department are to be established at Misaki and Honmoku, and telegraph wires are to connect them with the chief office at Tôkiô.

From the *Hôchi Shimbun.*

There a rumour afloat that Messrs. Shimadzu and Saigo of Satsuma intend to visit the capital, accompanied by seventeen battalions of Satsuma troops, and they are said to be due about the end of this month. We can hardly believe this is true, but yet, strange to say, the price of rice has risen in consequence.

From the *Nichi Nichi Shimbun.*

New pumping machinery having arrived from England for the Takashima coal mine, it is expected that all the water with which the mine was flooded some time ago to extinguish the fire then raging in the old unused galleries, will now speedily be pumped out, and that by the month of March the mine will be in the condition that it was before the fire took place.

From the same.

A residence for the *Daijô Daijin* is to be built at Iwaida-chô, Tôkiô, at the Government expense.

From the same.

A fire occured at Numadzu, a town on the Tôkaidô, at 1.20 a.m. on the 8th instant which destroyed 200 houses.

Wednesday, 10th.

The Foot Paper Chase yesterday afternoon was very well attended, there being a good number both of resident and naval competitors. The run lasted about 50 minutes, A. H. Dare coming in first, closely followed by J. J. Dare; but the first prize was awarded to Thomas Finley of the *Modeste*, and two other sailors obtained second and third prizes.

The law of conscription is to be applied to the Japanese inhabitants of Yezo, and the head quarters of the troops so enlisted will be at Hakodate.

From the *Nichi Nichi Shimbun.*

A fire broke out at Shiwodome-chô, Hakodate, at 2 a.m. on the 6th instant, which destroyed twenty houses.

From the same.

The Government officials are busily engaged in devising plans for retrenchment in their respective departments, in order to meet, as ordered by His Majesty the Mikado, the late reduction in the land-tax.

From the *Chôya Shimbun.*

For the future all postal business at Shanghai will be conducted at the Japanese Consulate there.

From the same.

Mr. Ogi, the Minister of Justice, will visit Yokohama shortly to investigate the case of the recent fight between the natives and the sailors of the German man-of-war *Vineta.*

From the same.

The Paper Money Department is now occupied in making, with all possible haste, the new pension bonds, with the view of having them all handed over the *kuazoku* and *samurai* by June next.

From the same.

There are many rumours of late concerning the *samurai* of Kagoshima *ken* (Satsuma). From a report which was current at the end of last month we judge that Shimadzu, Saigo, and the members of the Bôron party all differ in opinion, and that the latter recommend proceeding to the capital, which causes great anxiety to Mr. Saigo.

From the same.

Some discontent prevails among the *samurai* of Shônai.

From the *Hôchi Shimbun.*

The steamer *Takao Maru*, in which the Mikado will proceed to Kobe *en route* to Kiôto, has been thoroughly prepared for the reception of His Majesty, and left Yokosuka for Yokohama on the 7th instant.

From the same.

A newspaper will shortly be published at Kiôto called the *Saikiô Nichi Nichi Shimbun.*

From the *Akébono Shimbun.*

The *Hôchi Shimbun* has given 50 *yen* to the sufferers by the late fire at Bakuro-chô, Tôkiô.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Thursday, 11*th*.

The Japanese men-of-war and merchant vessels in the harbour are all dressed with flags on account of the departure of H. M. the Empress Dowager from Tôkiô to-day, on her journey to Kiôto.

From the *Chôya Shimbun*.

In regard to the rumoured trouble in the Kagoshima *ken*, we now hear that six officials belonging to the *Saibansho* of that *ken* left for the capital on the 6th instant, and complications of a very grave nature are said to exist in Satsuma. Saigo is reported to have left for Tôkiô on the 5th instant, and may therefore be expected to arrive in a few days.

From the same.

A magazine, called the *Moshio-gusa*, made its appearance on the the 9th instant at Tôkiô.

From the *Hôchi Shimbun*.

We hear that a Chinese firm is about to run a line of steamers between Kobe and Shanghai.

From the *Nichi Nichi Shimbun*.

Mr. Itô, the editor of this paper, has been summoned to appear at the *Saibansho* on the 10th instant, this being the first prosecution in the Tôkiô Court this year for a violation of the Press-laws.

Friday, 12*th*.

The M. M. Co.'s steamer *Tibre*, with French Mails on board to the 3rd December, will leave Hongkong to-morrow, Saturday, the 13th instant, at mid-day.

We are glad to observe that the *Kenrei* is at length about to undertake the long wished for dredging of the Creek, which will be closed to traffic between the first and third bridges during the progress of the works, commencing on the 16th instant.

The Committee of the Kiôto Exhibition, which will be held for a 100 days from 15th of March next, seem to be anxious to obtain foreign exhibits, and, in a circular they have issued, promise that "an award of the articles will be made and prize medals given to the most deserving in their respective classes."

From the *Hôchi Shimbun*.

The new building for the *Dashin-In* having been completed, will be opened for business on the 15th instant.

From the same.

As the farmers of Nosé, near Osaka, have evinced a disposition to create some disturbance about the land-tax, a force of fifty police constables has been sent there to prevent a breach of the peace.

From the same.

Several officials of Kagoshima *ken* have disappeared from the capital, and as it is thought they may try to take passage to their native province by the mail steamers, several police men from Tôkiô are stationed at the Yokohama hatoba to arrest them if they should appear.

From the *Nichi Nichi Shimbun*.

We hear that great changes are to take place in the various Government departments.

From the same.

The Italian Consul at Kobe requested the honour of a visit from the Mikado when he arrived at that place on his way to Kiôto, but as His Majesty would go on to Kiôto without stopping at Kobe, if possible, the invitation was graciously declined.

From the *Chôya Shimbun*.

The Government officials seems to be very busily occupied. The *Sangi* remained at the *Daijokuan* during the afternoon of the 10th instant instead of proceeding as usual to their several departments.

From the same.

Since the 8th instant a special Court has been sitting for the purpose of trying Nagaoka and others, who murdered the policemen at Shinbashi, Tôkio, last October.

Saturday, 13*th*.

From the *Nichi Nichi Shimbun*.

In order to carry out the economical changes which have been ordered in the various Government Departments, the annual expenditure of each office has been reduced as follows:—

Sei-In	300,000	instead of formerly	494,000
Genro-In	150,000	,,	207,000
Gaimusho	180,000	,,	185,600
Legations & Consulates	500,000	,,	548,300
Naimusho	2,520,000	,,	3,699,812
Okurasho	1,300,000	,,	1,798,600
Rikugunsho	6,000,000	,,	7,250,000
Kaigunsho	3,300,000	,,	3,549,700
Mombusho	1,200,000	,,	1,704,800
Kobusho	3,000,000	,,	4,900,000
Shihosho	1,280,000	,,	1,420,500
Kunaisho	280,000	,,	316,000
Chiri-kaisei-kioku (the office for regulation of land-tax)	150,000	,,	471,000
Keishicho	1,100,000	,,	1,195,000
Kaitakushi	1,525,660	,,	1,905,660
Total	22,785,660		29,617,972

Total reduction.....6,832,312

A reduction in the salaries of officials has also been made. Those of the 1st and 2nd class remain as before, but are liable to a tax of $\frac{1}{3}$ per cent, while the salaries of those of the 3rd class is reduced to 280 *yen* per month, with a tax of $\frac{1}{10}$ per cent; the 4th class to 200 *yen*, the 6th to 100 *yen*, and 7th to 80 *yen* per month, all liable to a reduction for tax of $\frac{1}{10}$ per cent.

From the *Chôya Shimbun*.

We hear that the *Daijôkuan* has issued a notification to the effect that the *Kiobusho* (Department of Religion) and *Keishicho* (the Bureau of Police) have been abolished, and the affairs formerly transacted in those offices will now be transferred to the *Naimusho* (Home Department). We also hear that other changes have taken place in the Government Departments, but are yet unable to obtain particulars.

From the same.

A fire broke out at Kurôyemon-chô, Osaka, at 5 a.m. on the 11th instant, which destroyed forty houses.

From the same.

The *Kaitakushi* has purchased the schooner *Rupak*, which will be towed up to Shinagawa on the 11th instant.

From the *Akébono Shimbun*.

We hear that a Russian naval depôt is to be established at Inasa, Nagasaki.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 24th December, 1876.

Passengers, Parcels, &c.	$6,584.64

1876.

THE year which has just closed upon us has, on the whole, been a period upon which both the Government and people of this country may look back with pride and satisfaction. It has not been free from troubles, anxieties or even convulsions, nor can its record confer a title to unqualified praise upon those at the helm of the national affairs. But neither does it involve many severe adverse reflections on them; while, on the other hand, much which has been done establishes a fair claim to commendation, and that Power in whose hands are the issues of prosperity and adversity, has abundantly blessed the land.

We closed our Summary of the events of 1875 with a short reference to the unsatisfactory condition of the relations then existing between the Government of this country and that of Corea. Nor was it alone between the Governments of the two nations that unpleasant feelings existed. On both sides the people were irritated and defiant; the Coreans had assumed an attitude of irritating and gratuitous insolence, the Japanese one of increasing determination that insults which had passed from words into deeds, must be atoned for and punished. In the same issue which contained that Summary, we published and drew special attention to a document, taken from the *Hiôron Shimbun*, in which the intentions of the Japanese Government in sending an Envoy to Corea—a course which had been previously determined on—were laid down with great clearness and circumstantiality, and it is only just to the Japanese to say that the line of conduct recommended in that excellent minute, was carried out with an admirable union of fidelity to its spirit and ingenuity in interpreting its letter. The Envoy chosen to carry the demands of Japan to Corea was KURODA, an officer of high rank, with a solid reputation for vigour and firmness—although not apparently a good departmental chief—and with him was associated INOUYE BUNDA, formerly Finance Minister, a Chôshiu man, of somewhat irregular orbit, but clear-headed, sagacious and of undoubted ability. They were supported by a squadron of eight steam-vessels and arrived at Fusan on the 15th January. Some apprehension had been previously felt by the Japanese Government regarding the attitude which China might assume towards these proceedings. The Emperors of China had long regarded themselves as suzerains to the rulers of Corea, and it was not unnaturally suspected that the Court of Peking might resent a demand for explanation and redress preferred to its tributary and not to itself. But, far from taking this view, the Chinese are believed to have acquiesced immediately in the Japanese proposals to negotiate directly with Corea, and to have expressed a very decided opinion that the outrage for which redress was sought would be best punished by such direct application. All misgivings on this head having been removed, the Envoys proceeded to their work. Their squadron, though quite as numerous as the occasion demanded, was one of small actual warlike efficiency, and many were the ingenious stratagems employed to persuade the Coreans that any resistance offered to it would be alike unavailing and terribly punished. During the suspense which occurred between the arrival of the Envoys at Fusan and the receipt of intelligence from them, active preparations were made here to throw a body of troops into Corea in case of necessity with the least possible delay. Artillery, small arms, ammunition, provisions and transports were rapidly brought into an advanced state of preparation, the popular mind was excited at the anticipation of possible war, and, as in the Formosa affair of the previous year, the people stood steadily by the Government. The negotiations were very protracted, and might have been less successful but for the activity constantly maintained by the squadron, which, without doing a single act calculated to irritate the Coreans, kept up a constant bustle and show out of all proportion to the force it represented. The sides of the transports had been painted so as to look like men of war with guns behind the imaginary portholes, and boats plied actively between the various vessels, which were also constantly employed in exchanging signals. Nor can it be doubted that these *ruses*, legitimate enough under the circumstances, and hardly likely to meet with objections from the countrymen of COCHRANE, made an impression upon the Coreans which was not without value and effect. Many of their leading men must have had a clear recollection of events not so far distant but that the efforts and loss they cost the nation, though sources of some pride, were such as to render the repetition of them undesirable. No radical antagonism existed between the two nations. If Japan remembers with pride the laurels she won in Corea, under perhaps the only genius of a high order she has ever produced, Corea may also reflect that she tore them from the brow of his son; nor will a nation which, in spite of all its present decay and degradation, yet harbours the high instinct which gives to letters the precedence over commerce, be likely to forget that she was the channel through which learning and religion were conveyed to the Japanese.

Be these things as they may, the Envoys were successful. A treaty of peace and commerce was signed on the 27th of February, and the squadron returned immediately to Japan. For reasons which have never been satisfactorily explained, the treaty was not published until it had been in the hands of the Cabinet something like three weeks. But it was received generally with decided approbation both by natives and foreigners. The independence of Corea was wisely acknowledged, somewhat to the disappointment, however, of the politicians of the old school, whose pride was gratified at the thought that Corea was still in some sense a tributary of Japan; provision was made for the opening of three ports to trade within a given time; for the survey of the Corean waters by Japanese ships; for the protection of shipwrecked crews—extended subsequently to the ships of all nations; and for the jurisdiction of their own authorities over Japanese subjects. The small trade which had previously existed between the two countries has been somewhat extended by this instrument, steam communication has sprung up, and postal facilities have been established by the Japanese Government. But it is absurd to cherish any illusions with regard to Corea. It may have attractions for the lettered antiquary as one of the cradles of learning, if the word may be applied to the ingenious, but idle speculations of a people without the rudiments of positive knowledge or the possession of any method by which it may be acquired. But it is an extremely poor country, the majority of its people live in contented filth and abject poverty, the comforts of life are unknown, its decencies ignored if even speculatively acknowledged, and the advantages likely to arise to Japan from the restoration of good feeling between her and her neighbour, will probably to be rather sentimental than economical. Not the less, however, is the episode of the Corean expedition and treaty one which may be remembered by the nation with reasonable satisfaction and pride.

The events to which we have just now referred were

so inseparably interwoven with those of the previous year, that though they have carried us over the first quarter of 1876, we could not but give them precedence over all others. But we must revert to the opening of the period under review in order to glance at a matter which has far more important bearings upon the welfare of the country than any relations with Corea, whether disturbed or pacific, can possibly have. We allude to the position of the national finances.

On the 22nd December 1875, the FINANCE MINISTER presented his Estimates of Income and Expenditure from the 1st July 1875, to the 30th June 1876, to which a prefatory memorandum was affixed, showing the general principles and strong determination by which he was guided and animated in the management of the all important department under his control. The following extract from this memorandum deserves special notice at present, because it may be presumed to embody these.

Mr. OKUMA said :—

It is my opinion that any fixed system of finance is difficult to establish and easy to be destroyed, that it is difficult to preserve pure in its springs, and liable to become polluted in its course. Estimates are necessary in order to prevent irregular expenditure, and to strengthen habits of economy. If this object is not attended to, and this evil repressed, the projects of officials will be allowed free scope, their minds will become relaxed, requests will be granted which ought not to be granted, and there will be an increase of expenditure which ought to have been curtailed. If this evil overflowing from above should find its way below, and the amounts fixed here should be exceeded, these tables would be no better than books on a shelf, and in the end no good result would be attained by them. My apprehensions are no doubt excessive, but I have felt bound to state my honest opinion and therefore, in presenting these tables, I have set forth my humble ideas and invite your judgment upon them. It is my hope that they may in some small measure facilitate the work of administration.

In attempting to bring this department under such regulation as satisfies foreign critics, the FINANCE MINISTER has done well in resorting to those mechanical appliances without which any finance administration, however well-intentioned or honest, must remain without any solid guarantee for effectual control. Besides the estimates which have now for some years been furnished by the Department, Mr. OKUMA has inaugurated a system of book-keeping by means of which the accounts of the Empire are kept with all the clearness and regularity of one of the governments of the West, nor can there be a doubt that the country is much his debtor for the introduction of this improvement. How much it was required is shown by the fact that, up to this very moment, the accounts of the old *Han* are not yet closed, and the Government is, in consequence, in doubt as to the total quantity of paper money for which it is responsible, though it is only right to say at the same time that this promises to be considerably below the old estimate made of it. Nor was this new system introduced before it was required. It is very obvious that the Imperial accounts have, up to a very recent date, been in a state of great disorder, a fact demonstrated by the estimates under review. For instance: the estimated sum derivable from the Land-tax from the 1st July 1875 to the 30th June 1876, was stated at *yen* 51,500,000 as against *yen* 44,600,000, not indeed for the exactly corresponding previous period, but for the year ending the 31st December 1874, up to which date the accounts had hitherto been made. When an explanation of this enormous discrepancy was sought, it was found to lie in four facts, three of which distinctly inculpate the old system of accounts which the FINANCE MINISTER has now happily abolished.

As these estimates had a new point of departure and a new terminus, owing to the change which had been made in the financial year, it was impossible to deduce from them any very certain conclusions regarding the condition of the finances. But the resources of the previous period had been much strained by the Formosan affair, and therefore no great surprise was felt that the estimated balance of revenue over expenditure only amounted to *yen* 89,760,—in other words, that even if real, it was practically nominal. There had also long been a growing conviction in the minds of all critics who had narrowly watched the condition of the country, that the rate of expenditure which had been maintained for some years was out of all reasonable proportion with its resources, and wholly incompatible with the welfare and progress of the agricultural classes, who are almost the sole source of its wealth. How the financial equilibrium was restored, we shall see when we arrive at a rather more advanced period of the year.

On the 28th March a short notification was issued by the Prime Minister to the effect that no person was thenceforward permitted to wear a sword, except when in court dress, or if a military, naval or police officer. The practice of carrying swords had for some time been falling into disuse. The Japanese gentleman who had been abroad scorned any longer to wear a weapon which the races he aspired to imitate had long discarded, except on occasions of ceremonial, and he had already willingly fallen in with the permission to lay it aside issued some years previously—the utmost the Government could then do to discountenance a practice which had too often led to outrages upon foreigners. In the main, too, it must be confessed that the upper classes of society, and therefore those who were regarded as examples by the lower *samurai*, had so completely identified themselves with the intellectual movement which was carrying the nation away from its old customs and traditions, that the appendage they had been accustomed from childhood to regard as a source of pride and a badge of gentle birth, had become to them a relic of days from which they rejoiced to have escaped. Of course, in the more remote provinces of the Empire, where the force of this intellectual movement was less felt, or where there existed a tendency to oppose it, the edict was received with strong opposition, not the less deeply felt because suppressed. An isolated case or two occurred in the capital itself of men appearing in public with the old cherished badge of their rank, but they were at once disarmed by the police without venturing to draw it. Others, and especially those who were travelling between the coast ports in the steamers of the Mitsu Bishi Company, carried their swords, or had them carried by servants or old retainers, in wrappers which but ill-disguised their contents. These covert protests, however, were derided by the populace, and, as might have been expected, soon disappeared before the will of the Government and the force of public opinion. The feeling which gave rise to them was destined to show itself openly and seriously once more, as we shall find later in the year. But it then received a further blow, as we shall also see, and may be considered now so entirely extinguished that the Government has nothing more to apprehend from it.

In May an official announcement was made by the Prime Minister that His Majesty the MIKADO had resolved upon making a tour in the northern part of his dominions, and a short code of instructions was issued at the time to the local authorities of the districts through which he purposed to pass, in regard to the forms and mode of his reception. These instructions were characterized by the greatest simplicity. His Majesty had resolved that his presence should entail the smallest possible burden upon his people, while pains were to be taken to discover and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

occasion to reward those special cases of unobtrusive merit among his humbler subjects which might be brought under his notice. The simplicity of these preparations was advantageously contrasted by the Press with the ostentatious and costly pageants which attended the movements of the Shôgûns, and praise was lavished upon the paternal tenderness and consideration which promised to make His Majesty's presence a source of unalloyed pleasure to his faithful people. Early in June the MIKADO took his departure from the capital, attended by the EMPRESS and her suite, the great officers of state, and an imposing military escort. But after having partaken of refreshment at the first halting station, His Majesty took leave of his august Consort, dismissed such of his Ministers as could not be spared from their duties to accompany him, and proceeded on his journey. The simple programme laid down for his progress was strictly observed. Wherever he went he was received with exhibitions of respectful loyalty and affection, and foreign travellers who passed through the towns and villages on his route coincidently with him, saw with pleasure and admiration the simple yet effective decorations which the Japanese employ so happily on these and similar occasions. Lanterns and banners, gay dresses, arch and smiling faces, holiday looks and holiday tones greeted His Majesty everywhere along his line of march. The old prohibition enforced against looking upon the face of the Sovereign had left no traces of its existence, the closed and sealed lattices of former times were replaced by open slides withdrawn from before happy faces, and no check but that which their own curiosity or respect imposed, was placed upon the movements of the people, who had been enjoined to pass to and fro and pursue their occupations according to their wont. As His Majesty went along, enquiries were made into the condition of the peasantry and farmers, some of whom were summoned into his presence, questioned regarding their state, or congratulated upon the improvements they were reported to have effected. Rewards were conferred upon the deserving, benevolences dispensed to the distressed, schools and manufactories were visited and garrisons reviewed. His Majesty proceeded as far northward by land as Awomori, whence he was conveyed in a steamer, with a suitable escort, to Hakodate. Whatever satisfaction he may have here received from the growth and prosperity of the town, was not destined to be damped by a sight of the artificial and lifeless capital, some hundred and thirty miles to the northward, which has been created by the lavish expenditure and visionary projects of one of the public departments, and after remaining a few days in the Island of Yezo, he embarked again for the capital, where he arrived on the 21st July. It cannot be questioned that his journey was of signal service to the Government and the country.

The arrival of the Corean Embassy just previous to His Majesty's departure permitted of the presentation at Court of the members of an interesting but unsavoury mission from a people with whom we have never been able to feel much sympathy. The spirit which induces a nation to withdraw themselves from the rest of the world and exclude all foreigners from their territory, may have some element of respectability in it if they are persuaded that conquest will be the inevitable result of foreign intercourse, and doubtless the Coreans are animated by this fear. But their ignorant disdain of the civilized nations, their inhospitable treatment of neighbours, or those whom misfortune has hitherto cast in distress on their coasts, their arrogance and contumacy, their preference for dirt and aversion to decency, have placed them beyond the pale of our imperfect sympathies. There is no reason to think that the members of the Mission were at all superior in these various respects to the mass of their countrymen, and it is not in human nature to feel any active sympathy with people for whom you experience a contempt which is only exceeded by that with which you inspire them. Th commerce of pioneers is not fastidious, and it is possible that were the country opened up to foreign trade it might attract a few Europeans or Americans, and yield some small advantages. But they could at most be of a trifling nature, and nothing that we have recently learned of the country gives the least ground for believing that the opening of it to foreign trade is even remotely desirable.

About the time of the year at which these events occurred, a commercial movement took place in this country of which mention must not be omitted even in a Summary usually devoted exclusively to political events.

Towards the end of May reports began to arrive from Europe of a great apprehended deficiency in the silk crops of France and Italy. Prices were still low, such advance as was demanded by the Japanese was paid without serious reluctance, and the market was immediately swept of every bale of workable silk. But as telegrams came in day by day announcing the confirmation of the earlier suspicions regarding the European crops, prices rose amain, and an advance of 38 per cent was established in the course of 22 days. A low and declining rate of exchange favoured the movement, although buyers began to hesitate regarding the prudence of continuing to purchase at rates which seemed so extravagant in relation to those of the previous twelve months. But still more encouraging news raised prices higher and higher day by day, and an ever increasing avidity was shown to secure every bale which the Japanese brought to market. The movement continued until silk which a few months previously had only been worth $450 per picul, realized nearly $1,200, and meanwhile the Japanese had ransacked every corner of the silk districts for the wherewithal to supply this profitable and unusual demand. By the middle of October 14,000 bales had been shipped against about 4,000 in the previous year, and, roughly speaking, this largely increased quantity had brought on an average twice as much money per picul as the crop of 1875. The paper currency was so strained to provide means for carrying on the trade, that it rose to about 7 per cent premium, and only declined to its normal rate when the pressure for remitting money into the country had subsided. The movement itself was of vast benefit to the country, the commercial condition of which revived under it to an extraordinary degree and from a point of most severe depression.

Early in August a notification was issued by the Prime Minister which fell like a thunderbolt on the country, extorting, indeed, the gratitude of the masses of the people, but inflicting an irrecoverable blow upon the privileged classes. It embodied a measure for the capitalization of the hereditary incomes and life-pensions of the nobles, gentry and lower *samurai*, and their conversion into interest-bearing bonds for the capital, at from 5 to 14 years purchase, in definite proportion to the amount of such income or pension, the larger annuities terminating in the shorter period, and *vice versâ*. Thus, incomes of 70,000 *yen* and upwards were to be exchanged for bonds, bearing 5 per cent interest, for five years purchase of the annual amount; and as the amount of the hereditary income or pension was less, so the number of years purchase, and the rate of interest borne by the bond, were greater. The incomes of the greatest nobles would therefore be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

first extinguished, and those of the lowest *samurai* last.*

It should be observed that steps in this direction had long before been taken by the Government, by a preparatory and permissive measure, which enabled the members of the pensioned classes to sell their terminable or perpetual annuities for a sum representing from 5 to 6 years' purchase of their annual amount. For this purpose the sum of £2,400,000 had been borrowed in London in the year 187 , and was soon entirely paid away to applicants desirous of availing themselves of the privilege offered by the measure. The sum annually charged to the revenue on account of hereditary incomes and pensions immediately fell in the accounts of the succeeding year from *yen* 19,484,911 to 17,805,366, and a very easy calculation will show that the redemption on this basis of claims, some of which were perpetual, while others had long terms to run, was profitably effected by money borrowed for the purpose at about 7 per cent. The Government was at special pains to prevent a misuse of the privilege offered by the measure. It foresaw that many applicants for the commutation of their pensions would avail themselves of it with less seriousness of purpose than a proper consideration of their responsibilities to others would justify, and it dreaded the creation of a class of needy and disappointed men who had sold their birthright lightly, and would squander the proceeds in idle and demoralizing dissipation, or in the pursuit of visionary schemes, to return afterwards in poverty, discontent and unsettled habits upon the hands of the provincial authorities. It therefore took measures to guard against the evil, and strict enquiries were made of all applicants as to how they proposed applying the funds placed in their hands. In spite of this care, however, it is certain that a large proportion of those who thus parted with their claims on the state made but an unsatisfactory use of the money for which those claims were commuted. Unaccustomed to business, and greatly incapacitated by their previous habits or occupations for acquiring any practical knowledge of it, they easily became the prey of the designing, or the dupes of their own visionary projects. Abundant references will be found in the translations from the native papers which have appeared in these columns, to their inexperience of life and their failure in business or associated enterprise, and it is much to be feared that though the state has been relieved of much of the burden their maintenance formerly entailed on it, it has not greatly profited by their conversion into more independent and wealth-producing subjects.

It is needless to say that the important measure now under consideration was extremely acceptable to the mass of the people and greatly extolled by the native Press, which had long made the idleness of the privileged classes and their dependence upon the agriculturists, the theme of abundant reproach. But foreigners, whose views of the indefeasibility of private property and the limitations of the power of the state over it, are much more serious and scientific, if we may use the term, than those of the Japanese, could not be expected entirely to waive them in favour of a measure which was in its essence deeply tainted with spoliation, and the necessity for which was directly and distinctly traceable to the large expenditure of the Government since the time of the Restoration. The scheme was therefore criticised with some severity by the foreign Press, as one which tampered with the great principles on which property, as the basis of society, exists; nor can it be pleaded that such criticism was wholly devoid of force. But it was contended on the other hand in these columns that if ever there was a case in which the apophthegm '*salus populi, summa lex*' was applicable, it was this. Int he old condition of affairs thirty millions of people were kept in enforced poverty from which there could be no escape so long as the enormous burden represented by the hereditary incomes remained on their shoulders—a burden not repudiated by the measure, but simply reduced in weight and by this means gradually removed altogether. The nation was charged with the payment of some £27,000,000 spread over thirty years, to redeem a perpetual annual burden of about *yen* 18,000,000, and though the disproportion between these amounts will forcibly strike foreign readers, they should always remember that the normal rate of interest in this country in fully three times as high as the average rate in wealthy countries like England or Holland. It may indeed be a question whether the Government actually intended to give the annual saving effected by this measure—8,000,000 *yen*—to relieve the burdens on land; indeed we believe that it was not so. But circumstances, quite unforeseen when it was passed, have since secured this large boon to the agricultural interest, as it was our strong hope would be the case. Indeed, nothing but the belief that it would be thus disposed of reconciled us to the measure which had in it, as was confessed even by those who conscientiously supported it as necessary for the existence of the country, more taint of repudiation than it was at all desirable to find in a measure so clearly representing the mind and principles of the Government.

But the measure has a great political as well as financial bearing, and here we are less favourably disposed towards it. It must necessarily produce the ultimate extinction of the landed aristocracy, and this is a source of grave danger to a monarchy which must year by year part with much of the support it has hitherto received from purely superstitious considerations. No monarchy is safe without an aristocracy standing between itself and the people. The monarch represents the unity and permanence of a nation and the stability of the government; the aristocracy, the divisional exercise of power under the monarch and the territorial soil of the kingdom. We have no desire to see in this country a certain number of families in the exclusive enjoyment of all the powers and privileges which belong to aristocracy as an institution, because this inevitably prevents the organic growth of society, fixes in perpetuity what nature has made, and what progress demands should be made, variable and expansive, and substitutes the accident of birth for the prominence due to the intelligence of a nation. We have no desire to see a government of nobles alone, with caste made the criterion for office and power, and impassable barriers erected between the privileged and unprivileged. Under such circumstances, indeed, society falls into a condition which nature cannot tolerate, the strength and vigour of the commonwealth disappear and cannot be renewed, growth is arrested, expansion is impossible, the edifice of the state falls into ruin, and the value of its dignities disappears. But we desire to see some institution representing the fixed property of the soil, as territorial wealth must always exercise its influence, directly or indirectly, and an adjunct of the first political importance in the machinery of government may be founded on this ultimate fact. An aristocracy is required, in countries monarchically governed, to fulfil two separate and antagonistic functions, both of which, however, may legitimately be entrusted to it; to stand, on the one hand, between the

* The full particulars of the measure will be found in the *Japan Mail* of August 22nd, 1876.

Original from UNIVERSITY OF CALIFORNIA

Throne and the people, in case the former unduly stretches its prerogative, and, on the other hand, in case the passions of the people threaten the existence of the Throne, or their will assumes to itself the ultimate decision with regard to what is either political wisdom or political rectitude. The measure which must eventually extinguish the aristocracy of this country, or dissever it from the influence which attaches to the possession of the soil, was based on purely financial considerations regarding which there may fairly exist differences of opinion. But there will be no such difference of opinion regarding its political effects among men who have paid any attention to government as an experimental science resting upon the constitution of human nature as its ultimate support, and if this view—expressed not by any means now for the first time in these columns—should lead to the fuller consideration of this great question among the more thoughtful of the men at present entrusted with the destinies of this Empire, we are persuaded it will not be without service to the country. All history, and the teachings of the profoundest political philosophy, bear testimony to its truth and universality, and a disregard of it will assuredly be followed by convulsions, in comparison with which financial considerations will disappear as of small and momentary importance.

(To be continued.)

BRITISH EPISCOPAL CHURCH.

The Annual General Meeting of this establishment took place in the British Consulate yesterday afternoon, the subscribers present being Messrs. A. J. Wilkin, J. Mackrill Smith, W. W. Cargill, J. Rickett, Jr., M. Kirkwood, H. Barlow, J. J. Keswick, G. P. Ness, F. S. James, and C. D. Moss.

Mr Russell Robertson took the chair and briefly stated the business before the meeting. He remarked that instead of the two usual meetings in December and January there was only one this year. The following report was then read:—

YOKOHAMA, JANUARY 9TH, 1877.

GENTLEMEN,—The Church Committee beg to submit their Report, together with the accounts for the year ended December 31st, 1876.

ACCOUNTS.

	Dr.
To amount of subscriptions from seat-holders received during 1876	$2,852.08
Special subscription (collection)	110.50
Sustentation fund (as per list)	1,187.00
Balance due Treasurer 31st December, 1876	82.28
	$4,231.86
By balance due Treasurer 31st December, 1875	$ 790.10
Incumbent's stipend, 12 mos. at $200 per month	2,400.00
Premium on Fire Policies, Church, Parsonage, and Organ for $10,000	260.00
Sundry repairs during 1876	87.25
Incidental expenses during 1876	694.51
	$4,231.86
1876, December 31st, by balance	$ 82.28

The small amount of the Balance due the Treasurer, while a matter of congratulation to subscribers, is attributable, it should be borne in mind, to the exceptional aid derived from the sustentation fund. An amount of $1,187 was so obtained, and the Committee gladly record their acknowledgment of the generous assistance thus afforded.

The income derived from pew rents and sittings during 1876, compares favorably with that of 1875, and there is reason for believing that the income from this source will remain steady for the present year.

In May last Mr. W. G. Howell resigned the direction of the choir, and his place at the organ. The Committee, in accepting Mr. Howell's resignation, expressed their sense of the obligation the congregation was under to him for his kind and able services, and the acknowledgments of the Committee were conveyed to Mr. Howell.

Mr. Griffin consented to fill the vacancy thus caused, and Mr. Henley continues also his kind assistance.

It having been intimated early in the past year that the Ladies' Benevolent Society did not charge themselves with the working of the school situated on the Church compound, its management was taken over by the Rev. W. F. H. Garratt at the request of the Church Committee.

The Committee beg to tender their thanks to those ladies who have taken such kind interest in, and give such effectual aid to the choral services of the church, as also to those who assisted at the Christmas decorations.

We remain, gentlemen,

Yours obedient servants,

RUSSELL ROBERTSON.
J. MACKRILL SMITH.
JAMES J. KESWICK.
GAVIN P. NESS.
W. W. CARGILL.
F. S. JAMES, Treasurer.

Mr. Rickett moved that the accounts be adopted; Mr. Wilkin seconded the motion, which was carried.

With regard to the election of the committee for the current year, Mr. Cargill remarked that with the exception of himself all the other members of the out-going committee were willing to be re-elected. He therefore proposed that the following gentlemen be elected, Messrs. Ness, Keswick, James, Smith and Rickett. The motion was seconded and carried.

Mr. Cargill now, in a few remarks, urged upon the subscribers the necessity of continuing the sustentation fund, as without it, the Church's income was not sufficient to meet the expenditure. It would be advisable, he said, to send round the subscription list again this year. Over $1,000 were collected last year.

The Chairman then read over the list of subscribers to this fund. Also a letter sent to Mr. Howell on the occasion of his retiring from the management of the choir. The answer was not at hand.

This terminated the proceedings.

Correspondence.

GAIETY THEATRE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL,'

January 11th, 1877.

SIR,—The last time I was present at an Amateur Dramatic performance here was in' 66 or' 67, nearly ten years ago, and your predecessor in the editorial chair asked me, as an ancient theatrical critic, to report for him upon the performance of a comedy then being presented to a Yokohama audience. Accustomed to such work in a larger metropolis, and seduced by overhearing the reiterated laments of the actors that the local press was incompetent to judge of their performances, exercised no "discrimination," but abundance of "partiality"—I thought I should please both actors and public by using the freedom of a critic, *bonâ fide*. I "discriminated" and I was perfectly "impartial." I told the old gentleman of the piece that he was quite as good as Emery, but I had to hint to the accomplished, polished, gentlemanly swindler—that it was not usual in good society in London to wear a hat in a drawing room in the presence of ladies, and that a prejudice existed among students of English elocution in favour of the letter H; and to the quiet unobstrusive husband, who defeats the machinations of the villain, that a face without either paint or expression, and a voice symptomatic of serious and exhausting illness, were not the aids which Wigan habitually gave to the author's dialogue, intended to indicate repressed and reserved power. Hapless innocent! Guileless globe-trotter!! The morning after the publication of my criticism, my friend the Editor came to my bedside hurriedly with :—"Arise, and flee for thy life." The enraged amateurs were going about to take me. Accustomed to *notices* of their performances, similar to those in Miss Snevellicci's scrap book, my confidence in their wish to be *criticised*, and my criticism of their work, were alike misplaced. It appeared that my "discrimination" was to have been exercised, by picking out something to praise in each actor's reading of the character, personal appearance, or at least his dress; my "impartiality" by buttering every body all round, even to the footman who brought in the muffins. The consequences of my error were serious. Mr. Lenville was waiting for me at the club to inflict summary vengeance; Mr. Folair had gone to the *Japan Times'* office to insist on the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Editor's giving up my name; nobody was satisfied but Mr. Crummles. What the Editor did I have never heard—I had gracefully made my exit, and have not since, until lately, revisited Japan. (In fact, I am not sure that the original "VIATOR" is.....but—to proceed).

VIATOR returns to Japan; he finds another Mr. Editor, other actors, and other pieces; a repetition of history takes place, the artists are just as desirous of discriminating criticism; the newspaper as greedy for copy; the regular reporter as glad to get his work done for him. But he finds a change. Happily for the Queen's peace, two well-known, well-rehearsed, well-played pieces are tendered to his inspection—a sympathetic, intelligent audience stimulates all to do their best;—discrimination can find no fault, impartiality has all to praise;—and Miss Snevellicci's scrapbook can conscientiously be emptied into your column of dramatic news.

It was my good fortune never to have heard *Cox and Box*, and I naturally enjoyed it probably better than thé large majority of the audience. *Box and Cox* was always admirable fooling, though a most trying piece of work for amateurs—absolute knowledge, to the letter, of the parts, long experience of stage business, and complete self-command, being only to be hoped for in such old actors as those for whom the piece was originally written. The conversion of the farce into a burletta brings it far more within the grasp of amateurs. The libretto of the music is so skilfully written; in the same key, so to speak, as the original dialogue, that there is only so much interruption of the fun and bustle of farce as is needed by amateurs; with the advantage of these pauses, Mr. Newcome and Mr. Fredricks did very well indeed: the former was as hare-brained and light-hearted as a coxcombical young hatter should be; the latter as grimy, dishevelled and morose as any typical, touchy compositor on a morning paper. The first's costume, that of the hatter in 'Alice in Wonderland,' was the outcome of a happy reminiscence; the soiled linen, dirty apron and unshaven chin of the printer evidenced careful study of the "Real" which we know is also the "Beautiful" and the "True." Mr. N. Lee will, doubtless, make more of his part on another occasion; and I think I am giving high, but not undeserved, praise to the whole cast, when I say that, with about ten more dress rehearsals, they might play the original *Box and Cox* as well as any amateurs and a great many professionals.

I have been obliged to ask a musical friend to add a postscript to my letter with reference to the way in which Sullivan's beautiful music was rendered: my last attempt to criticise musicians was not quite graciously received. It was on board a small steamer which plies on the ten miles of river between Totness and Dartmouth. As I had not for years enjoyed the exquisite scenery of the "English Rhine" I was anxious to do so, undisturbed by any inharmonious titillation of another sense than that of sight, and, therefore, remarking that a band, comprising the orthodox steamboat instruments,—a cornet, a harp and a flageolet, were preparing their apparatus of torture as we left the wharf at Totness, I entered into conversation with the leader of this orchestra and enquired, casually, what might be his average 'take' of coppers on the trip. A rapid calculation, and a glance at the passengers, (all except myself and the one sweet spirit who was my minister, being simple market-folk) convinced this hero that, unless some such "distinguished patron of the arts" as myself, would "go as high as sixpence," eightpence halfpenny would be his probable receipts. I suggested that perhaps eighteenpence and a couple of bottles of the steward's stout might meet his views as an inducement—*not to play*. His reply I shall not easily forget:—"Sir," said this outraged musician:—'my poverty, and not my will, consents'—but, Sir, you must excuse me when I remind you that Shakespeare says:—

> 'He that hath no music in his soul,
> And is not moved by concord of sweet sounds,
> Etcetera, etcetera,
> Let no such man be *trusted*'—

and therefore, Sir, we must stipulate, for the porter at least, in advance."

I pass to the few remarks I have to make on your amateurs' performance of *The Critic*.

This more ambitious effort deserves more detailed notice than I shall give it, as I am told it has recently been produced on the same boards. But as I hear that many of the parts were filled, on this occasion, by actors to whom they were new, I cannot condense my criticism into Mr. *Puff's* own 'puff direct':—"Mr. Dodd was astonishingly great in the character of *Sir Harry*. That universal and judicious actor, Mr. Palmer, perhaps never appeared to more advantage than in the colonel; but it is not in the power of language to do justice to Mr. King"; and so on. A little more particularity is needful.

Everyone knows the difference between an 'acting' and a 'closet' edition of a play. And all are ready to admit that most authors require the assistance of the stage-manager and the carpenter, to make their plays presentable to an audience. But of the exceptions to this rule Sheridan is a prominent one. And *The Critic*, especially, written while he was manager of Drury Lane Theatre, one of his latest dramatic works, composed with full knowledge of his company and their force, his stage and its capacities, *The Critic* requires, less than any other even of his works, interference at the hands of the practical men of the theatre; while it is so familiar to us all, that excision of any of the "household words" in it, or any embroidery of "gag" upon it, ought only to be ventured on after grave consideration, and with the fear before the adapter's eyes of the just indignation of the defrauded audience. I suppose hardly any amateur company is strong enough to give it entire, and therefore the excision *must* be forgiven of the scene in the Squire's Justice Room. Yet I missed sadly, last night;—

"*Sneer.*—But, Mr. Puff, I think not only the Justice, but the clown, seems to talk in as high a style as the first hero amongst them.

"*Puff.*—Heaven forbid they should not in a free country! Sir, I am not for making slavish distinctions, and giving all the fine language to the upper sort of people.

"*Dangle.*—That's very noble in you, indeed,"

And the climax,—

> "Hence may each orphan hope, as chance directs,
> "To find a father—where he least expects!"

I also regretted the absence of Thames with his Banks, all three characters which, being dumb, might surely have been got for a dollar apiece:—

"*Puff.* Yes, one crowned with alders, and the other with a villa!—you take the allusions?—But, hey! what the plague! you have got both your banks on one side.—Here, Sir, come round.—Ever while you live, Thames, go between your banks!"

As for the additions to the text,—however happy as local hits, or however well calculated to suit the taste of the 'groundlings,' I cannot yield my belief that, until another Sheridan assumes the post of stage manager in Yokohama, Richard Brinsley Sheridan's text is best left alone. One feels much inclined to say of interpolations, inverting *Sneer's* criticism of *Sir Fretful's* 'tropes and flowers,' that they suit the general brilliancy of the style, as "linsey woolsey sprigs would a ground of tambour work," and I am of opinion that your Yokohama audience would have been better pleased, had the compliment been paid to them of omitting the London 'gag.'

The actors in the first part of *The Critic* will have to pardom me for taking exception to their dressing; an error into which the "acting" edition led them. The 'acting' edition, they failed to bear in mind, was compiled for London actors; and, in *their* case the audience, accustomed only to see them in the disguises of the stage, enjoys with the keen zest of gratified curiosity, the opportunity of seeing them 'in their habits as they live.' With amateurs, and especially so in a small community, the case is precisely the reverse; public curiosity has long been habituated to the personal appearance of social favourites; Mr. Spurgeon's genial voice and hearty laugh may be heard any morning, just before tiffin time, on the 'Rialto,' as he facetiously calls the muddy Main Street; Mr. Newcome's courtesy is fully appreciated at afternoon tea; and eligible opportunities occur for admiring Mr. N. Lee's morning coat in his office. Dressing the part in modern costume is, anyhow, totally illegitimate, even in London. It does not suit the dialogue—the 'vastly well'—the 'give me leave to tell you'—the 'zounds' and 'what the plague'—and, if not dressed to Sheridan's own generation, at any rate the costume-man should not go back beyond our grandfathers. Ama-

teurs, acting before an audience of personal friends, wilfully throw away a chance, when they appear in any thing resembling their ordinary dress, and it was his departure from tradition in this respect which, to my mind, gave to Mr. Toddles the palm he deserved to win, in the first act, in the part of *Sir Fretful Plagiary*. Not to this alone, of course;—he added to it, careful study of his character, and 'letter perfectness' in the text, he has considerable facial expression, and can only improve his reading by a little more restlessness in his limbs, while writhing under *Sneer's* impromptu quotations from the 'paper of Thursday.' He thoroughly deserved the applause which followed him as he left the stage.

Handicapped by modern costume, it was generous in such a good actor as Mr. Spurgeon to give up the part of *Sir Fretful*, which is generally doubled with his own; and which would have given him so brilliant an opportunity of exhibiting his versatility and power of impersonation of character. Depend upon it, Mr. *Puff*, Charles Mathews' reason for originally combining the characters, was because he agreed with my view, (like yourself and Shakespeare) and found himself crippled by the traditions of the stage. I can add nothing to the praise universally bestowed on your acting, and look forward to seeing you in some part where you will not be so readily recognizable as Mr. Spurgeon.

Mr. Lee's part is, at best, a thankless one, and, unless aided by careful make-up, as a middle-aged, fatuous, one-idead noodle, offers little scope to the actor; but Mr. Newcome suffered most from these confounded traditions of the stage. With the *rictus politicus* well marked on each side of his mouth, and the dress of *Sneerwell* in the *School for Scandal*, this versatile actor has only to study a little, Darwin's 'Expression of the emotions,' and give a little more emphasis to the malice of his part, to present as good a *Sneer* as one would wish to see. Last night, he gave us far more of *Will Honeywood* than of *Croker*.

But, I am occupying too much space, I fear, in so serious a journal as the *Japan Mail*, and I cannot go through the whole cast of so populous a play as *The Critic*. I must rather hurriedly touch the characters of the burlesque. Of Don Whiskerandos' part there is no dress tradition. and Mr. Vernon, by making up as anything but an attractive Lothario, fully justified Tilburina and the nieces, for falling in love with him, for the sufficient female reason, that he was the last man in the world by whom they should have been captivated. *Lord Burleigh*—a great part,—was rendered to perfection; the Governor acted the 'fine old English gentleman' to the life; the two walking gentlemen's parts, Sir Christopher's and Sir Walter's, were most respectably filled; the sentinels slumbered with commendable discretion, and all the other minor parts were equally well acted. Irving himself could not speak *Leicester's* speeches (and there is far more in them than most people see) subject to the abominable interruptions of the exacting *Puff*, and Mr. Home must wait for a better opportunity of displaying the stuff he has in him. I must leave criticism of the ladies' acting to feminine Yokohama, and have only, therefore, to add a word of unqualified praise of the scene-painter, property man and stage-manager, each and all of whom had done their work so well, that everything went far better than I ever saw a piece go, on a first night, at any London Theatre, except the Prince of Wales' and, perhaps, the Vaudeville.

I congratulate Yokohama on the possession of the Gaiety Theatre and its talented *corps*, and remain,

Yours faithfully,

VIATOR.

P.S. by my musical friend.

"Mr. Sullivan's music is throughout lively, sparkling and extremely ingenious, here and there—as in the 'Lullaby'—full of pretty sentiment, and elsewhere of dramatic force and variety. The overture—arranged for the little orchestra by Mr. Griffin—was played with great spirit, as were the accompaniments throughout, by the same gentleman, with accuracy and sympathy. Bouncer's *Rataplan* wanted a little more force, but was nevertheless effective; Mr. Frederick's sympathetic voice gave to the 'Lullaby' all the sweet character which belongs to it, while the duet which announces and illustrates the musical proficiency of the two fellow-lodgers was most happily and humorously rendered. Indeed the three performers throughout did themselves full justice, and sustained their parts with exceptional skill and success."

V.

Law Reports.

IN H. B. M.'S CONSULAR COURT.

Before Russell Robertson, Esq., Consul.

Monday, January 8th, 1877.

E. S. Smith *v.* R. Lilley.

This was a claim for $16.25.

Defendant did not appear.

George Hodges, Consular-constable, sworn:—I served the summons against defendant this morning on board the *Sunda*. I saw him on board. He said he was sick.

Edwin Schenck Smith, sworn:—I am manager of the International Hotel. Defendant came day after day and signed chits for refreshments amounting to $8.25. He then asked me for $8 in cash, promising to return it next morning. Next day I heard that he owed money in other places and that he could not pay. I went to see him myself. After repeated attempts to get the money, on the occasion of the *Sunda's* last trip, I said I would summon him. He then sent me an order on Mr Bevin. On that gentleman's arrival from San Francisco, he refused to pay, saying that defendant had made similar demands upon him, although defendant owed money to him. I then applied for a summons.

Judgment for plaintiff with costs.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

Wednesday, January 10th, 1877.

Akanuma Tsunekatsu, Tôkiô *Fu Chusai Kan, vs.* J. M. Batchelder.

A motion was made, on the part of plaintiff in this case, for a new trial. He was represented by Mr F. V. Dickins. Defendant appeared personally.

Mr Dickins said that this was a motion under Sections 76, 77 and 78 of the Regulations of the Court. He then read plaintiffs' affidavit and statement attached thereto, and continued:—According to the rules of the Court I have made this affidavit of as general a nature as possible. It now remains for me to speak more fully with regard to the reasons for making this motion of appeal. I need hardly remark upon the importance of this case; we all know the importance of the question at issue, and it is a very large one. It deals with the rights of foreigners resident in Japan on the one hand, and the rights of the Japanese Government on the other. The Court will take into consideration the fact that plaintiff is really the Government itself and that defendant represents those foreigners who enjoy the hospitality of that Government. I will now proceed to review the particulars of the case. This ground in Tsukiji was rented by defendant at the land sale held according to the regulations posted at that time. Defendant did not pay more than one year's rent and plaintiff endeavoured to recover the balance due. In the case as brought before your Honour, plaintiff did not produce, through his ignorance, certain evidence which was of importance to his case; nor did he question certain evidence which was adduced, simply because he did not understand the language nor the proceedings of the Court. I think it only fair that the Court should, for this reason alone, think fit to grant a rehearing. But I have another reason to give. Plaintiff has some new evidence to bring forward which he could not well have done at the time of the trial, and which will serve to show the whole case in quite a different light to the Court. This fact alone is sufficient ground for an appeal. Defendant admits having purchased the ground, and I shall be able to prove by the very question of law that the Government, or plaintiff, is entitled to payment of this ground rent.

The Court here remarked that the question of holding the land had never been under consideration.

Mr Dickins said that was quite true, but though not expressly stated it was implied. The ground rent of Tsukiji was insufficient moreover, to pay expense of repairs and improvements in the settlement, so that defendant receives more than the pays for, and has noright to claim any damages. I have now additional evidence of documentary and other kind. The next ground of objection I have is the 4th, and that is to the excess of damages claimed.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

His Honour here read from the regulations, to show that the learned Counsel had no right to comment upon more than the first three parts of the appeal. There was a statement wanting.

Mr Dickins replied that he thought it would be useless work to write out a full statement of the evidence already before the Court. The grounds he went upon were the insufficiency of the evidence to support the reasons given in the judgement. The evidence did not support the decision. He did not propose to go to any length into the question whether the judgment was wrong in point of law or not. The judgment appeared to him not only wrong in point of law but was against all reason, all logic. He would call attention to the answer to the petition. How were the Japanese to understand it, seeing how vague it was? How were they to know what defence to make, what evidence to bring forward? They could not know the nature of the defence. And then, in the judgment, defendant was awarded some three or four thousand dollars more than he asked for. He was granted the whole amount of ground rent sued for by plaintiff. In an action of this nature, when a landlord sues his tenant for rent overdue, there can be only one defence. Defendant must prove some breach of contract. And at the beginning of the trial this sum should have been deposited in the Court, to await the decision. This case really began in 1871 or 72, when the first year's rent had been paid and the second was becoming due. Defendant had some complaint against the *Fu* and lodged the rent in this Consulate pending a settlement of the dispute. This money had never been paid to plaintiff, but was used to settle with some private Japanese who had some claim against defendant. This shows that if the ground was held under any condition, this condition was waived. But I deny that there was any condition precedent. The motives for giving a verdict in favour of defendant do not sufficiently uphold the judgment. It is true that the Government allowed foreigners to live inside Tsukiji, but this does not hinder the Government allowing foreigners to live *outside* Tsukiji. I will now ask, on these grounds, that the appeal for a re-hearing be granted. With regard to the deterioration in the value of land in Tsukiji, that was consequent upon a falling off in trade in Japan generally, and lots of land in other open ports are of less value now than they were some time ago.

Defendant now applied that the petition be dismissed, and commented upon several of the arguments used on the other side. With regard to plaintiff not being represented by Counsel, he said they met on equal terms, for he had not employed a lawyer. He had as much right to object to this re-hearing because plaintiff had a lawyer and he had not. Plaintiff had had ample time to engage one, for there was no surprise in the matter, and some forty days elapsed between presentation of the petition and the hearing of the case.

Mr Dickins in reply said: Plaintiff is a Japanese and does not understand a word of English. The defendant's argument is plausible at first sight, but I maintain there was a surprise, for plaintiff could not, from the nature of the answer to the petition, understand what the defence was to be, not could he come to Court with proper evidence to meet it. Plaintiff might have been defended by a lawyer, but, as I said before, he looked upon it as simply an indisputable claim for rent and not as a touchy point of law. New evidence can be brought forward which could not be got then. The only question really at issue is, was there a condition precedent to the sale? Plaintiff declared it did exist. I am prepared to show that it did not exist.

His Honour said he doubted if the papers used in this motion were sufficient. He was clear that, so far as surprise was concerned, there was none. The great fault is that the regulations do not distinguish between one party and another. There was no distinction shown between Americans, Britons, or Japanese sueing in this Court. All were supposed to know what was being said and what was going on. With regard to this new evidence, with due attention to the law, it should be set forth clearly in the petition what this new evidence is, whether it will affect the case—in fact, whether it is new, material and not accumulative, and of such a character that it will present the case in a totally different light to the Court. His Honour deferred his decision.

Friday, January 12th, 1877.

Robert Thompson, second mate on board the American ship *Stonewall Jackson*, was charged with having abused the men, and attempting to raise a mutiny during the voyage from Boston to this port.

His Honour read the affidavit to the accused, and asked what he pleaded in defence.

Prisoner said that as for abusing the men he pleaded clean guilty. With regard to trying to incite a mutiny on board, it was false.

His Honour said that the affair having occured at sea, this was not a trial, only a preliminary examination.

H. P. Arbecam, master, sworn:—Shortly after leaving New York, as I had done probably a year ago on board the barque *William S Thornbent*, I spoke to Mr Thompson, saying I could not have any trouble on board my ship; he must not raise a hand to strike any one. The mate was the first to inform me of the accused striking the men. Mr Thompson himself came to me at the breakfast table in the presence of the carpenter of the ship. He said that he had disobeyed my orders and struck John Borrison with a belaying pin. I afterwards heard he had also struck the boatswain. I then gave the accused particular orders not to strike a soul on board the ship. I afterwards heard that he had been purloining the boy's clothes and that he had struck the boy. The boy cried when Thompson told him he had "nigger blood in him." I got the boys' shoes, handkerchiefs and other things back. I then reiterated my orders about striking, and requested that should be the last instance. I had no complaints from the men up till this time. Shortly after this the carpenter to'd me prisoner had struck Frederic Worn, and stood over John David, seamen, threatening to knock his brains out. I sent for Worn and David to get their statements; then for the carpenter and the boy George Bulley. Worn confirmed the statement made by the carpenter. Mr Thompson came aft then and wished to have some conversation with me. I told him our conversation should be before all hands at 12 o'clock. I intended to send him to the forecastle. I afterwards concluded to talk with him privately in the cabin. I told him I knew of his conversation with the men in reference to my command of the ship, that I was incompetent, and of his insulting language with regard to my wife and myself, and of his abuse of these men, but not wishing to disgrace him in the presence of all hands, I gave him friendly warning once more and allowed him to continue his duties as second officer, he promising to act rightly: He only moderated a statement with regard to my wife. He returned to duty. I heard soon after, through the carpenter and boy, that he had resumed his insulting and slanderous remarks, accusing me of incompetency and so forth, and also of the mate. I took no notice of this. On the ship approaching port, on the 31st December, I went on deck and found prisoner clenched with the chief officer. Knowing that he had threatened to whip the chief officer, I took him by the hair of the head, and finding a belaying pin in his hand I took it away and struck him several times on the head, reduced him to submission and put him in irons; considering it for the safety of the ship and the lives of all hands. I made this statement on my arrival at Yokohama. It is entered in the log, signed by myself; D. Hyde, chief officer; A. MacCallister, carpenter; F. Worn, seaman; T. Kelly, boatswain; S. M. Kundson, seaman; C. Smidt, seaman, and John Daly, by mark. I hold the log in my hand and produce it in Court. It was read by me to accused at noon on the 31st December, in the presence of all hands. The fact of the reading is entered in the log.

The accused had no question to ask witness.

Alexander MacCallister, carpenter, sworn:—That is my signature. I know the statements made in the log with regard to defendant. I know all the facts in which I was concerned to be true. I saw the second mate strike Borrison, the seaman. Accused ordered him to go aloft, and as he came out of the forecastle struck him on the head with a belaying pin. I saw no cause for it. It did not knock him down. He went aloft. I heard accused threaten John Daly, called "Andrew." I have heard him speak in disrespectful terms about the captain and mate. The mate had always sailed in small craft, he said, and was unfit for the position he was in. He called the mate by a nickname. He said the captain could not sail the vessel; it was always in bad weather. The ship was taken the wrong way. If *he* had had command he would have taken it another route. In fact he sported the captain before the men, at different times. I heard him threaten the steward and passengers. He ridiculed the captain in bad weather on deck. He had a way of mimicking the wind whilst speaking of the captain. He cried "whew, keep her north; whew, keep her south." He spoke disrespectfully of the women on board.

To the accused:—You struck Borrison when he came out of the forecastle to go aloft.

John Borrison, seaman, sworn:—I complained to the captain of the second mate's abuse. I don't remember the date exactly. It was in September or October, I believe. We were all hauling a rope aft when he came up and struck me on the back with a belaying-pin. I slewed round, and he again struck me on the shoulder. I had not done anything wrong. I have seen accused

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

insult all the men forward. I did not see the fight with the first mate. I have heard him pass remarks on the first mate.

The steward and mate not being present, the boatswain was next called.

Thomas Kelly, sworn:—I am now acting second mate on board the *Stonewall Jackson*. I shipped as boatswain. Accused struck me on one occasion, some time in September. I was sick at the time and he pushed me down on deck; for what reason I can't say. I have seen him hit Worn. He struck Worn with his fists; I don't know what for. I saw the mate and he go for each other, but what followed I did not see. I have heard accused speak disrespectfully of the mate.

Frederic Worn, sworn:—That is my name in the log. Accused struck me with a belaying pin and a capstan bar. He said I was not quick enough. He has struck me five or six times. I have seen him strike others. I saw him strike the boy. I have heard him speak insultingly of the captain and mate. He promised to square accounts with the mate when we got into Yokohama. I saw the fight between him and the mate.

To the accused:—I did not see the captain strike you.

Court adjourned till 1.30 p.m. on Monday.

PROTECTION IN THE UNITED STATES.

(The Economist.)

A prolonged and rather unprofitable controversy has been carried on in the *Times* as to the limits to which Protection in the United States is likely to be carried, and the probable consequences, in the long run, of the system which the manufactures of America have built up. Captain Galton, who has lately been visiting the Philadelphia Exhibition, was greatly impressed with astonishing results there displayed of the progress of the manufacturing industries of the Union within the past twenty years. It is stated by Captain Galton, and confirmed by other witness, that the advance upon what was possible before the Republican party came into power, and Protection was accepted as the official doctrine of the American Government, is almost beyond belief. It is certain that at Philadelphia the representation of American industry outshone the inadequate exhibition of the English and other European manufactures, and it is probably time that the mechanical genius and the commercial instincts of the American people, working in combination, have actually approached, and threaten to equal, the most admirable industrial efforts of the Old World. Captain Galton goes so far as to assert that British manufacturers have hopelessly lost their hold upon the markets of the United States. Other observers go further, and picture the disastrous consequence of the removal of protective duties in America, which will bring American manufacturers into ruinous competition with us, we are told, in the open markets of the rest of the world. We think that all these apprehensions are either absolutely unfounded or grossly exaggerated. They point to an unsteadiness of conviction in the minds of the industrial classes in England, which would be dangerous were there ever to be—which is quite possible—a foolish democratic outcry among the English working classes. Such fears may possibly do some good by making our manufacturers perceive the truth—already sufficiently obvious—that the industrial supremacy of this country cannot be preserved without continual efforts to improve the quality and cheapen the cost of manufactured articles; but they are much more likely to do mischief by suggesting impracticable or ultimately ruinous remedies.

What is the actual state of the case in the United States? American industries have vastly improved in the character of their products, and as this improvement has gone on under a Protective system, those products have, by degrees, forced themselves upon the American markets to the exclusion of European commodities. Protection made the latter artificially dear, and as in time the American manufacturer began to produce something which could fairly stand comparison with the European, and which, though costly also, was not so costly as the European article, weighted with the duty, had become, the state of things came about on which Captain Galton looks with admiring amazement, and the representatives of some English industries with undisguised dismay. But what has been the result to the American manufacturers themselves? They may command their own home markets, but they do so at something approaching to an absolute loss. Protection has been followed by excess of competition and by over-production, almost unparalleled, it is said, in the history of trade. To this is attributed the present prostration of the leading American industries. This would not seem to furnish any very striking arguments in favour of the Protective system; but the fears of the manufacturers, who write in doleful language to the *Times*, use the very failure of the system as a proof that having done the maximum of mischief to English industry in one way, the policy of the United States will now be turned about, and will do us equal or greater injury in the opposite direction. It is argued that the American manufacturer, unsuccessful as he has been in making large profits of late years, has succeeded at any rate, in doing two things—in beating England and Europe out of the American markets, and in placing American manufacturers, at least, on a level in point of excellence with those of Europe. The latter fact, we are assured, will be proclaimed to the world by the Philadelphia Exhibition, and the world will be ready to receive the information eagerly. But the American manufacturers, already able to lower their prices by the diminution in the rate of wages, will be still more relieved by the operation of the late crisis, which has transferred factories and machinery into new hands at a comparatively trifling cost. The manufacturer who has come into possession of his buildings and plant at one-fourth of the original outlay, and who pays his workmen 40 per cent. less than he would have been obliged to pay them four years ago, is plainly so much the better able to enter into competition on the ground of cheapness as well as of quality. Why, then, should he not compete abroad as well as at home? Why should not American manufacturers challenge the supremacy of English in the markets of continental Europe, of the East, and even of our own colonies? The prospect, it is said, is tempting the American manufacturers to the side of Free-trade. They find that the tariff which doubtfully protects them at home, for prices artificially raised are devoured by competition and over-production, prevents them from entering into anything like equal rivalry with England abroad. This conviction, according to some shrewd observers, has given the death-blow to Protection, and Free-trade will soon, we are told, be the accepted policy of the American Government. Then we shall find that America will step forward as a formidable competitor in every foreign market, and if we do not take care we shall find it hard to hold our own.

By all means let us take care, but in truth, if we cannot hold our own in the conditions stated, we deserve to be beaten. The course of events indicated is precisely what we have always contended the question of the tariff in the United States would develop. There, as elsewhere, we felt certain that the over-impatience of consumers against high prices would never make Free-trade a political question of the first order; but that when the producers themselves began to feel the system pinch them the solution would soon be reached. If it should be, we have no fear of the industrial pre-eminence of England. Granting that the Americans have made progress astonishingly in the last twenty years, we have the traditions and the habits of a period ten times as long, and our national energies have not assuredly lost their elasticity and adaptive power. It is absurd to suppose that the present "shrinkage" in the value of American factories and machinery can be taken as a permanent element in the competition between the manufacturers of the United States and those of the Old World, and still less justifiable is it to count upon the recent fall in wages as a deduction from the burdens on American industry. As yet the Americans have never been able to stand up before us in the open field of competition, and the conclusion that they will be able to do so, because under Protection they have improved production and got the command of their own markets, is a wholly illegitimate inference.

THE 'FRANCONIA' JUDGMENT.

(The Spectator.)

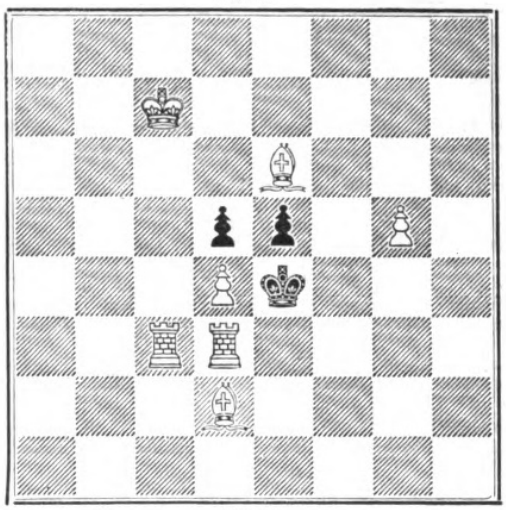
The judgment in the 'Franconia' case, which denies that English Courts have any criminal jurisdiction over foreign ships passing within three miles of our coast, involves not only a very considerable number of somewhat nice points of law, but a great question of policy. On the legal points we are content to take the judgment of the majority of the Judges,—indeed of more than a bare majority, if the opinion of the late Mr. Justice Archibald, who held with the majority, and whose opinion was one of great weight, be included,—as authority enough for us. It is admitted that the sea for three miles out from our shores cannot be territory in the ordinary and fullest sense of the word,—that we could not forbid the ships of all foreign nations access to our ports; that we could not enforce Customs duties on ships entering within the limits of such a belt of sea, whether the goods on which they were to be paid were or were not to be landed; that we could not even forbid anchorage within such a belt on the ground that the bottom of the sea by which the anchor

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

would necessarily hold, was British territory. Whether or not the majority of Judges are right, it is perfectly certain that the three miles' belt of sea next to the shore is subject to the jurisdiction of English Courts in a very much more limited sense, and subject to much more serious restrictions, than the land itself. That is not in fact, denied by the minority of the Judges. While maintaining the criminal jurisdiction of English Courts within these limits, they would concede that we have allowed the right of passage to foreign vessels, and indeed that for most purposes, though the three miles limit is a margin within which the English Government exercises a limited authority, a foreign vessel is more controlled by the law of the country to which it belongs than by that of the country near to whose coast it is sailing. For example, in France the rule is, even in ports and harbours, not to claim jurisdiction over crimes which affect only the internal discipline of the ship, but to leave that jurisdiction to the national Courts to which the ship belongs. It is obvious, therefore, that within the three miles limit the question cannot be one of an exclusive criminal jurisdiction, but at most only one of an alternative jurisdiction. And as a matter of fact, it is quite obvious that a foreign vessel will rarely be stopped *in transitu* while passing the shore of another country only to assert and exercise a criminal jurisdiction over it by the tribunals of that country. If criminal justice is to be done at all on the crew or a passenger of a ship for crimes committed when within three miles of a foreign land, it must usually be by the tribunals of the country to which the ship belongs, and not by the tribunals of the country which the ship happens to be passing. Hence, even if the criminal jurisdiction of the English Courts over foreign vessels within three miles of our shores had been maintained, instead of ignored, that jurisdiction would have been very rarely appealed to, and would have been comparatively speaking inoperative. On the other hand, the judgment delivered does not in any way interfere with the right of any country to enforce within the three miles' limit such regulations as may be requisite for the purposes of the police of the seas,—for keeping order, ensuring a conformity to sound rules requisite for the safety of ships, and punishing breaches of such rules. This is as freely granted by the majority of the Judges, as the various large restrictions on the absolute territorial right over the belt of sea within the three miles' limit, is conceded by the minority. We may assume, then, not only that the decision of the Court is good law, but that it does not quite involve all the vast consequences which some writers seem to imagine,—that though legally the distinction between the view of the majority and that of the minority of the Judges is very clear and important, yet practically it does not quite involve all the consequences which might at first appear.

Nevertheless, we conceive that the *policy* of the judgment is at least not less clear, probably even clearer, than its legality. For the consequence of claiming criminal jurisdiction over the crews and passengers of vessels *in transitu* would in general be almost purely mischievous. In the first place, a crew of one nationality cannot be expected to know the law laid down for regulating their actions by another nation, and yet in merely embarking on board of one of their own ships, they never dream that they are in need of the kind of circumspection and deliberate accommodation of their actions to new habits of life, which a man who lands in a foreign country must always be well aware that he has need of. If an English crew, for instance, were led to suppose that in taking service in an English ship they were running the risk of having their acts judged by the criminal law of any country—France, Spain, Italy, Turkey—within three miles of whose shore they might happen to coast, they would hesitate very much and very justly before taking such service at all.

Again, we must remember that such a rule as the subjection of coasting vessels to the criminal law of the country by which they were coasting, would operate very much more hardly on the inhabitants of a great maritime country than on the inhabitants of a country with but a small maritime population. We should have many Englishmen subjected to the Spanish or Turkish criminal law for every Spaniard or Turk who was so subjected to the English criminal law, and the balance of injustice would be very unfavourable to Englishmen. Moreover, we must remember that the assumed three miles' territorial belt is a very elastic kind of distance. It arose out of a theory that the old artillery could command a distance of three miles from the shore, and now Spain has extended it to the new range of the modern artillery, and holds it is within a six miles' belt, not within a three miles' belt simply, that the jurisdiction extends. If, then, we are to make a precedent for holding that our Courts have criminal jurisdiction for three miles from shore, Spain would use it as a precedent for claiming such jurisdiction within six miles from shore, and within the whole of that distance we might find our sailors in Spanish waters subjected to the very rude criminal code of a nation the great vices of whose legal system are constantly brought before the world. Indeed, the great maritime nations being for the most part the most civilised, the rule would operate to bring a great many more subjects of a civilised State within the criminal jurisdiction of a relatively uncivilised State, than it would to bring subjects of an uncivilised State within the criminal jurisdiction of a relatively civilised State. And considering that even a ruder code, if well known to the persons who are liable to be tried by it, is juster than a far more refined and just code not so known, the exchange even in the latter case would be for the worse, while the exchange in the former case would be greatly for the worse.



Again, it is clear that it is always impolitic to claim a jurisdiction likely to give rise to petty and yet irritating international disputes, and unquestionably this must be the tendency of claiming to apply English criminal law to persons on board a foreign vessel who never, perhaps, entered England, and never contemplated entering it. The Americans, for instance, seem to impute criminal negligence much less easily than we do; hence we can easily conceive what wrath might well be caused by our finding an American guilty of criminal negligence on our coast, just after some Englishman had been acquitted of criminal negligence, perhaps with a much stronger case against him, on the American coast. It is always wise to try men as far as possible by the law to which their habits and customs have given birth; and if for that reason only, it seems to us very fortunate that our Court has decided that foreigners are not to be criminally liable to the English law for offences committed within three miles of our coast, in spite of their complete ignorance both of the law which they may have transgressed, and of the habits and customs which gave birth to that law. On the whole, we regard the judgment in the 'Franconia' case as, in policy, a very fortunate, no less than, in all probability, legally a very sound decision.

PROBLEM

By J. N. Keynes.

From the Westminster Papers.

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of W. H. T.'s problem of last week.

White.	*Black.*

Correct answer received from W. H. S., and W. B. M., Tōkiō; C. B., Yokohama.

A correct answer to W. H. T.'s problem which appeared in our issue of December 30, 1876, was received from W. H. S., Tōkiō, but too late for acknowledgement in our last issue.

The following game, taken from the *Illustrated London News* of many years ago, was played by Messrs. Anderssen and Wyvill, and will well repay the chess student's attention.

(Sicilian opening.)

Taffachelass	12	yds,	48	in.		1.90	to 2.10

Yarns.—

No. 16 to 24	per picul...	$28 00	to 32.00
No. 28 to 32	per picul...	$30.50	to 35.50
No. 38 to 42	...per picul...	$36.00	to 40.00
Reverse Twist 16-24	,,	$31.00	

Woollens.—There has been lately a slight improvement in the condition of our market for some days past, and *Mousseline de Laines* seemed to be attacting more attention from our buyers, but prices have not recovered sufficiently to decide holders in effecting fresh sales, and are even weaker again at the close. *English Goods* remain also very dull, with the exception of good *Black Italian Cloth* and light weight *Blankets*, which finds buyers at prices quoted below.

Plain Orleans	40—42	yds.	32	in.	4 75	to	6.75
Figured Orleans	29—30	yds.	31	in.	4.25	to	5.25
Shimagoro	30	yds.	30	in.	4.00	to	5.25
Italian Cloth	—30	yds.	32	in.	0 24	to	0.33

Camlets Asstd.	56—58	yds.	31	in.	16 50	to	17.50
Lastings, Japan	22—30	yds.	32	in.	12.00	to	13.00
Plain Mousseline de Laine	—30	yds.	30	in.	0.17	to	0.19

Figured Mousseline de Laine	...30	yds.	30	in...	0.25	to	0.30
Multicolored ,,	...30	yds.	30	in...	0.30	to	0.36
Cloth, all wool plain or fancy	...48	in.	to 52	in...	0.80	to	1.20
Presidents	...54	in.	to 56	in...	0.75	to	0.80
Pilots	...54	in.	to 56	in...	0.45	to	0.60
Union	...54	in.	to 56	in...	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.			....per lb	0.42	to	0.48

Sugar.—The market is dull, as there is no enquiry of any moment, but prices remain unchanged.

Sugar:—Takao in bag	...per picul...	$4.20	
,, in basket	,,	$3.90	
Taiwanfoo in bag	,,	$3.95	
do. in basket	,,	$3.75	
China No 1 Ping-fah	,,	$7.50	
,, No. 2 Ching-pak	,,	$6.80	
,, No. 3 Ke-pak	,,	$6.10	

China No. 4 Kook-fah	...per picul...	$5.50	
,, No. 5 Kong-fun	,,	$4 90	
,, No. 6 E-pak	,,	$4.20	
Swatow Brown	,,	$3.10	
Daitong	,,	$3.50	
Japan Rice		$2.10	to $2.25
Kerosene Oil		$4.70	

Kerosene Oil.—Stocks are over 50,000 cases, and 25,000 are reported shipped and shipping from Shanghai. Native stocks having run down, hand to mouth operations continue at quotations.

EXPORTS.

Silk.—Our last fortnightly report, dated 11th instant, was to the following effect:

The advices received from Europe since the 26th ultimo had continued favorable, when a telegram, dated London, the 8th instant, reported business quiet, and disappointed the anticipation of increased firmness at home for the beginning of the year. Transactions on this side, notwithstanding the New Year's festivities and puzzling fluctuations in the rate of exchange, have been fairly active, and prices have advanced fully $30. Settlements are about 400 bales of Hanks and 200 of other sorts, leaving a stock of 2,000 bales.

The shipments of the fortnight are 729 bales, making the total export since 1st July 18,579 bales, against 9,664 last year for the corresponding period.

	At Exchange 4/2¾ in London.	*At Exchange 5.37 at 6 m.s. in Lyons.*	
Hanks.—Best No. 1 & 2	$870 to 890	32/5 to 33/1	90 to 92
,, Good No. 2	$840 to 860	31/4 to 32/1	87 to 89
,, Medium No. 2½	$800 to 830	29/10 to 31/	83 to 68
,, C'mon. No 3 / ,, Inferior No 4 & 5	$700 to 780	26/4 to 29/2	73 to 81
Oshiu—Best	$800 to 830	29/10 to 31/	83 to 86
,, Medium to Good	$740 to 780	27/8 to 29/2	77 to 81

	At Exchange 4/2¾ in London.	*At Exchange 5.37 at 6 m.s. in Lyons.*	
Hamatski No. 1 & 4 nom.	$520 to 620	20/ to 23/6	55 to 65
Kakeda—Extra	$950	35/3	97
,, Best	$900 to 930	33/6 to 34/6	93 to 96
,, Medium to Good	$830 to 860	31/ to 32/1	86 to 89
Filature Silk	$900 to 1000	33/6 to 37/	93 to 102

Silk Worms' Eggs.—Final statistics regarding the total export of this season will appear in our next. Meanwhile we may confidently state that they will not materially differ from the figures given in our report of the 26th ultimo. Shipments since that date have been quite insignificant.

Since the above was written arrivals have been 75 bales, and deliveries 190 piculs, a large portion of which has already been rejected after inspection. Prices have receded $30 to $50, and they are tending further downwards.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—The market for the closing week has been quiet, though rather more business has been done than during the previous week. Prices remain much the same, but some amount of irregularity exists owing to the exigencies of holders.

Settlements amount to 1,200 piculs, and arrivals somewhat under that quantity.

Stocks are light and mostly composed of low classes, but it is possible that some amount of *Finest* and *Choice* Teas have been held back, under the idea of obtaining fancy prices a little later on in the season, but yet little or no chance remains that rates for these can rule higher than current during October and November, and thus native dealers will have overheld the market.

Common	...$10.00 to 13.00	Fine	Nominal.
Good Common	... 13.00 to 15.00	Finest	
Medium	... 16 00 to 18.00	Choice	
Good Medium	... 19.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—Rates during the past week have been pretty steady, with, however, but very little doing.

Rates close as follows :—

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

VOL. VIII.—No. 3.] YOKOHAMA, SATURDAY, JANUARY 20, 1877. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 16th instant, at Christ Church, Yokohama, by the Rev. W. F. H. Garratt, assisted by the Rev. John Piper, GAVIN PARKER NESS, Barrister of the Middle Temple, to FRANCES DRUMMOND, eldest daughter of William Walter Cargill, Esq.

Notes of the Week.

The greatest commotion has been caused among the employés of the Government by the recent measure dismissing the greater part of them. A large proportion will necessarily be re-appointed, but the above course has been adopted in order to facilitate the reconstruction of the public departments on a reformed scale.

In our issue of the 16th December we called attention in a short note to the hardship under which the farmer labours in having to dispose of his rice within a certain limited time, and in such a market only as the circumscribed means of transport at his command will enable him to avail himself of, whereby he is forced to sell his grain at such disadvantages as make the payment of the land-tax in money, as recently ordered by the Government, a greater burden upon him than was ever contemplated, and one naturally likely to give rise to great discontent and a sense of injustice inflicted. At that time we suggested that some means should be devised by the Government for extending financial assistance to the farmer, by offering him facilities for storing his rice in Government establishments until opportunity should offer for disposing of it on favourable terms, after having obtained such an advance on it as should enable him at once to pay the tax due. We are happy to learn from the native papers that some such arrangements have been made within the last few days, by direction of the Government, and a branch office instituted, under the supervision of the Finance Minister, for providing establishments for the reception of grain on storage, on which the requisite advance in money can be made.

It is important that the issues connected with the case lately tried by the U. S. Consul-General—the Tôkiô *Fu v.* J. M. Batchelder—should not be complicated by any misapprehensions regarding the facts. In its last issue the *Tokio Times*, commenting upon the case, says:—

> A plan was devised by which, it was thought, the underlying difficulty could be effectually swept away, and the particular interests of all parties conserved. It was agreed to by the Ministers, and was submitted to the Foreign Department of the government. Its provisions were simple. The full amount of rent due was to be paid, up to a fixed date. A reduction of fifty per cent. was afterwards to be allowed to the present holders of premises in Tsukiji.* The agreement of 1870, and all other kindred agreements were to be considered at an end, so that the government should be subject to no question or remonstrance, for the future, as to its right to admit foreigners to residence in any place.

This is quite a mistake. No such plan was ever submitted to the Ministers, and even had this been the case, there is the gravest reason for doubting whether they would have accepted it, as the general conditions on which foreigners occupy land in Japan are moderately satisfactory, and extremely so at Kobé.

It is with sincere regret that we have to record the death of Commander C. W. Jones, R.N., Director of the Imperial Naval College. His health had for some time been such as to cause considerable anxiety to his friends, and he was seized about three weeks back with an attack of paralysis. Grave as it was, there seemed grounds for hoping that he could regain his strength. But the disease gained the mastery and he died on Monday last. He was held in high esteem by the Japanese authorities of the department in which he served, and regarded with sincere affection by all whom he commanded. He was zealous in the discharge of his duties, and his amiable disposition endeared him to the large circle of friends who now mourn his early death at the age of thirty-four. He was attended to the grave with every token of respect which his character, position and the occasion demanded.

We sincerely hope the Japanese will not be misled by the sentimentalisms of an entirely false and exploded political economy in their endeavours to improve the condition of this country. If they are taught to believe, and should believe, that a nation forfeits its right to independence because it cannot supply itself with everything which it requires, they will soon get into a hopeless state of muddle. Has the commercial system of any country in the world had the success of that of England? England at this moment is bursting with wealth, prosperity, security, independence and everything which can render the life of a nation desirable, and yet importing eatables—the actual necessities of every day life—to the extent of over £30,000,000 annually. Tell Englishmen that they have thereby forfeited their right to independence, and they don't argue about it. They simply laugh.

In a comparatively recent number of the *Economist*—which however we have vainly endeavoured to find—there was an article showing wherein lay the fallacy of the well-known exception J. S. Mill made to the doctrines of free trade of which he was one of the chief apostles. In this exception he argued that, in the early history of a nation's trade, a protective tariff might legitimately be resorted to in order to foster the growth of its manufactures. The editor of the *Economist* disputes and disproves this, and there is hardly a higher living authority. We will endeavour to reproduce the argument next week.

Mr. McMahon, Reuter's Agent at this port, has prepared a circular which he is about to issue to the mercantile community and others of Yokohama and Tôkiô, inviting subscriptions for the purpose of reviving the service of

* Not a reduction of fifty per cent. on ground rent in Tsukiji generally, but a reduction only for grounds already occupied.

Original from UNIVERSITY OF CALIFORNIA

political telegrams which was discontinued on account of the great loss involved in supplying such news. We can only hope that Mr. MacMahon will be successful in his efforts, as the want of the latest telegraphic news from the world outside Japan is sincerely felt by all residents here, especially at such an important political crisis as at present prevails in Europe.

The state opening of the section of railway between Kiôto and Osaka will take place early next month under the immediate auspices of the Mikado. Invitations to join in the ceremony have been issued to the Foreign Ministers. His Majesty leaves for Kiôto on or about the 22nd instant.

Particulars will be found elsewhere of a fire which broke out on Sunday morning last and destroyed several buildings in the Main Street, including the store occupied by Messrs. Lane Crawford & Co. The Insurance offices suffer to the extent of about $170,000.

Dr. Dresser, on whose mission to this country we made some remarks in a recent issue, was presented to His Majesty the Mikado this afternoon.

The departure of the Mitsu Bishi S. S. Co.'s steamer *Nevada* for Shanghai and ports has been postponed from Wednesday, the 24th, to Friday the 26th instant.

From the "Japan Mail Daily Advertiser."

Monday, 15th.

At half-past one on Saturday night smoke was observed to issue from the house on lot No. 59, the lower story of which is occupied by Messrs. Kelly & Co. and Mr. Geffeney, and the upper story by the Chamber of Commerce. An alarm was immediately given, and the bell of the Roman Catholic Chapel at once summoned assistance. When the engines arrived on the spot it was found that the fire had obtained a complete hold on the building where it had originated, and was spreading to the adjoining one in the occupation of Messrs. Stillfried & Co., the photographers. This it soon became apparent was doomed, so efforts were directed to endeavour to save Messrs. Lane, Crawford & Co's store, and to prevent the fire extending in the opposite direction to the No. 28, and across the street to the Chartered Mercantile Bank and the building formerly occupied by the Deutsch Bank. The heat was so intense that at one time great fears were entertained for all these buildings, and more than once Messrs. Wetmore & Co.'s house at No. 28 was on fire, but fortunately the flames were prevented from taking a hold on that building or extending across the road. By this time sailors from the *Modeste* and Japanese men-of-war in the harbour were landed and rendered most efficient service in salving property, and doing all that was possible to prevent the fire spreading. No efforts, however, could save Messrs. Lane Crawford & Co's. The windows of the upper story of the store and the office soon caught fire, and quickly spread to all parts of the building, while the bakehouse and outhouses rapidly caught fire and were destroyed. All the books, papers, etc., belonging to the firm were saved, and much of the stock, which was carried to Lot No. 9. The new fire well at the Roman Catholic Chapel was found to be of great service, as from it the principal supply of water was obtained, while a section of hose was led down to the sea for a further supply. About three o'clock Messrs Lane, Crawford & Co's large building was one mass of flame, and as the interior of the building was consumed the stone walls at the sides and back fell with a crash, but the front wall was left standing by itself—a source of danger to all who had occasion to pass,—while every now and then an explosion—whether of gunpowder, spirits, or kerosene oil is uncertain—would take place. The large two storied godown at the rear of the store next caught fire, and as it was impossible to bring the engines to bear on it, the fire had its own way unchecked, but was fortunately prevented from spreading beyond this building, and by half-past four all serious apprehensions of it extending further happily ceased. At one time great fears were entertained that Messrs. Ahrens & Co.'s premises on lot No. 29 would catch fire; and Messrs. Reiss & Co.'s buildings on lot No. 30 were also in danger, and it was found advisable to remove the books of the firm to a place of safety. Fortunately a judicious use of water, and the employment of coolies to extinguish the flakes of fire which were flying about, averted this danger, and the direction of the wind prevented the flames communicating to the row of new buildings on Lot No. 60. At the Chartered Mercantile Bank a small private engine was brought to bear on the dangerous wooden eaves of that building, except at such time when the inexperience of those handling the hose led them to play on the crowd in the street, and a stream of water was now and than directed on the blistered front of the old Deutsch Bank. The front wall of Messrs. Lane, Crawford & Co.'s store did not fall until after six o'clock, and although the fire might have been considered as then subdued, it was yet necessary that the engines should continue to play on the mass of fire which was still raging beneath the debris of the fallen buildings. Indeed, this was done all yesterday, and even now the fire is not entirely extinguished.

All the buildings which were destroyed were insured, as was also Messrs. Lane, Crawford & Co.'s stock, and the property of the Chamber of Commerce other sufferers by the fire, and the total amount of the loss cannot be under $200,000. The offices on whom the principal share of the loss will fall are the Phœnix, North British and Mercantile, Manchester, Scottish Imperial, China Fire and Staffordshire. Messrs. Stillfried & Co. succeeded in saving some few things, and the safes of the Chamber of Commerce were secured the next day, but all the stock and effects belonging to Messrs. Kelly & Co. and Mr. Geffeney were lost.

From the *Hôchi Shimbun.*

The use of native oil for lamps in the soldiers' barracks has been substituted for kerosine, as experience in the use of the latter has proved it to be dangerous.

From the *Nichi Nichi Shimbun.*

On the 15th instant the Emperor will perside over the *Genro-In,* on the resumption of business for the present year.

From the same.

We hear that several changes will take place among the local officials.

From the same.

Twelve telegrams were received from Kumamoto by the Government on the 12th instant, but as to what they refer is unknown.

From the same.

We have received telegraphic advice that some trouble has arisen in the province of Mino, but that a force of police has been despatched to suppress it.

Tuesday, 16th.

It appears that the fire at Isechô, Tobé, which broke out at 6.25 p.m. on the 14th instant, destroyed twenty houses before it was extinguished.

From the *Nichi Nichi Shimbun.*

The insurgents of Kumamoto, Akidzuki, and Yamaguchi who were sentenced to hard labour exceeding the term of five years, in number about 60, will shortly be sent to Sapporo in the Island of Yezo, for the purpose of being employed in making roads, and other labour required for opening up the country.

From the same.

A laboratory for the assay of metals having been erected at the Kaisei Gakko, the upper students in chemistry are now studying that process.

From the same.

The *Kogaku-rio* and the *Seisaku-rio,* belonging to the *Kôbusho* Department, have been amalgamated under the denomination of the *Kosaku-kioku.*

From the *Mainichi Shimbun.*

The sulphuric acid manufactured at the Osaka Mint is gradually finding an increasing sale. Not long ago five thousand jars were sold in China, and moreover there is large demand

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

for it in various parts of the country. The monthly sales now average a value of 80,000 *yen*.

From the *Nichi Nichi Shimbun.*

The various *Rio* (sub-departments) are to be abolished, and the business that was hitherto transacted by them will hereafter be done at such *Kioku* (bureau or office) as the Cabinet Ministers may be pleased to direct. All officials below the rank of *Daijo* will now be dismissed, but certain of them will be selected for re-appointment to the posts of *Shoki-kuan* (secretary) and *Zoku-kuan* (under secretary). Government officials will now rank as follows:—The *Dai Shoki-kuan* will be an official of the 4th class, with a salary of 200 *yen* per month; the *Gon Dai-Shoki-kuan* will be of the 5th class, with a salary of 150 *yen* per month; the *Shô-Shoki-kuan* of the 6th class with a salary of 100 *yen* per month, and the *Gon Shô-Shoki-kuan* of the 7th class with a salary 80 *yen* per month. These are followed by the *Zoku-kuan*, of whom there are ten classes, the first being of the 8th class with a salary of 60 *yen* per month, and the lowest being of the 17th class with a salary of 12 *yen* per month.

Wednesday, 17th.

The funeral of the late Commander C. W. Jones, R. N., Director of the Imperial Naval College, will take place to-day at the cemetery. The funeral party will leave Shinbashi station by the 12 o'clock train. Friends are invited to attend either at the Railway Station or the French hatoba.

Dr. Murray, of the *Kaisei Gakko*, is to be honoured by an interview with the Mikado to-day.

A small skating rink has been formed close to the Athletic Grounds at the end of the Rifle Range, but it not only labours under the disadvantage of being too small for the purpose, but proper attention has not been paid to it, so that the ice is in bad condition. As these skating rinks are well supported by foreigners, and involve little or no outlay for their construction, and are, also, easily kept in order when once made, it is a matter for wonder that some of the farmers have not endeavoured to establish a rink which would be attractive from its size and condition, especially as the investment on their part would, without doubt, prove remunerative. The state of the weather is such that it would certainly be worth while for those foreigners who enjoy skating to take the matter in hand, and construct a commodious rink, which, moreover, if protected from the sun, as it might easily be done, would day by day afford a source of enjoyment to many ladies of this settlement.

The line between Kobe and Kiôto is to be officially opened on the 2nd proximo in the presence of His Majesty the Mikado, and it is expected that several of the Foreign Ministers will be present at the ceremony.

We have rarely seen so marked an improvement in amateur acting, as was to be noticed last night at the Gaiety Theatre, on the second performance of *Cox and Box* and *The Critic*. The fact that twenty-five minutes were saved in the time of representation would be alone, to an *habitué* of the theatres who had witnessed the first performance, sufficiently indicative of the direction in which advance had been made, and he would not be in error. Both pieces were played with a *verve* and *aplomb* which is wanting, even among professionals, on first nights; and as no improvement was possible in the practical departments of the stage, it is simply to the actors that last night's improvement was due. We must not be thought partial in giving special mention only to a few,—a correspondent has, lately, so amply reviewed the acting of all, that it is only necessary for us to say of most, that their performance was fully up to last Wednesday's dramatic triumph.

Mr. N. Lee, in *Bouncer* in the first piece, and as *Dangle* in the second, made a most remarkable advance. In *Cox and Box* he sang and acted with confidence and spirit; in *The Critic*, he was an absolutely different and totally unrecognizable *Dangle* from that of Wednesday, and made a great deal more of the part. Messrs. Newcome and Fredericks could hardly sing better than on the former occasion, but last night, they bustled through the 'business' with much more liveliness, and Mr. Newcome, particularly, gave us some excellent additions to his by-play. The exquisite 'Lullaby' floated into every cranny of the house, and the execution of the two very difficult duets 'Who are you, Sir,' and 'Sixes' was simply perfect.

Sneer, like *Dangle*, was an advance on the first performance; *Puff* was only not better, because he was just as good. In the burlesque, where all seemed more at ease, the specially noticeable improvement was in the performance of the gentleman who took the part of *Leicester*. He and the gallant *Raleigh* both looked, moved, and spoke like their prototypes and well deserved the thanks of their stage manager. *Tilburina* was as pathetic, tender, and love-lorn a maiden, her *confidante* as faithful a shadow as ever—the two amatory nieces as desperately jealous. *The Beefeater*, doubled with the part of *Sir Fretful*, being played by a veteran, hardly admitted of improvement on Mr. Toddles' presentation of Wednesday; both parts were quite as well done as then. The audience seemed thoroughly to enjoy the piece, the first act quietly, the second more boisterously; and by midnight, the theatre was emptied of a crowd who went away thoroughly pleased with their night's amusement.

From the *Chôya Shimbun.*

A foreigner has asked the Government to grant him permission to form a Company in Tôkiô, to be called the *Hokensha*, with a capital of 1,000,000 *yen*, for the purpose of constructing fire-proof warehouses at the five open ports, in which to receive goods for safe deposit.

From the *Hôchi Shimbun.*

On account of the near departure of the Mikado for Kiôto, five *kuazoku* will start on the 17th instant from the capital for that city, for the purpose of making preparations for the reception of His Majesty.

From the same.

The Primary School of the Army Department has been abolished, and the students transfered to the Military Officer's School belonging to the same department. The usual annual addition of students will, for the present, be discontinued.

From the same.

Although the Government has taken immediate steps to reform the various public departments, the changes effected will not be sufficient to complete the decrease of expenditure rendered necessary by the late reduction of the land-tax, so that it is expected that a further change will be made in the number of the *ken* in the empire, twelve more of which will be abolished or amalgamated with others.

From the same.

Less change has been made in the Post Office than in any other Government department, as only seven or eight officials belonging to it have been dismissed, though the salaries of all have been reduced, as elsewhere.

Thursday, 18th.

The funeral of the late Commander C. W. Jones R.N., Director of the Naval College at Tôkiô, took place at the cemetery yesterday afternoon. The funeral procession proceeded to the Shinbashi Station at Tôkiô for departure by the mid-day train, but owing to the unavoidable delay caused by the necessity of providing extra carriages to accommodate the large number of friends, Naval officers, etc, who accompanied the remains, the train did not start until long after the usual time, a fact which made subsequent trains throughout the day half-an-hour late. On arrival at the Yokohama station the procession was formed in order. First came the band of the Imperial Marines, playing the Dead March in "Saul," then the coffin covered with the Union Jack, and placed on a gun carriage which was drawn by non-commissioned officers and men of the Naval Mission. Immediately following the coffin were a large number of friends of the deceased, among them being the British Minister, and then a large body of cadets from the Naval College and Japanese Naval officers in full uniform, and finally Admiral Kawamura, Vice-Minister of Marine, and Admiral Nakamuda in a carriage. The procession proceeded along

Honchô-dori and the bund, and at the French hatoba was joined by Capt. Buller C.B. and several officers of H.M.S. *Modeste*, together with a firing party from that vessel, who marched with reversed arms. The Rev. A. C. Shaw, of Tôkiô, who was waiting at the cemetery, read the burial service, and after the coffin had been lowered into the grave three volleys were fired over it.

H. I. H. Arisugawa no Miya, President of the *Genro-In* and other members of the Imperial family, together with many officials of the Imperial Household, left for Kobe in the *Hiroshima Maru* yesterday afternoon *en route* for Kiôto, where they proceed to be in readiness to receive His Majesty the Mikado later on.

From the *Nichi Nichi Shimbun*.

Messrs. Shishido and Okubo Ichio were yesterday appointed to the office of *Gikuan* of the *Genro-In*.

From the same.

The building formerly occupied of the Horaisha at Honchô, Tôkiô, is now used as a school.

From the *Akébono Shimbun*.

Their Excellencies Sanjô and Iwakura received a decoration of the first class on the 13th instant, in recognition of ten years continual public service.

From the same.

The drivers of the mail carts between Kiôto and Tôkiô have been permitted to carry pistols in case of their being attacked.

From the *Chôya Shimbun*.

A few of the cadets of the Imperial Naval College are to be placed on board the Mitsubishi Company's Mail steamers as midshipmen.

From the same.

Nagaoka, the leader of the party of *samurai* who cut down some policemen at Shianbashi, Tôkiô, died in prison on the 12th instant from a wound that he received when being arrested.

From the *Mainichi Shimbun*.

Mr. Makita, the editor of the *Hôchi Shimbun*, was released from jail on the termination of his sentence of imprisonment on the 4th instant, while Mr. Takase, the editor of the *Kôfu Shimbun*, was sentenced on the 12th instant to imprison- for fifty days for a breach of the Press-laws.

Friday, 19*th*.

The *Chôya Shimbun* gives the following account of changes which have taken place among the officials of the Chiba *ken*, which will give some idea of the plan of reduction of expenditure which, it may be expected, will be adopted generally throughout the country. The *Chôya* adds that the announcement of the changes was received by the populace with lively demonstrations of satisfaction. "Officials of the 8th class, hitherto in receipt of 70 *yen* per month, are to be reduced to the 9th class with a salary of 50 *yen*. Those of the 9th class who were formerly in receipt of 50 *yen* per month, are to be reduced to the 10th class with 40 *yen* per month; those of the 10th class in receipt of 40 *yen* per month to the 13th class with only 30 *yen*; those of the 11th and 12th classes, hitherto in receipt of 30 and 25 *yen* per month respectively, to the 15th class with 20 *yen* per month; those of the 13th class with 20 *yen* to the 16th class with 15 *yen* per month, while those of the 14th and 15th classes, hitherto in receipt of 15 and 12 *yen* respectively, have been reduced to the 17th class with a monthly salary of 12 *yen*."

From the *Hôchi Shimbun*.

NOTIFICATION No. 5.

It is hereby made known that when any one is prevented by sickness or any like cause from appearing when summoned by the *Saibansho*, he must make the same known before the appointed time for his appearance. Any one failing to comply with this order, will be fined an amount not less than five *sen* and not exceeding ten *yen*.

SANJÔ SANEYOSHI,
Prime Minister.

Tôkiô, 17th January, 1877.

From the *Hôchi Shimbun*.

The position of officials of *Fu* and *Ken* has been settled in the following manner:—

FU, KEN.

Chiji, *Kenrei*...will be of the 4th class, with a salary of 250 *yen* per month.

Gon-chiji, *Gon-rei*..will be of the 5th class, with a salary of 200 *yen* per month.

The office of *Sanji* has been abolished in favour of *Daishoki-kuan* and *Shoshoki-kuan*. The former will be of the 6th class, and the latter of the 7th class.

From the same.

A large body of police constables, in charge of two sergeants, will start for Kiôto on the 19th instant.

From the same.

In the Judicial Department on the 17th instant, about twenty-five of the lower officials were re-appointed to their posts.

From the same.

All the officials of the Tôkiô *Fu*, with the exception of the *Chiji* and *Sanji*, have been dismissed, and such as are required for the business of the *Fu* will receive re-appointments under the new regulations.

From the *Chôya Shimbun*.

The officials of the *Kaitakushi* below the seventh rank have had both their rank and salaries reduced, as in other departments.

From the same.

Mr. Mutsu Mumemitsu has been appointed to act as the *Gicho* of the *Genro-In* during the absence of H. I. H. Arisugawa no Miya. The *Genro-In* will commence its sittings on the 19th instant.

From the same.

Three more newspapers are announced to appear shortly in Tôkiô, the *Kôfu Nippo*, the *Konoha Shimbun* and the *Kansai Shimbun*.

From the *Akébono Shimbun*.

A number of farmers have assembled together in the Chiba destrict of the Tôkiô *Fu*, on the plea of getting up a petition to the Government for a reduction of the land-tax, and it was apprehended that some disturbance might take place.

From the same.

Our former acting editor, Mr. Arai Kôzaburo, was summoned to the *Saibansho* on the 17th instant, and there made to sign a statement of the proceedings of the trial he had recently undergone, so that it is probable that he will shortly receive his sentence.

From the same.

We hear that small-pox is prevalent in Tochigi (Kadzusa), Ishikawa (Kaga), Fukuoka (Chikuzen), and Kumamoto (Higo) *ken*.

Saturday, 20*th*.

By the courtesy of Reuter's Agent we were yesterday put in possession of the following telegram, which we issued as an extra:—

London, 17th January, 1877.

Constantinople conference expected failure. Turkey resists demands. Porte's final reply expected on Tuesday. Aspect of affairs threatening.

From the *Hôchi Shimbun*.

Messrs. Nakajima and Ogai, of the *Akebono Shimbun*, were summoned to the *Saibansho* on the 18th instant, for examination about an article published in No. 935 of the issue of that paper.

From the same.

The Bureau of Police has published a work upon the mode of restoring those who have attempted to destroy themselves by hanging, and those who have been rescued in an insensible state from drowning, and copies of this work are to be furnished to the various police stations throughout the country.

From the same.

We are happy to hear the rumour that the Press-laws are to be administered with much less severity than has hitherto characterized them. It is now said that offences against these laws will no longer be punished by imprisonment, but only by fine.

From the *Nichi Nichi Shimbun.*

As the Mikado will leave the palace at 7.30 a.m. on the 22nd instant, all the officials who are to compose the Imperial suite are to assemble there at 5.30 a.m., and at 6 a.m. the members of the Imperial family, *Daijin*, *Sangi*, and other high officials will present themselves to take leave of His Majesty, and accompany him to the Shinbashi station.

From the same.

The *Sei-In* has been abolished, and the officials hitherto employed therein have consequently been dismissed. The rank and salaries of all officials of the *Daijô-kuan* were, on the 18th instant, reduced as in other Government Departments, and on the same date a large number of officials employed in the *Genro-In* were dismissed.

From the same.

About ten of the Yamaguchi insurgents who were condemned to hard labour have been sent to Osaka, to work out their sentence there.

From the same.

On account of the departure of the Mikado for Kiôto on the 22nd instant, the various government offices will be closed on that day.

From the same.

The *Daijô-kuan* has notified that all officials down to the eighth rank, being those in receipt of a salary of, or above, 80 *yen* per month, will have to pay an income tax of 5 per cent. Military and Naval officers do not come under this regulation, but only those of the Civil Service.

1876.

(Continued.)

TOWARDS the end of August a notification was issued by the Prime Minister embodying a measure for the re-division and enlargement of the *kens*. Whether the end sought to be attained was a more healthy localization of the administrative power, greater economy, or increased centralization—as one or two of the native papers appear to have imagined—we cannot accurately say. But the tendency of the measure seemed distinctly towards a diminution of the extreme centralizing spirit which had grown up, almost inevitably, since the Restoration, and of which the evils have often been pointed out in these columns ; nor do we see any reason to doubt that this must be the direct result of it.

On the 26th of October rumours reached the public that an *émeute* of a serious character had broken out in Higo, a province in the island of Kiusiu. On the night of the 24th about 200 of the *samurai* of Kumamoto, the chief town of the province, made an attack upon the barracks of the local garrison, killed the sentries, and rushed in upon the panic-stricken soldiery, cutting down all whom they met in flight or surprised at rest. The barracks were quickly in flames in several places, fire was put to the offices of the local government, and loud reports showed that the insurgents had obtained temporary possession of the guns and small arms of the garrison. The telegraph office was forced, the machines destroyed and the wires cut. But long before noon of the next day the tide had turned, many of the *samurai* had been killed by the pursuing soldiery, others had committed suicide, and active measures were being taken to bring the remainder to punishment. Similar movements in other places, however,—Fukuoka, Kokura and Amaki-machi—showed that the rising of the Kumamoto *samurai* was only one sign of much general disaffection among the whole class. The central Government acted with great vigour. Telegraphic communication was quickly restored, and steamers available for the purpose were at once despatched with considerable bodies of troops and police, to the disturbed districts or the ports whence they could be most easily reached. As information regarding the movement became more precise, the figure of one man drew into increasing prominence, and assumed day by day a more accurate definition. This was the figure of Mayebara, whose manifesto inciting the *samurai* was published in the *Nichi Nichi Shimbun* of the 13th November.

Mayebara had taken an active part on the Imperial side in the events which brought about the Restoration. The bent of his genius was military ; he was brave, vigorous and astute in the field, nor need there be any doubt that, at one time at least, the flame of his patriotism burnt with a pure and bright light. When success had crowned the efforts of the Mikado's party, he was rewarded with high office and entrusted with the administration of one of the public departments. But for this he was unfit. The ability and firmness which the dangers of the field only served to call into more active exercise, deserted him when he approached the portfolio. The last man who had his ear determined his decision. He was weak, vacillating and unpractical in the work of his department, yet stubborn, uncompliant and impracticable in council. To have retained him in office would have been to cast sand, instead of pouring oil, upon the wheels of the administration, and he was dismissed. But he was rewarded with a pension, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

allowed to retain the rank he occupied while in office, with an honorary title denoting his former distinction. He retired from the capital to his native province, where, had he been wiser, he might have passed the remainder of his days in comfort and honour. But an envious eye converted his former colleagues into rivals and enemies. He lacked that innate generosity of heart which enables a man to rejoice in the unshared prosperity of friends, and can contemplate their elevation with something of the pride which similar good fortune would have produced in himself. For eight years he fed upon his heart, far away from the capital or any associations which could have reconciled him to the course into which the force of circumstances, and their own acceptance of its impulse, were forcing his former friends. Everything that was done seemed to him done amiss; everything that was omitted seemed of imperious necessity. He thought the nation was being denationalized, demoralized and hurried to destruction. One after the other he saw the old customs, traditions, and what he imagined to be safeguards, disappearing. The swords of his class had gone, their pensions were threatened, and the absolute will of the Sovereign was or could be thwarted by his Ministers. Long he kept silence; but, as he mused, the fire kindled, and at last he spoke. "I have lived in retirement," he said, "dur-"ing the past eight years. My anger burns to see His "Sacred Majesty kept in imprisonment, and * * * *† "acting just as it pleases him. Inspired by gratitude for "favours formerly received from his Sacred Majesty, I "now, in all loyal fidelity, take up arms on his behalf. "When I heard of the action of the Higo men, I "could no longer restrain myself. I rose, and they "gathered around me in crowds. Here in this district "of *San-in*, there has not been found one to resist us, "and, be the result of this act what it may, I call on the "whole nation to sustain us in it. Let all who side with "me arm themselves and advance towards the north. "Destroy the wicked officials of the capital and release the "Emperor from confinement. If we allow this opportuni-"ty to slip by, another may never arrive. Give no lengthy "consideration to this question; time is short and punish-"ment will overtake those who hesitate. Delay not. The "laws and our Emperor are our guide and strength, and "by them shall our conduct be judged."

Thus it was that he incited the *samurai*.

But his cause was espoused by another party, and from its tenets we may fairly infer something regarding his fitness to judge of the Government he conspired to destroy. The *Jimpu* party was headed by an obstinate fanatic, seventy years of age, Uyeno by name, and immediately subordinate to him were two men respectively named Kaya and Ono. Their loyalty was a form of the lowest superstition, inflamed by a burning hatred of foreigners. Japan was to them the land of the gods. But it had been invaded by devils, and, worst of all, the children of the gods were imitating the ways of the invaders. The new mode of dress and of wearing the hair, the discarding of the sword, the foreign books and foreign ideas were so many forms of defilement which provoked and justified the anger of heaven, nor could this be appeased until foreigners were swept from the country and the land throughly purged of their presence. It is only just to the Japanese people to say that this party is very small, and that its tenets, at least in this extreme form, are repudiated by the intelligence of the country. There is doubtless a considerable party, ignorant of the pernicious effects of its exploded and now ridiculous creed, which would be glad to see Japan so far independent of foreigners as to be able to supply itself, regardless of price or loss, with those commodities which its contact with the western world has taught it to appreciate and desire. But, far from despising foreigners, they are desirous of learning from them, and we may fairly infer that with an extension of their intelligence the delusion referred to will disappear from their minds.

Yet there was one grievance among those enumerated by the insurgents which deserves a special word of notice. It appears that in one of the disaffected districts, some place where the inhabitants had been in the habit of meeting for the purpose of discussing imperial or local affairs, had been forcibly closed, and this act had excited fierce opposition. We shall only say here that in this course we see an evidence of that disposition on the part of the Japanese Government which prevents its appreciating the true and inevitable results of the progress it has inaugurated. This progress will necessitate better means than now exist for giving expression to the ideas which are its natural fruits, and unless such means are found, recognized, and permitted to have an effectual bearing on the condition of the people and their relations to the Government, serious trouble is in store for this Empire.

By the end of November the insurrection was quelled, MAYEBARA taken, and order restored throughout the country. The MINISTER of JUSTICE immediately went southward with a sufficient staff of assistants to try those who had been implicated and captured. MAYEBARA and a small number of the ringleaders were excuted, while all of them were deprived of their rank, and some were sentenced to longer or shorter terms of imprisonment or transportation to Yezo with or without hard labour. It is said that those who suffered capitally expended their latest breath in strong denunciation of the course pursued by the Government, as certain to lead to the degradation and even destruction of the Empire. There is no reason to think that the punishments awarded were in any sense excessive.

And it may be well for the Japanese to take to heart one or two reflections which this occurrence and the unhappy fate of MAYEBARA suggest, in order that their minds may dwell more seriously on those large questions of government which are certainly beginning to call for practical solution in this country.

The measure in which all shades of opinion can find expression, and claim the right at least of reaching the ear of the government of a country, may be accepted as one great test of the quality of that form of government. Let us for a moment contrast what has recently occurred here with what would have occurred in England, for example, under circumstances as similar as the condition of that country permits. Let us suppose a dissatisfied section of the community, led by a man of mark, labouring under the fear that the course pursued by the administration was prejudicial to the welfare of the country, having definite views and aims, and capable of supplying the place of those they attempted to supplant. What would happen? In the early stages of the movement attempts would be made to operate on the popular mind through the press, by meetings, and by agitation in the forms abundantly provided by the constitution. Those who espoused the cause in Parliament would call the attention of the Government to it, and any arguments adduced in its favour would have to be met by direct replies from members of the Cabinet. The whole question would be brought into the arena of public discussion. It would be turned over and examined from every side and in every light

† It was thus that he referred to the special object of his bitterness, whoever he may have been.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by writers and speakers. Minds of all classes would pronounce on it; serious men with earnestness, witty men with caustic allusion and happy analogy, humorists with ridicule, ardent partisans with fire, invective and sarcasm against its opponents, ardent adversaries with the same weapons drawn against its supporters. By these means public opinion throughout the country would be educated on the question, and gradually moulded and formed. Presuming that the doctrines of the party were capable, from their inherent merit and applicability to the wants of the nation, of maintaining their ground, an ever increasing majority would pronounce in their favour, and they would eventually assume the force of law. If they could not stand this test, they would disappear under the exhaustive process of critical analysis to which they had been submitted.

But what happens in this country? A brave and, in some respects, capable man is animated by strong opposition to the course pursued by the Government. His views are shared by a considerable section of his countrymen. Whether better or worse, they have a certain force, and demand a hearing from the country itself. But there is no such thing as permitted agitation, no public meeting can be called to discuss the question, a severe administration of the Press-laws pronounces as seditious all argument in its favour, no advocate can bring it before a representative assembly, and no member of the Cabinet can explain to the country the grounds on which he and his collengues resist it and consider it detrimental to the national interests. The agitation, therefore, which, if open, would be healthy, becomes perforce seditious. Brave men are reduced to secret conspiracy and become more or less demoralized by the process. Subterfuge becomes the necessity of the occasion, suspicions usurp the place of manly confidence in united action, and the virtue of enterprise is stained by the means it is compelled to employ.

> Between the acting of a dreadful thing
> And the first motion, all the interim is
> Like a phantasma, or a hideous dream:
> The genius and the mortal instruments
> Are then in council; and the state of man,
> Like to a little kingdom, suffers then
> The nature of an insurrection.

Political morality is thus destroyed, what would otherwise be patriotic virtue becomes violent sedition, the public mind is not guided or advanced, and what should be a healthy flame giving warmth and life, smoulders unsuspected, to break out no one knows when nor where. Then comes the day of trial. A midnight outbreak; men who are the mere passive instruments of the state slaughtered in their beds; hideous scenes of murder and suicide; the sky red with flames; the fruits of painful and poorly-requited labour destroyed; wailing women and fatherless children; brave yet misguided men led to execution or sent off into banishment.

From the repetition of such scenes this country can only be saved by an improvement in its form of government, and the first step towards this must be, greater freedom in the expression of public opinion. Though we regard the recent insurrection as a late—let us hope it may be the last—convulsion of expiring feudalism, we do not think it need have occurred, and certainly neither the civil nor military authorities can be absolved from blame for the absence of that vigilance which would have prevented it altogether, or greatly reduced the deplorable accidents which attended it.

The month of December was characterised by serious agrarian riots extending over large sections of the country, and giving evidence of great discontent among the agricultural class. The change in the mode of levying the land-tax, from kind to money, seems chiefly responsible for this, and, as we have recently shewn, the want of roads and banking facilities is a serious obstacle to the satisfactory working of a measure which has otherwise much to recommend it. These riots were suppressed without much difficulty, but they betokened such a serious condition of feeling against the scale of taxation hitherto imposed on the country, that they have brought about a modification of that scale which amounts to a financial measure of enormous proportions. The particulars and effects of that measure, however, belong to the economy of the present year, upon the history of which we must not now trespass. Suffice it here to say that the measure will call for a corresponding diminution in the expenditure of the public departments, and a healthy reduction of the clumsy and costly machinery by which they were managed. It may safely be asserted that this reduction could be carried to two-thirds of the employés, besides a diminution of the salaries of the remaining third, without prejudice to the efficiency of that machinery. Special means—an Audit Office would be among the best—should be taken, however, to prevent the growth of official corruption, which is the invariable result of underpaid service. Of course, this is a prodigious change, and must involve a great deal of temporary hardship and distress. But it is necessary, and its accidents must be faced with fortitude and determination. Let us trust—and we may fairly do so—that it will have a beneficial effect upon the whole country—upon the land first, and afterwards upon those whose enterprise may be stimulated by their temporary misfortune.

Amongst the most serious causes which the foreign critic must find for adverse reflection on the proceedings of the year, the severe manner in which the Press-laws have been administered certainly deserves the first place. Had the editor of this journal been animated with no more serious views than the supply of news to the public or its mere entertainment, he would long ago have ceased—could he indeed for a moment have so derogated from the position it has been his ambition to occupy—to write upon a question which must have become wearisome to all those of his readers who think that the object of a newspaper is attained when it has subserved these purposes, and even to those more seriously inclined who do not know how much long, steady and persistent effort is required to ensure the triumph of the cause involved in this question. But he has ever regarded the Press as one of the most important and valuable of all the instruments which modern life has constructed or employs in the great work of human progress, and, above all, in the extension of human liberty, nor have its errors, its license, its excesses, or even its too frequent prostitution to base purposes, ever produced in his mind more than a transient scepticism with regard to its value and the paramount importance of the office it discharges. What one man can do in a sphere so small as that in which he has worked, is little indeed, even were his abilities, industry and adaptability for his task a thousand times greater than such modicum of these as he has brought to his task. Not the less, however, has he felt that no weariness of his readers, no iteration or reiteration of arguments and explanations and reasons known to them as well as their own names, must prevail for a moment in deterring him from the most constant recurrence to this question. And this, not only because of the sacredness of the cause at stake, not only on account of the sufferings of the many men who are at this moment undergoing punishment in this country for the expression of their

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

opinion; but because the extension of freedom, here as elsewhere, involves the extension of the happiness and and welfare of man, the cause of order, contentment and good government, of an advancing instead of a stationary civilization, that advance coming by the people and through the people, and therefore conforming itself to their natural genius instead of being forced upon them. We are quite persuaded that the punishments awarded under the Press-laws have been excessive, and therefore ill-advised. We have drawn constant attention to them in no hostile spirit to this Government, with which, indeed, we have ever felt, and still strongly feel, a sincere sympathy. Its task has been enormous, its perplexities unceasing and harassing, its successes not inconsiderable, and if there be something with which to reproach it, there is abundance for which to praise it. But we have no commendations for it in this section of its administration, which has been harsh, short-sighted and illiberal.

Notably otherwise, speaking generally, has been the attitude of the Press. To its occasional excesses we have drawn attention, always with pain, but always with severe rebuke. We shall confess that there are forms of liberty, of which indeed the western world gives us abundant specimens, which, far from offering attractive examples, or constituting acceptable sacrifices, are to us repulsive and loathsome offerings. When the great cause of freedom has been gained, nothing is more common and more easy than its abuse. But no man fully knows its value or its beauty who cannot subordinate the blessings it brings to the general well-being of society, and, in order to do this, he must part with a share of it in exchange for the advantages which society in its collective capacity confers upon him. His obligation then changes from the right to do as he likes—of course within the bounds of law—to do as he should in furtherance of the highest interests of society, and it may be doubted whether man can guide his actions by a more perfectly unselfish and beneficent law than this. Of course the measure of individual liberty in this country is far too small for any such lesson as this to be of use to the mass of the community. The Japanese have yet to acquire personal and political rights, nor will they attain them without a severe and long protracted struggle. The idea of freedom being conferred upon men at the hands of a government is, as we have always strenuously argued, purely visionary. Liberty given is no true possession. It will be withdrawn again whenever it suits the convenience, or falls in with the caprice of the donor, to do so. Wordsworth more rightly judged the worth, or rather the worthlessness, of a gift such as this when he wrote—

> A gift of that which is not to be given
> By all the blended powers of earth and heaven.

The country has been blessed this year with a most bountiful harvest, and its surplus production of grain, whether of the stores of previous years or of this season, has been, and is still being, exported to some extent, and it is probable that this export will be steadily continued. But it is not done according to the best method, and this demands a few words. Some years ago similar shipments were made by the Government under somewhat similar circumstances, that is, by private intervention, instead of public sale. We drew attention to the facts at the time, and argued warmly that the Government was placing itself in a false position in every way by undertaking responsibilities and incurring risks which experience has shewn to be within the special province of private mercantile operations, but beyond the proper province of Governments, which would do better in the long run to act upon this broad principle, and abandon at once and for ever operations on account of the country which deprived it of the benefit of that competition of which every seller should try to get the full advantage. If we recollect rightly, these shipments were discontinued shortly afterwards on the ground that the export of rice was no longer expedient or desirable. But they were resumed about a year and a half ago, and we have been reproached on one or two occasions for having made no protest against a repetition of the system to which we had formerly taken exception. It was even supposed that because the operations were conducted in one case by an American, and in the other by an English, house, a little national partiality was the cause of our silence. We can assure our readers that nothing of the kind was the case. The simple fact was that after much investigation there seemed many very sufficient reasons—too long for enumeration here—for temporarily pursuing the old course or something analogous to it. But the force of those reasons seems now to have expended itself, while the probabilities are that the export of grain will henceforward constitute a prominent feature in the business of the port. We have no hesitation therefore in again urging that this business should be thrown open to public competition as the best method of conducting it. We shall not deny that, at times, the Government may, by following its present course, secure for itself profits which, under the system we recommend, would go into the pocket of the merchant. But systems must be judged by their operation when extended over wide fields of experience, and we doubt whether any European Government guided by sound economists would for one moment think of resorting to the system now pursued in the export of rice by the Government of this country.

The little principality, or kingdom as we ought perhaps more rightly to call it, of Loochoo has been the cause of some serious discussion during the year between the Government of China and that of Japan. The two Empires claim the allegiance of the Loochooans, and apparently have done so for many generations. But Japan has lately contended that this double allegiance must cease and be yielded to herself alone. The Chinese dispute the contention, and the poor simple Loochooans, who regard the two Empires in the light of father and mother respectively, cannot find it within the limits of their philosophy, or consistent with their safety and perhaps their feelings, to abandon the one for the other. Into the merits of the case we shall not now enter. Suffice it that Japan has taken measures to substantiate her claim, and, perhaps a century hence, China will feel the necessity for doing something in the matter. We may safely leave it meanwhile to our descendants or successors.

The Bonin Islands present no such difficulty, though other claims to them might have been urged had there been any disposition to advance them. The Japanese have resumed an occupation of them abandoned at the time of the late civil war, and may be congratulated upon the possession of a whaling station in anticipation of an increase of their enterprise in that direction. The epicure must envy any nation a clear title to a group of islands abounding with the finest turtle, and the Japanese may dismiss all the doubts they at present entertain regarding the lawfulness of this animal as an article of food, seeing that the kindly designs of nature have blessed the group with an equally rich supply of lemons.

The establishment upon a sound basis of the Mitsu Bishi Steamship Company has placed the Japanese flag on the waters surrounding these islands and those of China under

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the auspices of an important commercial enterprise. The business of the Company is daily increasing, and it appears to be transacted with vigour, efficiency and success.

There are many other topics connected with the progress of this Empire during the past year which claim our attention—reforms in the law and the judicial and executive machinery of the Government; the reduction of the practice of torture (which ought to be absolutely swept away, and for the continued existence of which we saw, with something more than regret, an apology in a recently established foreign journal published in the capital); the progress of the educational establishments in Tokio under foreign direction; of the Army and the Military school under French direction, upon which competent judges have passed high encomiums; of the school of the Kaigunsho, and the Naval College. But, with however much regret, we must pass them by, and trust that they will receive their due share of attention at some other time.

The year which has just opened on us has much in it of good augury in view of the great financial measure lately passed for the relief of the land from the execessive burdens hitherto imposed on it. Yet there is cause for considerable anxiety regarding the disposition of the *samurai* towards the pension-bonds which they will be called on to accept about the middle of the year, and their acceptance or rejection of which will denote their final resolution upon the measure passed in August last for the capitalization of their hereditary incomes or life pensions. We have not yet seen the end of this measure, though we trust and believe that it will be a peaceable one.

There yet remains one duty which we are called on to discharge, and which we approach with feelings too complex to be analysed, too strong to be altogether suppressed, yet permitting of but reticent allusion.

This week seven years ago the founder and editor of this journal took up a wholly inexperienced pen to do what in him lay towards the task from which he now retires. If sincerity of purpose may be pleaded as an excuse for the presumption, he offers it in all good conscience, and hopes—he may even venture to say believes, that his plea will be allowed. During this not inconsiderable period—which has witnessed the passing away of one generation and the advent of another, as time is reckoned in an eastern settlement—he has stood face to face with his readers at the close of each week, with no disguise to his mind, expressing opinions upon many various subjects, and holding views which must have often conflicted with the interests, and what is often more sensitive, the *amour-propre*, of some of his readers. The inestimable advantage of impersonality, enjoyed by the conductor of a great journal at home, is denied to a journalist here. He may be the personal friend of the man on whose public conduct his sense of duty calls on him to reflect adversely. The obligation imposed by private partisanship to support his friend even when in the wrong, so far as comports with obligations more sacred still, has for him no existence. Every opinion he expresses must seem superficial or trivial to some specialist whose province it invades. The conditions under which his labours are prosecuted necessitate the formation and expression of rapid judgments, which the limitation of human vision, the fallibility of human judgment, and the strength of human prejudice, unconsciously to its victim, often combine to render weak or erroneous. Called on to express decisions on all those subject or occurences, at least of local import, which affect or interest his readers, some of them perhaps very deeply, what wonder if he falls short in reflecting their varied sentiments, hopes and objects? And if this is so in journals which trust for their acceptance to the fidelity with which they express the opinions of their readers, how much more difficult is the task of one who has sought rather to be of service by making his journal the organ of his own mind, fortified, instructed and corrected by the best advice and opinion at his command?

Yet society is gracious to what it believes to be sincere endeavour, however poor may be its fruits; and to this fact the retiring editor of this journal attributes such acceptance as it has found among this community and elsewhere. Of the failings, defects and deficiencies which he has abundantly shewn, no one has so keen a sense as himself, as no one can deplore them so heartily. But a man must be taken and judged of in his totality. If he has fought on the side of right and justice and liberty, if he has guarded, so far as his range and power extended, those great principles which constitute the foundations of human society and the guarantees for human advancement, his weaknesses, shortcomings and errors will be regarded with a kindly forgiveness, and in this faith—in which he has so strong an interest—the editor very gratefully and cordially bids the readers of this journal farewell.

SPIRIT OF THE JAPANESE PRESS.

The Reduction of the Land-tax.

("Hôchi Shimbun," 6th January.)

Let us consider the Imperial decree of the 4th instant. According to the order therein contained, the Government ash already reduced the land-tax from 3 to 2½ per cent. per annum on the value of the land, and the tax for local purposes which was formerly levied to the extent of one-third of the amount of land-tax, must not now exceed more than one-fifth of that amount.

Is it not a good omen that the 10th year of Meiji opens with such a decree, and the consequent Government notification that its orders have been complied with? Such actions show, moreover, the deep interest which both the Mikado and his Government take in the condition of the people; and we trust it will be our good fortune to chronicle hereafter many such instances of consideration for their welfare. We hear that the reduction of one-half per cent. of the land-tax will diminish the annual revenue by about eight millions of *yen*, which, if a reliable statement, is also a startling one, as the amount involved is more than sufficient to cover the annual expenditure of any one of the Government departments. The reduction of the revenue to so serious an extent can only be ascribed to the love of the Mikado for his people, and such an act is therefore deserving of the highest praise.

But, after all, the greatest difficulty does not lie in the reduction of the taxes, but in making the revenue, after the taxes are so reduced, cover the expenditure. Herein is the difficulty, which can only be rightly grappled with by the strictest and most uncompromising economy in all branches of the Government—all useless officials must be dismissed, and no expenses incurred which are not absolutely necessary. By the notification of the Government we are aware how the revenue is decreased by the reduction of the land-tax, but it yet remains to be seen how the Government will set about a reduction of the expenditure, and what immediate steps will be taken towards that desirable end.

The Mikado has shown his love for his people by his decree as made known to us in Notification No. 1, which will, in a great measure, relieve the people of their hardships; but the welfare of the people will only be properly assured if the Government does its duty thoroughly by at once reducing all unnecessary expenditure.

But there is yet another point which should be taken into consideration. The new mode of levying the land-tax was ordered by the Government in order to relieve the people of unjust burdens which they had long borne, by having to pay taxes which were not uniform throughout the country. Doubtless the officials who were employed to assess the value of the land for this purpose were actuated by a desire, in justice to the people, to do their work

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

honestly and correctly, and therefore there ought not to be any reason to doubt the results of their labour. But at the same time we fear errors may have been made in valuing the land, through haste or press of work; and as the Government has always shown a praiseworthy desire to effect any necessary reforms, it would confer undoubted benefit on the agricultural classes by ordering a careful revision of the land assessment, as it will be evident that the advantage to be derived by a reduction of one-half per cent. of the land-tax will be quite nullified if the value of the land is assessed excessively high.

It will, perhaps, be said, that any concession on the part of the Government is bound to lead to further unreasonable demands being made upon it, and some may think we are asking too much by advocating a reform in the direction that we have done; but we were led to do so by the joy which the notification of the reduction of the land-tax caused us, believing that a re-assessment of the land would, as it were, complete that beneficial measure.

We think, however, that we have now sufficiently ventilated this question, and shall therefore conclude our remarks by offering our thanks to the Government for the great change which it has happily effected, and hope that it will be our good fortune to record many more such desirable reforms.

"IT'S AN ILL WIND WHICH BLOWS NOBODY GOOD."

("*Hôchi Shimbun*," 16th January.)

The Government having arrived at the conclusion that economy is of primary importance, has ordered a reduction of the allowance for expenditure to each and all of the public departments. In order to carry out this reform many officials have already been dismissed, but, in our opinion, to properly meet the reduction of expenditure ordered, this dismissal will have to take place to the extent of two-thirds of those formerly employed.

Should it now be ascertained that the same amount of public work can be efficiently performed by a reduced number of officials, it becomes apparent that among the larger number there must have been many who were but useless incumbrances. But if the contrary should prove to be the case, then the Government will be obliged to reduce the amount of work undertaken by two-thirds, in order that the remainder may be accomplished by the reduced staff, in which case it would be clearly evident that the dismissed officials had not been idle and useless office-holders. The result, however, will prove this, but at all events the dismissal of a large number of officials from their posts cannot be anything but a great gain to the people, for the reasons which we how adduce.

All of them being men qualified to hold office under the Government, must undoubtedly have possessed great talents, which will now be as useful to the people as they were formerly to the Government. These men, moreover, belong as a rule to the upper classes of society, and when they received their Government appointments were chosen on account of their capability for managing the affairs of the nation, so that although the Government suffers a great loss by being deprived of their valuable services, the people gain by the return of these men among them. Indeed, not only are the people relieved to the extent of 8,000,000 *yen* by a reduction of the land-tax, but they further gain a similar sum by the value of the services of these dismissed officials, which are now transferred from the Government to the people. Men are not dispossessed of their talents and abilities by a change of occupation, and although the dismissal of these officials may prove a matter of sorrow to a few who are specially interested in their retaining Government employment, yet, for the reasons we have stated, it may be looked upon by the nation at large as a subject for sincere congratulation.

The great eagerness with which some persons have been ready to sell themselves to Government has long been a source of grief to all right-minded men, who despised the office-seekers who were everlastingly plotting to obtain some comfortable and lucrative post, and who never gave a thought to the welfare of the people, nor cared to exercise any abilities which they possessed for the public weal. Night and day their thoughts turned to Government appointments only, so that the sweeping changes now inaugurated will be beneficial in turning their thoughts in a more worthy direction, and causing them to seek for some other honourable means of supporting themselves and their families. Therefore this great good, at least, will be effected by such prompt and determined action of the part of the Government.

The officials who have been dismissed will, perhaps, be somewhat perplexed at first to determine on what employment they should fix. Being men belonging to a good class of society, the majority will doubtless turn to the arts and sciences, or even commerce and trade, while perhaps those who had the management of agricultural affairs when in Government employ may follow agricultural pursuits, and thus give the farmers the benefit of their vast experience. By all this the nation will gain, because the people will have among them men of ability following the same pursuits as themselves, yet with all the practical experience of the art of governing a nation.

But even further benefit may result from these changes by the Government being led to adopt some satisfactory method of filling official posts, for should the old system of selecting officials be continued, the good effected by the reforms now undertaken by the Government will be destroyed, and the present dismissal of officials will be of no lasting benefit. It will be like chasing flies from a rice bowl, which are bound to return in a few moments. We therefore hope that serious attention will be paid to this very important matter.

THE VICTORIA FIRE BRIGADE FANCY BALL.

There is a pretty, fanciful picture in one of the illustrated editions of Shakspeare's works—Staunton's we rather think—in which the poet is seen standing, in the attitude of his well-known statue by Nollekens, but resting against one of the columns of a vast hall, through which his various creations are trooping in something of the order they have assumed in the minds of his readers. The philosophic young prince and the distraught maiden who died of his honied words; the old heart-broken king; the noble but too jealous Moor; the ill-fated lovers of Verona; the conscience-stricken thane and his dauntless wife: the banished duke, his dainty daughter and the still more dainty spirit which did his bidding; the lovers of the Athenian wood and the fairies who befooled them; the Merry Wives and their witty dupe; "Sweet Anne"; the cross-gartered steward and his "most excellent and accomplished" mistress; the traduced Imogen; the weird sisters; queens, kings, princes, Romans, Greeks, senators, soldiers, churchmen, clowns, fools, tapsters,—all are passing in review and mingling together irrespective of country, date, occupation, station or congruity of time or place.

There is something extremely entertaining in all this; but it is the entertainment of a dream, a romance of Wonder-land, an evening spent on the other side of the cold river, a symposium in the Elysian fields. "You are going into good company, Madam," said the famous Simeon to a dying lady of quality. "You will see the patriarchs, prophets and martyrs; Moses you will recognize at a glance, and you will be delighted with Enoch."

A fancy dress ball has in it something of these surprises. It involves, as it were, a translation of oneself into another period, nationality or language; nor, trust me, dear madam, are the handsome accidents of the transformation without very traceable results on these occasions upon your spirits, and therefore upon your eyes and your wit. The lustre of the former last Tuesday week was not wholly due to the powder in your hair, or to the touch of carmine which methought I saw when I paid my accustomed respectful homage.

"Indeed, sir,—

"Nay, forgive me, madam, and do not imagine there was the most distant thought of reproach in my reflection. Your adoption of the dress of the last century amply justified that delicate rivalry of nature, nor can I affect to regret an allusion which has produced at this moment the lovely symptom of confusion which——

"Forbear, sir, I command you."——

Yet is there something of unaccustomed elation brought about by this change of dress and character. Some of the cares and cobwebs which cling more or less about the most light-hearted are banished and swept away for the nonce. The key is turned on the skeleton-cupboard. The sigh with which perchance the day began—let us hope, dear madam, it had no deeper source than misgiving whether some other character than that which you have assumed would not better have become you—has slowly changed into a settled smile of happy contentment, and with the discarded dress of every day life many of its cares and vexations have been laid aside for the hour. When A., for instance, dons his slashed satin doublet, adjusts his frill, clasps round his neck the gorget of cameos which marks his rank as a noble of medieval Italy, and buckles on his sword, do you think that he is the same A. whom you have seen

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

many a day working away at a desk covered with letters and papers and fretting over a fall in exchange? No, he is another man for the evening. The dignity of his dress has somehow crept into his imagination, and promoted him to fancied honours which are almost as real as dreams while we are dreaming. His salutation as you greet him is more calm than usual, and perhaps even has something of courtliness in it, his step is somewhat slower, his air more distinguished. He has come from his palace, down the marble staircase with parcel-gilt balustrading. An illusion of ancestry has seized him, and, as he passed through the banqueting room, faces made immortal by the brush of Titian or Tintoret have smiled on him. The humour of the evening has grown on him with every item of the unaccustomed dress he has assumed, and he is almost hurt at your "Ah, A, is that you?" He thinks that "Good evening to your Grace" would have better become you.—"Let us play at being grown-up" say the little ones."

"All this is vastly well, Sir, but I cannot see how at this rate you will ever come to *my* character, which is the only thing I really care about in your sketch of the ball. The wholesome distrust of your powers which appears to have seized you, would have been best shewn by your declining your task and entrusting it to a stronger hand. Methinks your reflections and fancies are idle enough where you should be descanting on the fashion of velvets, the shimmer of diamonds, the brilliancy lent to the eye by powder, the grace of the minuet—above all, the impression left on your mind by the dresses of my sex."

"Have patience at least, lady, nor forget that my subject does not admit of this kind of treatment. Though in all things your humble servant, I cannot force my pen from its measured pace. Recollect that we are among the great, and, truth to tell, I was ever partial to good company."

But, hush! Who is this in the black velvet doublet, slashed with violet satin, the ample and laced square linen collar falling over the shoulders and chest, the trunk hose and shoes of Elizabeth's time?

"I protest, Sir, it is most ungallant to begin with your sex, be its representative who he may. Since the days of chivalry was it ever heard that women took the second place? I protest against this violation of all the propriety of precedence."

"Madam, there lives not a more devoted worshipper of your sex than myself, nor one who better knows how to bow to its claims. But if the recollections of the parish church of Stratford hold good in my mind, yon figure bears a striking resemblance to the bust above the grave of one William Shakespeare, and now that I look more narrowly, it is surely he whom this figure is intended to represent. In all else but this, madam, I submit to your dictation; but, forgive my bluntness, neither to you, nor all of you, nor if there were a hundred fold as many of you as there are, and—were it possible—you could be more to us than you are, will I for one instant yield on this point. Nor, indeed, if you knew him well, would you resent my preference; for no one has ever painted your sex as he has done, no one has so prodigally lavished the loveliest flowers of poetry upon you, or adorned you so royally with the dazzling brilliants, cut by nature's own hand, which lay in rich and unexampled profusion in his own matchless mind.

I protest, too, that he does not head the procession so inappropriately, for, surely, there are some of his creations in the room. That can be no one but Olivia, in black velvet and pearls, fit attire for "a rich countess." She has indeed drawn the veil which at first concealed her face from Viola, and we may take, in her own words, "the inventory and divers schedules of her beauty." There is Maria, too, looking as merry as if she had come from the conspiracy against Malvolio or were enjoying the laughter it had caused. But where is the steward? What! Olivia and Maria, and no Malvolio! Come hither, Laertes, and doff thy dress. Thou art in no humour to grapple with the Dane at thy sister's grave. Get thee cross-gartered. Thou hast of late "had greatness thrust upon thee." "Cast thy humble slough, let thy tongue tang with arguments of court. Go to, thou art made, if thou desirest to be so."

Here comes the Princess of France—"I do affect the very ground her shoe doth tread." Petruchio, too! But alas! Where is Katherine? What, not here? "Oh, the pity of it! the pity of it!" Surely, too, that must be Rosaline—not mistress Rosalind, mark you—but she who imposed her commands on Biron. There goes Prince Hal, and with him Poins, "as merry as crickets;" Sebastian, sweet Viola's brother, and the Duke of Illyria.

And now we may leave our favourite and his creations and make a low bow as four sisters pass dressed as the four queens of clubs, spades, hearts and diamonds, with one king and four sturdy knaves to match. A peasant girl of Lombardy dances by so winsomely that we would live nowhere but in Lombardy were all her sisters such as she. That Polish lady with the splendid *chevelure* recalls the sorrows of a noble race and the fascinations of a brilliant society. There goes a winning Shepherdess; there, Little Bo-peep, and there again Little Red Riding-hood—a faultless presentation. Winter disarms us of all thoughts but those which spring from the heart's best emotions, Night glitters with a thousand stars, and witchcraft loses all its terrors by bewitching. Rebecca and Prince Charles Edward are the only characters of Scott's we see in the room, unless indeed that pretty Puritan has walked out of the Woodstock gallery, but the more southern latitudes give us a Normandy *bonne*, an Italian and a Swiss peasant girl, a Greek lady and two beauties of the French court of the middle of last century. Miss Thackeray doubtless suggested Angelica Kaufmann, and would have been content with the presentation of her charming character.

A very striking constellation was formed by a numerous "Centennial party," brilliantly dressed in the costume worn in America a hundred years ago, and a good example was given of the garb in which we are accustomed to picture Washington to ourselves. The effect of this combination was singularly excellent.

Among the historical characters were Sir Christopher Hatton and Sir Walter Raleigh. Goethe furnished us with Faust and two examples of Mephistopheles, while for half an hour a Satanic imp flitted about—a pocket edition of 'Old Hornie' himself. The civil costumes of the times of Queen Anne and the early Georges were well represented, as were the military costumes of France and Germany of the early part of the last century. Sheridan gave us Don Whiskerandos; a handsome young Spaniard a knight of St. James. Old Japan gave us two *No* dancers; a Turk and a Bulgarian were seen in friendly intercourse, a Neapolitan fisherman jostled side by side with Puss in Boots, and a Picador danced in the same quadrille with an ingenious presentment of Lawn Tennis. The law took to Japanese dress, a Jack tar danced toe and heel with unfailing vivacity, a Canadian chieftain in pacific humour formed a striking figure, while pages, courtiers, and officers of many various uniforms and periods made the room gay with their colours or decorations. Nor must the pretty dress of the Fire Brigade itself be unnoticed. It was numerously represented, as became the occasion, and afforded a ground work harmonizing the thousand shades of colours presented by the other costumes.

And thus much for the Victoria Fire Brigade Fancy Ball of 1877.

The *Lancet's* correspondent in Rome writes:—"The death of Cardinal Antonelli has told severely on the Pope. For some days he has been in a state of extreme dejection of mind, and his physicians entertain serious misgivings as to his health. By their orders he has reduced his business cares to a minimum, and every precaution is taken to obviate a recurrence of those epileptoid seizures which in his present condition might have the gravest consequences."

The Master of the Rolls had before him on the 17th inst. the case of "Stewart *v.* the Sultan of Turkey and others," in which the plaintiff, on behalf of himself and all other holders of Egyptian Tribute Bonds (1871), seeks to restrain the Bank of England from parting with funds in the Bank applicable to the payment of these bonds. An application was made yesterday for leave to serve a writ of summons on the Sultan, by delivering the same to the Turkish Ambassador in London. His lordship said it would be against the comity of nations to accede to the application.—*Pall Mall Gazette.*

MINETARO.

An Episode of Yesterday.

Chap. I.

PROLOGUE.

Now, who would imagine that among so many queer, old houses—which in themselves do not inspire jollity—there would dwell so many bright eyes and laughing lips? For, although Asakusa is very pretty upon a holiday, when crowds flock to the great temple of Kuannon, to feed the sacred pigeons and to pray; when the patter of the maidens' *geta* on the stony pathway sounds like music to a lover's ear; when the sunbeams play bo-peep upon the pavement and the incessant hum of voices from within the temple only makes you think what a good business Kuannon Sama is doing; when the lotus and chrysanthemum are in full flower, or the new year carnival brings its admiring thousands to the scene—although on such occasions, I say, Asakusa will live in our minds as all that is gay, good and beautiful—are there not times when a solemn sadness seems to hover around the ancient temple and its precincts?

But why should there be, you may well ask. Pray listen to my story. Perhaps you did not know little Minetaro, nor the dingy old street which suggested my initial query. Perhaps you did not know that the most dazzling of the many dazzling eyes; or the very sweetest of the many sweet mouths; or the most graceful neck and most melodious voice of any in the good city of Tôkiô, used once upon a time to dwell there. And perhaps, you never even saw the little house, through which she used to flutter, like the sunbeams playing on the temple steps? For Minetaro is Minetaro no longer, and were I to tell you all about her modest dwelling, the parental Government of Japan would assuredly make a shrine of it, with a very large box in front for the spare cash of all devoted lovers! But I am anticipating.

Chap. II.

LOVE.

Minetaro was a singer, and if her name does not sound familiar to you as being one much sought after, or if her portrait has never adorned the shop windows of the capital, it is not because her charms were unworthy of either honour—rather because her innate modesty prevailed over the tendency to use those arts with which her sex are so well endowed. But Minetaro had her admirers, especially amongst those middle-aged gentlemen with rubicund, jovial countenances, and—it is sad to confess it—wives at home, who enjoy their cup of *saké* when a young, fair, beaming, innocent face and an elegant and bewitching figure is the presiding genius. Not that they think their better-halves do not possess those qualities—certainly not! Besides these, she had her lovers, and it is with them we have to deal. They were two—of course, rivals.

Chozaburo was the favoured one, a strapping fellow, fully five feet eight inches in his socks; good-natured, pleasing in his manners, with a fine swinging gait that would have set off his two swords to advantage had the old custom been then in vogue. He affected the foreign fashion of wearing a moustache, and though his friends teased him upon his resemblance to the great Napoleon, he was not to be caught in that manner, especially as his Minetaro had declared, long before it had reached its present dimensions, that she would not be afraid of it. I shall neither describe his rival nor give his name, you will know quite enough of him very shortly.

It will serve my purpose to call him A ——.

Now, it was gall and wormwood for him, you may well conceive, to discover how coldly Minetaro received his advances. Once or twice, to my knowledge, he called on her, only to find her singing before Chozaburo, and to see how the eyes of her lover glowed with animation as she sang to him that verse from the *Dodo-itsu*,—

> My maiden shame forbids me own
> How much I love him; but in spite
> Of all this fond pretence, alone
> His image haunts me day and night.*

And once or twice, too, to be told that she was poorly, when, to my knowledge also, she was as lively as the children outside playing battledore and shuttlecock. Oh! Minetaro! But all is fair in love and war. His time, however, was not far distant.

It came about in this wise. Chozaburo suddenly disappeared—no one knew whither—not even the little singer. And, strange enough, one only professed to know, and that was A ——. Was there not something suspicious in this? Poor Minetaro was sadly disturbed in spirit. Had she been deserted? Was the little heart that then fluttered so wildly—like the wings of a bird set loose from its prison home—to be left scarred and torn and a prey to those tempestuous feelings hidden within the bosoms of the most gentle of Eve's daughters? She would not believe Chozaburo could be cruel, for had he not often told her the story of Gompachi and Komurasaki, with an eloquence no actor could attain? And she knew too, his spirit was as bold as that of Kuronosûké himself. No! some accident had befallen him, and she would visit Kuannon to pray for his speedy recovery. Day after day passed, but still the same ominous silence, when just as the last rays of hope were struggling within her, she was summoned before the man she, if not hated, certainly despised. For though Minetaro was not entirely mistress of herself, her heart was undoubtedly her own. Others might claim her voice and her presence, but her heart might be far, far away. She observed the smile of satisfaction upon the face of A——. as she made her appearance. Now, Minetaro had that admirable self-possession so characteristic of the Japanese race; she felt that the man before her could relieve the anxiety about her lover; she determined to watch and wait. Soon the fun waxed fast and furious; the *saké* cup was drained to the utmost; merriment reigned supreme, save in one small spot. A——. and his friends were in that gay delirium which robs us of ourselves, and no one would have thought Minetaro capable of resisting the general contagion. The conversation changed. Names the highest and the mightiest in the land began to be bandied to and fro in a manner not the most pleasing, strange schemes of which Minetaro could divine but little were excitedly discussed. What could she understand of political economy or the capitalisation of the incomes? True, vague rumours of quarrels had penetrated the confined precincts where she lived, but that was all. What was to be the end of this? Why did a cold feeling of dread overtake her at that moment? And as she recovered from it, the voice of A—— struck harshly on her ear.

"You remember Chozaburo; he has been degraded "from his office. They might have saved themselves the "trouble, for I hear that he joined the Yamaguchi *skizoku* "on the 30th October, and was killed next day at Hagi." Oh! it was cruel, cruel. The *saké* cup dropped from the quivering hand, and the little maid fell senseless on the floor.

Chap. III.

WAR.

The scene must now be changed, and so as to show the machinations of A —— in their true light, make a slight retrogression. The period at which my story dates is that of the brief but determined rising of the rebels, begun at Kumamoto and ended with the defeat of Mayebara. Fortunately for the ruling powers, mismanagement early set in; the Kumamoto men broke out before the prearranged time, and the advantage gained by them upon the garrison only had the effect of counteracting the scheme laid down by the leader. From subsequent events, there seems little doubt that this untoward step of the rebels—sad as was the result to all concerned—at once gave the deathblow to any hopes the insurgents might have entertained of a revolution, by giving the Government time to take deliberate action. And with the resources at their command what could a few men, badly armed, hope to achieve? It was a dying struggle, a convulsive effort of the Old Life against the New. Can you blame them? Is it not human nature?

But to our story, for it pains me to leave you under the impression that Chozaburo could possibly be one who disapproves of the conduct of the enlightened men who direct the affairs of this Empire. Certainly, as the old priest

* *Horewa seau to wa hitomai bakari hiru wa maboroshi yoru wa yume.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

says in his sermon, there are such men in China and India!

It will relieve you to know Chozaburo is not dead, and, matter of fact as the truth is, out it must come. His aged mother, long an invalid, became so low, that life being despaired of, her only son was ordered to return to his father's house in the province of B——. Filial obedience is the lode-star of the Japanese youth. Within an hour he had left the glare and the turmoil of Tôkiô far behind him. His route lay through one of the disaffected districts, where a scene of excitement awaited him. Police in groups patrolled the usually quiet streets; there was a sound of unrest in the air. Whilst halting for a time at the hotel, Chozaburo received a request to appear at the *Kencho*; a plot had been discovered in which an attack on the officials was threatened, and he was asked as a loyal *samurai* to assist in the maintenance of peace—an appeal that did not fall on deaf ears. At midnight the expected attack was made, but the officials were on their guard. The rebels were clad in the old warrior fashion, some wore armour and brandished long spears, others clutched with an energy that denoted the passions raging within them, the swords they had worn in their youth; only a few possessed foreign fire-arms. A desperate fight followed, in which Chozaburo was always in the thickest. Bravely, however, as the *Kencho* officers defended themselves they were greatly outnumbered, and but for a fortunate incident just as matters were approaching a crisis, this little drama might have had a different ending. Troops had been telegraphed for two days previously; they were now overdue, and the devoted servants of the state waited for them as eagerly as Wellington did for Blucher at Waterloo. Not in vain, either, for the bugle notes of the Imperial troops were borne on the wings of the wind in time to save a repetition of the massacre of Kumamoto.

Chap. IV.
EPILOGUE.

In a sense, my pleasantest and my saddest duty is now at hand. *Fiat justitia, ruat cœlum.*

Perhaps you read the subjoined paragraphs in the *Nichi Nichi Shimbun* lately; if so, a re-perusal now may throw a new light upon them.

"We hear that rewards were given yesterday to "those officers who assisted in the defence of the "I——— *Kencho*; special notice being taken at "the same time of the gallant conduct of Mr. Cho- "zaburo on that occasion."

* * *

"On the 14th instant A———, a *shizoku* of Ya- "maguchi *ken*, who was recently arrested in Asaku- "sa as the agent of a secret society for conspiring "against the Government, was sentenced to five "years imprisonment."

* * *

Few more words are necessary. Papers were found upon the rebels captured at Hagi implicating A—— and his companions in questionable transactions, and from further information privately given by a maid of whom we already know something, all the conspirators fell under the ban of the law.

Yet one more picture.

I stood the other day upon the steps of the large temple at Asakusa, musing upon the moving panorama around me. It was a *fête* day. In the endless procession of old and young, are all strangers alike to us? See! amongst the worshippers there are two who advance together to pray. We have met them before, but never have we seen so lovely a radiance upon the sweet face of the one, or so manly a portrait of the other. Ah! it is Minetaro—to us Minetaro no longer—and Chozaburo. They descend the steps, they pass among the sacred doves, through the great gate-way—out into the vast city beyond. Asakusa knows Minetaro no more. And that is how I think there is a sadness there—as of one who has brightened our existence for a time and suddenly faded for ever from our sight.

M.

The detailed account of the Austrian Arctic Expedition of 1872-74, by Lieutenant Payer, one of its commanders, will be published shortly. In the introduction, the *Academy* says, an attempt will be made to compare the results of the English and Austrian expeditions, and to show that perhaps even yet further discovery may be possible.

ASIATIC SOCIETY OF JAPAN.

The following "Notes of a Trip to Vries Island in July, 1872" were read by the author, George J. L. Hodges, Esq., of H. B. M.'s Consulate, at the meeting of the Asiatic Society which was held at Tôkiô on the 27th December last.

On my arrival at Misaki from Yokohama I commenced to make enquiries about the best means of getting to Oshima, or, as it is generally styled by Europeans, Vries Island, and was informed that the distance to it was eighteen *ri*, and that I could reach it either in a ***bin-sen***, or a passenger boat hired by a number of persons, which might be starting in a few days,—or by a ***shi-tate***, or express boat of my own,—***when the wind changed.*** The wished for change, however, did not occur till the following morning, when not being able to find a boat ready to start, I was obliged to charter one on my own account for six *riyôs* and a half, and started in the grey dusk for Ôshima with six sturdy boatmen and a large boat.

After a pleasant sail of about six hours we came within about a couple of miles of the coast, and from this time our progress became slow in the extreme, and the current, which here runs at the rate of a mill-stream, required my boatmen to use their best exertions to make any headway against it. At the same time, the swell caused by the current meeting the waves raised by the wind rocked our boat about in rather an unpleasant manner. Seen from this point, Ôshima presents a bold and rugged appearance, the volcano, however, is not visible.

After a severe struggle my boatmen managed to gain the channel, and keeping in close to the western shore of Ôshima, to avoid the current, sculled slowly on through a sea as unruffled as a mirror. The coast of the island, now on our left, is here low and dark in colour,—shewing evident traces of volcanic action,—but at the distance of a mile or so inland rises the range in which the volcano lies. Fish seem to be in abundance. For not only are they leaping out of the water near our boat, but all along the shore every rock seemed provided with a man and fishing-rod.

At about 1.30 p.m. we at last arrived opposite to the village of Motomura, which from the sea does not present a very populous aspect. There is no regular harbour or landing place, but the water is deep close up to the shore, and we easily gained *terra firma* once more. Here, however, my difficulties commenced. I in vain enquired for an inn or place of refreshment, but was informed there was nothing of the kind on the island. I then betook myself to the *nanushi*, or headman of the village, Mr. Seizayemon, who at first declared he could not receive me, and that his duty compelled him to send me back to Yedo, as foreigners were not permitted to land on the island. On representing, however, that I had only engaged the boat to come here, that the wind was adverse,—and perhaps mollified by some other soothing influence—he at last yielded, and consented to house me himself till I should obtain a boat to proceed to Shimoda. Once having relented he proved a most attentive host; the greatest kindness was shown me by himself and family, and on my departure he refused to accept the slightest remuneration.

Motomura, the village in which I had thus succeeded in establishing myself, is the largest of the six upon the island. The names of the others are respecting Ôkata, Sendzu, Nomashi, Sashijiji, and Habu. The last named has a picturesque and landlocked little harbour. The population of the whole island is about four thousand. It, and the other six islands in the same group, are under the jurisdiction of the Ashikara *ken*. They are named Tô-shima, Miake, Nijima, Hachijô, Mikura and Kôzu. All are populated. Ôshima is the most northern of the group. It is about eight miles in length and five in breadth.

On first landing on the island my attention was immediately arrested by the appearance of the inhabitants, especially the women, who differ in many respects from the people of the mainland. They seemed to me to be taller, fairer in skin, and better favoured. The women dress their hair in a different manner. It is never shaven, even in youth, but simply thrown back from the forehead and tied in a knot behind; the married women thus forming one long chignon which

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is generally worn to the side of the back of the head, the remainder of the hair flowing part of the way down the neck; while the unmarried women tie the knot in the middle, so as to make a bow, with the ends sticking out at both sides of the back of the head. The women also wear a peculiar embroidered band or cap on the head. This is generally of a blue color, and has a white or coloured crest in front. They also have a kind of petticoat, round the skirt of which the same embroidery, etc., is worked. The dress of the men however, does not differ from that of ordinary Japanese, and their hair is worn in the same fashion. It is also worthy of remark teat the women, married or single, do not blacken their teeth; that there is not a single *samisen* or musical instrument on the island; that dancing is unknown; that there are no public baths, etc., and that concubinage does not exist. That the inhabitants are peaceful may be argued from the fact that they possess neither swords or fire-arms; and that their habits are simple may be concluded from the circumstance that in the only semblance of a shop in the village of Motomura, the greater part of the business was carried on by barter, and money seldom used. They live by fishing, and exporting cherry-tree wood to Yedo. There is no rice grown, and the only crops grown are a little corn and sweet potatoes. The soil is dark, or dark-red, and evidently pulverized volcanic rock. Indeed the very stones on the sea-beach are of the same material, and closely resemble those I afterwards saw on Fuji-san. The country is well wooded, but not many of the trees are of any size. The general work seems to be done in great measure by the women, who, curious to say, carry all burdens on the head. On the evening of my arrival I was much amused to see them coming down in troops to draw water from the well (of which there is only one in the village), each one with her pail balanced jauntily on her head, and her blue cap, set perhaps a little to one side, giving her a coquettish appearance. On the morning of my departure, too, a junk was being loaded with cherry-tree wood for Yedo, and the beach was covered with women and girls bearing down the bundles upon their heads, then skipping lightly along the plank between the vessel and the shore, and, with a graceful motion of the neck, tossing them on board.

Above the village, and near the centre of the Island, is the crater of Mihara-yama. This is a volcano still in partial action,—that is, from to time smoke issues forth, and a smell of sulphur is perceptible. At night, too, the glare at its summit occasionally serves as a beacon to the sea-farer. It is situated about three miles from Motomura, and the ascent is rather difficult; not only is it very steep, but the debris of former eruptions renders walking a very tiring operation. In height I should judge it to be about 2,500 feet. The crater itself is oblong in shape, and from 800 to 1,000 yards in length, by about 50 or 60 yards in breadth. There are marks of the lava having extended in three directions. I could not distinguish anything inside the crater but a mass of seething vapour, with what the Japanese accompanying affirmed to be smoke.

On descending from the mountain, I was carried off by my host to witness, not a bull-fight, but what might be termed a "bull-wrestle," which seems to be a favourite amusement at Oshima. Two bulls were brought down to the beach, and stationed on little hillocks, facing each other. At a given signal they were let loose and rushed down to the encounter. They met in the centre, where they locked their horns together, and pushed and struggled in the most scientific manner, to the great delight of all the inhabitants of the village. The conflict ended by one of the bulls pushing the other over, when they were with difficulty separated. I should mention that there are numbers of good cattle on the Island—there are also some horses, and three dogs which have lately been introduced.

The dialect used by the people differs very considerably in pronunciation from that of Yedo or the neighbouring mainland of Idzu, and in sound, when spoken, one is reminded of Chinese, as there is a sort of sing-song about it not heard in Japan. The last word of the sentence is also prolonged, and the voice seems to rise towards the end.

Oshima is said to be the Island to which the mighty bowman Minamoto Tametomo was banished by Yoshitomo, and here he performed his famous exploit of sinking by his arrows one of the vessels of Kanô no ské, who had been sent to attack him. From Oshima Tametomo is said to have gone to Liukiu, and from this fact some persons trace a connection between the inhabitants of this group of islands and the Liukiuans.

July 4th, 1872.

Correspondence.

THE PROBLEM OF TAXATION.

To the Editor of the "Japan Weekly Mail."

Yokohama, January 16th, 1877.

Dear Sir.—In the very interesting review of the past year contained in your issue of the 13th instant, as you refer to the recent reduction of the land-tax, I notice that your language seems to imply the opinion that this tax has not only been too high, to which all would doubtless assent, but that it has been too high as compared with other taxes.

Similar expressions are used also in the *Japan Mail* of August 12th, 1876. In both passages you speak of the tax as exerting a depressing influence upon agricultural interests.

That the tax has exerted a depressing influence upon the country, there can be no doubt, but that it has been felt with special force by the agricultural class, is to my mind by no means so certain.

Having travelled during the past eighteen months, in three excursions to different parts of the country, an aggregate of about 2,500 English miles, I think I may safely assert that agriculture in Japan is in a state not less forward than that of other departments of industry. It is my impression that a larger number of *shizoku* are turning their attention to agriculture than to any other single pursuit. Statistics show that the production of tea and silk has enormously increased during the past few years, and the number and extent of the young plantations, both of the tea-plant and the mulberry, indicate a still further increase within the next three or four years, while the fact that in both cases the new plantations are very largely set out upon land reclaimed for the purpose, would seem to warrant the belief that, this increase is not offset by a corresponding diminution of production in other branches, but represents a real growth in the agriculture of the country.

If we look at the matter in a speculative way, is there any reason for supposing that a tax upon the land will exert a depressing influence upon the agricultural interests? On the contrary is it not generally conceded by political economists, that taxes of all sorts tend to adjust themselves equally upon all classes, even though assessed upon one class alone—just as water seeks its level—provided only that the industry of the class concern itself with the production of some one or more staple commodities, and that the tax be uniformly assessed within that class?

If this theory be correct, as I believe it to be, the great problem is to secure uniform assessment within the range fixed upon. Under any complicated scheme for the taxation of personal property, this is practically impossible, for the reason that large amounts of property will almost inevitably escape taxation, either through defective machinery, or the criminal intent of the owners.

A tax upon real estate does not have this disadvantage. Real estate can not be concealed, or its money value be seriously misrepresented.

It would seem, therefore, that a tax upon land, would, so far from exercising a depressing influence upon the agricultural interests, be the most equitable method of raising a revenue. It has for this reason, always seemed to me a happy circumstance that the Japanese should have received by inheritance from a barbarous antiquity, a system of taxation more fully in accord with the investigations of scientific men than that adopted by most countries of the West.

In view of the healthful influence which I am sure your journal has ever exercised upon Japanese politics, you will, I trust, pardon me the hope, that after a more

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

definite expression of your views, that influence may be found on the right side of this important question.

I remain, Yours truly,

D. C. G.

We thank our Correspondent for his suggestive letter, which, however, demands a more careful reply than we can possibly find time for this week.—[Ed. *J. W. M.*]

Law Reports.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

Monday, January 15th, 1877.

Robert Thompson, second mate on board the American ship *Stonewall Jackson*, was charged with having abused the men, and attempting to raise a mutiny during the voyage from Boston to this port.

(Continued from 12th instant.)

Albert A. Meyers, sworn:—I was passenger on board the *Stonewall Jackson*. I had occasion to notice the behavior of the accused during the voyage. I saw him strike the men with belaying pins. At first I knew nothing of the decipline of a ship and thought it necessary, and laughed at it. The captain reprimanded me and asked me not notice such things. One morning I opened the window of my cabin to let in some fresh air and the sea happened to come in. The accused swore at me and threatened to whip me. I saw no cause for the striking of the men with belaying pins, especially as the captain had given orders against such conduc'. Accused made remarks to me about the captain's incompetency to command a ship. Accused used to call the mate "Hydavis" and I could not help laughing at the way in which he expressed himself. One morning whilst I was washing myself accused abused me very much. I told the mate to reprimand him for his language, as I was not a fighting man and did not want to have any disturbance on board. One night, whilst standing in the pilot house, I heard accused use insulting language about me to one of the boys. He threatened to "fix me up" when we arrived at Yokohama. He said "never mind, I'll cook your goose for you when we get there." I thought I would say nothing of this to the captain till we got here.

To the accused:—The captain did accuse me of carrying tales from the boatswain's room to the cabin, but I was then unaware of the harm I did in mentioning at table anything I had heard or noticed on board the ship. It was the first ship I had been on board of. I saw you strike and mark one of the men, a stowaway Japanese. One night I had occasion to go on deck during your watch, and saw you fling a belaying pin right at a crowd of men pulling at a rope, and strike this Japanese. I saw his finger the day after.

Andrew Anderson, sworn, stated:—I am seaman on board the *Stonewall Jackson*. I have been assaulted by accused. I saw him assault John Bailey at the forecastle door. He kicked him twice. He did not say why he kicked Bailey. Accused struck me over the shoulder with a belaying-pin. He has kicked me and hit me with belaying pins at other times. I have the mark of a belaying pin on the back of my head yet. He said he would knock my brains out. He struck me with his first at the wheel. I have heard him say the captain was a bad man. He was to square with the mate when we arrived at Yokohama.

Accused had no witnesses to call. He said:—For myself I have only to say that before joining I was told the captain always ran the 2nd mate out of the ship in some way or other, and that I need not join her. As for saying the captain did not take the ship the right way, the mate asked me one night where the ship was, and I said too far to the westward.

His Honour said it was evident from the testimony that accused was a man of ungovernable temper. The evidence clearly showed that he had been in the habit of abusing the men, and trying to raise disturbances on board. He was unfit for the position he had held, as he could not govern his temper.

Accused, in reply, said he pleaded guilty to abusing the men, but denied the rest of the charge.

His Honour ordered that he should be put on board the vessel, and returned to America as a prisoner, to be tried on this charge there.'

The captain here remarked that he had promised accused the berth of mate on board one of his own vessels if he behaved himself.

His Honour said that had nothing to do with the matter in hand. It did not alter the evidence, which showed how reprehensible accused's conduct had been.

IN THE KANAGAWA SAIBANSHO.

Before Asaina Kansui, Esq., Vice-President.

Tuesday, January 16th, 1877.

Rose & Co. *v.* Fujikura Zenpachi.

This was a claim for $1,000, value of boiler and engine sold to defendant, with 10 per cent. interest. Plaintiffs were willing, they said, to accept $200 damages for breach of contract, if defendant would acquiesce, and so cancel the contract.

In the former sitting on the 9th instant, the Court had heard the following evidence.

Thomas Rose stated:—I am plaintiff in this case. Defendant came to me on the 14th September last and spoke about purchasing a boiler and engine I had. We did not agree about the price at the first interview, but subsequently, on the 16th, we came to a settlement. The value of the machinery and boiler was $1,000, and defendant paid me $100 as bargain money and promised to let me have the balance within sixty days. I made out an agreement and gave it to him; but he gave me nothing in writing in return. During the following month I had an offer of $1,500 for the boiler and engine, but considering my contract with defendant as binding, I could not accept it. Defendant came some four days after the time for delivery had expired and asked for forty days longer. He promised to give me $100 extra if I would grant him that time. He was to bring that sum the next day, but he did not come, and I have seen nothing of him since. I was told by another man that he had advanced $600 to defendant on the boiler and engine, and wondered why he had not received them. I did not keep a copy of the agreement but sent a summary of it in my complaint to the Consulate. I have entered the transaction in my books.

Okamoto Tenzo, defendant's lawyer, then testified that the document which plaintiff had received from defendant was not duly signed, and therefore could not be received as legal evidence.

Yusutaro was next examined and his evidence was taken note of by the Court, but was not translated.

Plaintiff said he had no further witnesses to call, but showed an entry in his books in support of his own testimony. In answer to the Court he stated that the amount he claimed, $200, was as damages for breach of contract. He had received an offer of half as much again for the articles in question, and surely he was entitled to some compensation for his loss. If defendant were willing to take delivery, then he would claim $900, with 10 per cent interest. Dollars were at a high figure at the time of the contract, being worth 4s. 5d., now they did not bring more than 4s. 1d. He had to look after the machinery, and that caused expense.

The Court requested plaintiff to bring, at the next hearing of the case, the document spoken of by his last witness. This document was from defendant to another man stating that he had bought the machinery for $1,500.

Plaintiff promised to do so, and the Court adjourned till yesterday morning at 10 a.m.

Yesterday, the Court having waited till past eleven o'clock, and defendant not appearing, plaintiff was notified that defendant had, through his absence at both sittings, lost his right to defend the case. The Court therefore resolved to give a verdict on Wednesday, the 17th instant, reserving to itself the right of giving judgment as it might think proper.

Plaintiff thanked the Court, and asked leave to put into its hands the document alone referred to. This was the letter from defendant to one Okawa, in Tôkiô, stating that he, defendant, had purchased a boiler and engine from Rose & Co. for the sum of $1,500. Upon the strength of this letter Genyaimon, who was the real purchaser, paid defendant, his broker, $600, out of which $100 onlyhad been paid to plaintiff, though defendant reported that he had paid $300.

Thursday, January 18th, 1877

JUDGMENT.

(Official Translation.)

Defendant has forwarded in answer, on the 27th of 12th month, 9th year of Meiji, his objections and remarks against the claim brought against him by plaintiff for non-fulfillment of contract for the purchase of a boiler and machinery, but defendant not appearing in the sitting held on the 8th of 1st month of 10th year of Meiji, neither in that held on the 16th of same month, has lost through so doing the entire right of defence and is considered as accepting the entire claim of plaintiff. Consequently defendant is hereby condemned to pay to plaintiff the balance claimed of $900 with interest from off the day such should have been paid and to take delivery of the boiler and machinery, or in case of his unaptness to do so, to pay then as indemnity to plaintiff's firm the sum of $200.

YOKOHAMA SAIBANSHO.

18th of 1st month, 10th year of Meiji.

THE CZAR'S PROMISES.

(Pall Mall Gazette.)

In the *London Gazette* of Tuesday some important correspondence on the Eastern Question appears. The most interesting part of it relates to a certain statement made by the Czar to Lord A. Loftus. It is printed at the request of the Russian Government, as appears from a despatch from Lord Derby to our representative at St. Petersburg. His lordship says, "The Russian Ambassador has called upon me and said that he is instructed by his Government to request that the report of your Excellency's conversation at Livadia with his Imperial Majesty the Emperor of Russia should be made public, as it contained assurances which were of a nature to tranquillize public feeling. The answer to Count Schouvaloff was that, although the production of documents of this kind relating to a negotiation actually in progress was not customary in England, Lord Derby could not, under the circumstances, hesitate to make an exception. Accordingly, the despatch in question is now published. And this is the gist of it.

Lord A. Loftus had an audience of the Czar at Livadia on the 2nd instant, at which his lordship observed "on the sudden change" which had taken place between the Sunday when he had seen the Chancellor and the following day, when the ultimatum was despatched to General Ignatieff. Thereupon his Majesty said that this had been caused by the intelligence he had received of the complete discomfiture of the Servian army, and his fear that it might be followed by similar atrocities to those which had occurred in Bulgaria. He further said that he had decided on addressing an ultimatum in order to prevent further unnecessary effusion of blood, and he observed that "no one was more astonished to receive this instruction than General Ignatieff himself." This seems to show that his Majesty is capable of taking grave measures on sudden impulses. The complete discomfiture of the Servian army ought to have been foreseen; whether or no, when it actually happened it seems to have thrown the Czar's mind off its balance—a circumstance worth noting.

From this point his Majesty proceeded, "with great calmness and lucidity," to enter upon a review of past negotiations, and to make a variety of solemn pledges and promises as to the future. The outcome of his retrospective survey is, that the diplomatic conduct of the Porte has exhausted his Majesty's patience. He regards the refusal of an armistice of six weeks as "a *soufflet* given to the Powers;" of which, however, only one seems to have been disconcerted by the blow. The counterproposal of the Porte for an armistice of five months was still more offensive to the Czar; who said that "if Europe was willing to receive these repeated rebuffs from the Porte, he could no longer consider it as consistent either with the honour, the dignity, or the interests of Russia." He further said, in the spirit and almost in the words of his Moscow address, that while he was anxious not to separate from the European concert, he yet regarded the present state of things as so intolerable that "unless Europe was prepared to act with firmness and energy he should be obliged to act alone." And we see that, so far, he is making vast preparations to redeem his word, twice given.

We now come to certain declarations which are sure to be discussed with much liveliness on all sides. His Majesty spoke of England. He said he regretted to see that there still existed in in this country "an inveterate suspicion of Russian policy, and a continual fear of Russian aggression and conquest." He "deeply deplored" this distrust of his policy, and the evil effects it produced; "and he earnestly requested me to do my utmost to dispel this cloud of suspicion and distrust." And so do we all deplore this distrust. It is at any rate no satisfaction to any creature in England, but a source of great disquietude and of constantly recurring embarrassment. But that it exists is no fault of ours. There are countless reasons for it, but these reasons are not of English growth: they are supplied, and supplied almost from month to month, year after year, by Russian generals, Russian statesmen, and the Russian Emperor. In this, however, the Czar insists that we are altogether mistaken. He reminds us (not that it was needful) that he has "on several occasions given the most solemn assurances that he desired no conquest, that he aimed at no aggrandizement, and that he had not the smallest wish or intention to be possessed of Constantinople." And "intentions," said his Majesty, "are attributed so Russia of a future conquest of India. Can anything be more absurd? It is a perfect impossibility." So we believe. But we know—it is not a matter dependent on explanations, protests, promises, on any side—that the Russian Government has made for years past, and at this hour is making, large and subtle preparations to *disturb* our rule in India, whenever occasion serves: and that is enough for us. It may be true that all that has been said or written about a will of Peter the Great and the aims of Catherine II. are illusions and phantoms; but there is nothing phantasmal in the military and diplomatical operations of Russia in Central Asia—there and elsewhere. However, we are not to believe our eyes, but to rely entirely on the word of the Czar that what is is not, or that, existing, in has neither purpose nor meaning. As with India, so as to Constantinople.

His Majesty pledged his sacred word of honour, in the most earnest and solemn manner, that he had no intention of acquiring Constantinople, and that, if necessity should oblige him to occupy a portion of Bulgaria, it would only be provisionally and until peace and the safety of the Christian population were secured.

And, says Lord A. Loftus, speaking of a later point in the conversation, "his Majesty charged me to convey to her Majesty's Government the solemn assurances he had repeated to me."

Lord Derby believes the publication of the despatch containing these declarations may be opportune, "since the last few days have brought us the intelligence of the mobilization of a considerable Russian force and of the emission of the new Russian loan for a hundred millions of roubles." There is much point in this remark. But more remains to be said about the Czar's promises. We know beforehand that a vast deal will be made of these solemn pledges: the protest of the Emperor's word of honour will be held conclusive as to the aims and intentions of his Government. That they do not include the occupation of Constantinople at present we are ready to believe; because that event has not yet come within the range of actual possibilities. But they include an approach to the doors of Constantinople; and as for the Czar's pledges—it is true, as his Majesty said, that this is not their first presentation to grievously suspicious England. On another occasion his Majesty gave "the most solemn assurances that he desired no conquest, that he aimed at no aggrandizement, and that he had not the smallest wish or intention to be possessed of"—Khiva. In 1873 the British public was startled by an announcement to the effect that its Government, (even the Gladstone Government) had ventured to hint a strong objection to certain schemes of conquest projected by Russia. It was said that Lord Augustus Loftus had delivered a Note to Prince Gortschakoff declaring the resolution of the British Government" to refrain from all interference with Russian progress along the Amu and Sir, so long as it does not menace Afghanistan or the Principalities on the Upper Amu, and others, situated between Khiva and Afghanistan, claimed by the Ameer of the latter country. So much concerned was the Russian Cabinet at our uneasiness, that the Emperor sent a special envoy to England for the purpose of offering our Government "his Majesty's most conciliatory assurances." The mission was a great success. The apprehension and the opposition of Lord Granville were set at rest by the solemn promises of the Czar. His lordship read to the House of Lords a despatch addressed by himself to Lord A. Loftus, in which, recording a conversation with Court Schouvaloff, Lord Granville says the Russian envoy made the following declaration: "The object of the expedition to Khiva was to punish acts of brigandage, to recover fifty Russian prisoners, and to teach the Khan that such conduct on his part could not be continued with the impunity in which the moderation of Russia had led him to believe. Not only was it far from the intention of the Emperor to take possession of Khiva, but positive orders had been prepared to prevent it, and directions given that the conditions imposed should be such as could not in any way lead to a prolonged occupation of Khiva." Lord Granville expressed his implicit belief in the Czar's promise, saying that, "considering the form of the Russian Government, he attached as much value to the assurances he had received (through Count Schouvaloff) as he should to a formal engagement." On this occasion, too, the Czar deplored the distrust of his policy so prevalent in England. "Count Schouvaloff (Lord Granville went on to say) repeated the surprise which the Emperor felt at the uneasiness which it was said existed in England on the subject; and he gave me most decided warrant that I might give positive assurances to Parliament on the matter."

This conversation was reported to the House of Lord when Parliament met in the month of February. By August the Czar's promise was completely falsified; and the occupation of Khiva remains to this day standing evidence of Russian sincerity and good faith.

AMERICAN HOSPITALITY.

[FROM OUR SPECIAL CORRESPONDENT.]

(The Times.)

PHILADELPHIA, Nov. 2.

When in a recent letter I referred, in a purely disinterested spirit of admiration, to the grand scale on which the Americans delight to exercise hospitality, I had no idea that I should have so soon an apportunity of witnessing an unusually striking specimen of it. But I do not think I am guilty of more than the Briton's inevitable arrogance when I say that American hospitality, though, doubtless, universal—as the many-nationed guests of Philadelphia can testify—is never so hearty and open-handed as when its object is an Englishman. After all, in spite of the occasional disputes and unpleasantness to which international complications and blundering statesmen will give rise, just as quarrels will happen in the best-regulated families, blood is thicker than water, and the genuine American, even in his moments of irritation against English policy, cannot help feeling a specially warm and friendly interest—a peculiar sentiment, for which one may search all history in vain for a parallel—in a visitor from a distant land who is, in one sense, a stranger, with a stranger's claim to courtesy and hospitality, yet, in another sense, is as closely bound to him as his own blood relations by all the strong ties of race, religion, language, literature, joint heir with him to the same glorious history which has already given the Anglo-Saxons their place of pride in the foremost rank of civilization, and bids fair to make them masters of the world. Among cultivated minds there is in the literature alone a magic spell and bond of union. There are few things more pleasant to an Englishman than to hear Americans describe the delight with which, on their first visit to England, they found themselves actually living in places familiar and sacred to them from childhood as the haunts of favourite heroes and heroines, whether of history or fiction; and to the many Americans who cannot make this visit the people who come from these classic spots are, as it were, pilgrims from a holy land, however prosaically unconscious themselves of the halo which surrounds them, however ignorant of the subtle spell hidden in names which they may have asociated with no other literature than bankers' books and tradesman's bills. To a certain extent, no doubt, this literary sympathy may extend to visitors from any scenes which great writers or great deeds have made classical, but to nothing like the extent, I take it, in which it applies to stories read in childhood of the mother country in the mother tongue. The literature of the present is a scarcely less potent link in the long chain of sympathies than the literature of the past. It is a mystery to me, to take this one ground alone, how an Englishman can feel as if he were in a foreign land, can feel as he always must feel, even among his best friends, in Germany or France, when he is with people on whose shelves Tennyson and Longfellow stand side by side as they do on his, to whom the heroes of George Eliot and Hawthorne are quite as real and familiar personages as to himself.

All these and many similar influences, to which it would take a volume to do justice, create between Englishmen and Americans, despite other counteracting influences, a peculiar feeling which cannot, perhaps, be exactly described, but of which the nearest description I have heard was given me recently by a distinguished Englishman, himself the recipient of endless American kindliness and courtesy, when he said that coming to America was like coming by marriage into a family hitherto unknown, the members of which were somehow at the same time strangers and intimate friends. I believe that among genuine Americans, sound in heart and strong in head, this feeling underlies the very moments of their bitterness towards England, perhaps even accentuates them, just as the fiercest quarrelling is that of friends; and if any one wants a touchingly quaint illustration of this, let him read again Mr. Lowell's essay "On a Certain Condescension in Foreigners," and mark how the writer, in the very midst of his angry talk about Alabamas and "airs of patronage" and his bated breathings of war, can no more refrain from the kindest heart-utterances about Englishmen than Balaam could help blessing the children of Israel. It may be said that there is a good deal of anti-English writing in the American Press, though I cannot myself say that I have seen much of it, or anything like the amount of what I have seen in praise of England. But, admitting its existence, the greater part of it may, I think, be accounted for by causes which Englishmen at a distance are apt to overlook, and which have really very little to do with any unfriendly feeling towards England. To begin, many of the writers are so accustomed to throw about hard, high-sounding words of abuse that they learn to regard them somewhat as Calchas in *La Belle Helène* regards "*Mon tonnerre*," the only use of which is to stir up the people to bring offerings. Most, too, of the writing is political, and there are ardent politicians here who would think themselves justified in abusing not only their mother country, but their mother-in-law and all their wife's relations if the abuse helped their party to win the Irish or any other vote. Much of the abuse is written by non-Americans, especially Irishmen, whose national aptitude for writing gives them a position on the American Press altogether out of proportion to their numbers. I am sorry to be obliged to add that, though most of the Englishmen who make America their home never lose their affection for the old country, a few become more anti-English than the most prejudiced American. From none have I heard so much said against England as from these gentlemen, partly, one may charitably hope, from the notion that they have a sort of prescriptive family right to abuse a country which is, in a way, their own; partly because they fancy themselves bound to show some reason for having left her; but chiefly, I apprehend, from an ignoble fear of being suspected of lukewarmness towards the land of their adoption if they do not vehemently repudiate the land of their birth.

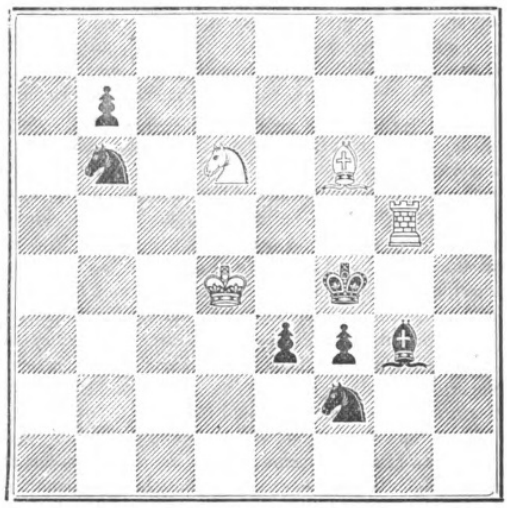
This feeling which I have been attempting to describe is entertained, I believe, more or less strongly by all classes of Americans towards all classes of Englishmen. I, at least, have found it everywhere, from the grandees of Newport to the roughest street crowd, through which my "English accent" has been a sort of passport, and the experience of nearly all the Englishmen with whom I have compared notes has been the same as mine. On the 3d of July, in Philadelphia, I drove from one end to the other of the immense multitude of all classes and conditions lining the streets, and shall never forget the reception which they gave to the carriages containing the British Commissioners and Judges. But of course the feeling, like everything else, has its flood tides, and is only seen at its best under two very important conditions, the latter of which many Englishmen either forget or do not understand. In the first place, the English guest must be a representative man of mark at home, in whose case the Americans can feel that every tribute of respect they pay him is also a tribute to the country which he represents; in the second, he must fall into the hands of the right American hosts. The best army without good Generals is a mob, and all the hospitality of America is of no avail without the right men to organize it and put it in proper train. If Englishmen of mark return home discontented with their reception in America—though I do not think this often happens—it is almost sure to be owing to their neglect or ignorance of this latter condition. But, when the two conditions are happily combined, the English guest is entertained on a scale of which it is not easy to give people at home any adequate notion, and which I regret to be obliged as a veracious historian to confess, quite puts to the blush all our time honoured notions of hospitality in the Old World. I am not, indeed, at all prepared to admit that Americans as private individuals are one whit more hospitable than we are. But there is certainly no denying that for reasons which I have no time here to discuss, their public bodies and public men somehow contrive to show Englishmen attentions of a far more striking kind than Englishmen ever show Americans. I have before spoken of the occasion on which the Pennsylvania Railway Company carried over 100 guests for a week's excursion through the country, treating them thoughout in princely style, and of the sensation which it would make in England if one of our railway companies did the same thing. But even a big excursion of this kind somehow strikes one less than when one finds similar attentions shown to an individual guest; when the same company, through its chief, Colonel Scott, offers to take him and his family wherever he may like to go over the length and breadth of their enormous line, just as an English host might offer him a carriage for a drive; and when the Pullman Company place a palace car at his exclusive disposal, always ready for him at the moment he wishes to remove from point to point of his tour, no matter how long it may be, and all the time attend so carefully to his comfort and that of his party that they travel 500 miles with less fatigue and trouble than an American in England can usually travel 50. Wherever he stops, he finds the best people of the place all ready on the look-out for him, eager so to do its honours as to make him feel as if he were the guest of the nation, and, as if to complete the illusion, he is perhaps—though I am bound to admit that this is an honour extremely rare and exceptional—formally entertained by the nation's representative, the President of the United States.

As if this general scale of attentions were not sufficient, should it be discovered that there is any place which, on personal or other grounds, he may particularly wish to see, every effort is at once made to provide not only for his seeing it, but for his seeing it in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

some particularly and more than usually pleasant way. It was an occasion of this latter kind, on which I happened to be myself an eyewitness of the way in which Americans treat an English guest whom they single out as worthy of special honour, that suggested this letter, and was, indeed, meant to be the subject of it; but my rash reference at the beginning of it to the general friendliness of Americans towards Englishmen—about which no Englishman who has experienced it feels that he can say enough—has unfortunately tempted me into so long an exordium that I have no time left to say half enough about the occasion itself. It arose from a wish expressed by Mr. Walter, M.P.—who, with Mrs. Walter, Lieutenant Walter, and another son, a little boy, has been for nearly two months on a visit to the United States—to see something of the American namesakes of the English county and town with which he happens to be closely connected. Nearly all our old English names are reproduced, some of them half a dozen times over, in America, and Pennsylvania boast its county Berks, and Berks its town Reading. Mr. and Mrs. Walter were at the time guests of Mr. and Mrs. G. W. Childs, who need no introduction to Englishmen, as it is in England especially that their world-wide hospitality is best known, and Mr. Childs, than whom no one understands better how to make his fellow countrymen follow the example of kindliness and courtesy towards Englishmen which he himself is never weary of setting, immediately undertook to see that the wish of his guests should be gratified in the pleasantest way. As I said just now, American hospitality only wants to be set in motion; the sole difficulty, sometimes sufficiently serious, is then how to stop it. A two days' excursion was decided upon, and the railway companies through whose domains it was to be made—the Philadelphia and Reading and the Lehigh Valley—at once put their lines at the disposal of the excursionists, with special cars, trains, and everywhere unwearying attentions from their most distinguished officers. The presidents of the two companies, Mr. Gowen and Judge Asa Packer, themselves in person looked after the party, and were strenuously seconded by Messrs. Hartshorne, de Keim, Wootten, Morris, Sayre, and I daresay others whose names I do not happen to have been told. Our route lay through the famous coal regions of Pennsylvania, and Mr. Walter, wishing to inspect them more carefully than would, perhaps, have been possible if he had gone at a later hour with the majority of the party, started at 6 o'clock on Monday morning with Mr. Gowen and Dr. Siemens in one of those delightful toy carriages—engine and carriage in one—which are unknown in England, and even in America are peculiar to the Philadelphia and Reading Railroad. I had the good fortune to come back in it, and could willingly write a column on its charms alone, did not space and time remorselessly forbid. It will whirl you along 50 or 60 miles an hour, while you sit surrounded by open windows, as much at your ease and with as good views of the scenery on both sides as if you were in a postchaise, picking its way cleverly through the many branching lines, slackening or quickening speed, stopping, reversing with better discipline than the best-trained horses. Mr. Walter's party "did" the coal regions, I believe, in the proper style, even to going down a mine. Our party was rather "on pleasure bent," and some members of it did not even see a mine, though others, more privileged, looked down one mine's mouth. However, we had, thanks to the skilful arrangements made by our numerous and watchful hosts, a most delightful excursion through some of the most charming scenery and interesting towns of Pennsylvania.

The Cairo *Raudhatu-'l-Akhbár* announces that, according to the latest intelligence received from Râtib Pasha, the commander-in-chief of the Khedive's Abyssinia expedition, his Excellency had quitted the highlands and was moving towards the plains in the neighbourhood of Massowah, taking with him four battalions, the remainder of the Egyptian forces which had been placed under his command. The Pasha and these troops are to be re-embarked for Egypt as soon as steamers can be provided for their transport, and two fresh battalions are to be sent to relieve them in and around Massowah.



News has been received at Lloyd's that the new screw steamship *Genoa*, valued at about £52,000, with a cargo of maize worth about £20,000, has foundered, it is believed, in the Bay of Biscay. The captain, the first and third officers, boatswain, and one fireman were drowned. Twenty-three of the crew have been landed at Gibraltar by the Italian brig *Zeo*. The *Genoa* was a handsome iron screw steamer of 180 nominal horse-power and 1,216 tons net. Her owners are Messrs. Nelson, Donkin, and Co., of Newcastle-on-Tyne.—*Pall Mall Gazette*.

The death is announced of the Greek monk Nicolara, who followed Canaris through all the campaigns of the Greek war of independence. It was he who blew up the Turkish admiral's vessel in the strait of Scio. After the war he retired again to his convent.—*Pall Mall Gazette*.

PROBLEM.

FROM A COLLECTION OF PROBLEMS, BY J. B., OF BRIDPORT.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF J. N. KEYNES'S PROBLEM OF LAST WEEK.

1.—B to Q B's sq.	1.—P takes P.
2.—R to Q B's 2nd.	2.—Anything.
3.—B or R mates.	

Correct answers received from W. B. M., and W. H. S., Tôkiô; C. B., E. S. B., and Delta, Yokohama.

Game played at New Orleans between Mr. Rousseau and Mr. Schulten of New York.

BLACK (Mr. S.)	WHITE (Mr. R.)	BLACK (Mr. S.)	WHITE (Mr. R.)

* Well played.
† This is not a good move.
‡ Threatening mate next time.
§ The only move on the board to prevent immediate checkmate.
‖ The opening of this game is smartly played by Black; but his opponent contrives to turn the tables on him latterly, and to terminate the contest by a very neat and scientific *coup de grace*.

TRAVELLERS, MISSIONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper, in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, *(Horniman's Museum.)* Forest Hill, LONDON. [ADVT.]

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—In general our market continues very quiet, and prices are about the same as last reported. *Yarns:*—Only in 16-24 has a moderate business been done at slightly improved rates, whereas 28-32 and 38-42 are neglected. *Shirtings* are in over supply and almost no demand exists for them. Prices are quite nominal.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce.	$1.40	to $1.80
8 lbs.	38½ yds.	44 in.	,,	1.90	to 2.40
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.60	to 2.40
9 lbs.	38½ ,,	44 in.	,,	2.15	to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40	to 1.60
,, 6lbs.	24 ,,	32 in.	,,	1.10	to 1.25

White Shirtings:—					
60 to 64 reed	40 yds.	35 in.	per pce.	2.20	to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	0.65	to 0.95
Black Velvets				7.50	to 8.75
English Drills 15 lbs.	40 yds,	30 in.		2.55	to 2.65
Taffachelass	12 yds,	43 in.		1.90	to 2.10

Yarns.—

No 16 to 24	per picul	$28.50	to 32.25
No. 28 to 32	per picul	$30.50	to 35.50
No. 38 to 42	per picul	$36.00	to 40.00
Reverse Twist 16-24	,,	$31.00	

Woollens.—The same dullness as formerly prevails in this market, there being scarcely anything doing in this staple. Quotations given below are therefore quite nominal.

Plain Orleans	40—42 yds.	32 in.	4.75	to	6.75
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.25
Shimagoro	30 yds.	30 in.	4.00	to	5.25
Italian Cloth	—30 yds.	32 in.	0.24	to	0.33
Camlet Cords	29—30 yds.	32 in.	5.75	to	6.00
Camlets Asstd.	56—58 yds.	31 in.	16.50	to	17.50
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00
Plain Mousseline de Laine	—30 yds.	30 in.	0.17	to	0.19

Figured Mousseline de Laine	30 yds.	30 in.	0.25	to	0.30
Multicolored ,,	30 yds.	30 in.	0.30	to	0.36
Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80	to	1.20
Presidents	54 in.	to 56 in.	0.75	to	0.80
Pilots	54 in.	to 56 in.	0.45	to	0.60
Union	54 in.	to 56 in.	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.	per lb	0.42	to	0.48

Sugar.—Since our last report a small enquiry has sprung up, but at lower rates.

Sugar:—Takao in bag	per picul	$3.90			
,, in basket	,,	$3.70			
Taiwanfoo in bag	,,	$3.75			
do. in basket	,,	$3.60			
China No. 1 Ping-fah	,,	$7.50			
,, No. 2 Ching-pak		$6.80	to	$7.20	
,, No. 3 Ke-pak		$6.00	to	$6.30	

China No. 4 Kook-fah	per picul	$5 30	to	$5.60	
,, No. 5 Kong-fun	,,	$4 80	to	$5.10	
,, No. 6 E-pak	,,	$4.00	to	$4.30	
Swatow Brown	,,			$3.00	
Daitong	,,			$3.50	
Japan Rice	,,	$2.05	to	$2.20	
Kerosene Oil				$4.70	

Kerosene Oil.—The market is quiet at quotations, with only a hand to mouth business.

EXPORTS.

Silk.—This market has remained since the 11th instant under the influence of advices which boded ill for the maintenance of peace in Europe. At the same time the quality of the assortments of Hanks on offer being in most cases unsatisfactory, buyers have had to reject after inspection the greater part of their purchases. In fact, settlements only amount to 90 bales of Hanks, and 60 of Oshiu sorts, Sodai and Filatures. The advance of $30 reported in our last has been fully lost, and the fall in prices cannot but be accelerated by a telegram received on the 19th instant, which reports a rupture between Russia and Turkey as imminent. Under these circumstances the following quotations are to be considered as nominal.

The shipments of the fortnight are 224 bales, making the total export since 1st July 18,803 bales against 10,225 last year for the corresponding period.

The stock, which is mostly composed of Oshiu sorts, is estimated at 2,200 bales.

	At Exchange 4/4 in London.	*At Exchange 5.50 at 6 m.s. in Lyons.*	
Hanks.—Best No. 1 & 2	$840 to 860	31/11 to 32/8	89 to 91
,, Good No. 2	$810 to 830	30/10 to 31/7	86 to 88
,, Medium No. 2½	$770 to 800	29/4 to 30/5	82 to 85
,, C'mon. No 3	$720 to 750	27/7 to 28/8	77 to 80
,, Inferior No 4 & 5	$650 to 700	25/ to 26/10	70 to 75
Oshiu—Best	$770 to 800	29/4 to 30/5	82 to 85
,, Medium to Good	$700 to 750	26/10 to 28/8	75 to 80

	At Exchange 4/4 in London.	*At Exchange 5.50 at 6 m.s. in Lyons.*	
Hamatski No. 1 & 4 nom.	$500 to 580	19/7 to 22/6	55 to 63
Kakeda—Extra	$925	35/	97
,, Best	$820 to 860	31/2 to 32/8	87 to 91
,, Medium to Good	$760 to 800	29/ to 30/5	81 to 85
Sodai	$550 to 580	21/5 to 22/6	60 to 63
Filature Silk	$870 to 1000	33/ to 37/9	92 to 105

The total export of Silk for the first six months of the season is as follows:

	From 1st July to 31st December, 1876.	1875.
To England	9,066	3,661
To France	8,342	5,707
To United States	62	53
To Italy	715	89
Total bales of 80 catties	18,185	9,510
Average price per picul	$818.22	$445
Total value	$11,903,540	$3,385,560

Silk Worms' Eggs.—The total export for the season 1876-1877 is in round numbers 1,025,000 cards, which at the average price of $1.60 gives a total value of $1,640,000.

This statement is based upon a careful compilation of the Custom House returns, the number and weight of packages, and our weekly market reports.

The total export for 1875-76 was 727,000 cards, giving, at the average price of $0.45, a total value of $327,150.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—Rather more briskness has been apparent in our Tea market during the past week, settlements amounting to 1,500 piculs, mostly of the lower grades, although *Fine* Teas have received a little attention.

Prices have, in a measure, become more firm, and an advance of fully $1.00 to $1.50 per picul may be quoted on *Medium* and lower grades.

Arrivals amount to some 600 piculs, but it is difficult to say what amount of unsold stock yet remains in the country. The general impression seems to be that this market will only be supplied as the demand on the part of buyers may require; but experience of late shipments last season should tend to warn intending operators of the almost certainty of disastrous consequences of such purchases.

Common	$11.00 to 13.00	Fine	$24 to 30
Good Common	14.00 to 16.00	Finest	Nominal.
Medium	17.00 to 18.00	Choice	
Good Medium	19.00 to 22.00		

EXCHANGE AND BULLION.

Exchange.—There has been but little doing during the past week, with pretty steady rates until at the close, when an advance took place.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

DIED.

Suddenly on Thursday morning, the 25th instant, GEORGE HURLBUT, aged 39 years.

Notes of the Week.

The dollar issue of the "Dai Ni Koku Ritzu Ginko," or Second National Bank—commonly called "The Shosha Notes,"—has for years been a thorn in the side of our foreign bankers and merchants. We find that so long ago as 1873, the Chamber of Commerce called attention to the large quantities of these notes in circulation, and addressed the Directors of the Ginko to point out how desirable it was for all concerned that some information as to the constitution and position of their bank should be given, and suggesting the publication of periodical returns. Since that, there have been the same manifestations of distrust recurring from time to time, while the foreign banks have adopted variously modified precautions in the form of receiving the notes only "for collection." In June last, indeed, three of our banks agreed to refuse to receive these notes at all, hoping thus to be able to drive them out of circulation, but a want of unanimity has rendered this attempt a failure. The continued agitation has not, however, been altogether fruitless. Recently, the Okurasho has ordered the Ginko to publish in one of the native newspapers daily returns of its circulation, which is decidedly a step in the right direction; and if these returns are given loyally and promptly, they will not only be a safeguard to foreign merchants, but of considerable value as an index of the course of trade. We propose to translate them into our daily issue, and hope they will prove of interest and use to our readers. Evidently, a large part of the trade of the place, as between foreigners and natives, is done through the medium of this currency, and the fluctuations in the amount of the circulation indicates the amount of business doing, at least in exports. The modus is just this: The great bulk of the cheques given by foreign buyers in payment for produce find their way to the Ginko, which gives in exchange for them its own notes, at the same time obtaining from the foreign banks cash for the cheques. These notes circulate amongst the native merchants, but also come back to foreigners in considerable quantities in payment for imports. Thus we find that in the early part of July, when purchases of silk were on an insignificant scale, the circulation was returned as under $200,000; while at the end of September, when large business was doing in silk, the circulation reached nearly a million. At present it is something under $500,000 which, considering the general dulness of business, is a high average. Probably more activity in imports, by throwing back the notes into the Ginko, would considerably reduce the amount.

The *Kobusho* has issued invitations to the foreign press to send reporters to the opening of the railway between Osaka and Kiôto, and we believe these have been very generally accepted, so that the ceremony will be fully described both here and in the home newspapers. The representative of the *Illustrated News* is among the invited, so that sketches of the beautiful scenery about Kiôto, and of the ceremonial itself, will not be wanting. We hear that the *Nichi Nichi Shimbun*, the *Hôchi Shimbun* and *Chôya Shimbun* have also had the same offer made to them. Evidently the object of publicity will be attained.

We publish to-day a translation from the *Chôya Shimbun* on the subject of the provision by the Government of *Johei-sô*, or establishments for the storage of rice, on which advances can be made to the farmer, thus enabling him to pay his land-tax when due, without being compelled to sacrifice his grain. We called attention in our last issue to this subject, and we sincerely trust that the Government will fully carry out its most praiseworthy intention. In the present condition of affairs, no step could be taken that would afford more material assistance to a class that most need, most deserve, and will best repay by their gratitude, all the generous consideration it can show them.

Of course it cannot be expected that the Japanese should understand a Fancy Dress Ball, or the feelings which prompt those who attend one to assume costumes of bye-gone ages for a few short hours, but the following account of the Victoria Fire Brigade Ball, taken from the *Mainichi Shimbun*, will at least serve to call to our minds Burn's lines,

> "O wad some power the giftie gie us,
> To see oursels as ithers see us."

"On the evening of the 12th instant, an eccentric performance was played at English No. 1 in this settlement. All the actors were the Foreign gentlemen residing at this port, who apparently gave their minds to every contrivance, some of them dressed in kami shimo and others in large crest Japanese robes with a Japanese hat on; another was dressed in Tigers fur and walked in on all fours mew-mewing. The tastes of the contrivance were more than can be written. Among these the plan which most pleased all was a large bottle with a brandy label on it, which was brought in, as if for a present to the master of the house. No sooner were a few verbal messages delivered, when a glass in the bottle's mouth flew up with a noise like a cannon, and the presenter showed his face from the mouth. About 150 persons were invited to the Ball. Mr. Goto Shojiro was also present.

Following the summary of the year 1876, which has occupied our columns during the past two numbers, we, in the present issue, publish a translation of a Japanese review of the events of the past year, which many of our readers will find interesting to read and compare with our own.

This morning at twenty minutes past eight, fire was discovered breaking out in the apartment of Mr. House, at No. 67. Fortunately it had not made much headway at the time of its discovery, and the principal damage to the house arises from the cutting away of the roof and the plentiful streams of water directed from the engines which were quickly in attendance. The fire originated from the same cause as that which recently so nearly caused the destruction of the Grand Hotel,—the running of a wooden beam or rafter across the chimney. The architect of these buildings seems to have a special facility for laying such fire-traps, and we would suggest the advisability of the Insurance Companies appointing some one, competent to act, as inspector of chimnies and fire-places, otherwise we are quite likely to have many fires arising from such carelessness or incapacity.

The funeral of the late Mr. George Hurlbut took place on Friday, and the numerous attendance thereat is ample evidence of the general esteem in which he was held, and of the universal regret at his sudden death. He needs no epitaph. It is written in the hearts of all his friends, and is,

> "That best portion of a good man's life,
> His little, nameless, unremembered acts
> Of kindness and of love."

The following is the note from the *Economist* to which we referred last week. Mr. Shaw Lefevre's address to which it alludes will be found in the London *Mail* of the 18th October, and deserves careful study. The great mischief threatened by antiquated and retrogressive views on this subject is that they turn the minds both of rulers and people in a direction exactly contrary to that in which their true interests lie.

PROTECTION IN NEW COUNTRIES.—Mr Shaw Lefevre's address at the Social Science Congress at Liverpool was an admirable defence of Free-trade doctrine, and an exposure of some of the current fallacies of Protection, which unfortunately, notwithstanding all the experience of the last thirty years, still maintain a footing. He pointed out that the comparative freedom from suffering among the working classes in England as compared with similar classes in America, was due to the natural strength and variety of our manufacturing, which was utterly without any artificial stimulus, while in America, "under a system of "Protection, such as the Americans still enforce, native industry is "necessarily limited to its home markets, and a depression of trade in "this one market causes vastly greater suffering than where trade is "cosmopolitan and commerce free and open." And there can be no doubt of the truth of this. In the days of the Corn Laws, when English agriculturists were protected in the home market, they were in frequent suffering from the limited nature of the market, and the liability to excessive production. There is, no doubt, in agriculture a peculiar difficulty in calculating the needs of a market, but the experience of America goes to show that in manufacturing the difficulty is enough to cause great distress at times through the consuming powers of the one market open to the protected industries being over-estimated. The principal fallacy which Mr. Lefevre exposed was, perhaps, that of the necessity of protection in stimulating industries in new countries, the doctrine which Mr Mill most unintentionally countenances by a little unguarded language. The main passage deserves quotation :—

"Mr Mill's admission has been readily laid hold of by Protectionists in every part of the world, and his been held to afford a plausible argument for a vast number of Protective duties. It forms the stock argument of the American Protectionists to this day, in a country where more than half a century ago manufactures were firmly established, and were even then competing with us in markets which they have now lost through their Protective system. It is difficult to conceive the case of the young community to which the argument would fitly apply; one might, perhaps expect to find such a case in our Australian colonies; but experience and a careful comparison drawn between the two colonies of Victoria and New South Wales—the first of which adopted a very Protective system, and the other a very Free-trade system—shows that on this very point the Free-traders have the advantage. In proportion to its population and wealth New South Wales has a greater number of manufactures in those very industries most protected in Victoria. I have already quoted the case of Sweden where the same results are shown. The fact is, that under a system of Free-trade the growth of industries and manufactures is spontaneous, and robust, they are of the wants of the people, and they are not fostered into existence by an artificial process. On the other hand, under a system of Protection, industries taught from their earliest existence not to trust to their own exertions, but to rely upon Protection, are always weakly bantlings. They are ever calling for more protection and higher duties, rather than endeavouring by renewed exertion and by adapting themselves to the tastes and wants of their customers, to meet competition on equal terms. A trade is thus created with interests and hopes antagonistic to those of the rest of the community. It becomes a kind of vested interest. It creates around it a circle of dependent interests, all associated for the same object of maintaining Protection, and of taxing the community for their sake; and long after the time when under the most extreme view industries, having passed through the period of infancy, should walk without assistance, they [illegible] in imposing upon their fellow-citizens the obligation of supporting them." The allusion to the age of manufacturing in some of the alleged new countries will perhaps be new to many, but there is, in truth, something ludicrous in the way that American Protectionists talk of stimulating manufactures in a new country, when in truth their duties protect manufactures in a very ancient manufacturing district—that of New England, not properly a new country at all. We trust Mr Lefevre's address will be widely circulated in "new" countries, where it cannot fail, we believe, to have some effect in exposing the sophistry with which the manufacturer seduces his countrymen to tax themselves for his benefit.

From the "Japan Mail Daily Advertiser."

Monday, 22nd.

The P. & O. Co.'s steamer *Lombardy*, with English Mails on board to 8th December, left Singapore on the morning of the 12th instant, being then two days behind time. The *Sunda*, with Yokohama portion of these mails, is not expected until Saturday next, the 27th instant.

From the *Chôya Shimbun.*

The police have, for the past few days, been guarding the houses of several of the higher officials.

From the same.

On the 25th and 27th of this month horse races and wrestling will take place at Shokonsha, Kudan, Tôkiô.

From the same.

We hear that a newspaper to be called the *Sôhôjijo* will shortly be published in the capital.

From the same.

We hear that barracks are to be built in the Ano district of the province of Isé, for the accommodation of a division of the Nagoya garrison.

Tuesday, 23rd.

On enquiry we were informed that owing to advices received from Kobe as to the state of the weather, Admiral Kawamura, Vice-Minister of Marine, recommended H. M. the Mikado to postpone his voyage southwards. As far as we can ascertain no definite time has been fixed as yet for His Majesty's departure.

From the *Hôchi Shimbun.*

We hear that about 300 prisoners under sentence of hard labour will very soon be sent to Sapporo in Yezo.

From the *Akébono Shimbun.*

A newspaper to be called the *Sekkai Shimbun* will shortly be published at Kobe.

From the *Osaka Nippô.*

At Okinoshima, in the neighborhood of Takashima, coal of good quality has been discovered, and a thorough examination of the bed will be made without delay.

From the same.

The *samurai* at Hagi in the province of Chôshiu still show some feeling of discontent. We hear from a person just arrived from the south that the police are keeping a sharp lookout for suspicious persons, especially as three of their body were assassinated about ten days ago.

From the *Chôya Shimbun.*

We hear that about 20,000 *yen* are to be spent in constructing an entrance gate to, and railing to surround the *Naimusho.*

From the same.

Mr. Kato, the editor of the *Yomiuri Shimbun*, was summoned to the *Saibansho* on the 20th instant and there examined concerning on item of news that was published in No. 582 of the issue of his newspaper, which was considered an offence against the Press-laws. Mr. Kato was permitted to return to his home, but was placed under surveillance.

The P. M. Co.'s steamer *City of Tokio* left for San Francisco early this morning, taking 374 bales of Silk and the following cargo of Tea:—

TEA:

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	141	—	—	141
Hiogo	125	383	84	592
Yokohama	687	982	2,968	4,637
Hongkong	172	13	—	185
Total	1,125	1,378	3,052	5,555

Original from UNIVERSITY OF CALIFORNIA

Wednesday, 24th.

The Mikado is expected to arrive at the Yokohama Railway station at a quarter-past nine this morning, and will shortly afterwards embark from the Benten hatoba and proceed on his voyage to Kobe. The wildest rumours have been flying about the capital as to the reasons for the postponement of his departure, which was really owing to the state of the weather, as we announced yesterday. The Prime Minister has issued an official notification to this effect, which will probably have the effect of putting a stop to any further false reports.

From the *Hôchi Shimbun.*

Mr. Narahara, the manager of the affairs (*karei*) of the family of Shimadzu (Satsuma) has, it is said, arrived in the capital.

From the *Chôya Shimbun.*

NOTIFICATION.

The principal roads have been classed as follows, which is now made known for public information :—

Tôkaidô Nakasendo Riku-u-kaido	First class.
Kôshû-kaidô Rikuzen-hama-kàidô Sakura-kaidô	Second class.
Atsugi-kaidô Ôme-kaidô Kawagoi-kaidô Iwaki-kaidô	Third class.

KUSUMOTO MASATAKA,
Vice-Governor of Tôkiô *Fu.*

From the same.

The Minister of the War Department has notified to the various garrisons that whenever a request is made by the local authorities for the use of the troops, such request must be complied with without the least delay.

From the *Nichi Nichi Shimbun.*

A part of the troops now garrisoned at Osaka and Himeji are to be sent to Tottori, in the province of Inshu.

From the same.

A magazine has been published in the capital called the *Chiye-no-Semi.*

From the same.

Messrs. Sameshima, the Vice-Minister of Foreign Affairs, Kawamura, the Vice-Minister of the Navy, and about fifty other gentlemen have formed a club called *Suikôkai*, which will be opened for the first time on the 23rd instant.

From the *Akébono Shimbun.*

Hitherto both men and women were employed at the *Shihei Rio* (Paper Money Department) but hereafter the work will be done by men only. The department itself has been converted into a *kioku* (bureau) and placed under the supervision of the Minister of Public Works.

From the same.

Many people attend the wrestling matches now taking place at Ekô-in, Riogoku, Tôkiô, the average daily number of visitors being about five thousand.

Thursday, 25th.

His Majesty the Mikado, attended by the principal officers of state and a numerous suite, left the Shinbashi Station at 8.15 a.m. yesterday, and in due time arrived at the Yokohama Station, where the officials of the Kanagawa *ken* were in waiting. His Majesty stayed for a short time at the Station and then accompanied by Messrs. Sanjô Saneyoshi, Kido, Yamagata and Tokudaiji, escorted by a detachment of Lancers and followed by his suite, proceeded in a carriage and pair to the Imperial Naval Yard at Benten. The band of the Imperial Marines was stationed at the entrance gate and played the national anthem as His Majesty passed. Here waiting to receive His Majesty were Admirals Kawamura and Ito, Captain Buller C.B. of the *Modeste*, Captain Brennier, of the *La Clocheterie*, and the Commanders of the Japanese men-of-war in port. After a short stay in the Admiral's office His Majesty was conducted to his state barge which lay at the steps close by, manned by naval cadets, and was rowed off to the *Takao Kan*, which lay a short distance from the shore. The day was beautifully fine, the water smooth, all the vessels in port gay with bunting, and the yards of the men-in-war in harbour were manned as the Imperial barge left the jetty escorted by numerous boats containing Naval officers in full dress, so that the whole presented an animated and novel sight. As His Majesty stepped on board the *Takao Kan* the Imperial standard was hoisted at the main, and a royal salute fired by the Fort at Kanagawa and all the men-of-war. After about half-an-hour's delay the anchor was weighed and the *Takao Kan* proceeded out to sea, being saluted by the various vessels she passed, and escorted by five Japanese men-of-war and the *La Clocheterie.* A large number of natives assembled to witness the Mikado's arrival and embarkation, and every post of vantage was availed of for this purpose, but the crowd was most orderly, and,—strange enough it seemed to foreigners—perfectly silent. It is worthy of note that as the Mikado's barge passed the end of the jetty which is opposite to the Naval Yard, a few foreigners who were collected there raised as hearty a cheer as possible, which His Majesty graciously acknowledged by raising his hat and bowing, and leaning forward so that his acknowledgment could be seen from under the awning which covered his barge. Of course the majority of His Majesty's suite appeared in what is considered by foreigners to be full evening dress—but why wear such dress, and, oh!—why wear such shocking bad hats? It is high time that the Japanese were aware that the civil official dress they have adopted is not becoming to them, and that it is quite as requisite for appearances' sake that an ordinary dress coat should be as well-fitting as the most gorgeous uniform. His Majesty's black coated suite presented to-day a marked contrast to the neat uniforms of the Naval and Military officers in attendance, and of the police who kept the road.

The *Nevada* has been transferred to the Japanese flag and will now be known as the *Saikio Maru.* For the future the Mail matter from America will be forwarded to Shanghai and the coast ports by any of the Mitsu Bishi Company's steamers as convenience may determine.

From the *Nichi Nichi Shimbun.*

The gate keepers of the *Kobusho* are to be dismissed, and the duties formerly undertaken by them will devolve on a detachment of 11 police constables under the command of a sergeant.

From the same.

Mr. Tachibana, the editor of the *Tôhoku Shimbun* published at Sendai, was summoned to the *Saibansho* on the 17th instant and fined 10 *yen* for an infraction of the Libel-laws, in having made some defamatory remarks about some of the hospital doctors.

From the same.

Mr. Sudzuki, editor of the *Aiki Shimbun* published at Nagoya, was summoned to the *Kencho* on the 17th instant and examined about an article which was published reflecting adversely on the Nagoya garrison. Mr. Sudzuki was placed in charge of the ward officials.

From the same.

Only a short time has passed since the school at Riugasaki in Ibaraki *ken* was established, but on examination this winter there was not one among four hundred students who failed to pass satisfactorily.

From the same.

Mr. Shinagawa, the present Japanese Consul at Shanghai, will return to this country about the end of the month, after visiting various ports in China, and the vacancy caused by his retirement is to be filled by Mr. Tomita, late Japanese Vice-Consul at New York.

From the *Chôya Shimbun.*

We now hear that Mr. Saigo is at his home in Satsuma, where he is quietly carrying on his agricultural pursuits.

From the *Hôchi Shimbun.*

Wrestling matches will take place at Kanda, Tôkiô, commencing on the 2nd proximo and continuing for ten days.

Original from UNIVERSITY OF CALIFORNIA

Friday, 26th.

The settlement was greatly shocked yesterday morning to hear of the sudden death of Mr. George Hurlbut, in the employ of firm of Smith Baker & Co., in consequence of the rupture of a blood-vessel. Up to the time of his decease he was in the enjoyment of his usual health, with the exception of a cough which gave him no anxiety and little uneasiness. He was with his friends as usual on the previous day, and thus the announcement of his death produced all the greater shock among them. About 6 o'clock yesterday morning he was seized with a fit of coughing which brought on the fatal rupture of one of the vessels of the heart, and he died before medical assistance—even if it would have availed—could reach him. His amiable and kindly nature had endeared him to many friends. No man was more ready to place his time and services of whatever kind at the disposal of the community, and they were as modestly estimated by him as they were highly rated by those who could best judge of their efficiency. He was but thirty-nine years of age.

His funeral will take place this afternoon at 4 o'clock.

The M. M. Co.'s steamer *Tanais*, with French mails on board to the 17th December, will leave Hongkong to-day, Friday the 26th instant, at noon.

Special services will be held on the 27th, 28th and 29th at Shokonsha, Kudan, Tôkiô, in honour of those soldiers of the Imperial army who fell during the late insurrection in the South, and the religious ceremonies will be supplemented by horse-racing and wrestling matches.

From the *Mainichi Shimbun.*

Hitherto there were thirty foreign instructors in the employ of the Army Department, but the services of twenty-five of them have now been dispensed with.

From the same.

The wife of a man named Asai, living at Ise-chô, Yokohama, gave birth to three male children on the 20th instant, all of whom are doing well.

From the *Nichi Nichi Shimbun.*

His Excellency Iwakura presented to the Library of the British Museum a work, entitled *Issaikio*, on the founder of the *Shinshu* sect of Buddhists. In exchange Mr. Iwakura was presented with many valuable classical works, globes, etc, for the Public Library at Tôkiô.

From the same.

A person at Ichiwatari, Atami, in the province of Idzu, wishes to know how it is that when eggs are boiled in the Atami hot springs the yolk hardens before the white part.

From the *Akébono Shimbun.*

We hear that on account of the superior quality of the foreign paper manufactured at Oji, large orders have been received from the American Government.

[The truth of this statement is extremely doubtful. ED. *J.M.D.A.*]

Saturday, 27th.

From the *Nichi Nichi Shimbun.*

Mr. Narahara, the *Karei* or manager of the affairs of ex-*Sadaijin* Shimadzu Samuro, is in Tôkiô on certain business. On the 25th he went to the *Daijôkuan* wishing to have an interview with His Excellency Iwakura, who, however, did not happen to be at his office at the time.

From the *Chôya Shimbun.*

The Educational Department is about to erect a building for a Library at Idzumibashi-dôri, Tôkiô, on the site where the hospital formerly stood.

From the same.

Thirty-eight of the 647 police constables of Kanagawa *ken* have been dismissed, together with several of the sergeants.

From the *Hôchi Shimbun.*

His Excellency Ito, the Minister of Public Works, starts for Kiôto to-day.

From the same.

On the 23rd instant two fires occured on the Nakasendô,—one at Kuraga which consumed nine houses, and the other at Honjô where 300 houses were unfortunately destroyed.

From the same.

The temples Daiun-In, Shunchô-ji, and Jôkiô-ji at Kiôto, are being prepared for the reception of such of the Foreign Ministers who will attend the ceremony of the opening of the railway.

From the same.

Mr. Arai, of the *Akébono Shimbun*, was yesterday sentenced to pay a fine of 20 *yen* for a libel on Mr. Nakajima Yasuo in having stated, in No. 953 of the issue of the above paper, that he had unjustly made a man sign and seal a statement of his imputed crime, thereby violating the 4th Article of the Libel-laws.

IMPERIAL GOVERNMENT RAILWAYS.

KOBE, OSAKA AND OMIYADORI STATION.

Statement of Passenger Traffic for the week ending 14th January, 1877.

Passengers.....25,727.	Amount...Yen	7,380.435
Luggage and Parcels.....	,,	173.570
Goods,.....	,,	643.975
Total.....Yen	8,197.980
Corresponding period last year.....Yen	4,373.109

Through the courtesy of W. M. Smith, Esq., Locomotive and Carriage Superintendent, we have been enabled to obtain a sight of the Imperial carriage made at the Railway works here for the use of His Imperial Majesty the Mikado on the forthcoming State Opening of the line hence to Kioto. The under frame is a combination of teak and iron, the "head stock caps" being really very handsome ornaments in bronze, hand carved, with flowers in relief in electro-plated silver, the frame as a whole being painted in carmine. The bottom of the body is painted in the same tint, the upper part being salmon colour, and the whole length is twenty-four feet, divided into four compartments. The principal one is twelve feet by six and a half, the others being an appartment for attendants, an ante-chamber and a withdrawing room, hot and cold water being supplied to the washhand basin from a tank on the roof. The body of the carriage is of teak, all hand painted and richly picked out with gold, with the Mikado's arms on the central panels; the window frames are of rosewood. A carving of chrysanthemum leaves forms the moulding round the top, and the border underneath is a representation of the *kiri*, in gold. The door handles are all richly carved in silver, the raised parts in gold, having been expressly made at Kioto for this purpose, as is the the case also with all the interior silken decorations and crockery—which is in white and gold. The roof of the carriage is double, or perhaps, to speak more correctly, we should say treble, as the "roof sticks" are covered on the inside. The panels of the interior doors which make communication between the compartments are in silk, printed and embroidered, the lining of the carriage sky blue silk, and the furniture black walnut and dark blue silk rep; a lace border runs round everywhere, in blue, silver and gold, the piping blue and gold. In the roof is a signal worked by hand from the inside of the carriage, and in the saloon are three lamps set together in a silver plated reflector. A very ingenious, useful and tasteful arrangement places all the handles in the centre of the doors, the bolts being at the top and therefore entirely out of the way of catching and tearing anything. The carriage was designed by Mr. Smith, and built under his personal superintendence, nearly everything, including the electro-plating, but excepting wheels and axles, having been made at the works here. The carriage promises—for it yet wants a few finishing touches—to be a really beautiful work of art, and reflects the highest credit on the the Railway staff, both native and foreign. We ought not to omit to add that the precious metal and silk work was superintended by Enouye Masaru, Chief Commissioner of Railways, with regard to whom Mr. Smith expressed himself with grateful satisfaction for the way in which the suggestions he made were taken up and carried out. The engine to be used on the occasion—"No. 20"—is being prepared for the purpose; it has been entirely rebuilt at the Kobe works as a "bogie" engine, and will form to those interested in the development of engineering skill certainly not the least interesting feature in the ceremony.—*Hiogo News.*

At the Meeting of the Municipal Council yesterday we were requested to mention that it would both shew respect to H.I.M. the Mikado and assist the efforts of the Council if residents would make the illumination as general as possible.—*HiogoNews.*

INTRODUCTORY.

A TASK is imposed upon us by the strong needs of circumstance and locality, which we would we could decline. In larger communities, journals of greater importance can experience a change in their directorate without remark; their proprietors can trust to time for the development of possible advantage,—can realize the full value of experience and tradition, though the venture prove unhappy. We are not so fortunate. A few lines in the number which has closed the last series of the *Japan Mail* have wedded us to stern Necessity; we invoke our readers' prayers that the union may not be barren of Invention.

We are not inclined to accept without question, the *dictum* that 'the inestimable advantage of impersonality, enjoyed by the conductor of a great journal at home, is denied to a journalist here.' This may have been true of a journalist, taking up an inexperienced pen seven years ago, and wishful to educate a rising generation,—to stamp upon it the impress of his own mind,—to guide its progress into safe grooves of thought. But we find our generation educated, seemingly impatient of receiving impressions from the force of any single brain, and, rather, evidencing a certain character of its own, original and many-sided, which fits it no longer to be, but entitles it to demand—a mirror. Content to play the humbler part, the aspiration of the *Japan Mail* of the future will be, that the mirror it may hold shall be parabolic; it may chance that, thus, the collection of many rays into one focus may give light and heat, as strong, and pure, and wholesome, as though they emanated from a single, unassisted flame. The relations of the existing government of Japan to its foreign allies, and its duties and responsibilities to all classes of its native subjects, have long occupied, here and in Tôkiô, the earnest attention of more than one thoughtful mind; to concentrate upon such questions the combined force of these can hardly be deemed a difficulty insuperable;—nor presumptuous the hope that, so strengthened, the *Japan Mail* may sustain, abroad, the reputation and authority it has enjoyed for the last ten years. On questions of purely local interest, and as a record of commercial and general facts and statistics, it is even possible that the journal may benefit, and be rendered more useful, by a change from the autocratic system of government; it only remains for its conductors to promise that no descent into discourtesy in argument, no prostitution of its columns to the uses of malice, spite, or greed, shall lower its tone from the key struck by their predecessors in the editorial seat.

Our views on the many important subjects which demand consideration must be developed separately; in a manifesto such as this we can only indicate the general, guiding, principle which will colour them all. And this is best done by the expression of our conviction, that, in the growth of a polity, rapidity is incompatible with soundness and durability. The natural tendency of a nation, or a party,—after violent disruption, or successful revolution,—is towards radical and unwholesome change, without due consideration of the weight and value of all that has been overthrown; a policy as foolish as would be that of an architect who, rebuilding on an ancient site, should refuse to avail himself of the foundations, or to work up the materials, of the structure which he had undertaken to replace. But the teaching which history and experience has given to us forbids us altogether to despise our forefathers, and has led us to the settled belief that a conservatism which,—while permitting full and free discussion in favour of reform, is yet slow to move—is the safest form of government for the rulers, and the best for the ruled. Holding this opinion,—the line we shall take on one, perhaps the most important, of the subjects now occupying the minds of native and foreign statesmen and publicists, may be predicated with certainty and ease. We thoroughly sympathise with the laudable ambition of Japan to assume, as soon as may be, the port and stature of a member of the family of civilised nations; but we cannot acknowledge that the dignity has been yet attained. We appreciate to the full all that her statesmen have done since 1868, and believe all that we can of their promises for the future; and we have weighed in even scales all that her foreign counsellors can heap up of municipal and international law in counterpoise to the provisions of the Treaties. But the conviction remains, that no prospect of the abolition of the extra-territoriality clause can be held out to the present generation; we cannot advocate it—we must always oppose it—we may even decline to admit it as a possible subject for argument; our assistance in this direction must be limited to an earnest endeavour to educate, so far as is in our power, statesmen, jurists and people, to such a point as will enable them to bequeath to their children a confident hope of emancipation from a restraint which cannot, with safety, be removed from themselves.

No clearer proof is needed of the unfitness of this government to be trusted with the power it seeks to exercise over the lives, liberty and property of foreigners, than its repeated breaches of faith with the dispossessed *samurai*, and its general treatment of the class which raised it to power. No better instance could be adduced of the evil character and effect of that reckless subversion of ancient order which we have condemned. It was not by timid acts of treachery, by broken promises, by confiscating the goods of the weak to pay bribes to the strong, that the House of HANOVER converted the devoted clansmen of its rival into the staunchest supporters of its throne. Not by such arts did JOHN and HENRY LAWRENCE mould the wild swordsmen who had been its bitterest foes, into the army which saved an Empire in its hour of sorest need. Use and long prescription may have alloyed authority with insolence, and the 'girded sword, the living soul of the *samurai*' may have been occasionally shown, as an instrument of extortion to a countryman; it was never slow to leap from its sheath, a weapon of terror to the country's foes. The balance of rank had been disturbed: the power of wealth had been enabled to compel its recognition, by the acceptance of commercial treaties and the admission of foreign trade. The revolution, or restoration, of 1868, while it freed the aristocracy and gentry from the intolerable yoke of the Shôgunate, suddenly and enormously increased the power and wealth of the Mikado. An exhibition of almost superstitious loyalty, and of patriotism bordering on the heroic, astonished foreign spectators of the event, when the Daimios laid their power, their lands, and their arms, at the foot of the Imperial throne. Ill advised, short-sighted, the counsellors of the young Emperor failed to rise to the occasion. They might have surrounded him with an aristocracy, supported him with an army, strong in tradition, numbers, discipline, and long prescriptive title to the natural leadership of the nation. The feudal system, here, was no anachronism, and the influence of foreign commerce and foreign ideas should have been left to work its silent way towards its ultimate and inevitable victory. But 'wait a little, that we may make an end the sooner' was a lesson they refused to

learn. In what condition stands that throne, now, after nine years of 'progress' and 'civilization'? Rent is the veil of mystery that hid no man knew what of sanctity and power; an Emperor is disclosed, first held to be a fraudulent presentment, now recognized as a mere mortal, displaying no special sovereign attributes to raise him above humanity;—scattered, wasted, gone, the ancient nobility which guarded, while it reverenced, the Son of Heaven in his shrine:—degraded and disarmed the national army, watched by a new one of peasants and policemen, lest, forbidden to defend, it should yet find means to sting. It may be that, aided by its new allies, steam and electricity, the bureaucracy which now rules Japan may go on, for a time, repressing, as they arise, each impulsive, unconcerted outbreak of protest or resistance against successive acts of spoliation. But the strain of constant watchfulness against such a danger is too great for any government to bear, and conciliation of the suffering class appears to us the only safeguard against reiterated and ultimately successful rebellion; and that policy will find a consistent advocate in this journal, though it uphold it,—alone.

Reform in the civil service, retrenchment in the expenses of government, and collateral reduction of taxation, sustension and expansion of the national credit, education, judicious expenditure on public works, encouragement to the inflow of foreign capital, and development of native enterprise,—these are among the problems which the government, the ministers of its allies, ourselves and our countrymen, have a deep and common interest in successfully solving; and to the discussion of these, we shall, from time to time, lend what assistance lies in our power. But it is not possible, within the scope of such an article as this, to do more than name a few of the subjects which it will be our duty, hereafter, to consider in detail. We have been more candid, in fact, than is usual, on such an occasion, in the avowal of decided opinions on two of the most important. In our treatment of others, we shall be equally outspoken, and equally prepared to find our views differing from those held by some of our neighbours; confident that we shall always have it in our power to bring to bear upon their consideration industry, research, and the desire to do right, we must leave our readers to assess the ability with which we discharge our office, and to Time, the inexorable, but impartial judge, to award to us such meed of success as our efforts may deserve.

At 5 a.m. on Monday last, the Mitsu Bishi steamship *Tōkiō Maru*, late *New York*, whilst on her voyage from Kobe struck on a ledge of rocks off the Island of Otata, thirty miles from Nagasaki. At the time it was quite dark, and piercingly cold. The ship hung by the fore part, and as daylight dawned it was evident she had sustained serious damage, and her position was most critical. A boat was immediately despatched to Nagasaki, and in the meantime the forward cargo and coals were thrown overboard, which so lightened her that with the rising tide she floated at 8.30 a.m., and arrived in Nagasaki about noon. A survey was immediately held, and as it was decided that the ship was sufficiently safe, she sailed for Shanghai at 4 a.m. Captain Dunn, officers, and men behaved throughout the trying ordeal with the most praiseworthy coolness. No confusion whatever was apparent, and all orders were carried out with alacrity, and in the most systematic and regular manner. Captain Dunn is one of the most careful and skilful navigators, and is a universal favorite. Having been on deck almost the entire night, he had just laid down for a few minutes when the unfortunate accident occurred. We understand the entire blame rests with the Japanese pilot.—*Nagasaki Rising Sun.*

A JAPANESE CHARITABLE INSTITUTION.

WE are indebted to the kindness of a correspondent for the receipt of a prospectus of the Society for the Promotion of Charitable Objects among the Japanese (*Rakuzenkuwai jikeihobo*), which seems so admirable in its intentions, and straightforward in its aim, that we feel it due to the promoters to give it the fullest publicity.

It will at once be seen that it has been drawn up entirely by Japanese, and as our correspondent remarks, there is an earnestness in its composition and an expressed determination to carry it through in a successful and satisfactory manner, which, together with the good names attached, speak well for its future.

We look upon the institution of a society of this nature, as one of the most hopeful and unmistakeable signs of advance that a nation can show. Indulgence of charitable aspirations, obedience to the pure and worthy promptings of the heart can be found in individuals among the most barbarous nations. "There is in man's nature a secret "inclination and motion towards love of others which if it "be not spent upon some one, or a few, doth naturally "spread itself towards many, and maketh men become "humane and charitable." But the exercise of these feelings can only become a national virtue when a people are well advanced on the road to the higher forms of civilization. And of this the promoters of the charity show themselves fully conscious. They recognise it as a duty "that no "efforts should be spared to gain admission for the afflicted "to the fraternity of his fellow men" and for this reason "and because our country is now steadily launched "on the stream of progress, we have formed this com"pany, whose aim is the devotion of all its members' "energies to the consummation of benevolent ends."

The Society, with a view to the best expenditure of the funds entrusted to it, and to prevent their undue dispersion into mere infinitesmal doles, has,—very wisely, we think—determined to confine its efforts, at first, to the amelioration of the condition of deformed persons; and having, we suppose, already prospect of enough support to justify them in making a beginning, propose to commence by the establishment of an asylum for a sub-section of such unfortunates—the Blind. One of the worthiest and most sensible characteristics of their scheme is that their charity should not be simply that of ministering to the mere supply of actual bodily wants; but should take the far higher and more sublimated form of assisting the apparently helpless to help themselves; teaching them that the great happiness of independence is not altogether denied even to such as they, and so giving priceless alms to the soul, as well as the needed sustenance to the body. Those admitted into the Asylum for the Blind are to be called 'pupils' and the only difference made in favour of those in better circumstances,—who may seek instruction, or other advantages, from this institution,—is, that they are permitted to enter without limitation of age: the 'free pupils' not being received over seventeen, when placed in the first class, where they are to receive instruction in literature and the arts; not over forty, when destined for instruction in handicrafts. A serious omission in the plan —we must here remark—appears to have been made, in the absence of any provision for the indigent and aged blind, whose cases are, probably, the hardest of all—the majority of adults being generally able already to do some little matter towards their own support. But this, and other minor faults which are evident in the plan, it is not necessary to dwell upon at present. They will doubtless be soon observed and remedied during the early working of the institution, by the promoters themselves.

Original from UNIVERSITY OF CALIFORNIA

As we intend again to refer to this matter, and shall endeavour to procure all possible information on whatever attempts may have been made in former times, either by the Government or native Guilds, to alleviate the sufferings of the afflicted, it is unnecessary at present to do more that request our readers' perusal of the prospectus itself, which we partially reprint below. As the scheme developes itself, and if it is conducted as well as its proposers promise, we shall, on occasion, draw attention to it, and we should think it far from improbable that these benevolent men will find in the purses of foreigners a vein of wealth which they have not perhaps hoped ever to work. In conclusion, we cannot too heartily congratulate them on their laying of a foundation stone on which we trust may rise a noble edifice of national charity and humanity or rather goodness. "For I take goodness in this sense," says an old writer "the af-"fecting of men, which is that the Grecians call Philan-"thropia: and the word Humanity (as it is used) is a "little too light to express it. Goodness I call the Habit, "and Goodness of nature the Inclination. This of all "virtues, and dignities of the mind is the greatest; being "the character of the Deity: and without it, man is a "busy, mischievous, wretched Thing; no better than a "kind of Vermin."

In their own words we wish them success, and sincerely trust that "their noble aims may have fair fulfil-"ment, and their good deeds large developement."

PROSPECTUS

OF THE

SOCIETY FOR THE PROMOTION OF CHARITABLE OBJECTS.

MANIFESTO OF THE SOCIETY.

All men are endowed with the disposition to do good; in this respect the distinctions of educated and ignorant, sage and simpleton no longer hold.

Yet though this disposition exists, its reality cannot be credited unless it assume some form of action, and amongst these many forms none takes precedence of that which goes about to support the indigent and infirm, or to succour and educate the deformed; for those gather from the precepts of piety and patriotism moral strength and heart healing, while these, despite their physical infirmities, taught how to become useful members of society, develope powers of diligence and perseverance that ultimately place them in positions of independence.

Accordingly in all civilized countries, there are poor laws, as well as institutions for the succour of the blind, the mute and the insane, maintained either by the government or by private contribution, so that "the lamp of charity glowing overhead, and the breath of benevolence breathing through the land," the very culminating point of philanthropy has been attained.

Now it has hitherto been the custom in our country to leave to the government the execution of all works of charity. Private contributions have never aimed at more than the celebration of festivals or the achievement of pilgrimages, while the nobility and the wealthy have only subscribed to the building or decoration of the temples. But now in these days of universal reform, the people also must consider what effort they can make to further the good work, and in the same spirit that evoked their contributions for other purposes of old, must set themselves to become active members of the new common-wealth.

It behoves us, who are fortunate enough to be men endowed with hearts that guide us to the good and strength to follow this guidance, not to squander the great gifts of a beneficent Creator, but each in our several spheres to perform the duties that fall to our lots with patience and unflinching perseverance, so that, strong in truth and unanimity, we may achieve the purpose of our nature in the exercise of the right.

Did even those, not a few though they be, who, steeped in indolence and lust, wasting their money in idle pursuits, lulled into an evil dream by the beauty of women, or devoted to quarreling and injustice, know nothing of the priceless pleasures begotten by work and well-doing, did even these turn their eyes honestly inwards and reflect, they would see that the bestowal of one old coat on a beggar gives a finer satisfaction of well doing to the donor, as well as a thousand times more joy to the recipient, than the lavishing of a hundred *riyos* on a dancing-girl.

Western philosophers say that "A man's nature is written in his account-book," and verily it is so!

We then, stirred by the example of the earnest workers of the world, and with the hope that our united action may achieve something for the general good, have formed ourselves into this "Society for the Promotion of Charitable Objects."

Our general aim is to collect funds for charitable purposes, and our especial one to establish an institution for the training and education of deformed persons, a want which is at present entirely unsatisfied.

As the halt and the maimed are a burden and a care to the whole community, so the education that makes them independent, confers a universal benefit. This fact particularly recommends their case to the consideration of thinking men, and ought also to induce us who are blessed with the possession of all our faculties, and who have food and clothes in abundance, to spare a little for the less fortunate by curtailing our own wants. The cripple is indeed physically imperfect, but his moral endowments are none the less complete, and if every ethical code, whether ancient or modern teaches us, that it is the duty of a humane government, by educating these faculties, to gain admission for the afflicted to the fraternity of his fellow men, how much more does such a principle accord with the dictates of that Providence, whose unerring hand, meting blessing for the just and bale for the evil-doer, has written beyond the reach of all doubt this promise, "Virtue toiling in the darkness shall be rewarded in the noon-day"! That this is the creed of all Christian countries it is unnecessary to say, when philanthropy is the main article of the tenets of Buddhism, and charity the cardinal duty of a Mahometan.

For the reasons then, and because our country is now steadily launched upon the stream of progress, we have formed this company, whose aim is the devotion of all its members' energies to the consummation of benevolent ends; and though we cannot at once segregate ourselves from the government, and assume a self-supporting position, we shall not be altogether dependent, but by the aid of general subscriptions will endeavour to achieve some work worthy of the State's reform.

We have held many meetings and have decided to devote our energies to the establishment of a college for the blind, and since we see not a few good men who, with the ability and volition to do well, are yet awaiting some opportunity, we combining our strength, small though it be, have formed this project, hoping nothing more than that it may afford one outlet for the benevolent energy of our country-men.

None who are physically deformed ought to escape our pity, but we elect first the blind, because compared with other countries our own has a particularly large proportion of them, and also because an apt opportunity just now presents itself.

Fellow philanthropists! we pray you, give us your confidence, and entrust to us any money you propose to devote to charity. We shall either allot it immediately in alms, or else put it by as capital, and apply the interest to the education of the deformed, that these becoming useful members of society, and intelligent units of the commonwealth, your noble aims may have fair fulfilment, and your good deeds large developement.

We, eight men, will form the nucleus of this association, and undertake the duties of management month about, but what we most earnestly desire is that all the benevolent persons of our country without distinction of rank or position, should join us and help us where our strength fails, or direct the affairs of the society in our stead.

And now one word in conclusion.

Having put our hands to this work we have sworn solemnly that we will never abandon it whatever calamity overtake us. The proverb tells us, "Money is the handmaid of mercy," and "Heaven the guardian of virtuous aspirations." What fear then that we, lightly misapplying your money, should frustrate the purposes of charity and paralyze the agent of benevolence!

Names of the Members.

S. TSUDA,	H. MAYEGIMA,	G. KISHIDA,
M. NAKAMURA,	M. FURUKAWA,	Y. SUGIURA.
Y. YAMAO,	A. KOMATSU,	

N.B.—The above are given in Japanese alphabetical order.

OBJECTS OF THE ASYLUM FOR THE BLIND.

The aim and wish of the founders of this Asylum is to develope the mental resources of the blind, and teach them arts and sciences which may enable them to become independent members of society. The following is an epitome of the principal practical means proposed for this end.

Item I.—All those admitted to the asylum will be called pupils, and it is to be clearly understood, as a fundamental principle of the institution that it is intended to assist the industrious, not the indolent blind.

Item II.—The heads of instruction will be divided into two classes.

Class I.—To comprise instruction in literature by means of raised type, oral instruction in physics and classics, instruction in singing and playing on musical instruments, Japanese and Foreign, and instruction in trades adapted to the sex and physical condition of the pupil.

Pupils entering this class not to be more than 17 years of age, those who pay their own fees, however, excepted.

Class II.—To comprise, in the main, instruction in handicrafts, with oral instruction in morals every holiday.

Pupils entering this class not to be more than 40 years of age, those who pay their own fees, however, excepted.

Item III.—Food, clothing and all other necessaries will be provided from the funds of the association for the free pupils, but the proceeds of the sales of their work while under instruction, will be added to the capital of the asylum, any surplus being however placed to the credit of the individual, and the aggregate handed to him when he leaves the asylum.

Item IV.—Pupils will be admitted on payment of such fees and honoraria as may be determined by the members of the society; the amounts, however, in every case to be minima.

Item V.—The number of pupils whether free or on payment will be regulated by the decision of the members, in accordance with the capabilities of the building, and the condition of the funds.

SPIRIT OF THE JAPANESE PRESS.

A Japenese Review of the events of 1876.

(Nichi Nichi Shimbun of January 4th, 6th, 8th and 9th, 1877).

Before entering the arena of controversy for the 10th year of Meiji (1877), we must firstly, according to our usual custom, for the sake of our readers take a retrospective glance at the principal events that have occurred during the past twelve months and publish a succinct account of the same. Our reason for this is that the events of the past year contain many circumstances that are of great importance as regards the history of the period of Meiji.

Looking back, then, we find that at the commencement of last year the question of calling Corea to account for her wrong-doing was much agitated in public, and well-informed people were in doubt as to what final arrangements would eventually be made in regard thereto. Even though no attention was paid to the arguments for "a Corean expedition" put forward by temporising persons, which arguments had already been deprived of all influence by general public opinion, it was nevertheless thought that the offences of the Corean Court could not be allowed to pass unnoticed. Our Government therefore specially appointed Kuroda Kiyotaka and Inouyé Kaōru as High Commissioners, and sent them to the Corean seas, accompanied by several steam vessels. The two Commissioners touched at Fusan, then changed their course and so arrived at Kôk'wa. In their treating with the Court of Corea, they urged the advantageous policy of opening the country and the disadvantage of keeping it closed, thus following in the track already observed more than twenty years previously by the American Envoy Perry in regard to our old Shôgunate. Eventually, on the 27th of February, a Treaty of Friendship was signed at Kôk'wa, and the Commissioners returned home having achieved a reputation both for diplomatic success and for personal merit. In connection with this mission both Mr. Nomura Yasushi and Mr. Miyamoto Okazu also showed great zeal in their proceedings, as must be well known to the public in general. After this, the envoy from the Court of Corea, Kinkishu, with a suite of subordinate officials, came to Yedo. Our Government treated him in an especially friendly manner, thereby dispelling from the mind of the Corean Court its feelings of distrust and dislike. Mr. Miyamoto Okazu next went, as Commissioner, to the capital of Corea, and determined the clauses of (the Treaty of) Friendship, and the Trade Regulations, after which he returned home. Upon this, our friendship and trade with Corea were fully established, and means were at last found to clear away from the seas between Japan and Corea the bad feeling that had existed for many years back.

Although friendship with Corea was in this way happily established, the Liukiu *Han*, on the contrary, appeared to be unable to bear openly the severance of all connection with the Court of China, and we heard that they persistently addressed petitions to our Government to be allowed to observe their ancient usage of a double allegiance. This affair being kept very secret, we have been unable to arrive at a knowledge of the particulars, yet it seems that the reason why Liukiu was unable to break off relations with China was not merely owing to the fact of ancient friendship shown to her by the latter, but was really in a certain degree in consequence of certain privileges enjoyed (by Liukiu) in regard to exemption from trade dues. We much regret that we have been unable during the past year to learn what final arrangements were made in respect to this point.

On the 9th of January last year the detention in prison of parties to a civil action was abolished, and on the 10th of June there was ordained the law that offences should be judged according to the evidence adduced, while the system of decision upon the confession (of any one charged with an offence) was abolished. These two points are indeed the greatest advance in judicial matters, and by them was swept away the evil of such "detention" being secretly altered to torture, and of making innocent persons confess to crimes under the influence of torture. The Law of evidence was not, however, as yet established, and there was not any code relating to perjury, and we are therefore unaware of the extent of the law about "according to the evidence adduced." And again, though "detention" has been abolished in regard to civil actions, it is still resorted to, as heretofore, in criminal cases. Thus, then, well-informed persons are exceedingly desirous that this should be properly adjusted, and argue that for the sake of criminals a system of bail should be established, that Counsel should be admitted, and that the Courts should be opened to the public. Public opinion in general takes this view, but although there do not seem to be any who think it undesirable, the march of events in the past year was unable to effect the actual operation of this matter. Over and above this, there were determined Temporary Regulations for Branch Judicial Offices and also Temporary Regulations for Judicial Police Affairs, and rules were issued as to the distribution of Local Courts, from each of which measures we believe that some greater or less advantage will accrue to the people. Now, at the very commencement of the Government measures of last year, His Excellency the Minister for Justice stated that "he had drawn up a Draft of "New Laws and had formed the intention of presenting it to the "Emperor; and that he hoped, if this Draft were referred to a "special committee, and due observation given to the codes of "other lands and comparison instituted with them, so that these "New Laws might be made an established code to circulate openly "before the whole world, that it might come to pass that during "that present year the old might be amended and the new put "into effect." With these words he presented it to the Emperor. Do these expressions "New Laws," and "Established Code," allude to the "Japanese Criminal Laws" which, as we have heard, were laid before the Government by the Judicial Department last year? Even in such case, it certainly did not come to pass, during the term of the year 1876, that the old was amended and the new put into effect.

Upon glancing at the regulation of the *ken*, we note that on the 18th of April last year, the ten *ken* of Ashigara, Nara, Watarai, Iwai, Niikawa, Aikawa, Hôjô, Hamada, Kokura, and Saga were abolished and annexed to other *ken*; and that on the 23rd of August the Chikuma, Hamamatsu, Wakamatsu, Iwamaé, Tsuruga-ōka, Oitama, Tsuruga, Tottori, Shikama, Toyoōka, Minuma, Miyazaki, Kagawa, and Miyôdô *ken* were abolished and amalgamated with other *ken*, whereby the Government of the interior of Japan became divided amongst 3 *Fu* and 35 *Ken*. These are as follows:—Tôkió, Kiôto, Ôzaka, Kanagawa, Saitama, Gumma, Chiba, Ibaragi, Tochigi, Sakai, Miyé, Aichi, Shidzuōka, Fukushima, Miyagi, Shiga, Nagano, Yamanashi, Gifu, Niigata, Hiôgo, Okayama, Shimané, Hiroshima, Yamaguchi, Wakayama, Ehimé, Kôchi, Fukuoka, Oida, Kumamoto, Nagasaki, and Kagoshima. The jurisdiction of each several *ken* thus became very wide, and as, therefore, the regulations regarding the several Government offices naturally differed from what they had formerly been, the extent of the powers of Branch Local offices was determined, and attention turned to the scheme of dividing out the *ken* government. We, however, cannot, upon seeing this, at once give it the title of decentralization.

The Imperial Progress to Mutsu and Dewa is the most important event of the fortunate period of Meiji, and is indeed a circumstance worthy of special mention in the narrative of great events that occurred last year. The Emperor's excursion to the East and North was to have taken place the year before last, but for certain reasons no orders were intimated in regard thereto, and it was only last year that we heard that directions had been issued for it. The 2nd of June was the fortunate day fixed for the Dragon Car to set out from Yedo, and, after passing through Musashi, Hitachi, Kôdzuké, and Shimotzuké, His Majesty traversed Iwaki, Iwashiro, Rikuzen, Rikuchiu, and Mutsu, kindly enquiring into the hardships of the people, and viewing their toil in regard to agriculture,—and so eventually arrived at Hakodaté. The whole of the inhabitants of the east and north, therefore, shed tears of gratitude, and rejoiced at the kindly nature of the Imperial favour. Next, after the Emperor's return, the Prime Minister and Councillors of State, went again to the district of Mutsu and Dewa, and penetrated even into Yezo, where they observed the manners and customs, and the dispositions of the people. This, again, cannot but be termed a most fortunate event of the past year.

On January 6th, 1876, Mr. Black, a British subject, issued at Yedo the first number of a newspaper called the "*Bankoku Shimbun.*" Although Mr. Black put forward the assertion that being originally a British subject he was not obliged to respect the laws of our country, the local Government nevertheless issued a decided prohibition against the issue of the paper. Black, not assenting to such prohibition, laid a plaint before his Consul, and the affair finally assumed the form of a discussion with the Department. During the following month, however, the British Minister issued a notification to the effect that "no British subjects coming to and "residing in the Empire of Japan could, unless by permission of "the Japanese Authorities, issue a newspaper in the Japanese "language." Thus was prevented a continuation of the issue, at will by foreigners, of newspapers in our language. There did not, however, occur any break in the continuous line of instances from January onwards, of newspaper writers being called to account, in Court, for offences against the newspaper regulations, and at one

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

time, in Yedo alone, there were over 30 writers kept in prison Was this not a lamentable affair? It would appear, nevertheless, as though violence of argument did not yet lose force, for on the 5th of July our Government again enacted that "those newspapers, "magazines, or miscellaneous works that should be deemed in- "jurious to the peace of the country should have their issue pro- "hibited, or else be temporarily suspended, by the Home Depart- "ment." Thus, within less than 10 days time, the issue of the *Hiôron Shimbun*, the *Sômô Zasshi*, and the *Kokai Shimpô* was prohibited, and next after them the *Chiugu'ai Hiôron* also received orders for its suppression. Now, although the issue of magazines and small books prospered exceedingly during the former half of last year, the very pulse of such literature, together with the weight of the writers' arguments too suddenly fell, so that at the end of the latter six months the number of periodicals issued for a fixed term fell off considerably and reached only a very small proportion of that to which they had formerly attained. Amongst these, those works treating upon Government matters were not above two or three in number. Alas! how sudden was their rise, how quick their fall! In regard to newspapers, also, the case was the same. They were started and abandoned by turns, and worst of all, there were some whose existence was cut short when they had not published many numbers since their first issue, so that those still keeping on their work were barely one or two in every ten. It must indeed be said that the spread of the formation of newspaper companies seemed, during the year 1876, to be a sort of contagious disease of literary writers. In speaking generally of the force of argument contained in newspapers, we would observe that although it appeared as if violent and heated feeling might be suppressed, and turned again into actual reasonable argument, still, if the matter were regarded from another aspect, it would appear as if some influences assailed us either on the right or left, rendering it impossible fully to argue out proper lines of opinion. As, however, the matter stands thus owing to unavoidable reasons, we cannot, again, fully argue out the causes thereof.

The abolition of wearing swords was actually effected by the notification of the 28th of March. For a long period good public feeling had desired the prohibition of wearing them. Since the issue of the notification of the 8th month of the 4th year of Meiji (1871) which made it optional to wear the hair cut in foreign style and to leave off the swords, the whole of the castle of Yedo seemed to adopt the fashion of discontinuing the wearing of swords, but the *shizoku* of the country districts still arrogantly bore their two swords girt across their loins, and still retained the warlike appearance of ancient times. Thus, then, there were some who feared lest, owing to this decided abolition of the swords by the Government notification, there might be grounds for anxiety that these *shizoku* might be caused to harbour feelings of deep resentment,—but it was impossible to stem the torrent of good public opinion, and so, no matter whether some *shizoku* attached to the old régime cherished some slight ill-feeling in their breasts, the decree abolishing the wearing of swords was carried into effect without awaiting even the dawning of a second day. The fact of the results of this measure having been manifestly beneficial both directly and indirectly, is a matter that was plainly apparent during the past year to all well informed persons;—how, then, can we forbear to say, when we consider this, that it was a most important advance in sound reform?

At the commencement of last year, there was no other flag, with the exception of the Mitsubishi mail-boats, seen running on the line of navigation from Yokohama through the Inland Sea to Shanghai. In February, however, the English P. & O. mail-boat Co. suddenly got ready four steamers, and opened a branch line between the places above-named, and forthwith entered into competition with our mail boats, with the intention of forcibly entering our Inland Sea, and, profiting by opportunity to seize and carry off our power of navigation. The Mitsubishi, however, made up their mind, and having met with this formidable opponent, overcame them in the first instance by celerity of ship-service, and finally achieved a complete victory by means of low rates. But as the P. & O. Co. were from the first one of the most powerful Companies on the face of the globe, they relied on their own powers, and did not withdraw. For about half a year's time the two disputed in concert the power of navigation between Yokohama and Shanghai. In September, even the P. & O. Co. became aware of the fact that they had no advantage in strength, and finally abandoned this branch line, whereby the power of navigation of the Mitsubishi Co. in the Inland Sea was admitted. Next, steamers were sent out also by the Chinese Trading Guild, with the design of secretly experimenting on this line of service, but after a very short interval, they voluntarily withdrew. But the Mitsubishi Co. had sustained injury owing to competition for several years back, and were only able to gain a slight degree of peace in the latter half of last year. This was a fortunate matter, not for the Mitsubishi Co. alone, but, did not all good public opinion go in their favour, since all this had resulted in the power of navigation of the Japanese seas falling into the hands of Japanese subjects? When, however, the competition had come to an end, the Mitsubishi Co. did not lie idly content with this immediate slight degree of success, but by degrees extended their ship-service throughout the neighbouring seas of Japan, and eventually arranged set periods for running their vessels to the ports of the Bonin Islands, Liukiu, Corea and Newchwang, thus entering foreign waters, and doing just what they objected to the P. & O. Co. doing. As all these mail-boats were concerned in the important matter of postal service, the advance of postal affairs, in concert with telegraphs, made unmistakeable progress during the past year. In the different localities to which the lines of vessels were run, there were none among the people who did not think these advantages of great benefit. How, then, can we deem it a matter of but slight import to make this information known to our readers! Nevertheless, these operations come under the charge of the intelligent officers of the Mitsu Bishi Company, and as we believe that when the affairs of administration recommenced on the 4th instant, representations were made by the Company to the Government, we shall wait until we can obtain the draft submitted by them, and lose no time in at once publishing the same.

The publication of a "Code* for official discipline" took place on the 14th of April. Subsequently to the issue of this "Code of discipline," the "Code† of official duties" and the Code relating to public offences of officials were abolished; and this must be styled an alteration of an already fixed code. Now, as the good effects resulting from this "Discipline" must be positively apparent to the public, we consider it unnecessary to give any special explanation thereof.

The reason why the assembly of local officials was not held last year was in consequence of the Emperor being pleased to make an Imperial progress, but nevertheless general opinion argued in different ways the right or wrong of the matter, and wonder was felt at the rise of the delay. The *Genro-In*, after the revision of the Regulations for its formation and duties, carefully discussed and determined a code of laws, and examined into the same, whereby its legislative character appeared to be in some degree advanced. We are, however, as yet unable easily to understand whether or not such advance was made in concert with that of its actual powers. Upon a consideration of the arguments that appeared last year, we find that the ideas of well-informed persons in all cases advocated "freedom of action" and laid stress upon the question of "rights," and that the earnest desire for a constitutional form of Government forthwith became a matter of public discussion amongst the more intelligent classes. But just as all the nation were ardently longing for this to be taken in hand, orders were issued by the Emperor, on the 11th of September, to the President of the *Genro-In* to draw up a Draft for the constitution of the country. The *Genro-In* at once made selection of a special committee to draw up this draft for the national constitution, and some people affirm that the draft was made out during last year and presented to the Emperor; but we, however, are not as yet fully informed on this point also. In regard, again, to the routine to be adopted in the establishment of a Deliberative Assembly, the general public opinion was in favour of the plan that it ought to be set on foot from a small commencement at first, and by degrees attain to a greater growth. While those persons among the upper classes who were truly in favour of "People's Rights" were anxious that Town and Village, District, and *Ken* Assemblies should at once be started and thereby a National Assembly might eventually come into existence. On the 17th of October, the plan was determined on, that District, Town and Village General Representatives should be appointed, and that the District Superintendents and the Mayors should hold discussion with the said General Representatives on matters relating to loans of money or rice from Government, the disposal and management of property owned by several individuals in concert, and land and forest matters, &c. After this, in Yedo, rules for the election of General Representatives were determined at the *Fu* office, and published, and the limit of (the People's) powers was extended so far as is shewn by the statement that "according to time and "circumstances matters affecting the advantage or disadvantage, "the benefit or loss, of the people should be submitted for dis- "cussion at meetings convened at the *Fu* office." Thus, "Sub-

division Assemblies,"—consisting of Town and Village General Representatives,—and "District Assemblies,—consisting of General Representatives of the Sub-division,—have already been thus set on foot, and it would also appear as though a "*Fu* Assembly" will by degrees take a similar form. In the foregoing manner Regulations and Laws have both been fully determined, but still, in consequence of their having been in existence only for a short period, we are not yet as able to give any information as to the nature of the actual results to be expected therefrom.

On the 5th of August last year the Regulations for the Incomes of Nobles and Gentry were amended and the "Rules for the issue "of Government Bonds for Incomes" were notified. By these regulations, alteration was made in Incomes and Augmentations of Incomes granted in perpetuity, for life, or for terms of years, and a law was enacted for their payment in one sum by means of Government Bonds. Thus, on the one hand, there was granted to the nobles and gentry capital for the commencement of business transactions, while on the other a final limit was put to the Incomes that have hitherto been the most troublesome matter in connection with the financial affairs of our country. This was indeed a regulation of great worth in regard to both these points. Nevertheless, seeing that in consequence, firstly the notification prohibiting the wearing of swords, and now of the grand alterations in respect to the rules for Incomes, the *shizoku* who were attached to the ancient régime were deprived of their power as a military class, and sustained a diminution of the benefits (formerly) accruing therefrom, general discontent by degrees gathered strength. They could not repress it, and so eventually forgot their grand duty of fidelity, went astray from the line of proper reason, looked back with regret upon yesterday's dream of the Feudal System, and ended by feeling hatred against the present state of affairs under the new Government. For this reason, the greater part of the turbulent rioters in the West and South borrowed for their cry of origination and as the pretext of their movement the two points of the Income Rules and the abolition of the swords.

During a period of profound tranquillity the news from the south-west of the sudden outbreak of riotous disturbances firstly consisted of the tidings that on the night of the 24th October, 1876, a band of brigands amongst the Kumamoto *shizoku*, called the *Jimpû-ren*, set fire to the Military Depôt and assassinated the Military Commandant and officials of the *ken*. As urged by us at the time, this disturbance consisted of nothing more than a congregation of rioters who had no fixed plans, who set on foot hostile operations, with the design of thereby testing the power of insurrection against the present Government. Thus, then, when the Reserve forces were led forth and attacked them the rioters were at once routed, and bit the dust, while those left behind were all captured, so that quiet was forthwith restored before the lapse of many days. Still, if we enquire into the origin of these riots, we find that there was not wanting a reason for their occurrence. Since the abrupt breaking asunder of the bands of the Feudal System, and the sudden enforcement of centralization, it is certain that a spirit of discontent has seized upon the *shizoku* of the whole empire and has caused universal pondering over the matter. Now, if we distinguish between the views entertained by different persons, we find that there was one party in favour of the "Feudal System," another advocating the "Expulsion of the barbarians," and a third party urging "Speedy Reformations," so that their various objects were by no means similar, and they were as hard to commingle as are ice and charcoal. In consequence of the several parties being unable to spread their own particular ideas, for several years back the ever-increasing feelings of discontent caused them to attempt the work of gathering together bands of like spirits to their own. The affair by no means originated on the day last year when it first came to light. If we glance back at the straightforward advance made by the new Government it will be seen that the usual civil and military duties of the *shizoku* were discontinued, their powers as soldiers curtailed, their incomes diminished, their swords prohibited, and eventually even the rules for their incomes altered. As often as these alterations were made, so often did the *shizoku* sustain loss and injury not only respect of prestige but also of the material advantages of their position, until they were finally reduced to the hardship of finding it difficult to provide themselves with simple means of subsistence. Consequent upon their not clearly comprehending the grand duty of throwing aside individual advantages for the sake of the public welfare, there were very few among them who did not cherish in their breasts feelings of ill-will. This, then, was the reason why every scheme of the Government of no matter what nature, merely appeared, to the eyes of the disaffected *shizoku*, as a disagreeable matter. As this discontent became ingrained in them, they in the end utterly forgot their grand duty, and planned these disturbances. For this reason, having perhaps heard the news of the Kumamoto affair, the Akidzuki rioters followed on in the same time, and the ring-leaders of the different parties next set on foot hostile operations at Hagi and caused their influence to work far off amongst the disbanded men in Yedo. Still, they lost the right opportunity for warlike action, and failed in their calculation of the moment when to strike, and so were arrested one after the other, by the soldiery; they achieved not the slightest results, merely brought on themselves punishment under the code of their country and homes, and left behind them a tarnished name in the annals of the period of Meiji. In meting out punishment to brigands such as these, the Government considered that dealing with treason should not be effected without mature deliberation, and so exercised less severe measures than had been expected, which was a step universally praised by public opinion. But nevertheless, if these rioters had adroitly restrained their own secret feelings, had borrowed the pretext of "People's Rights," hounded on the agricultural population, exciting them to insurrection and scheming in concert with the latter, then indeed it would have been impossible to know whether their pacification could have been effected in the space of a breath.

The rise of Agrarian Riots during the past year commenced with the riots in Kishiu during the month of May, but as those who set them on foot did not extend over more than a few villages, tranquillity was easily restored. In November, however, the disturbances in the province of Hitachi were originated. This affair had from the first no direct connection with the turbulent action of the *shizoku* of the south-west, and its cause was clearly different, but nevertheless it is probable that the news of the other disturbances to a certain degree indirectly fanned their flame. If then, we glance at the general character of the evil actions wilfully committed during this insurrection, we find that these extended over several departments and broke forth in various places, and the evil resulting therefrom would not appear to have ended merely with the few villages in Kishiu, for immediately afterwards in the month of December, disturbances were raised again in Isé. These riots arose in the one province of Isé, but extened to Iga and Shima, and then turned back to the borders of Mino and Owari. Incendiary fires were kindled both in town and country, Government buildings were broken down, and violent deeds were committed at will, the whole being even more dreadful than what had occurred in Hitachi. As the rioters engaged in these disturbances were farmers, clad, not in armour, but in straw-coats and hats, and armed with bamboo spears, the commencement of their swarming together was even as the flooding of a level plain by pools of rain, and though, as they gradually gained numbers, a dire state of circumstances was presented to view, still, upon seeing the government troops, together with *shizoku* volunteers, advancing to attack them, they at once dispersed in confusion. As, moreover, the cry which they took as their pretext, namely, the urging of petitions, was by no means clearly defined, how can there be any anxious doubt but that, even though these risings had taken place throughout even several tens of provinces, they could have been without difficulty repressed by military force. Turbulent fellows who, while enjoying a state of tranquillity, fling aside the spade and mattock, and take up deadly weapons, must have some unavoidable reasons for so doing, and therefore, even though their violent action cannot possibly be overlooked by the laws of their country, still, if we examine into their motives, we shall find that these are different from the schemes on the part of disaffected *shizoku* to raise disturbances. Because, to the outward view, the riots are of similar nature, to at once consider the causes of these two different affairs as identical, and to argue in one and the same manner in regard to their motives, is, in our opinion, by no means the conclusion that will be drawn by well-informed persons. According to what we hear stated in respect to riots, they arise in one case from the Revision of the Land-tax,—in another, from the statement of the unreasonable rate of the price per *koku* of rice. Let the true cause, then, be supposed to be one of these two. The fall in the market-price of rice at the time of the payment of Government dues of last winter would seem to have been the nearer cause of hardship, and thus both town and country disputants, looking carefully at this point, sought for some rule to amend the matter, and turned their close attention to the prevention of an insurrectionary spirit spreading throught the wholecountry. And thus did the past year come to an end.

The above is a succinct account of the more important portion of the various events with which we came into contact during the past year. Here, then, we will fling away the pen, with the hope of freshly arguing in this year's arena other matters of public controversy that affect the people.

On the Establishment of Government Rice Stores.

(Choya Shimbun, January 18th, 1877.)

In the middle ages of China, during the reign of the Emperor Riu, a *Johei-sô* or establishment for the storing of rice was instituted by the Government of that country. This establishment was conducted in the following manner:—When, owing to a plentiful harvest the price of rice was extremely low, the Government bought up the grain at a little above the market rate, and stored it in buildings erected for that purpose. When, on the other hand, whether from floods, drought, locusts or other natural causes, the harvest was bad, and the price of the staple consequently high, the *Johei-sô* sold rice to the people below the market value. Thus did the Chinese Government prevent those excessive fluctuations which always cause distress to the lower classes. Moreover, by storing up rice in this manner, starvation was to a slight extent guarded against in times of famine. The establishment of the *Johei-sô* has thus always been considered a beneficial act, and is spoken of to this day by the Chinese men of learning, as an act of benevolence. During our feudal times, institutions on the model of the *Johei-sô* were established in this country by private companies, and were found to work as beneficially as in China. Although, owing to times having changed, and our country being thrown open to foreign trade we cannot tell whether, at the present time, institutions of this nature will or will not produce equally beneficial results, by the recent reform it has been decided that the *Okurasho* is to have nine *kioku*, or offices, placed under its supervision, one of which is to be called *Johei-kioku*. We are not yet acquainted with the functions of this office; but judging from its name, and from rumours that have reached us, that several rice stores are to be established in various parts of the country, wherein certain amounts of rice are to be deposited yearly, we infer that it has been instituted in accordance with a memorial forwarded from some of the sub-departments to control such stores. From the most ancient times rice has been the staple of this country. It is the common food of all classes, and has always been used by the farmers in payment of taxes. Of such importance is it to this class that it may well be termed their life and strength, and when by floods or other casualties their fields are devastated and their crops destroyed, not only are they unable to pay their taxes, but sometimes fail to save themselves from starvation. So often have our countrymen suffered from such calamities, that any action on the part of the Government that will tend to alleviate them is worthy of all praise.

But there is another point to be considered which is no less important, and that is the new mode of taxation which has lately come into force. The land taxes which have hitherto been collected in rice, are in future to be made payable in money. Now there is little money among the farming class in this country, so that when the taxes fall due, the farmers are compelled to rush their produce on the market. As a natural result the price falls, and the farmer finds, after disposing of his rice and paying his taxes, that he has nothing left for himself. Under these circumstances the establishment of such an institution as the *Johei-kioku* would undoubtedly be of great benefit, as it would enable the farmer to obtain a reasonable price for his grain, and he would not be compelled to sacrifice it at a price which, in some cases, does not yield him enough to enable him to satisfy the tax collector.

Two years ago, when the China Merchants' Steam Navigation Co. was first started, people "gave it two years of "life"—to use the current idiom. Two years ago, had any body expressed his belief that in two years more the Shanghai Steam Navigation Co. would have passed into the hands of the Chinese, he would have been looked upon as a fit candidate for admission to a lunatic asylum. The impossible contingency is now, if not an accomplished fact at any rate being very seriously contemplated. Negotiations are progressing between Li Hung-chang and the Agents of the Shanghai Steam Navigation Co. for the transfer of the Company's steamers and other property, and the bargain, it is said, is "seven-tenths" settled. Purchase-money, two million four hundred thousand taels, of which one million is to be paid down. This will give the share-holders their money back, *plus* a division of the reserve fund, and make the shares worth about Tls. 125 each.

We understand that the Commissioner of Customs has received despatches through the Tao-t'ai from the Tsung-li Ya-men to the effect that, in virtue of the provisions of the Chefoo Convention, no *likin* taxes will be leviable on foreign goods in the settlement of Shanghai on and after the 1st day of the 1st moon of the 3rd year of Kuang-sü.—*S. C. & C. Gazette.*

DINNER TO W. G. HOWELL, ESQ.

A complimentary dinner was given at the Grand Hotel on Wednesday last, the 24th instant, to W. G. Howell Esq., late proprietor of this journal, on the occasion of his relinquishing the editorial duties which he has undertaken for the past seven years. The chair was taken by General Van Buren, U. S. Consul-General; and among the sixty-four of Mr. Howell's friends who sat down were the British Minister, Sir Harry S. Parkes, K.C.B., the Russian Minister, Mon. de Struve, the Spanish Minister, Sr. Don Mariano Alvarez, Baron Von Gutschmid, Baron Rosen, several members of the Consular Board, Captain Buller, C.B., of the *Modeste*, and representatives of the Bench, Bar and Press and all classes of the community.

After dinner the Chairman, who was loudly cheered, rose to propose the first toast of the evening—Our Monarchs and Magistrates,—which he introduced in a few appropriate remarks, and after an interval of a few minutes the second toast of the evening, that of Our Representatives. He said:—

Gentlemen,—The second toast which I have the pleasure to propose to you will, I am sure, receive your cordial approval. Thrown together, a little community in this far land, we have exceptional opportunities to become acquainted with the private virtues and public services of our officials, and especially of the distinguished representatives of our respective countries. Meeting them, as we do, in our frequent social gatherings; enjoying their hospitalities as they do ours; conversing freely with them upon topics of general interest, and affected instantly and largely as we are by their official action, these distinguished gentlemen are considered by us as friends and neighbours, whose interests are identical with ours and whose reputations are as dear to us as our own. It is therefore with no little pleasure that I see present with us on this occasion the distinguished *Doyen* of the Diplomatic Body, and other equally distinguished members of it,—gentlemen whose faces are familiar to us all, and whose presence we always hail with enthusiasm. I give you then, Gentlemen, the Diplomatic Body, Our Representatives in Japan."

Sir Harry Parkes in replying said:—

Mr. Chairman and Gentlemen,—On behalf of my colleagues I sincerely thank you for having included your Representatives among the toasts of the evening. We appreciate the compliment, because the diplomatic body do not usually expect to share in those festive honors which are deservedly bestowed on public occasions on other popular services. But if, in the prosecution of our work, which has for its high object the promotion by peaceful and friendly means of those interests with which we are charged, we are able to secure your approval, and to maintain that intimate identity with the Yokohama Community, to which, Mr. Chairman, you have so kindly referred, I need not say that we shall always gladly welcome the support and encouragement, which that approval and union afford us. It is evident, however, Mr. Chairman, that those of the diplomatic body who are present at this entertainment do not attend it in virtue of any speciality attaching to their official position, but in order to mark their regard for the guest of the evening. On this point I may be permitted to say a word, as I have had the pleasure of knowing Mr. Howell from a date long anterior to the time when any foreign resident in Japan set foot as these shores, and I can remember that when he left another large community elsewhere, of which he had been for many years an honored and a valued member, his departure occasioned similar feelings of regret to those which will be universally entertained by his friends in Yokohama and in Yedo when we have to bid him adieu, and to lose that pleasure and profit, which his society has always afforded us. I feel, however, that I should not encroach upon that recognition of his worth, to which I am sure the fullest expression will be given from the chair, but while thanking you Gentlemen, for the honor you have paid to my colleagues and myself by drinking the health of your representatives, we also cordially thank you for having allowed us the opportunity of joining with you in offering to Mr. Howell this tribute of our respect and esteem.

The next toast was that of Our Armies and Navies, which the Chairman proposed as follows:—

The third toast, Gentlemen, which it is my privilege to propose, is one that needs but little comment. Our Armies and our Navies always speak for themselves and with no uncertain sound. Heaven be praised that in the greater part of the world they are not engaged at present in the grim business of war, but are permitted to enjoy, with their fellow citizens, those blessings of peace which their valour and their devotion secure. With us in Japan the representatives of both services are ever welcome and honoured guests. The officers of our Navies, especially, are familiar to us as household words, and scarcely any social gathering is considered complete without the presence of some of them. I am glad to greet this evening, as I always am, one gentleman who so worthily represents that service at present in these waters, that bluff, hearty, whole-souled and large-hearted sailor, whose popularity among the ladies of Yokohama is fully as great as among the tars who love him so well. His modesty is only exceeded by his courtesy and bravery. I see, Gentlemen, that you do not wait for me to name the party to whom I allude. At once your eyes turn to the gallant gentleman, who has, on account of the virtues I have named, and especially on account of his modesty, been appro-

priately placed in command of H. B. M.'s vessel the *Modeste*. I give you, Gentlemen, Our Armies and Navies.

Captain Buller, C.B. rose to reply. He said :—

I think you will excuse me, Mr. Chairman and Gentlemen, if my speech is inadequate in expressing my thanks for this kind toast, when you remember the character I bear for modesty. I can never equal the polished powers of oratory possessed by my friend the Chairman, yet I feel I must respond to the remarks passed upon our profession just now. Talking of bravery reminds me of Yokohama in the olden time, when it possessed a brave volunteer corps who promised to resent right manfully the threatened treachery of the natives; who went to bed booted and spurred, it is said, ready to spring up to action at the bugle call. But mutiny is liable to break out in the best regulated army or navy, and these brave fellows revolted. We rode into the country for drilling exercise, and stopped to have tiffin at a place not far distant. The order to mount was given, but not a man moved. We must have a quarter of an hour longer, they said, to digest what has just been eaten, and move they would not for half an hour. But had they not cause for revolt? I feel however, that this toast might have been omitted, yet I know our honoured guest this evening appreciates both the army and navy, and has friends in both, of whom I trust I may call myself one. I thank you for the toast of Our Armies and Navies.

Mr. Mollison then rose to propose the next toast of Our Consuls, and said:—

Mr. Chairman and Gentleman,—I feel highly honoured at having been asked to propose the health of our Consuls, and although I could have wished to see the toast in abler hands, I am at the same time very pleased to have this opportunity of testifying publicly my respect for the Consular body. Consular duties, and how they are performed I need not touch upon here, but speaking as a merchant, I know that we are all of us brought from time to time into contact with our respective Consuls, on business matters of one kind and another, and if the experience of those I see around me is the same as my own, as regards the kindness, courtesy and consideration received at their hands, I feel sure that you will not refrain from adding your tribute of respect to mine on this occasion. I therefore have much pleasure in proposing the health of Our Consuls.

Mr. Russell Robertson, H.B. M.'s Consul, replied:—

I beg for myself, and on behalf of my colleagues, to thank you, my friend Mollison, and you, Gentlemen, for kindly drinking the health of the Consuls. The toast is one which I am pleased has found a place in this evening's list, because it affords me an opportunity to tender to the guest of the evening our (the Consuls') grateful recognition of the assistance we have always received at his hands, through the medium of the paper he has so ably conducted for a period of, I think, seven years. Such assistance, Gentlemen, has not taken the shape of adulation, either personally or collectively, but what it has done has been to place public questions before us in such a manner as to deal—I should perhaps say attempt to deal —with them in a way which I trust, so far as our poor efforts have gone, has resulted in some good to this community, of whose interests we are the more immediate representatives. Where praise has been given, it has been in a manner that has made the recipient feel honoured in accepting it; and where blame has been apportioned,—from which I possibly have not escaped —it has been done, if with a fearless, at all events, not with an unfriendly hand. I do not wish to anticipate the toast that is about to follow. Much will shortly be said about my friend Howell that will completely cast into the shade any words that I may attempt to utter, but he and you, Gentlemen, will at least allow me, speaking as his Consul and his friend, to say this much,—that the recollection he will leave with me will be that of a man who never did a treacherous thing to a friend, and who in thought, word, or deed was never ungentle or ungracious to a woman. To revert to the toast to which I have to respond—that of the Consuls—I have little to say beyond this: The progress Japan has made of late years has tended in no slight degree to lessen the labours of the different Consuls, and those whose recollection of events in Japan can carry them back to some sixteen years ago, will contrast the present date very favourably with the uphill work that had to be gone through by the Consuls then resident here. If, Gentlemen, our labours have lessened, the sense of our responsibilities has by no means diminished, and I can assure you, speaking for myself and my colleagues, that your interests are our interests, your business cares our business cares, and that while we labour to promote the one, none the less do we endeavour, so far as lies in our power, to alleviate or lessen the other. I again thank you very much for the toast which has just been proposed.

The Chairman next rose to propose the toast of the evening, which he introduced as follows, being interrupted from time to time by appreciative cheers:—

I am now, Gentlemen, about to propose to you that sentiment which I know you have been anxiously awaiting to respond to, and which will be greeted with that enthusiasm which its subject demands. I make no doubt that it will gratify our honoured guest, to see so many gentlemen assembled to do him honour, as it does us to have this opportunity of testifying our esteem and regard for him: our regard for him as a private citizen of stainless character, of most estimable social qualities, and of large and varied attainments, and our esteem for him as a writer who, however we may have differed from him on some points, we recognize as possessing rare talents, great industry, a remarkable gift of expression, and a sincere desire to do good to his fellows. There has grown up in the world of late years a new power, a power that has developed such marvellous energy and vast strength, as to prevent any thorough analyzation, and to defy all calculation as to what it may accomplish in the future. I believe it is no great exaggeration to say that this power elevates or destroys individuals, that it makes war and decrees peace, that it inaugurates and even conducts vast enterprizes of geographical and scientific discovery, that it gathers information from all parts of the earth and scatters it with a bountiful hand, and that it largely influences, if it does not absolutely shape the policy of nations. But I will not dwell on this most fruitful theme. The Press is to be the subject of another toast, and will be responded to by one of the fraternity whose experience and eloquence will, I doubt not, enable him to do it fuller justice than I can be expected to do in this passing way. What I have said, however, is sufficient to show how important it is for the interests of mankind that those who have the control and direction of this vast power should be men of character and education; should be men of high aims and lofty purposes, appreciating the dignity and responsibility of their calling and full of that spirit that ennobles labour,—men fearing God and loving their fellow men. All power, however, Gentlemen, experience teaches us, is full of temptation. History records upon many of its dark pages instances in which authority has developed into tyranny, and liberty into license. Monarchs have sometimes become villains of the deepest dye. Armies have been corrupted, and instead of being the bulwarks of freedom have been instruments of despotism. Navies have turned into pirates and have become the scourge of oceans which they should have protected, and even the Church itself has been at times turned from its mission of mercy to become the oppressor and terror of mankind. It is hardly to be wondered at, then, that the Press should not have escaped this universal aw, and I think I hazard nothing in saying that there are bad editors as there are bad men in other walks of life. Nay, I believe I may venture farther and say there are a number of these gentry, who if justice were done, would be serving their country in the classical exercises of picking oakum or cutting stone in some quiet and secure retreat, instead of preparing their vicious editorials or conducting their depraved journals. These are the freebooters and sneak-thieves of the profession, who rob reputations as easily and with as little compunction as the pickpocket lifts your purse, or a burglar plunders your dwelling. These are they whose columns are open to assaults upon private character, and against whose mendacious attacks no law affords protection,—save that first and last right of every man which he uses to protect himself against scoundrels and assassins. It is a pleasure for all us to feel, Gentlemen, that the friend we have assembled here this evening to honour is not one of that class. However we, or others, may at times have differed from his opinions or criticized his productions, I think it is almost universally admitted that the journal he has conducted has been marked by rare ability, and by a tone and character that has merited and received the approval of the community. In paying him this compliment, Gentlemen, it is not expected, and he himself I am certain does not expect, that we should approve everything he has done, or that when any of us have opposed his positions or criticized his statements we should now admit we were wrong and he right. We are not here for anything of the kind: we are not here to cover our guest with fulsome eulogy, which he is the last man to desire, but we are here to testify our warm regard for him, and our firm conviction that during his residence here he has laboured faithfully and zealously for what he believes the highest good, that his thoughts, and aims, and efforts, and desires have been to promote the best interests of this neighbourhood and the world at large. We are here to take you by the hand, Sir; to say to you that your absence will we considered a loss by this community that cannot easily be supplied: that we appreciate your labours; the hardships of your position; your abilities; your motives; and that in the future of your life, wherever you may be, and in whatever enterprise engaged, health and prosperity may ever attend you. Gentlemen I propose to you our guest. The health and happiness of William Gunston Howell.

Mr. Howell on rising was received with hearty cheers, which were repeated again and again during his reply to the toast, as follows:—

Mr. Chairman and Gentlemen:—

It is with feelings of no common warmth that I rise to return you thanks for the high honour bestowed on me this evening for the too flattering terms in which my health has been proposed, and for the kindness and cordially with which it has been received by this distinguished and representative company. Were it fitting or gracious on this occasion to dispute your opinion, I should do so: for you have unanimously agreed upon an estimate of my services with which I could hardly be blamed for not coinciding. But I shall rather follow the example set by Dr. Johnson when complimented by his Sovereign. He was asked whether he had made any reply to His Majesty, "No, Sir," he answered, "when the king had said it, it was to be so. It was not for me to bandy civilities with my sovereign." I need not assure you, gentlemen, that the expression of your good opinion and approval, in the deliberate form which it has assumed this evening, has caused me profound satisfaction. There is no reward which can be offered to a man who has occupied any form of public position, so grateful as the expression of approval and [illegible] for [illegible] which I have occupied, [illegible] grateful [illegible] because I know myself

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

too well to imagine that anything like personal popularity has contributed towards such acceptance as I may have found in this place. Rather, do I believe, gentlemen, that in the honour you have conferred on me this evening, you desire to pay a tribute to that sincerity of purpose by which I shall not disclaim having been animated during the seven years of my editorship of the *Japan Mail*. If the recollection of those years gives me one confident assurance, it is this, that the predominant motive which has animated me in all my work has been the desire for the welfare of this Empire, and of the foreign communities settled in Japan; for the promotion of just, generous, and sympathetic feelings towards the Japanese; and of good-will from them towards ourselves. If I have not contributed towards these things, so far as my power lay,—small as that power has been—I have vainly spent some of the best years of my life, and have cherished delusions which constitute collectively a grave reflection upon my capacity for undertaking any serious work whatever. But, gentlemen, your presence here this evening assures me that your impressions tally with my recollections, and that my sincerity and earnestness of purpose—I claim no more—have made themselves evident to you. But it has taken me years to produce these impressions, and I can assure you that during dark periods of discouragement, of misapprehension in regard to my motives and conduct, nothing but the conviction of the justice of this cause and of its certain ultimate triumph have consoled and animated me. But it has been wisely and wittily said that there is one subject on which men may be as eloquent as they like, but can never be interesting—themselves—and I shall take this good hint, and thus avoid the dangers entailed by a neglect of it. I could say much regarding the great difficulties—of so many different kinds—which beset the work I have tried to perform. But it is better to turn to larger and more serious questions. When I arrived in this country nearly eight years ago, Japan was bringing to a close the contest which ended with the Restoration of the Mikadoate. Of some of the active hostilities in the North I was an eye witness, and can bear testimony to the conspicuous gallantry displayed on both sides. It is extremely difficult for any one now residing here to form a picture of what Yedo was in those days. But I remember well that in going from one part of the city to another, a foreigner was always escorted by mounted guards; there was not a wheeled carriage of any kind in the streets, while two-sworded men swarmed everywhere. One by one changes came, first the railway, then the telegraphs, the foreign educational departments, the Army and Navy were reconstructed, the financial statements of the Government began to be published, the Post Office arose, this settlement began to take the form in which we now see it, especially towards the native side of the town, and the new spirit which was animating the Government began to show itself in every direction. It is not my purpose to recapitulate all these improvements and the details of this advance. My only wish is to show that if in these few years such wonderful progress has been made, we may fairly look forward to a continuance of it and need not in any way despair of the future of this country. The art of the historian is brilliant and attractive because it condenses into perhaps the reading of a week or a month the events of a thousand years. But the actual progress of human affairs is extremely slow as a rule, and we who have lived in this country ought rather to congratulate ourselves upon the speed of their march than complain of their tardiness. I fear the complaint will last until fortunes are made more rapidly, but this can only be when the country, by a vigorous encouragement and prosecution of its foreign trade, and the development of its mineral resources, has increased its accumulated capital. Permit me to say a few words to you on the subject of the native press, which has, as I think, a great future before it. Indeed, were I at this moment a young Japanese, my greatest ambition would be, not to take my place among the ranks of the leading officials of the Empire—though I quite admit the laudable nature of this ambition, if rightly directed—but to qualify myself for exercising a great influence on the public mind by means of journalism. In order to do this, I should spend three or four years in Europe and America in unceasing observation and study, and should apply the fruits of these years to promoting the advance of this country—not so as to denationalize it, but so as to build up a strong Japanese civilization, capable of absorbing much of the political philosophy of the western nations. I cannot imagine a more desirable or enviable career for a young man in this country. But he must approach his work with an entire earnestness of intention, and pursue it with unremitting labour and in all honour. Let him do this with the requisite insight, ability, patience and industry, and perhaps no career could offer the opportunity for doing so much good, and leaving so permanent a mark upon his generation. I shall not detain you longer, gentlemen. The habits of my life here have not tended to make me a fluent and entertaining speaker, and I am painfully aware of my deficiencies in this respect. But before I sit down, let me offer a tribute of public acknowledgment to those who have assisted me in my labours. I have been cruelly dull and tedious to you all for seven years week after week. I have had serious subjects to treat, and for the most part have treated them seriously, and I know only too well how much I must have wearied you. But my columns have from time to time been relieved by matter from many various hands—serious reviews from scholarly students, good dissertations on special or general trades, delicate little pictures of Japanese life or scenery, elegantly turned verses—lacking for some months, alas!—and, in fine, matter of various kinds all bearing on my work, or rendering the fruits of it more palateable to my readers. To those who have contributed these I offer publicly my best thanks. And now, gentlemen, I shall trouble you no more. I must shortly take leave of this country, to which I have become strongly attached, and to many kind and hearty friends who have cheered me in my labours and discouragements, and whose society has sweetened an exile which, in my case, has been attended with singularly painful concomitants. But the honour you have done me will ever live in my memory with the greatest satisfaction and gratitude, and the recollection of this evening will more than compensate me for all the labours and trials incidental to my connection with the journal the editorship of which I have just resigned. Gentlemen, I again thank you most heartily.

The next toast was the Bench and the Bar, proposed by Mr. Keswick in the following terms:—

Mr. Chairman and Gentlemen,—The toast which I have now the privilege to propose is one which will commend itself to the favourable acceptance of all present, and calls for very little to be said by me in bespeaking for it your most enthusiastic reception. The toast, Gentlemen, is that of the Bench and the Bar. We are all sensible of the ability, and the independence, with which the onerous duties of the Bench are performed in Yokohama, and it were only a work of supererogation on my part to dwell upon the conspicuous merits attaching to the administrators of justice in Yokohama. Suffice it to say, that we consider, happy is the Community which has its Law given so far outside the pale of reproach,—whether the reproach of man, or of justice,—and we rejoice in the belief that the status of the Bench in Yokohama, and those who adorn it, will yet prove—as indeed it shall prove,—an example and a leaven to the still far from immaculate native Bench of Japan. As for the Bar, and our Barristers here, we will not offend them by eulogy too high, but so much could be said in their favour, that I am spared the necessity of saying anything. Are not our legal luminaries our "guides, philosophers, and friends," and would not this community ill fare without them? Their professional sagacity, personal worth, and social qualities are known to us all, and although this be such an upright, law abiding, and generally model settlement, we rejoice in the expectation that the Bar and Barristers will every flourish among us. Gentlemen, I give you the Bench and the Bar.

Mr. Wilkinson rose to reply for the Bench, saying:—

I thank you, Mr. Chairman and Gentlemen, for myself and my brother occupants of the Bench, for the kindly sentiments with which this toast has been proposed, and the cordial manner in which it has been received. It is to me at once a source of pleasure and of regret to be called upon to respond to it—of pleasure, because it affords me an opportunity of paying my tribut of esteem to our worthy guest; and I do not think that I can do his better than by reëchoing, by reference, the sentiments, and saying Amen to the prayer of my sometime chief, and always friend, Mr. Robertson. It is a source of regret to me, because my appearing is due in some measure to the absence of one whose friendship, I know, Mr. Howell highly prizes, and who, on the other hand would have been glad of this occasion to bear testimony to the great comfort which I also know he has derived from the friendship of Mr. Howell. Mr. Chairman, in the toast which you have just drunk, the Bench and the Bar are very appropriately joined together. The Bench is a very old institution, older than the Bar, older than history itself, and its occupants in the presents day have very old traditions to maintain—the oldest of all being that we are to hold the scales of justice even between party and party and between the accuser and the accused, and I can say for myself and my colleagues, including indeed the gentlemen by whom the toast has been proposed, that we do our best to follow this tradition and to hold the balance even. To do so, however, is not as easy a task as it once was when the Elder sat in the gate. The complex relations of an advanced civilization have produced questions too complicated to be decided by the simple rules which satisfied the judges in those primitive times. These questions have, for their decision, called forth a science of law and with that science its professors—the members of the Bar; and the Bar now takes a very important part in the administration of justice. The occupants of the Bench, whether lawyers or laymen, are deeply indebted to the members of the Bar for their friendly assistance and coöperation, and, on a behalf of myself and my colleagues, I wish to take this opportunity of acknowledging our deep obligations to them. The community is indebted to them, moreover, for the beneficial influence which their collective opinion has always exercised over the Bench in securing uniformity of decisions, and in keeping the Bench in sympathy with the people, and it is right that their services should receive their due recognition. Mr. Chairman and Gentleman, on behalf of myself and my colleagues, I again thank you for the cordial manner in which you have drunk our health.

Mr. Kirkwood said in reply for the Bar:—

Mr. Chairman and Gentlemen, I rise to express the thanks of the Bar generally, and more especially that of the Bar of Yokohama, for the toast which has just been proposed and which has been so kindly, cordially and even heartily received by this somewhat large assembly. The health of the Bar given on an occasion such as the present, which is nothing more than a friendly gathering of a large section of this community, I refuse to consider merely as a common place after dinner compliment. I feel that I must regard it, also, as an opportune and kindly recognition of the confidence placed by the public of Yokohama in the general administration of justice in this settlement—in the Bench which presides over it and in the Bar which lend to it its aid and assistance. The Bench and the Bar, Gentlemen, should always merit this confidence, for without it, it is impossible that their influence upon society should be properly felt. So far as the Bar is concerned (for it is with respect to the Bar alone that I am now addressing you) I trust

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that we not only should, but shall always merit it, and that we shall continue to discharge the duties that we may have to perform with completeness and satisfaction to you and to ourselves, for, Gentlemen, you know as well as we do, that it is for the public welfare alone that we labour, that we seek alone to merit its approbation and confidence; and if we possess that, our reward is sure and certain. Gentlemen, on behalf of the learned profession to which I have the honour to belong, I tender you most sincere thanks.

Mr. J. C. Hall, in proposing the next toast of the Press, said:—

After the ample eulogy the Press has already received from the Chairman when proposing the toast of the evening, and the glowing picture of the future of the native press of the country drawn by our guest in his reply, it is not necessary for me to say much on the subject. One observation only I feel called on to make, and that is, that the power of the Press in organizing public opinion among the advanced nations of the world, and the capacity of the native press for promoting the civilization of this country, alike depend on one condition, namely, that the Press should be free. As my opinions on this question, however, are at variance with those of the gentleman whom we are here to-night to honour, I shall not say more. I beg to propose the Press.

In response to this toast Mr. Brooke, of the *Herald*, said:—

After all the eulogiums passed upon the press to night I need not say much in reply to the toast proposed now. The best possible test of the appreciation in which the Press is held is a gathering such as the present, where men of all shades of opinion have met to do honour to a gentleman who for seven years has wielded with much ability the editorial pen. I have often differed in opinion with him; we have broken many a lance in the lists, and in the ardour of contest have perhaps been occasionally unjust to each other, yet I trust now all is past that no rankling ill-feeling remains. For my own part I am sure I wish our guest well on leaving these shores for another sphere of exertion. Disapproving, as I have done, of the general politics of the *Mail*, yet I have no hesitation in bearing testimony to the talent and tone of the paper. As a specimen of literary workmanship it has been in every way creditable to its conductor; the musical and dramatic criticism of its columns have been of the highest order of excellence; better critical writing on these topics is not to be found in any newspaper, no matter where published. In losing Mr. Howell the community will experience a loss difficult to replace. I have always looked forward in common with the rest of the community to the issue of his weekly paper, and have mostly found something to interest me,—to please me,—though occasionally the reverse; but in this life we must take the bitters with the sweets, and be thankful when the former does not predominate in our cup. The example set by Mr. Howell in keeping up the high standard of the *Mail* will, I trust, be emulated by his successor. When the inevitable time arrives for those who remain connected with the Yokohama Press to retire, none need wish for a more honourable recognition of his public services than that which has fallen to the lot of Mr. Howell, the guest of the evening.

The last toast in the list was that of the Ladies, which Baron Rosen proposed, and said:—

Sir, I have the great pleasure of proposing the next toast, which I know you will accept cordially—that of the Ladies. Unfortunately I labour under the disadvantage of not being able to master the English language thoroughly enough ever to hope that I can do justice to the toast, and must therefore beg you to suppose that I have actually said all that it is my intense desire to say on so interesting a topic. I am satisfied that, whatever my shortcomings may be, the nature of the toast is such that you will readily receive what I say, and I am delighted to think that the task of replying to it will fall to a gentleman who will, I have no doubt, do so in a manner which will make up for my failure. Gentlemen, I give you the health of the Ladies.

In replying to this toast Mr. Hay said:—

Mr. Chairman, and Gentlemen, I have been honoured this evening by having had allotted to me the task of replying to the toast which has been so feelingly proposed by Baron Rosen and so enthusiastically received by all of you. Standing here, as I now do, for a few brief moments the representative of the ladies,—too brief, unfortunately—I cannot but be conscious how far I fail fitly to represent them, but I am emboldened to proceed because courage is a manly virtue which ever found favour with the Ladies, and failure is likely to secure their pity; and you all know what pity is akin to—well to a feeling which it is desirous to obtain from the fair sex. I trust therefore, Gentlemen, that you will pardon me if I fail, as fail I must, to convey to you the thanks of the Ladies with due and proper tact—that charming feminine tact of saying the right thing, and saying it nicely, too. It is a pleasant reflection for the Ladies that they now greatly influence the daily life of the gentlemen here, as this cannot any longer be considered a batchelor port, full of grumpy, discontented men who pretend that they glory in the fact of not being acquainted with a lady, and who strive their best to dispel all that remains of that softening influence which the society of their mothers and sisters had upon them at home. No, the Ladies feel now that they have established a firm hold on the respect and esteem of the gentlemen here, and it will not be the Ladies' fault if they lose it. Some of the old familiar faces among our lady friends have lately gone from among us, and others, unfortunately for us, are about to leave us shortly for home scenes, but I venture to say that even amidst the welcome of friends and relatives and the novelty of a return to home life, their thoughts will often turn in kindly remembrance to those whom they have left behind in Yokohama, while the sadly reduced number of those who still, thank Heaven, remain among us, will, I am sure, always meet the willing devotion and attention of the gentlemen with the same winning grace and charming kindness which has ever distinguished them. I would advise the batchelors here to profit by the good example which has lately been set them and change their condition. If they dare not take the fatal plunge themselves, nor have a friend on whom they can rely, I have no doubt that the editor of the *Matrimonial News* will help them out of their difficulties, and they will thus be able to please the Ladies by adding to their number in this place. The Chairman has spoken at some length of the loss we shall all sustain by the departure from among us of the guest of the evening, and our Consul very aptly touched on his particular devotion to the fair sex, but I confidently state that none will feel his loss more than the Ladies. He will be missed from the social tea board, the more formal dinner table, the cheerful drawing room, the friendly choral society and the more serious concert room; and notwithstanding the abilities of his contemporaries,—or rather, now, late contemporaries—and that his mantle has fallen on able shoulders, who will there be now to touch with a fanciful pen on the allurements of Lawn Tennis, or produce other such pleasant sketches for the delight of the Ladies. Gentlemen, on behalf of the Ladies, I thank you for the kind manner in which you have received the toast proposed.

Mr. House, in a few complimentary terms, proposed the health of Mrs. Howell, as a lady with whom he had the privilege to be acquainted, and whom no one who could boast that privilege remembered with any but pleasurable feelings. To this toast Mr. Howell appropriately returned thanks.

The Chairman then rose and said:—

Gentlemen,—There is one toast yet which must not be overlooked though it may not, unfortunately, be on the card. We owe much to science in general and to the men of scientific attainments amongst us especially. What our learned men have done for us no one can estimate. We could not do without our physicians, and we all esteem the distinguished services done by these gentlemen of our community, especially of our friend Dr. Eldridge, who is happily with us to-night. With his name I may couple that of our oldest and most renowned citizen, Dr. Hepburn. Gentlemen, I give you Our Physicians.

In responding Dr. Eldridge said:—

I thank you, Mr. Chairman and Gentlemen, for coupling my name with the last toast. The profession to which I belong is not nearly allied to that of our guest, yet the one is friendly to the other and each supports the other in many ways. Mr. Howell has generously aided us in our earnest endeavours to do good, especially in supporting all improvements in the way of sanitary measures by the aid of his columns. And Yokohama is a healthy place; you may laugh, Gentlemen, but I am not sorry it is a healthy place. We have enough to do and are content in the happiness of our fellow creatures here. Mr. Howell leaves us in good spirits and good health, and that he may long continue to enjoy them I am sure we all sincerely wish.

Sir Harry Parkes then rose to propose a toast which he said would be enthusiastically received by all, as the subject of it had greatly contributed to the enjoyment of a pleasant evening, and in a few complimentary terms gave them the Chairman.

In replying the Chairman said:—

Gentleman,—If I were accustomed to public speaking, and if I could appropriate to myself the compliments paid by my distinguished friend, I could reply to this toast. Since I arrived in this community I have felt that I am living amongst a class of men who desire to labour in their ways for the good of the community. There are men who do not give me the credit of being sincere in my work for the community. My work is laborious; I have to keep at it from morning till night, as have others here. Oppressed with the desire to join the dear ones at home we struggle on, and, I myself can sincerely say, that if at the conclusion of my labours here I could look forward to a recognition of them like the present occasion, by which we endeavour to acknowledge the great merit of Mr. Howell's work among us—if I could look forward to such an honour, which I dare not do, I should indeed feel that my labours had been appreciated, and consider that my time and efforts had not been wasted. Gentlemen, accept my thanks for the toast just given.

The Chairman then briefly proposed the health of Mr. Howell's successor in the editorial chair of the *Mail*, to which Mr. Pearson, in returning his thanks, said:—

Until within the past few days I have always regarded the making of a speech before such an assemblage as the present, as the most trying task I could ever be called upon to fulfil. I have discovered that there is one still more difficult, and it is the writing of one's first leading article. Adequately to perform them both requires the pen of an Addison and the eloquence of a Demosthenes. Judge then of my feelings when I find myself called upon to perform both these arduous labours in the same week, and pardon me if I cannot find fitting words to express my grateful sense of your kindness. But while I accept, with gratitude, the high compliment you have paid to me as plain George Cullen Pearson, as the future editor of the *Mail* I wish to preserve a strict impersonality. I wish to surround myself as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it were with mystery, believing that my future Sybilline utterances will have far more effect when delivered from behind the veil. Regard me, if you can, as a kind of electric battery, which collecting from all sides the flashes and sparks of genius, concentrates them upon you in one powerful weekly discharge. I have often heard young curates speak of the agony they have endured in the production of their first sermon; but what is that, compared to what a young editor suffers in the composition of his first article? The curate is largely aided by an attractive personal appearance, a natural grace of manner, and saint like expression (I am putting myself, Gentlemen, in the curate's place) which are sure to enlist the sympathies of his congregation before he even utters a word, while with such aids, his weakest expressions are certain to be rewarded by admiring glances from bright eyes, and slippers, showered on him from delicate female hands. Moreover, his profession requires him to abjure the devil and all his works. The case of the editor is far different. He has none of the curate's aids to popularity,. He cannot ignore the printer's devil or any of his works; on the contrary he is compelled to be on the best of terms with the imp, and to approve most of his actions.—Instead of being rewarded by admiring glances, his most powerful efforts are quite likely to cause his dearest friends to cut him dead, while there is always the secret, lurking fear in his breast, that the place of slippers may be supplied by boots, not administered by tender female hands. But though I speak thus jestingly, believe me, Gentlemen, I do not view my task in any such light. I cannot express my full sense of the responsibilities connected with the position I have undertaken to fulfil. General Van Buren has truly said that to fittingly fill such a post requires exceptional talents; a great natural ability, a grace of thought and expression, and a well formed habit of writing. I possess none of these qualifications. I must endeavour to supply their place by earnest labour and unswerving fidelity. Convictions come only with experience, therefore I have no convictions; but though convictions be wanting, one endeavour, at least, I can always make, the endeavour to be simply true.

One or two more toasts followed, and the proceedings were pleasantly diversified with songs, and about midnight the party broke up after having passed a most enjoyable evening.

ON THE USE OF "PILLOW-WORDS" AND "PLAYS UPON WORDS" IN JAPANESE POETRY.

By Basil Hall Chamberlain, Esq.

Read before the Asiatic Society of Japan on the 24th January, 1877.

The subject which I beg leave to introduce this evening to the notice of the Society is one which, notwithstanding its connection with the most delightful of all arts, cannot, I fear, but incur the charge of dulness. Dull and dry, however, as the technicalities of Japanese versification may be, I hope to show at the close of this paper that they are yet deserving of your attention, and that what might at first sight appear to have no possible interest save for the critical student of a bygone literature, may, after all, prove of practical value, even at the present day, to a large and influential portion of the foreign community.

Japanese Poetry, though scarcely, as yet, well explored, cannot exactly be called an unknown region; and it may, perhaps, be permitted me to take for granted that most of the members of this Society are, at least, so far acquainted with it as to know that (except in the case of a very few and very unsuccessful imitations of Chinese models) the prosody of this country knows nothing either of rhyme, assonance, alliteration, accentual stress, quantity, or parallelism. Of what it has *not* got,—or, to speak more correctly, of the reason *why* it has not got any of these peculiarities, some one or other of which, at least, has seemed necessary to all the other nations of which we have any knowledge for the proper distinguishing of poetry from prose, it does not fall within the scope of this paper to speak,—the peculiarities which it *has*, in contradistinction to the prosodies of other countries, forming a more fruitful subject of enquiry. We find, then, besides the well-known cadence formed by alternate lines of five and seven syllables,—that the chief characteristic of the classical poetry of Japan is the use of the so-called *Makura-Kotoba*, or "Pillow-Words," and of "Plays upon Words,—the "Pillow-Words" being more abundant in the earlier, and the "Plays upon Words" in the later portion of the classic age. (By the earlier period, I mean the centuries preceding the compilation of the *Manyōshu* in or about A.D. 753.) It will be convenient to take these two branches of the subject in the chronological order thus indicated, and to commence by the "Pillow-Words."

What, then, is a "Pillow-Word"? Its name indicates tolerably clearly its meaning: it is a word, itself destitute of life, on which the succeeding significative word, as it were, rests its head. The term *Makura-Kotoba*, i. e. "hat-word," which is preferred to that of "Pillow-Word" by the great scholar Mabuchi, sets forth the nature of this class of expressions in an equally intelligible manner. "But what," it may be objected, "can be the possible use "in a sentence of words which are, you say, destitute of "life, by which you mean, I suppose, destitute of mean-"ing?" To find a direct answer to this question would be rather embarrassing; but, perhaps, an illustration drawn from our own English usage may help to elucidate the matter. When we speak of "the gallant Captain," "the learned Professor," "His Holiness the Pope," "His Majesty the King," do we really mean to say that, after due deliberation, we consider those persons to be, respectively, gallant, learned, Holy and Majestic? Or, again, are all "honourable members" of Parliament or Congress men filled with high notions of honour and deserving to be honoured by us? What, then, do such expressions mean? The simplest reply is that they mean nothing at all,—that we use them for no other reason than that other people have used them before us, and that it has become the custom to use them. But they *ought* to mean something, and not only so, but they *did once* mean something. In olden times, none but the gallant and courageous were chosen as the leader of hosts; none but those reputed to be filled with Christian grace and holiness were ever raised to the Papal throne. In our days, the *thing* has, to a certain extent, vanished, while the *word* (for words are mere long-lived than things) remains. This is the gist of the matter, the "pillow-words" which we are discussing being, as a rule, simply epithets that were formerly applied quite naturally and appropriately to various objects, places and actions, but which in most cases, by the process of phonetic decay, by being used in connection with expressions having but a very distant affinity to the expression they originally served to define, or by application to words whose only connection with the original word is that it commences with the same syllable as the latter, have suffered such changes either in their own substance or in the connection in which they are used, as to have become almost unrecognisable, and, practically, devoid of meaning. Take, for instance, the "pillow-word" *hisakata no*, written with the characters 久堅之 (enduring and hard), and constantly found in poetry before the word "sky." The characters seem appropriate enough to form an epithet to be applied to the heavens; but, as a matter of fact, they rest on a mistaken etymology. The word *hisakata* should be written *hisagata*, and is a contraction of *hisago no katachi* (the shape of a gourd), —an expression which, though scarcely graceful according to European ideas, is yet very graphically descriptive of the apparent form of the firmament. Soon, however, the original meaning was so completely forgotten, that, down to the present day, *hisakata no* is used as a pillow-word," not only for the heavens, but for a whole number of things connected with the heavens,—even for the light, a phenomenon which has certainly no connection with a gourd, and for the Imperial residence, which may, indeed have been heavenly in its splendour, but is hardly likely to have been built after the pattern of a pumpkin. This system of what might be called "ex officio epithets" has received enormous extension; and herein, and in its application as a poetical ornament, lies the peculiarity. Some of the "pillow-words" are used before one other word only, others before whole classes, as in the case of *hisakata no* given above. Some are of rare occurence; but the Japanese scholar or versifier remembers all those in common use just as we remember our irregular verbs or the vagaries of our English orthography,—viz. simply by remembering them. Even in prose, "pillow-words" may occasionally be met with; but it is only in an extremely ornate style of prose, such as is, for instance, to be found in prefaces to collections of poems.

To pass on to particulars, it may be stated that the words of which we are treating always occur in the five-syllable, never in the seven-syllable lines of a poem. Those which themselves extend to the length of five-syllables in the immense majority of cases take no postposition, as, for

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

instance, the word *kusamakura* applied to journeys, or *chihayaburu*, now applied to all divinities indiscriminately, but properly belonging only to bad gods, or to bad and powerful men. Some few of four-syllables likewise take no position, as *soramitsu* the "pillow-word" for the province of Yamato; while a very small number indeed may be found followed by one of the postpositions *ya*, *ni* and *wo*. *Amatobu ya*, *wagimoko ni*, *fusamaji wo* may serve as examples. But by far the greatest number of four-syllable "pillow-words" take the postposition *no* (of). *Hisakata no* explained above, and dozens of others will at once recur to the student's memory. "Pillow-words" of less than four syllables are extremely rare.

So much for the outward form. In regard to the derivation and inward meaning, the "pillow-words" would seem to have been considered by Mabuchi as falling into five separate classes. But a European will find the following four-fold division more convenient:

I. Descriptive words or phrases of the nature of an adjective or of a simile, that have suffered no phonetic changes and are still employed in their original connection. The "pillow" for the verb "to yearn" may serve as an instance. It is *nakukonasu*, and means: "in the manner of a weeping infant," which is a pretty phrase to describe yearning. A slightly more difficult example is offered by *sakigusa no*, the "pillow" for *mitsu* (three) and *naka* (middle), where the origin of the connection lies in the fact that the *sakigusa* plant is a lily, whose stem always divides at the top into *three* flower-bearing stalks, and when three things are in a row, one of them must of course be in the *middle*. Other sub-divisions of this class are formed by "pillow-words" founded on the *lucus a non lucendo* principle, or furnishing examples of substantives which are, by an inverted process, employed to qualify adjectives.

II. Words or phrases originally similar to those comprised in the first class, but now differing from them, inasmuch as letter-changes or application to words other than those they originally served to define have obscured their meaning. The already quoted word *hisakata no* belongs to this category; and another instance is furnished by *shikitahé no*, where the change is, not in the term itself, but in its application. Signifying "made of finely woven stuff," it was at first naturally used as an epithet for clothes, and especially for sleeping apparel. Later on, however, the true meaning was so completely neglected, that the phrase was applied first to the bed in which the sleeping apparel is worn, and next to the house in which the bed is situated, and even to the Japanese pillow, which is, as any of us who have travelled in the country may know to our cost, made of anything rather than soft stuff.

III. Words or phrases alluding to some historical or mythological occurrence. For instance, *hayabito no*, which serves as a "pillow" to the province of Satsuma, is explained by the best authorities (though some commentators, it is true, contend for another interpretation, but also an historical one) as owing its origin to the fact that, in the earliest ages of Japanese history, the *haya-bito*, *i.e.* the soldiers who kept guard around the Mikado's palace, were always Satsuma men. *Soramitsu*, one of the "pillows" for the province of Yamato, has a mythological origin, while *tachibana no*, used before the surname Moribé, reminds us of the introduction of the orange into this country in the reign of Suijin Tenno. Under this heading may be classed a few ancient names of places, which have sunk down into the condition of mere "pillow-words" one for another.

IV.—Punning words or phrases. The ambiguous position of this class, placed, as it is, between the "pillow-words" on the one hand and the more regular plays upon words (to be presently discussed) on the other, has given rise to many differences of opinion among those best qualified to pronounce on such a matter; and numbers of expressions that are admitted into the category of "pillow-words" by one authority are rejected by another. Without entering into this discussion which is essentially a barren one, it may be sufficient (always following Mabuchi, as a mere foreigner may be well content to do) to quote, as an example of the punning "pillow-words," *koromodé'no*, which means *sleeve* and is used before the name of the province of Hitachi, because the first two syllables of the latter (*hida*) signify *folds*,—the sleeves worn in ancient times being narrow and so long that they had to be folded or turned up when a man wanted to do any work. *Momotaradzu* (literally, *less than* 100) is similarly used as a "pillow" for phrases or names of places beginning with the syllables *yaso* (an old word for 80) or *i*, considered as an abbreviation of *iso* (an old word for 50). The first, second and fourth classes comprise the great majority of the words which we have been considering; but it may be remarked that not a few of them belong to two classes at once. Thus *kankazé no* owes its connection with the name of the province of Isé, in the first place to a piece of mythology and in the second to a play upon words. A consideration of all the peculiarities of the "pillow-words" would, however, require a long treatise, and it may be as well here to leave this portion of the subject, merely pausing to state that on it, as on so many other branches of the native erudition, the celebrated Mabuchi is recognised as the greatest authority. His "Considerations on the Hat-Words,"—a work in ten volumes,—appeared in the year 1757; and a continuation of the same, in seven volumes, was published in 1801 by his follower, Ukéda Akinari. The total number of "pillow-words" explained by these two authors is 667. Other minor works have long been in current use; and some of them, which are mere alphabetic lists of significative expressions each accompanied by its proper "pillow-word," may be said to fill in this country the place occupied in Europe and in China by rhyming dictionaries.

I now pass on to the consideration of plays upon words, which have been noted as the second peculiarity characteristic of Japanese versification. The native literati are silent on the subject, probably because it has appeared to them so simple as to call for no special comment; and here, too, it may be disposed of in half the space devoted to the elucidation of the more obscure category of the "pillow-words." There are three classes of plays upon words:

I.—What is called by the Japanese a "preface" or "preparation," and what we might perhaps term a "punning introduction." The 18th ode of the well-known *Hiyaku nin-Is-shu* collection affords a good example. It runs thus:

Sumi no yé no
Kishi ni *yoru* nami
Yoru sahé ya
Yumé no kayohi-ji
Hito-mé yokuran.

In rendering this ode into English, we must translate the last three lines only, whose sense is: "Even at night, on the thoroughfare of my dreams, I will avoid the eyes of men." The first two lines, literally rendered, would run thus: "The waves breaking on the shores of the Bay of Sumi." But their sole use is, by means of the verb *yoru*, which here signifies "the breaking of the waves," to make a punning introduction for the word *yoru*, which means "the night-time": so far as the real subject of the little poem is concerned they are entirely meaningless. The student of the Manyōshu will perhaps here call to mind a very remarkable instance of the use of "punning introductions" which occurs in the 13th volume of that collection in a poem commencing *Komoriku no Hatsusé no Kaba* where no less than the first ten lines have no connection whatever with the elegy that follows, and serve simply and solely as a "punning introduction."

II. Plays upon words similar to the ordinary European pun. Into this class, if we follow Mabuchi, will fall many expressions commonly regarded as "pillow words." The following is an example:

Matsu ga né no.
Matsu koto to homi, &c., &c.

which may be nearly literally rendered into English, pun and all, by the line:

Like to the *pine*-trees, I must stand and *pine*.

III. A more complicated species of pun, occurring when a word with two-meanings is used only once as a sort of pivot on which two wheels turn. In this case, the first part of the political phrase has no logical end, and the latter part has no logical beginning. Of the three kinds of plays upon words, this is certainly the most character-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

istic; and none has been in greater favour from the ninth century down to present day, when, amidst the rapid decay of almost everything else of native origin, the peculiar poetry of Japan, which had already emerged in all its pristine vigour from the inundation of the Chinese learning, bid fair to weather the more destructive storms of the oncoming civilisation of the West. The following stanza from the *Kokihshu* will give an example of what might be termed "pivot-puns."

Shikitahé no
Makura no shita ni
Umi ha arédo
Hito wo *mirumé* ha
Shidzu zo arikéru.

Paraphrased into English (and thereby unavoidably made to sound grotesque in the extreme), the stanza would run thus:

On the salt ocean of my tears for thee
My pillow floats: could I my darling {see / sea-
Weed never groweth in this billowy sea.

The poetess means to tell us that she is is debarred from communication with her lover.

Were this paper addressed to any other persons than the Members of the Asiatic Society of Japan, most of whom probably possess some knowledge of the literature of this country, it would perhaps, *à propos* of the above lines, which cannot but excite derision when rendered into so utterly alien a tongue as English, be well to remind them that our canons of taste are not necessarily canons of universal application, and, in particular, that there is nothing in the nature of things constraining us to associate plays upon words with the ridiculous. Each literature must be a law in itself, and I should be surprised if any of those who have devoted themselves to the study of the productions of the Japanese Muse, were not to give their unqualified assent to the opinion that the plays upon words, of which all the later poetry is full, add infinitely to its grace, its vigour and its terseness. The lyrical portions of the *Nô*, or classical opera, are particularly rich in this species of adornment,—the sentence, which passes before one like a series of dissolving views, being often broken up in so complicated a manner as to defy any attempt at a logical interpretation. But, after all, delight, not instruction, is the end and aim of all true poetry, and the poet has amply fulfilled his mission if he leaves our minds dazzled with the resources of his art, or our ears ringing with the most harmonious cadences.

If I may detain the Society a few moments longer, I would suggest that any person possessing a sufficient acquaintance with any of the kindred Altaic tongues might open out a curious field of enquiry by collecting together information on the question of the existence in their poetical literatures of like peculiarities. The labours of Rémusat and others have demonstrated the similarity, almost amounting to identity of grammatical structure pervading all the languages of Tartar origin, and it is but natural to suppose that nations speaking similar languages will use those languages in a similar way. In the mean time, some may, perhaps, be tempted to think that the continued use of hundreds of words after they have partially or completely ceased to possess any meaning is specially characteristic of the Japanese cast of mind, conspicuous as it has ever been for its love of precedent and imitation. Into such speculations it would, however, on the present occasion, be beside the purpose to enter; and I would only, in fulfilment of the promise with which this paper commenced,—the setting forth, namely, of immediate practical utility to follow from the considerations with which it has been occupied,—make one more observation, addressing it more especially to those whose profession it is to popularise in this country the sacred books of the West. A careful study of the ancient poetry of Japan, and therefore, of course, of the prosody which determines its outward form, must precede any successful attempt at a translation into Japanese of the most splendid of all poetical literatures,—the Hebrew Psalms. At least, I am assured by some of those natives best qualified to form an opinion on such a subject, that a metrical version in the manner of the longer odes of the *Manyōshu* would alone be satisfactory to Japanese ears. Of the difficulties attending such a translation, and of the necessity which would often occur of sacrificing the letter to the spirit, there can be no doubt. At the same time, patient and persevering study should render the desired end not impossible of attainment.

A JAPANESE SONG.

A plum tree is my fickle love,
And I a weeping willow;
Her blossoms shine like stars above
My night-encircled pillow.

I court, and flatter, and beseech,
And bend in worship lowly;
But ah! beyond my eager reach
Still spread the branches holy.

So bear, sweet Summer, to the South
Your bright and balmy weather!
Rough Autumn comes with kindly mouth,
And blows our leaves together!

KAJIN.

Law Reports.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, January 24th, 1877.

J. RODERICK *v.* R. A. FRANCIS.

This was a claim for $30, on account of board and lodging.

Defendant when served with the summons in this case on the 17th instant, refused to accept the document. Another summons was issued, returnable yesterday morning.

Defendant appeared personally, but said that he was not a British subject. His father was a Brazilian, though he himself had been born in Singapore. He was not registered in any Consulate in Yokohama. He had been living for six years, in Saigon, Hongkong, Shanghai and this place. He lived in Shanghai for four years and was never registered in any Consulate. As there was no Brazilian Consul here he would prefer to register in the Portugese Consulate. Sooner them become amenable to British jurisdiction he would submit to Japanese law. He could not account for the fact that, though a Brazilian and resident in Singapore for ten years, his father should have had an English name. His father died when he was six years old. He had never done anything to renounce allegiance to Great Britain.

The Court, considering that defendant had been born in a British colony and had never renounced allegiance as a natural born subject, resolved to treat him as a British subject; and so informed him.

Defendant then said he had a counter claim against plaintiff for $37, but admitted his claim of $35. Plaintiff disputed the counter claim.

Defendant was now sworn, and stated that he had kept plaintiff's books for him during July last and claimed $25 for that. He had received $5 only. Plaintiff had a lot of things belonging to him still in his possession. Their value was $17.50. There was a verbal agreement between them about the book-keeping. Plaintiff promised him $25.

To plaintiff:—There was no agreement about giving me $4 per month. I kept the books one month only.

Plaintiff, sworn:—I agreed to give defendant $4 per month for keeping my books. He borrowed money from me but did not refund the whole amount.

Verdict for plaintiff for $30.50 and $3 costs. This amount to be paid as follows: $9.50 on the 1st February; $8 on the 1st March; and $8 on the 1st of the two following months, to be paid into the Registry.

WING SANG WO *v.* W. BLACK.

Plaintiff claimed $29.20 for goods sold and delivered.

Plaintiff appeared, but defendant did not.

Consular Constable Hodges stated how he served the summons in this case on the 22nd instant. Defendant then told him that his affairs were in liquidation and that he would soon be able to settle with plaintiff. Witness met defendant in the street a few days ago, when he asked him if the Chinaman would accept $10 and not appear in Court.

Plaintiff said he lived at No. 51, Main Street, and had dealings with defendant, who owed him $29 20.

Plaintiff showed the account and pass book, which was in defendant's writing.

The Court ordered defendant to pay into the Registry the sum claimed, with $3 costs, within 10 days.

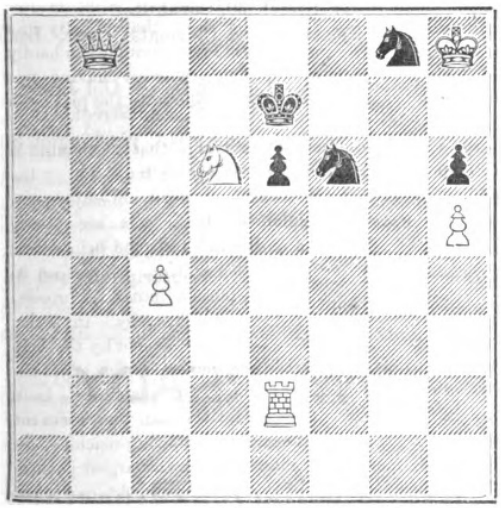
THE RECTOR OF LINCOLN COLLEGE ON BEAUTY AND TASTE.

(The Spectator.)

The Rev. Mark Pattison's clever diatribe at Oxford yesterday week against the modern carpets, coal-boxes, and cut-glass, shows that he understands how to take down the conceit of the middle-classes in more directions than one. The other day at Liverpool he undertook to show us how very little the middle-classes value the possession of knowledge simply for its own sake; now he has supplemented his humiliating lesson by illustrating his belief that the same classes are degenerating in taste. In both lectures he has, we fancy, erred a little on the pessimist side. It is easy, indeed, to show from the latter lecture itself that this is the side to which he inclines, for while he was lamenting the disappearance of the old Smyrna carpets, "whose graceful patterns and deftly-associated tints left nothing to be desired," he declared that these patterns and tints were themselves "education to the eye." But when he came to discourse of graceful patterns and tints which, instead of being lost to us, have been gained within the last thirty years,—the patterns and tints of the crockery designed for the use both of the table and the bedroom,—of which he admitted that it was quite undeniable that they had been vastly improved in the same period, instead of congratulating himself and his audience that these, too, were in their way "education for the eye" he proceeded to argue very elaborately that they were nothing of the kind. He was compelled, he said, entirely to dissent from the doctrine. It "seemed to him psychologically erroneous." "The presence of beauty alone," he declared, "does not educate the eye to see it." Either, then, his first admission was made inadvertently because it was a tribute to the last generation at the expense of the present, or the second carefully elaborated doctrine was a mistake. Whichever alternative we take to be the true one, Mr. Pattison here clearly indicates that slightly pessimist bias of which, as he confesses, he is likely to be accused. If he carelessly allowed himself to declare that the beautiful objects we have discarded were "education to the eye" of those who made use of them, though he emphatically denies the same doctrine in relation to the beautiful objects which we have recently introduced, it is clear that his bias is to estimate as losses, when deducted from the one side of the account, what he declines to estimate as gains when they are added to the other. If he is not really going to insist on his asserted psychological principle, his prejudice is still deeper; in that case, he must have been too eager to accept a hasty assumption only because it told against the taste of the present generation. However, we believe the truth to lie between the view which Mr. Pattison took when he was lamenting over what we had lost in the past, and the view which he took when he was endeavouring to take down our conceit in the present. It is surely true that to some extent the constant presence of grand or beautiful forms and colours is "education," not merely to "the eye," but to the mind, which often sees, and is capable of seeing, even a greater grandeur and beauty behind these forms and colours. It is surely also true, not, indeed, that "the presence of beauty alone does not educate the eye to see it," but at least that it *need* not do so. Often it does not, while oftener probably it does. In the great majority of cases, we do not doubt that the presence of beauty does exercise a very active educating influence on those who live amongst its sights and sounds, while it is absolutely certain that it need not do so, and hardly can do so without other favourable conditions. Still in the majority of cases which arise amongst civilised nations, these other favourable conditions are present. Mr. Pattison himself would not deny for a moment that an atmosphere of refinement refines, that an atmosphere of freedom enfranchises, that an atmosphere of excellence ennobles, that an atmosphere of industry makes industrious, that an atmosphere of taste elevates. But he would distinguish, and point out the great difference between an atmosphere of active sympathies which draw the more passive minds with them, and magnetise them into a certain amount of similarity, and the mere presence of external objects more or less congenial to these sympathies. And we entirely admit the distinction. Fine taste, even with the presence of very little to gratify it, can do more to educate taste, than the presence of a world of beauty without the human insight to make use of it. In a grimy city, where all the vegetation is killed, and where there is nothing but light and shadow, dawn and sunset, and starlight, to fill the mind with noble objects, a man's deep love of sublimity and beauty will do more to generate it in the obtuse natures around him, than the presence of all the treasures of Italian art, and natural Italian loveliness, could do to generate it in a mind equally obtuse, which was shut out from communication with minds of higher taste. So far Mr. Pattison is certainly right. The more active element, which is ennobling in every way, is the living feeling which goes out to meet what is great or good, not the mere vision of the external object which satisfies that feeling.

But surely Mr. Pattison goes greatly astray when he assumes—probably from noble rage against the vulgar self-satisfaction of the day in its own progressiveness, a self-satisfaction which evidently lashes him to fury—that even the mere accustoming of the taste to hideous objects is not debasing, and the accustoming of it to noble objects not, so far as it goes, good. Those who live amidst squalor and deformity will take a vast deal more of elevating sympathy to make them feel revolted by squalor and deformity, than those who live amidst pure and harmonious scenes. Again, the taste which is educated by habitual *protest* against the ugliness of surrounding objects is not nearly so happily circumstanced for a natural and healthy growth in discriminating perception, as the taste which is fed habitually upon that which satisfies, or is capable even of raising it. You might as plausibly say that you could spread the love of science in a world where there were as yet no scientific discoveries from which to illustrate and exemplify the significance and beauty of science, and spread it, moreover, as rapidly as you could in a world like our own, full of illustrations of the variety and beauty of scientific achievements, as say that you could spread the love of beauty in a world of ugliness as rapidly as you could spread it in a world of natural grandeur and noble artistic achievements. It is at least quite certain that the purest love of beauty will suffer negatively from the absence of that beauty, and more than this, that positively it will easily be accustomed to acquiesce in what is bad, unless it be trained in the constant association with what is good. Is it a mere accident that the Dutch school of painting has developed few very high characteristics except those which are due to the study of great effects of light and shadow, while the Italian school has developed the highest idealism? Is it not certain that the presence of much higher natural beauty, both as regards the forms of the external world and the grace and freedom of the human body, has been one of the most favourable conditions for Italian art, while the absence of that beauty has been of the least favourable for Dutch art? Every student of art holds the greatness of Greek sculpture to be due to the opportunity which the Greeks had for studying the human form in all its easiest, freest gestures. Yet this is just such a merely external condition as Mr. Pattison, in the latter part of his address at Oxford, treats as comparatively insignificant and irrelevant, at least when compared with the love of beauty, which can alone use the models so obtained. It cannot reasonably be doubtde that the constant presence before the eye, of great and noble standards of beauty is in the highest degree educating to those who have the least natural faculty for this kind of discrimination; while even in those who have that faculty in a very high degree, the most enthusiastic love of beauty can hardly sow the germs of a true artistic feeling, without having free access to object of beauty from which to illustrate the principles of artistic choice.

Mr. Pattison says,—we think quite truly—that mechanism is in many very important respects the enemy of true art. "Imitation kills art." "The artist-spirit is a spirit of enjoyment, of rejoicing in the work of our hands." When you are merely imitating, striking off a mere copy of what has gone before, that spirit of rejoicing is not and cannot be present. There can be no "expansive joy of soul" over the purely imitative process. That is perfectly true, and shows, we think, why, in a day when machines can do so much which men, except by the help of carefully constructed machines, could never do, the artist-element in man suffers. Men become ministers to machines. Look at the difference between the mower and the man who works the mowing-machine. Both the scythe and the mowing-machine are machines, but the former is a machine in which the largest possible room is left for the free, and easy, and intelligent movement of the human arm and body; while in the latter, the man dwindles, and is little more than a needful accessory to the machine. Hence there is true and graceful art in the work of the mower, and there is hardly more than mechanical industry in the work of the attendant of the mowing-machine. Mr. Pattison would, we fancy, agree with us in this, and even eagerly maintain that we are right. But how does the fact which this illustrates apply to Mr. Pattison's argument? Why, as we think, in the very opposite direction to the use which he makes of the hostility between Machinery and Art. He holds that it



Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is the loss of the love for beauty which has deteriorated modern taste, so far as it has been deteriorated. We hold that while that love has, on the whole, gained ground, it is rather the relative diminution in the number of beautiful objects, of objects suitable for the artistic impulse, which has caused any deterioration which we may have suffered. The multiplication of machines, and the increasing number of men who, instead of directly producing, have necessarily become the mere ministrants and attendants of more powerful machines, has necessarily diminished the ease and variety and freedom of the actions which excite artistic study and impulse. The steam factory is far less beautiful than the water-mill, because man and nature are far less at their ease, far more constrained to act in the groove of mechanical necessity, in connection with the former, than they are in connection with the latter. For the same reason, the steamer is far less artistic than the sailing-ship, and even the railway than the coach. But all this goes to prove that deterioration, so far as there has been deterioration, is rather in the objective than in the subjective world. The conditions of life which are unfit subjects for art, on which man and nature act in constrained and mechanical lines are relatively far more numerous than they were. The conditions of life which are fit subjects for art, in which man and nature act freely and with a certain ease and pliancy, the conditions which can be reproduced with an "expansive joy of soul" are fewer than they were, and in more complex and less simple regions of experience. In other words, the opportunities for art—at least, for the simplest art—are fewer. But, on the other hand, we believe the love and appreciation of it are greater. We take just the opposite view from Mr. Pattison. We are inclined to ascribe such deterioration as there is, in the middle-class at least, to the influence of the outerworld on which the power of mechanism has made vast inroads. On the other hand the improvement is due, we believe, to the culture of the inward love of the beautiful. And this must be the region in which we must fight against the inroads of the mechanical on our free life. Surely literary art was never so truly valued as it is now. And that is a region in which the aggression of mechanism need not at present be feared. Yet if the appreciation of true literary art is greater than it ever was before, it can hardly be said that it is the degradation of taste which has lowered our artistic achievement. In the simplest region of art, no doubt, the higher objects of artistic appreciation have diminished relatively in number. But in all regions of art we vinture to hope that the love of beanty has been enhanced.

PROBLEM.

By J. H Finlinson.

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of problem of last week, by J. B., of Bridport.

1.—Kt. to K. B.'s 5.	1.—B. to K. R.'s 5.
2.—Kt. takes P.	2.—Anything.
3.—R. B. or Kt. mates.	
	1.—Kt. to K. Kt.'s 5.
2.—Kt. to K. Kt.'s 7.	2.—Anything.
3.—R. or Kt. mates.	
	1.—Kt. to Q.'s 8.
2.—Kt. to K. R.'s 6.	
3.—R. mates.	

Correct answers received from C. B. and Delta, Yokohama; W.B. M., and W.H.S., Tôkiô.

A *belle partie* played between Messrs. Schoumoff and Korbout at St. Petersburg; the former giving his Q Kt.

(Remore Black's Q Kt from the Board.—Evans's Gambit.).

Black (Mr. S.)	White (Mr. K.)	Black (Mr. S.)	White (Mr. K.)
1. P to K 4th	P to K 4th	14. Q takes Q Kt	P takes P
2. Kt to K B 3rd	Kt to Q B 3rd	15. Castles	P to Q B 7th
3. B to Q B 4th	B to Q B 4th	16. P to K 5th	P takes P
4. P to Q Kt 4th	B takes Kt P	17. Q to Q B 5th (ch)	K to K sq
5. P to Q B 3rd	B to K 2nd	18. B to Q R 3rd	B takes Kt
(This move, though less objectionable when the player making it receives large odds, is not a good one. It is far better to retire the Bishop to Q R 4th.)		(This was very hazardous; but it was difficult, if not impossible, for him to find an unexceptionable move.)	
6. P to Q 4th	P takes P	19. Q to K B 8th (ch)	K to Q 2nd
7. Q to Q Kt 3rd	Kt to Q R 4th	20. K R to Q sq (ch)	P takes R, becoming a Q (ch)
8. B takes P (ch)	K to B sq		
9. Q to Q 5th	P to Q B 3rd	21. R takes Q (ch)	K to B 2nd
10 Q to K B 5th	P to Q 3rd	22. Q to Q 6th (ch)	K to Kt 3rd
11. B to K 6 (dis.ch)	B to K B 3rd	23. B to Q B 5th (ch)	K to Kt 4th
12. Kt to K Kt 5th	K to K 2nd	(He might at least have retarded his defeat by playing the King to Q R 3rd at this crisis.)	
13. B takes B	Q takes B	24. R to Q Kt sq (ch)	K to R 3rd,
(If he had taken the Bishop with his Rook he would clearly have been mated in two moves.)			

and Black now gave mate in four moves. How, we leave as a little Enigma for our readers.

Shipping Intelligence.

ARRIVALS.

Jan 20, *City of Tokio*, American steamer, Maury, 5,057, from Hongkong, Mails and General, to P. M. S. S. Co.

Jan 20, *Tibre*, French steamer, Le Girard, 1,735, from Hongkong, Mails and General, to M., M. Co.

Jan. 22, *Nevada*, American steamer, Williams, 2,145, from Shanghai and ports, Mails and General, to M. B. Co.

Jan 22, *Sumida Maru*, Japanese steamer, Gorlach, 890, from Hakodate, Mails and General, to M. B. Co.

Jan. 24 *Bat ak*, Russian steamer, Zotoff, 352, from Kobe, General, to China and Japan Trading Company.

Jan. 24, *City of Peking* American steamer, Tanner, 5,079, from San Francisco, Mails and General, to P. M. S. S. Co.

Jan. 24, *Kanagawa Maru*, Japanese steamer, Drummond, 1,325, from Kobe, Mails and General, to M. B. Co.

Jan. 25, *Dragon*, British steamer, Grevatt, 472, from Hiogo, Coal, to P. M. S. S. Co.

Jan. 25, *Nagoya Maru*, Japanese steamer, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. Co.

DEPARTURES.

Jan. 23, *City of Tokio*, American steamer, Maury, 5,050, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Jan. 23, *Malacca*, British steamer, Edmond, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.

Jan. 25, *C. L. Pearson*, American barque, Swain, 664, for New York, Tea, despatched by Smith, Baker & Co.

Jan. 25, *City of Peking*, American steamer, Tanner, 5,097, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Jan. 25, *Genkai Maru* Japanese steamer, Hussey, 1,917, for Kobe, Mails and General, despatched by M. B. Co.

Jan. 26, *Sumida Maru*, Japanese steamer, Gorlach, 896, for Hakodate, Mails and General, despatched by M. B. Co.

Jan. 26, *Saikio Maru*, Japanese steamer, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per Steam-ship *City of Tokio* from Hongkong:—Mrs. W. J. Thompson, Mrs. E. C. Hine, Dr. M. E. Drennan, U.S.N., Mr. P. J. Majer.

Per Steam-ship *Tibre* from Hongkong:—Messrs. Takatake, Yamagoto, Kuokto, Dr. Ziegel, M. le Bruntel, and 11 French marines.

Per Steam-ship *Nevada* from Shanghai and ports:—For Yokohama: Mrs. Machibara and 2 children, Captain Postumus, Messrs. T. B. Glover, A B. Glover, Hamilton, Goodwin, Ohara, Popp, E. C. Kirby, Von Siebold, Van der Ossen, Wilson, and 9 Japanese, and 1 Chinese in the cabin; and 181 in the steerage. For America: Mrs. Taylor and 2 children, and 1 in the steerage.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—In general our market has been very dull, and with the exception of some transactions in *Yarns* we have little or no business to report. Clearances, also, continue on a very unsatisfactory scale. *Yarns*:—There has been a moderate demand for 16-24, and for these numbers prices keep firm; other qualities are neglected. *Shirtings* continue in an extremely depressed state, and even concessions in prices do not tempt buyers. For *T. Cloths* there is a small enquiry, but offers are too low to lead to business. *White Shirtings, Turkey Reds* and *Taffachelass* are dull and neglected, but for *Drills* there is some demand, and *Velvets* are moderately saleable.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.80
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2.35
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55 to 2.35
9 lbs.	38½ ,,	44 in.	,,	2.10 to 2.55
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25

White Shirtings:—				
60 to 64 reed	40 yds.	35 in.	per pce.	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	0.65 to 0.85
Black Velvets				7.50 to 8.75
English Drills	15 lbs.	40 yds,	30 in.	2.55 to 2.65
Taffachelass	12 yds,	43 in.		1.90 to 2.10

Yarns.—

No. 16 to 24	per picul	$29.00 to 32.50	
No. 28 to 32	per picul	$30.50 to 35.50	
No. 38 to 42	per picul	$36.00 to 40.00	
Reverse Twist 16-24	,,	$31.50	

Woollens.—Our market has been exceedingly quiet and there is no decisive change for the better to record. Lower rates continue to rule for *Black Orleans* and *Italian Cloth*, in which articles some small sales are reported. There is not much doing in *Mousseline de Laines*; printed goods seemed for a few days to attract the attention of buyers, but we have not heard of any sales worth mentioning having taken place, while plain goods remain as dull as before. Prices are entirely nominal.

Plain Orleans	40—42 yds.	32 in.		4.75 to 6.75
Figured Orleans	29—30 yds.	31 in.		4.25 to 5.25
Shimagoro	30 yds.	30 in.		4.00 to 5.25
Italian Cloth	—30 yds.	32 in.		0.24 to 0.33
Camlet Cords	29—30 yds.	32 in.		5.75 to 6.00
Camlets Asstd.	56—58 yds.	31 in.		16.50 to 17.50
Lastings, Japan	22—30 yds.	32 in.		12.00 to 13.00
Plain Mousseline de Laine	—30 yds.	30 in.		0.17 to 0.19

Figured Mousseline de Laine	30 yds.	30 in.		0.25 to 0.30
Multicolored ,,	30 yds.	30 in.		0.30 to 0.36
Cloth, all wool plain or fancy	48 in. to 52 in.			0.80 to 1.20
Presidents	54 in. to 56 in.			0.75 to 0.80
Pilots	54 in. to 56 in.			0.45 to 0.60
Union	54 in. to 56 in.			0.60 to 0.75
Blankets, scarlet & green	6 to 8 lbs.	per lb		0.42 to 0.48

Sugar.—Sales have been only on a small scale, and prices generally are unchanged. None of the new crop *Formosa* has yet reached this market.

Sugar:—Takao in bag	per picul	$3.85	
,, in basket	,,	$3.65	
Taiwanfoo in bag	,,	$3.70	
do. in basket	,,	$3.55	
China No. 1 Ping-fah	,,	$7.30	
,, No. 2 Ching-pak		$6.80 to $7.20	
,, No. 3 Ke-pak		$6.00 to $6.30	

China No. 4 Kook-fah	per picul	$5.30 to $5.60	
,, No. 5 Kong-fun	,,	$4.80 to $5.10	
,, No. 6 E-pak	,,	$4.00 to $4.30	
Swatow Brown	,,	$3.00	
Daitong	,,	$3.50	
Japan Rice	,,	$2.05 to $2.20	
Kerosene Oil		$4.60 nominal.	

Kerosene Oil.—The market is temporarily quiet at quotations, but holders are firm in their demand for higher prices.

EXPORTS.

Silk.—On Saturday last we wrote that a telegram had been received on the 19th instant which reported a rupture between Russia and Turkey as imminent. Since then the market has been kept in a state of suspense of which no fresh intelligence on that point has yet relieved it, and transactions, notwithstanding the existence of an ample stock, have been almost insignificant. Some Hamatski have been settled at prices which have not yet transpired, and most of the Hanks bought have been rejected after inspection. Prices for Filature Silks are well maintained, and for the other sorts we are unable to report any change in our previous quotations.

Tea.—Business for the closing week has been more restricted, and buyers are very cautious, as recent telegraphic messages from New York report a continuance of low prices ruling there. Supplies to this market have been small and of inferior quality; settlements for the week amount to 440 piculs, and stocks on the spot do not exceed 2,000 piculs. Prices close weak as under.

Common		$11.00 to 13.00	
Good Common		14.00 to 16.00	
Medium		17.00 to 18.00	
Good Medium		19.00 to 22.00	
Fine		$24 to 30	
Finest		Nominal.	
Choice		Nominal.	

EXCHANGE AND BULLION.

Exchange.—Business continues very quiet, with slightly easier rates.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 3d.
,, Bank Bills on demand	4s. 2d.
,, Private 6 months' sight	4s. 3⅛d.
On Paris—Bank Sight	5.20
,, Bank 6 months' sight	5.30

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

We are in a position to state with correctness some of the details of the financial operation for the final arrangement of which, Masuda and Shibusawa went to Shanghai in the last steamer:—the loan from Japan to China. The amount is much larger than has been stated, and the component parts of it are rice, seaweed and copper. The price at which the rice is to be taken is $4.60 per koku. No bullion will pass between the parties, but an amount of copper cash may, or may not, form part of the transaction. The rate of interest has been fixed at 8½ per cent. We shall be able to give other necessary details of the business in our next; meanwhile, we regret to learn that the carriage of the produce will not be in foreign hands, the Chinese having stipulated that this shall be done by their own vessels.

Judging from the account given in the *Hiogo News*, the visit of His Majesty the Mikado seems to have been made the occasion for general rejoicings and festivities. The illuminations were brilliant, the weather all that could be desired, and nothing appears to have occurred to mar the preparations made by the loyal people of Kobe for the fitting reception of the Emperor. We are gratified to find that the efforts made by the foreign residents were very graciously recognised, a letter having been addressed by the *Gon-Rei* of Hiogo *ken* to the President of the Hiogo Muncipal Council, communicating the expression of His Majesty's gratification at the illumination held in his honour. We also observe that His Majesty was graciously pleased to accept the dedication and a copy of the music of the Japanese National Air composed by M. Cretella, Band master of the *Atalante*. *Embarras des richesses!* If we mistake not, this is the third National Air of which Japan has become the proud possessor in the last four years. "What the plague! three morning guns!" Our Dramatic Amateurs can finish the quotation.

Press of other matter prevents us from giving this week more than two translations from the native papers. In speaking of Saigo and his "designs" the writer seems to feel the very uneasiness that he wishes to allay in the minds of his readers. After all "the designs of Saigo" may be only "a painted devil" but in view of the extremely disturbing rumours that have been so rife of late, it cannot be wondered at that men should feel serious uneasiness.

Our second translation is on the Institution of a Representative Assembly. The writer urges the people so to educate themselves, by forming *ken* Assemblies, as to render themselves fitted for a National Assembly. The moderation of the writer is most praiseworthy, and he deprecates the folly of building a national edifice, without having first firmly laid its foundations. Let him 'possess his soul in patience' the people are beginning to recognise that the powers and prerogatives of the crown are vested therein as a trust for their benefit. We have sufficient confidence in the good will and uprightness of the Government to think that it will listen to the requests of its subjects when put forward thus calmly and respectfully. Let the people prepare themselves for a national assembly, and let the statesmen show themselves the friends of the people, and endeavour by all means in their power to accelerate the advent of the period for its establishment.

In the present number, we commence the publication of a long and extremely valuable paper on the Mineral Wealth of Japan by Mr. Henry S. Munroe, which has been prepared and read by that gentleman before the American Institute of Mining Engineers. Mr. Munroe for some years held a position in the Kaitakushi Department and was afterwards transferred to the Kaisei Gakko. Possessed of more than ordinary ability, and a most earnest student, he has already made for himself in America a reputation rarely achieved by so young a man. The paper that we publish has attracted great attention to the writer, who, we are glad to hear, is about to return to Japan in the service of the Government.

The *Hiogo News* has an extremely well considered article on the subject of the visit of the Emperor to the south, in the course of which it takes occasion to remark the probable effect of the "policy of opposition on the part of the Government to the claims of the Shizoku class, and to deplore that by its action, it has alienated the sympathies of a class, who should and could have been made its staunchest supporters." The views to which it gives utterance are entirely those that we hold. We sympathize deeply with the Government in its earnest endeavours to work for the advancement of all classes of its subjects, and appreciate the maze of troubles in which it has been and still continues to be involved, but many of these troubles are of its own making. The farmers are relieved to some extent of the heavy burden of their taxation, but the ranks of the *Shizoku* are swelled by a large number of discharged and therefore discontented officials. It is cutting a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

piece of the top to put on to the bottom to lengthen the skirt. We believe that the fear expressed that the smouldering disaffection may "end in another outbreak of sufficient importance to be dignified by the name of a civil war," is only too well grounded. Is it too late for conciliation? If so, a long and hard fight must be faced; will it be a bloodless one?

A startling incident finds place in the columns of the *Nichi Nichi Shimbun*. It seems that when the *City of Peking* was about mid-ocean on her last trip from San Francisco, a schooner, partly dismasted, was discovered. The course of the *City of Peking* was altered so as to approach the schooner, whereupon the Japanese flag was hoisted by those on board the latter. A boat was lowered from the steamer and boarded the distressed vessel, and after some delay returned to the *City of Peking* with four of the Japanese crew of the schooner, and after all had been received on board and the boat hoisted up, the steamer resumed her proper course and was speedily out of sight of the smaller craft. On board the *City of Peking* were seventeen Japanese returning with exhibits from the Philadelphia Exhibition, who at once proffered assistance to the rescued crew of the schooner, who were in a wretchedly wasted condition, and cried with joy on recognizing their countrymen, by whom enquires were made as to the particulars of the difficulty the schooner had got into. The narration of the events was sufficiently distressiug. It appears that the schooner was called the *Hisayoshi Maru*, constructed after the foreign style, for trading between Kobe and Hokodate. On the 1st of December last she left Hakodate with a cargo of rice, soy, *saké* and salt, destined for Hori-idzumi, a small port about 90 *ri* from Hakodate, but meeting with heavy weather the vessel was blown out of her course. After buffetting about for six days the rudder and one of the masts were carried away, when, of course, the vessel was driven about helplessly by the wind, none of the crew knowing whereabouts they were, when the *City of Peking* fortunately sighted them. The four rescued men, after so far relating their misfortunes, then began to bewail the unfortunate fate of the captain, mate and super-cargo of the castaway vessel, and on enquiry they confessed that those three men, not daring to show their faces to the owner of the schooner unless they could save the cargo, had appealed to the foreigner who was in charge of the boat which put off to their assistance to tow their vessel back to Yokohama. Apart from the impracticability of such a proceeding, no one in the boat understood Japanese, so that their appeal obtained no answer beyond orders, conveyed by signs, to leave the schooner and enter the boat. This, however, they resolutely refused to do, and so were reluctantly left behind to drift about at the mercy of the winds and waves until relieved from the horrors of their situation by death. The editor of the *Nichi Nichi* admires the honourable feeling which prompted these men to be careful of the charge entrusted to them, but rightly enough deplores the foolish obstinacy which induced them to remain on board and deliberately sacrifice valuable lives which might otherwise have been saved.

On the 20th of last month we published an extract from the *Hôchi Shimbun* to the effect that it was believed that the administration of the Press-laws would, for the future, be characterized by less severity than had hitherto been the case, and that offences against those laws would be punished by fine only, and no longer by imprisonment. Either there was no foundation whatever for the statement, or the time has not yet arrived for the purposed cessation of the continued persecution of public writers, as we now learn that the editor of the Yokohama *Mainichi Shimbun*, Mr. Koyedzuka, was summoned before the authorities on the 2nd instant, and sentenced to one month's imprisonment and a fine of 10 *yen*, for publishing a communication from a correspondent touching on the sentence passed on Mr. Tsukahara, a former editor of the same paper, who is at present undergoing imprisonment for an offence against the same laws. There seems to be nothing outrageous in the incriminated writing, but the publication of it has, nevertheless, been construed into a breach of Articles XII and XIV of the Press-laws, with the result as stated above.

We have received from the *Echo du Japon* a most useful table, showing the fluctuations in the price of silk during the past year.

Private telegrams have been received up to the 1st instant which make no mention of alarming complications of the Eastern question, so that it is to be hoped that there is no fear of war being imminent.

THE FOREIGN PRESS.

The *Tokio Times* having been before hand with us all, in the publication of the Financial Minister's Statement and Estimates for the year 1876-77, the *Herald* reproduced it on Monday night, with an article explanatory and critical. Giving credit to the Minister for some improvements in the form of his budget, and notably for the introduction, for the first time, of comparative tables, showing increase or decrease of expenditure in departments, this year as compared with the previous one,—the *Herald* appears to withold its entire credence from his statements, particularizing that of the amount of paper money in existing circulation. The *Gazette* of Jan. 30th has nothing but praise for the plans of the Financial Ministers, and admiration of his estimates. The *Tokio Times* of to-day follows, and goes even further than the *Gazette*, in its admiration of the Finance Minister's ability, for it makes the remarkable statement that—"the diminutions of income are, apart from the land-tax, chiefly in the matters of salaries, pensions, products, etc., which may, in other years, be turned to sources of profit." How the payment of 'salaries or pensions' can ever come to be 'sources of profit' to the Government which has to pay them, we confess ourselves totally at a loss to understand—perhaps the *Tokio Times* meant 'subsidies.' Neither of our neighbours takes notice of the important fact, that there has been no official publication of the estimates yet. We have reproduced it from the *Nichi Nichi Shimbun*, but the editor states that he has not been officially authorized to publish it. In the version given by the *Tokio Times*, occur a number of errors, which have been corrected in that which we give to our own readers; the figures being reviewed in another column by ourselves, renders unnecessary the task of further analysis here of our contemporaies' remarks.

The *Gazette's* leading column on Monday was occupied with an unfavourable criticism of our own introductory article of last week; but, as it admits that the key-notes we sound are not 'uncertain,' and writes as follows of our policy on one of the two important subjects considered, we have no reason to complain of its strictures:—

"When the Government has adopted, with natural and necessary modifications, that code which is the result of centuries of practice of the enlightened jurisprudence of many countries, and the judges in training are found equal to administer it impartially and in the spirit of its laws, then there can be no objection to the granting, on the part of those nations which express pleasure at Japan's progress, and delight in the prospect of admitting her to their comity, the reasonable request she will have to ask."

This appears to us to fix a period for the relief of Japan from the fetter of the extra-territoriality clause as nearly as possible coincident with that named by ourselves—the next generation. The *Tokiô Times* of this morning expresses, even more strongly, its disapprobation of our policy. This is the more regrettable, because we fear that our commercial and economic views are likely to prove, when enunciated, equally distasteful to our esteemed contemporary.

L'Echo du Japon published on Monday its usual full and carefully written summary of news for the French mail. In speaking of the recent dismissal from every department of large numbers of the Government Officials (our contemporary says two thirds, but we think the proportion can scarcely be so large) an act of economy rendered necessary by the large deficit in the Revenue that must arise from the recent action of the Government in reducing the land tax, it truly calls it "un remède héroique." As it further remarks, it remains to be seen whether the Government in solving one difficulty may not be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

involving itself in others. One cannot but fear that the dismissed officials may carry with them into their different provinces seeds of disaffection, which, sown in fruitful soil, may bring forth a crop of the ill weeds of disloyalty, when the Government conceive they have a right to be rewarded by a plentiful harvest of good for a praiseworthy action.

The *Herald* had a very good article on Tuesday, on the position and treatment of foreign *employés* in the native service. The writer justly attributes to a feeling of insecurity in their berths, the fact that every attempt to get up a Club, or even a reading room, has always been a failure—though we are of opinion that even a more potent reason for this, is the scattered character of the foreign residences. With the conclusion of the article we fully agree:—that foreigners have no right to complain of being dismissed at the expiry, or even (with adequate compensation) before the expiry of their terms of agreement; inasmuch as the only object of the Government in engaging them, in most cases, is that they should act as 'teachers.' They may consider, and often rightfully, that their pupils are not competent to take their places, when they receive their dismissals from Government, but this fact, with its consequences, concerns the Government and its Japanese subjects alone, and foreigners have nothing to grumble at, if the bargain made with them has been fairly carried out. That those foreigners who have been dismissed from their posts before the expiry of their agreements have been very liberally treated, is undeniable: for the rest, such inconveniences and disappointments are the inevitable lot of all who "become servants to the heathen."

We refer rather fully to this article, because we note that the writer omitted to mention, as should have been specially done at this time, that a number of foreigners have recently been dismissed from various departments, to show to dismissed Japanese officials, apparently, the impartiality of the Government, and the absolute necessity of retrenchment. We doubt whether Government has taken any steps to let their native victims know, that every foreigner so dismissed has received the full salary which he would have received, had he retained its position to the end of his agreement—that in fact, he is sent away to seek other employment with a useful little capital of twelve, fifteen, or eighteen months' pay in his pocket. It occurs to us, by the way, that one of the numerous foreign financial advisers of the Government might with great propriety have recommended to the Finance Minister the cheaper method in use in Foreign Civil services on such occasions, of commutation.

The *Echo du Japon* of Friday, quoting from the columns of our *Daily Advertiser* the 'state' of the Second National Bank, which we hope to be able to give periodically to the public, took the opportunity of giving us the first part of a financial article on the subject which promises to be of considerable interest, and which we shall review when completed.

Nothing more has been published, in the leading columns of the daily papers, during the week, which calls for remark.

From the "Japan Mail Daily Advertiser."

Monday, 29th.

During the absence of Sanjô Saneyoshi, who has accompanied the Mikado to Kiôto, *Udai-jin* Iwakura will act as Prime Minister.

The agent of the Great Northern Telegraph Co. yesterday informed us that the cable between Nagasaki and Shanghai was interrupted.

From the *Nichi Nichi Shimbun.*

Mr. Ôdzuka, the Chief Judge of the Kagoshima *Saibansho,* arrived at Tôkiô on the 23rd instant for the transaction of some business which as yet is unknown. Two secretaries accompanied him.

From the same.

Japanese banks are to be established at Hongkong and Shanghai shortly, so we hear.

From the *Hôchi Shimbun.*

A report has reached us that owing to bad weather the *Takao Kan,* conveying H.M. the Mikado to Kobe, was obliged to anchor in Toba harbour in the province of Shima, but would proceed on the voyage when the weather moderated.

From the same.

A school is to be built at the Nishikichô, Tôkiô, where the children of the *kuadzoku,* or nobles, can be instructed. Her Majesty the Empress has given 30,000 *yen* towards the expense of its establishment.

From the *Chôya Shimbun.*

The new building for the Superior Court will be rebuilt on the same site where it stood previous to its destruction by fire last year.

Tuesday, 30th.

The *Nichi Nichi Shimbun* yesterday published the following important news.

We have heard the purport of a telegram despatched from Rome on the 23rd instant. It is as follows:—

"Although the conference at Constantinople was concluded "yesterday (22nd instant) and the friendly deliberations "broken off without any result, still Russia has declared in "favour of a peaceful policy."

A further telegram despatched from St. Petersburg on the 25th instant reached Yedo on the 26th. Its purport was, we have heard, as follows:—

"The conference at Constantinople was broken off on the "22nd instant, and the Ambassadors left Constantinople, "leaving (behind) Charge d'Affaires."

From the *Hôchi Shimbun.*

A telegram has been received from our special correspondent that His Majesty the Mikado arrived at Kobe at 7 a.m. on the 28th instant, proceeded to Kiôto by the train at 2.20 p.m., and arrived at the Imperial Palace at Kiôto at 6.30 p.m. on the same day.

From the same.

Mr. Yamawaki, the editor of the late *Hiôron Shimbun* and now of the *Bummei Shimbun,* was released from prison on the 28th instant, at the expiration of the term of his sentence.

From the same.

An office called the *Shûshi-kuan* (Bureau of History) has been established as a branch of the *Daijô-kuan.*

From the same.

An express company called the *Naikoku Tsu-un-kuaisha* is about to build a steamer both for freight and passengers, which will ply up and down the Sumida-gawa.

Form the *Eiri Shimbun.*

It has been announced that Her Majesty the Empress Dowager arrived safely at Kiôto on the 27th instant.

From the *Nichi Nichi Shimbun.*

Special local representative meetings have been held since the 20th instant in Nagano *ken* (Shinshu), the representatives of the people being the *Kucho* and *Kocho.*

From the *Akébono Shimbun.*

On the 29th instant the fifty police constables who had been sent to Miyé *ken* (Isé) returned to the capital.

From the *Mainichi Shimbun.*

We hear that the railway between Kobé and Kiôto will be conducted by the Mitsu Bishi Company after the opening ceremony.

[We give this extraordinary statement for what it is worth. —Ed. *J. M. D. A.*]

Wednesday, 31st.

The *Thabor* left yesterday afternoon for Kobe having on board a large party for the ceremony of opening the Osaka and Kiôto line, among them being H. E. Ito, the Minister of Public Works and other Japanese officials, together with several representatives of the foreign and native Press and others. The *Meiji Maru* will also leave for the same destination shortly

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with another party, including some of the Foreign Representatives.

The Agent of the Great Northern Telegraph Co. received news yesterday evening that the cable between Nagasaki and Shanghai was repaired, and in full working order.

We have been favoured by a copy of the "Hong List and Directory for 1877" published at the *Japan Herald* office. It contains full particulars of all the Diplomatic and Consular establishments in Japan, of employés in the Government offices, public bodies and agencies, and men-of-war of all nationalities on the station, together with comprehensive lists of firms and residents in the various ports of Japan, conveniently arranged for ready reference. The labour which has been bestowed on its production can only be properly appreciated by those who are practically aware how much care and trouble are involved in such a work. It is accompanied by a useful map of the Settlement and Bluff.

Yesterday having been a general holiday there was no issue of native newspapers.

Thursday, 1st.

The *Japan Gazette* Hong List and Directory for 1877, of which a copy has just been laid before us, seems to be, as usual, put together with great care, and to contain all the information that such a work should contain in a neat and convenient form.

In accordance with our expressed intention we publish below a translation of the latest return of the circulation of the notes of the Second National Bank—commonly known as the "Shosha Notes"—which has been furnished to us directly from the *Ginko*.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

We publish the following, in accordance with a notification from the *Shihei-rio* (Bureau of Paper Money) of the 8th of August 1876, which was made up after closing our business for the week ending on the 27th January.

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	868,885	
In circulation	331,115	
	1,200,000	

RESERVE FUND.

In dollars (coin) on hand	$262,237.04
In dollars (Foreign Bank notes)	96.96
Deposited with Foreign Banks	68,780.00
	$331,114.00

From the *Chôya Shimbun.*

A telegraphic despatch announces that H. M. the Mikado visited and prayed at the tomb of his father, Kômei Tenno, at Kiôto on the morning of the 30th instant.

From the *Nichi Nichi Shimbun.*

The students of the Normal School of Kanagawa are to undergo an examination, and whoever fails to pass the same will no longer be permitted to remain at the school.

From the same.

The French Chargé d'Affairs left the capital on the 29th instant and will proceed to Kiôto *viâ* the Tôkaidô.

From the same.

Some 71,677 guests stopped at the hotels at Kanagawa during the last year.

From the same.

Kônoike Zenyemon (noted for his wealth) and several of the principal merchants of Osaka are drawing up plans for the establishment of a bank at that city.

From the *Akébono Shimbun.*

We hear that the out-turn of the iron mines of Yechigo and Shimano for last year was most encouraging, and that further improvement in the quantities of iron obtained is to be looked for this year.

From the *Hôchi Shimbun.*

Mr. Oyama, the editor of the *Tekkua Shimbun*, was summoned to the *Saibansho* on the 28th instant, but did not put in an appearance owing to his absence from Tôkiô.

From the same.

We have received a telegram from our agent at Osaka that on the receipt of acertain telegram at noon on the 30th instant, the castle was guarded by an extra number of the troops of the garrison.

Friday, 2nd.

A telegram from Tôkiô yesterday announced the total destruction of the *Gaimusho* by fire. The building occupied the office of Foreign Affairs is a large rambling one which was formerly the Kuroda Yashiki. The fire broke out about mid-day, and was caused, it is said, by an overheated stove pipe setting fire to the roof of the building, the inflammable nature of which precluded any hopes of saving it. The Foreign Office premises, however, being entirely surrounded by a road, the fire was fortunately confined to the compound in which it broke out.

The *Meiji Maru* was to have left for Kobe at 3 o'clock yesterday afternoon taking a large party of the Foreign Representatives and other members of the Deplomatic Corps to the ceremony of the opening of the Osaka and Kiôto Railway, but the vessel's departure was delayed until late last night as, owing to the fact that the Russian Legation in Tôkiô is situated in the immediate neighbourhood of the *Gaimusho*, and was consequently in no slight danger from the fire which destroyed the latter, Mr. de Struve, the Russian Minister, was unable to leave Tôkiô and embark on board the *Meiji Maru* at the time originally agreed upon.

The *Akébono Shimbun* says that some of the *Kucho* of Kanagawa *ken* are engaged in laying out a good road from Tôkiô to Kôfu. This will be a serious undertaking, as in order to carry the road by easy gradients across the Kobotoke and Sasako hills, some heavy work will have to be done.

From the *Chôya Shimbun.*

During the stay of H. M. the Mikado at Kiôto he will visit the temple of Nishi Honganji and there witness an examination of the students of the Kiôto *Fu.*

From the same.

Mr. Yamao, the Vice-Minister of Public Works, will act as Minister for that department during the absence of H. E. Itô.

From the same.

A work called the *Tôjunroku* has been compiled by the *Daijô-kuan*, containing the various statistics, and other information, which were collected during His Majesty's northern journey.

From the *Akébono Shimbun.*

Small pox is prevalent at Akita *ken* (the province of Dewa), but the authorities are taking all possible precautions to prevent it from spreading.

From the same.

The Mikado visited the *Fucho* and the Exhibition of Kiôto on the 31st instant, and on the 1st February, he is expected to visit the College and other institutions of the city.

Saturday, 3rd.

The P. & O. Company's steamer *Zambesi*, with English Mails on board to the 22nd December, left Singapore on the 24th ultimo, and it was expected that the steamer *Benarty* would also leave the same port on that day. The *Malacca*, with Yokohama portion of next English mail, may be looked for on the evening of Saturday next, the 10th instant.

The *Hiogo Maru* did not leave for Hakodate yesterday as advertised, her departure having been postponed until to-day, at 4 p.m.

Fires seem to have been alarmingly frequent in Tôkiô lately. On Thursday night twenty houses were destroyed at Atagoshita, and several of the outhouses of the Military School at Ichigaya were also burnt. On Friday night a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fire at Kitashin-bori consumed 72 houses, while several other fires occurred in various parts of the capital which were fortunately confined to the buildings in which they broke out.

The fire which destroyed the *Gaimusho* (Foreign Office) on Thursday was caused by an overheated stove pipe setting fire to the ceiling of the room set apart for the reception of Foreign Representatives. The flames extended to the roof and seized such rapid hold of the building that it was utterly destroyed in one hour, the roof itself having fallen in about twenty minutes after the first alarm was given. The fire brigades were quickly on the spot, and in unusual force, the number of firemen who turned out having been variously estimated from 2,000 to 3,500, while the number actually present may fairly be stated at something between the above mentioned figures. No exertions on their part could save the main building where the fire originated, but their efforts to prevent the fire spreading to the outhouses and surrounding buildings were entirely successful. It is highly creditable to the officials of the department, that notwithstanding the extremely rapid progress of the fire, all the records and official documents were saved with the exception of such as had been recently received and were in course of being answered.

We learn from the *Chôya Shimbun* that a submarine cable is at present being laid between Okayama *ken* (Bizen) and Ehime *ken* (Iyo) on the Island of Shikoku. The astonishment of the ignorant country people of that part of Japan, which is so little known to foreigners, was greatly excited, not only by the sight of foreigners themselves, but by observing them engaged in such an undertaking—a telegraphic cable and its uses, naturally enough, being something quite beyond their comprehension.

From the *Hôchi Shimbun.*

A new work upon Japanese history has been published in Kôfu, the author being Mr. Tanaka. The title of the work is the *Nihon Shiriaku*, and is calculated to be a very useful work for students.

From the same.

Mr. Sakurai, the *Gon-dai-Shokikuan* (Vice-Chief Secretary of the *Naimusho*, has been always appointed to take charge of the *Jôhei-kioku* (Office for storage of rice).

From the *Nichi Nichi Shimbun.*

A contributor to the *Kinji Hiôron* was yesterday summoned to the *Keishi-kioku* (Bureau of Police) and examined about an article of his reflecting on that office, which was published in No. 36 of that paper.

With regard to the journey of H.I.M. the Mikado, we announced in our daily issue yesterday that his departure had been postponed from Monday, the 22nd, for which day it had been fixed, and the lastest we have since heard is that another fixture had been made for to-day. Presuming no further alteration in the arrangements to take place, His Majesty will therefore arrive here on Friday, the 26th. In consequence of the above expected event there is extraordinary activity in the lantern trade in Kobe just now, one maker having temporarily hired additional premises in Main Street, his own usual premises being apparently unequal to supplying the orders which have come in. The wide straight streets of the Concession lend themselves well to illumination, and remembering how well the Bund looked on the occasion of the visit of the Grand Duke Alexis, we expect that on this occasion, when the illumination will be more general, the town will present a spectacle at once brilliant and unique.—*Hiogo News.*

We hear that private telegrams have been received, dated the 23rd January, to the effect that England and France have not, as yet, declared war either in favour of Turkey or otherwise.—*Shanghai Courier.*

The *Achilles* arrived at Hongkong and left for Shanghai yesterday. The *Stentor* left Singapore on the 21st instant for Hongkong. The *Glenroy* is expected in a few days.—*Shanghai Courier.*

THE FINANCE MINISTER'S ESTIMATES.

THE long expected annual Estimate of the Finance Minister at length made its appearance at the close of last week. Considering that the current financial year with which it deals has already more than half elapsed, it is perhaps as well that no credit is claimed by its author on the score of punctuality in the preparation of it. No allusion is made to the fact of the delay, no explanation or apology for it offered; but it may without rashness be conjectured that the insurrection in the South and the disturbed state of the country during the last six months are largely answerable for the tardiness with which Mr. OKUMA has this year acquitted himself of the duty of reporting to the Chief Minister of the Sovereign on the prospects of the national finances.

These may seem rather guarded terms in which to describe what is often loosely spoken of as the publication of the Japanese budget; but on a subject of such importance it is specially necessary to guard against the too common error of confounding things together which are only remotely analogous, because they happen to be called by the same names. Nothing could well be more misleading than to speak of the tables which we publish in another place as a budget. Four tables, two of which for all practical purposes are valueless, introduced by a few paragraphs of verbiage which convey no tangible information whatever, constitute the sum and substance of a report which is supposed to belong to the same category, and has been dignified by the same appellation, as the annual statement of the English Chancellor of the Exchequer. In the mere matter of form, the difference between Mr. OKUMA's report and the budget of an European state is the expression of the distance that separates oriental absolutism from centuries of progressive freedom. On the one hand we see the responsible chief of the Exchequer rising in the midst of an assembly of representatives of the people, to give a minute and detailed statement of the expenditure of the past year, to compare it with the expenditure of previous years, to account for every item that shows an increase, to justify every proposed addition to the national burdens, and to promise retrenchment wherever possible. On the other we see the irresponsible custodian of the national revenue forwarding, in a brief despatch to the head of the privy council, a few meagre tables, which embody his ideas as to what the income and expenditure of the coming year are likely to be. That the people who supply the revenue have a right to be informed of the manner of its disposal, is evidently an idea too chimerical for the Finance Minister to entertain. The *Nichi Nichi Shimbun*, the ministerial organ, in whose columns the estimates appeared simultaneously with the *Tokio Times*, is careful to state that they were not officially sent to it for publication, but that, moved by considerations of public advantage, it has taken it upon itself to make them known to the world.

And the character of the estimates themselves are in keeping with the mode of their presentation. They are manifestly intended for the initiated few, not for the enquiring many. With much parade of particularity and accuracy, they are so constructed as to yield the least possible quantity of information on the points where it is most urgently required; and a single specimen will be sufficient to show the value of the Finance Minister's idea of what he is pleased to denominate an explanation. "With reference," says he, "to the amount lent to the "people (described in the table as Loans by the Govern- "ment) I have given an explanation in my Introduction." To the Introduction accordingly we refer, and here is the vaunted explanation "an amount . . . . providing "for loans to the people will be found in the table." Exactly so. That is the explanation in its entirety; and what more could the most inquisitive mind desire to know?

The estimates of the revenue and expenditure for the current financial year from July 1875 to June 1876 are given twice over; first in two comparative tables, contrasting the conjectural income and disbursements of the past with the conjectural income and disbursements of the current year, and again in two separate tables. As a comparison, however elaborate, of unverified guesses cannot be accepted as equivalent to a statement, however simple, of actual facts, no well-grounded information as to the management or the condition of the finances of the country can be acquired from the first pair of these tables. We shall not waste our space in attempting to treat them seriously, but pass at once to the consideration of the figures for the current year as set before us in Tables III. and IV.

Taking the Finance Minister's figures for what they may be worth, and speaking in round numbers, we find the estimated revenue set down at sixty-three millions of *yen*, of which forty-six and a half millions, or well over three fourths of the whole amount, is obtained in the shape of a rent-tax levied on the tillers of the soil; and the remaining sixteen and a half millions are made up under the following heads. The Import and Export Customs duties, collected at the six open ports, yield a million and three quarters; an excise duty on spirits and tobacco three millions; various stamp duties and licenses, two millions and a half; an income-tax on the state allowances made to the ornamental families, the *kwazoku*, and the military gentry, the *shizoku*, brings back nearly two millions and a quarter to the national coffers; two millions and a half are credited to the Public Works Department, half of this sum coming from the mines, and the other half from railways, telegraphs, manufactories, and dock-yards; repayments of Government loans figure for over a million and a quarter; the Mint furnishes three quarters of a million; sales and rents of Government property, including under that term lands, houses, and forests, produce about a million, and Miscellaneous Revenues another million; the remaining half million is accounted for by a few small but interesting items specified in the table.

The surplus of these sixty-three millions of *yen* over the anticipated expenditure is set down at the exceedingly modest figure of eighteen hundred *yen*. Twenty-eight millions, or somewhat under a half of the entire expenditure, are distributed in very unequal proportions among the fifteen departments of which the executive machinery of government is made up. The next heavy item is the money swallowed up in the form of annuities or pensions to the privileged classes, in which category are included the nobles, the gentry, and the tolerably numerous list of eminently meritorious men, who helped in the great work of establishing the existing administration—total, a trifle under eighteen millions of *yen*. Next in importance ranks the reduction of the National Debt, both domestic and foreign, by the amount of five and a half millions. The incomes of the Sovereign and his family are well under a million. Over four millions are to be distributed among the local governments of the three capital cities and the thirty-five provincial prefectures. The police force will cost two millions, and the support of the national cult, Shintô, a quarter of a million. The dikes all over the empire are to be kept in order at an outlay slightly exceeding a million and a half,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Diplomatic and Consular Service claims half a million. Sundries, and loans for the relief and promotion of industry will absorb a million ; and a tenth of that amount is to be expended in the keeping up of existing Imperial palaces and the part erection of a new one. A million and a quarter reserved for contingencies brings up the total expenditure to sixty-three million *yen*, leaving of course, the unpretentious little surplus to which we have been careful to accord the place of honour in entering on the subject of the disposal of the national revenues. A statement of the national liabilities is appended, showing a total of one hundred and forty-nine million *yen*, of which the two foreign loans bearing interest respectively at 9 and 7 per cent. per annum represent only fourteen millions. Of the home debt, thirty millions bear interest at various rates averaging about 6 per cent., ten millions carry no interest, and we are expected to believe that the paper-money in circulation amounts to no more than the remaining ninety-four millions.

Such, in brief, is the Finance Minister's account of his opinions on the interesting subject of the prospects of the national exchequer, of which he individually has had for years the uncontrolled and unaudited management. If we frankly confess that our faith in its general trustworthiness is small, and that on some particular points of it our comprehension is not quite clear, we may plead in justification of our scepticism the conditions under which the statement is issued, the entire absence of any means, accessible to ourselves or to the outside world in general, of bringing its accuracy to the test, and a certain uncomfortable vagueness, not to say laxity, in the use of language on the part of the Finance Minister himself. Last year, on a similar occasion, he expressed himself thus :—"an actual account will, at some other "time, show whether the estimates were correct." Was this a prophecy or a promise? This year he is about equally explicit:—"In the foregoing table," says he, "the "Revenues and Expenditures for the 8th and 9th years "of Meiji are compared, and the amounts are arrived at "by careful calculation . . . . As already said, in this "table the 8th and 9th years of Meiji are compared. The "reason why the 7th year is not included in the compa-"rison is that its accounts have not yet been accurately "compiled. In future years, I will show the estimates for "the then current year, in comparison with the (accounts "of the? estimates of the ?) revenues and expenditures "of former years, indicating the increase and decrease in "the various items." It is scarcely necessary to remark that the words within brackets are our own, and that the reader is at liberty to select whichever of the two alternative meanings he pleases, just as his logical faculty, or his faith in the Finance Minister may incline.

Not very long ago, in a country where a severe press law was rigorously enforced, a financial statement incomparably more satisfactory and intelligible than the present was given to the world, and a certain publicist of that country on that occasion wrote as follows :—

"We once heard that there was a Minister of Finance "in a certain semi-civilized country not possessing re-"presentative institutions, who issued accounts from "the Treasury and notified them to the people. But "they were not such accounts as could be trusted, as "the Minister was said to make several accounts at "the same time, one for his own use and another to be "shown to the Sovereign and published to the people. "In that country, the Minister of Finance makes out "accounts which are mere calculations of what is to be "spent in the future, and never gives minute accounts of "what has actually been spent in the past."

Could any of our readers form a conjecture as to where these remarks were published, or what country that ingenious journalist was thinking of?

SPIRIT OF THE JAPANESE PRESS.

The Designs of Saigo.

("Chôya Shimbun," 23 January.)

There are, at the present time, rumours of various natures concerning the doings of Saigo and his party floating among the public; some to the effect that they are forming a conspiracy; others, that they have commenced action; then again that their present excitement has been calmed, and so forth. What is the reason that the public watch the doings of Saigo and his party with such anxiety and fear? From all that we can learn, we are led to suppose that the breaking out of some disturbance, and interruption of our tranquillity is anticipated. Under these circumstances we feel it incumbent upon us to enter into a full investigation of the reasons for these anxieties. In order to ascertain whether these rumours have any weight, there can be no better mode of procedure than, in the first place to discuss the feelings of various parties and then to inquire into the real character of Saigo himself. Of parties there are two kinds; one which makes the interests of the people in general its principal aim; and another which looks only to its personal interests as its guiding object. Among the former may be found some who are clamorous for speedy reforms, and others who are strongly conservative; but be they what they may the public interest is their common aim. Among the latter party are neither radicals nor conservatives. Its members seek first their own interests; are controlled only be a thirst for gain, and the well-being of the people is to them a matter of secondary consideration.

The first named party is the outcome of an advanced civilization, people in civilized countries being sufficiently enlightened to have a good idea of what government ought to be, and therefore uphold a party that has for its object the well-being of the people. The last named is more frequently found in countries not so far advanced, because the people are not sufficiently educated to be able to judge of the goodness or badness of the administration of the government under which they live, so that they are prone to be led away by some person among them who is wiser and more talented than themselves.

Now what kind of a party is Saigo's? We cannot doubt but that it is the first named. But is it radical or conservative? Now Saigo is a quiet man, but a man of quick decision, and a man endowed with a great talent to command a military force. While he was holding that important post in the Government, he did not hold opinions, to any great extent, at variance with those of other members of the Cabinet. This shows that he is not conservative. The only question upon which he differed was the Corean question; but now that the Corean difficulty is happily settled, no difference of opinion can any longer exist. We have therefore not the slightest reason to doubt the loyalty of Saigo to the present government.

Some people say that Saigo's ambition is immeasurable, and this as much as to say that Saigo is the leader of a selfish party; but all the honours that Saigo at present enjoys have been gained through his staunch adherence to the cause of the present Emperor, and his devotion to his country. What an absurdity is it then to believe that he would act as many of the discontented *samurai* have recently done.

We think we have said enough to prove that the object of Saigo's party is not a selfish one, and that its nature is not conservative. Still, at the same time the population of Satsuma is numerous, and there may be some who will try to put their private schemes into action by borrowing the name of Saigo, and it is thus that the existing fears and rumours may have arisen.

On the Institution of a Representative Assembly.

("Nichi Nichi Shimbun," January 22nd.)

When can we expect a better day than the present for the institution of a Representative Assembly? The land and local taxes having been reduced, thus removing the burden from the shoulders of the farmers, it is evident that the revenue of the Government must be proportionately diminished, and that consequently its administration must be carried on in a more economical manner. Under these circumstances who can be more usefully consulted than the people themselves?

When the question of people's rights and liberties first took root in this country, there were some who clamoured for an im-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

mediate institution of a Representative Assembly, while others were of opinion that our country was not as yet ripe for such measures. Still in spite of a difference in opinion among our leading men, as to whether the country was prepared for the establishment of such an institution, all were unanimous in declaring that, in order to uphold the rights and liberties of the people, a National Assembly is an absolute necessity. On seeing the disturbances that have taken place among the agricultural classes of Miye and Ibaraki Ken, we think that all must agree that the sooner the representative institutions are established, the better it will be for the nation. What is the reason that our easy-going and peace-loving farmers rise in arms and rashly oppose the authority of the Government? They plead, in excuse, excessive taxation, or the lowness of the price of grain, and their consequent inability to meet their taxes. To a certain extent this may have been the cause of their discontent, but we think that the principal cause may be found in their misunderstanding the will of the Government, while the Government has not understood them. We are therefore strongly of opinion that if means could be found by which the will of the Government could be made clear to the people, and the opinion of the people made manifest to the Government, these rash outbursts, which can only be quelled by fire, and sword, would be avoided.

When the people elect men in whom they have the greatest confidence, to be their representatives, and entrust to them the rights that they possess, be they ever so ignorant, they cannot be dissatisfied with the laws that these representatives enforce upon them, for is not this just the same as enforcing their own laws upon themselves? If then, these representatives should decide upon the amount of taxation to be imposed upon the people whom they represent, the people would naturally pay such taxes with readiness.

The reason that our farmers have shown so much dissatisfaction about their taxes, is not so much because of the temporary inconvenience brought upon them by the recent changes, as that they are utterly unacquainted with the reason why such changes should take place.

Were the people, then, to elect representatives from various districts and form *Ken* assemblies with the power to settle the amount of taxes for local purposes, the people being able to comprehend the will of the Government would become more interested in political affairs. Such will probably prove to be the foundation of a National Assembly. Such assemblies have been established for the past few years in Chiba and Hiogo *kens*, and the public are well aware of their beneficial results.

When such risings as those in Miye and Ibaraki *ken* occur, they can only be repressed by force of arms; but such a remedy will only tend to create still greater distrust of the Government in the minds of the people, and these outbursts will not cease until a Representative Assembly is established. It may be said that the people are as yet too ignorant and too uncivilized for such institutions to be of any use. It is very true that it may yet be too early for a General National Assembly, but the lesser representative institutions should now be established, so as to make a foundation for the greater one.

The correspondent of the *Standard* at Alexandria telegraphs that the late Egyptian Minister of Finance has arrived at Kerosko on his way to Dongola. He is closely guarded, as he has made several attempts at suicide. His harem, numbering 300 inmates, was seized by the Khedive. All the recently purchased slaves are to be returned to the vendors; the others are to be offered for sale. Dealers from Constantinople have arrived to bid for them.

It is reported from Belgrade that the Austrian mail-ship *Radetzki*, while engaged, under control of the police, in conveying some Bulgarian fugitives to Galatz, has been detained and searched by the Servian police authorities, who forcibly set the fugitives at liberty. The remonstrances of the captain were disregarded.

A despatch from St. Petersburg says that the Porte has notified its complete adhesion to the Geneva Convention in regard to the treatment of sick and wounded in time of war. The Turkish armies, however, will substitute the Crescent for the Red Cross.

The Berlin correspondent of the *Times* says:—"Nearly the whole of the Turkish troops have left Bosnia and Herzegovina, the Porte having determined not to resist the occupation by Austria of these provinces in the event of war." The same correspondent states that the Austrian Government have ordered the occupation in force of the Transylvanian-Moldavian passes directly the Russians enter Moldavia.

THE FINANCIAL STATEMENT AND ESTIMATES.

(From the "Tokio Times" and "Nichi Nichi Shimbun.")

NOTIFICATION No. 12.

To In, Sho, Shi, Fu, Ken.

It is hereby notified that the following tables of the Revenues and Expenditures for the year between July of the 9th and June of the 10th year of Meiji, inclusive, have been presented by Okuma Shigenobu, Minister of the Finance Department.

SANJO SANEYOSHI,
Daijo Daijin.

20th January, 10th year of Meiji.

According to annual custom, Okuma Shigenobu now presents the estimates for the year from July of the 9th to June of the 10th year of Meiji. At the present time the working of the alteration of the land-tax reduces, more or less, the year's revenues, whilst, on the other hand, the expenditures on the whole are much increased, some few items, only, showing a diminution. Indeed, in comparison with past years, the expenditures present a considerable augmentation, owing to large outlays for many hundred different purposes necessitated by the exigencies of the times. Our home productions are not yet sufficiently rich to meet these expenses, nor is trade in a prosperous condition. So it is impossible to levy new duties to provide for them. And when it is found that the revenues, which are necessarily limited, do not suffice to meet the expenditures, the difficulty must be solved by equalizing them in some way. To this end I have prepared comparative tables showing the increase and decrease, as the case may be, of the annual admitted expenses of every public office, and the increase or diminution, also as the case may be, of the revenues of the current and the last financial years. This has been done in order to show clearly the condition of the difference between our annual revenues and expenditures. I forward this statement with the accompanying tables for the purposes of public convenience; and I respectfully express the hope that you will give the subject your serious consideration.

OKUMA SHIGENOBU,
Minister of the Finance Department.

TO SANJO SANEYOSHI,
Prime Minister.

INTRODUCTION.

This budget for the 9th year of Meiji is compiled on information collated from minutely detailed accounts furnished by the various government offices. Before proceeding to the budget itself, I will briefly consider it in outline. The method formerly followed in keeping the accounts of this department has lately undergone reform, and the system of foreign book-keeping has been introduced, so that accurate records of the national revenues and expenditures may be preserved. In pursuance of this reform, the accounts of the various taxes are separately kept in order to facilitate the transaction of business; and the entire estimates have been framed upon the new model.

The whole system of taxation throughout the Empire has been thoroughly altered this year, and the holdings of land considerably modified. Hence, to what extent the land tax is increased or diminished, is not yet apparent. But the estimates on this subject have been calculated on the information furnished to the government from every Fu and Ken.

The taxes to be paid by druggists, only coming into operation this year, the revenue to be derived therefrom has been estimated very roughly.

The expenses of maintaining the Imperial Palace and providing pensions for members of the Imperial family, have hitherto been supplied out of the sums set apart for the Imperial Household. But from this year forth, they will be separately allowed for. Comparison of the expenditures of all departments for the current, with those of the previous, year, will easily show how the increase or decrease apparent may be accounted for. Thus, it is evident that the business of the Home Department (Naimu-sho) has been greatly extended; the number of people in the Rikugunsho, (War Office) the vessels of war and the sailors at the disposal of the Kaigunsho (Navy Department) much increased, while the mines of the Kobusho, the Stamp Office of this department, the provincial Saibanshos, and the land tax office have all required extensive additions to their staffs. Further, the Police, Public Works, and the necessity of making new and repairing old dykes have involved much increased outlay.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The cost of construction of the new Imperial palace is estimated at about one million yen. The works will be commenced this year and finished within five years. The amount required this year for this special purpose is shown in its proper place in the table of expenditures.

An amount provided for contingencies, some other items, and especially one providing for loans to the people will be found in the table. The reason of the reduction in the amount paid on the debt owing to the country is, that pensions returned, and monies to defray domestic debts owing to the government, are funded. An increased sum has been paid towards the reduction of the foreign debt of the country. I now hasten to submit the following estimates showing the increase and decrease in the several items of the annual revenues and expenditures.

COMPARATIVE TABLES OF THE REVENUES AND EXPENDITURES FOR THE EIGHTH AND NINTH YEARS OF MEIJI, SHOWING THE INCREASE OR DECREASE IN THE SEVERAL ITEMS.

TABLE I.

REVENUES.

Source.	9th Year. *Yen.*	8th Year. *Yen.*	Difference. *Yen.*
Customs	1,762,554	1,744,837	Increase 17,717
Land Tax	46,556,743	51,505,967	Decrease 4,949,224
Mining Tax	11,055	10,464	Increase 591
Tax on Official Incomes	93,575	108,285	Decrease 14,710
Tax on hereditary and other pensions	2,198,914	2,267,810	Decrease 68,896
Tax on productions of Yezo	370,592	437,485	Decrease 66,893
Tribute from the Riukiu Han	34,925	50,744	Decrease 15,819
Tax on Wines and Spirits	2,373,859	1,613,083	Increase 760,776
Tax on Tobacco	539,948	100,000	Increase 439,948
Stamp Tax on legal documents	531,881	534,917	Decrease 3,036
Postage Stamps	652,884	570,000	Increase 82,884
Other Stamp Taxes	523,588	571,418	Decrease 47,830
Miscellaneous	804,366	482,905	Increase 321,461
Income derived from Mines	1,212,825	548,314	Increase 664,511
Income derived from Railways	692,967	691,019	Increase 1,948
Income derived from Telegraphs	163,858	152,143	Increase 11,715
Income derived from various Manufactures	385,710	450,277	Decrease 64,567
Income derived from Mint	770,800	675,240	Increase 95,560
Sales of Government property	692,772	968,956	Decrease 276,184
Rent of Government Lands and Buildings	139,713	145,668	Decrease 5,955
Income derived from Forests	129,769	367,270	Decrease 237,501
Miscellaneous Revenues that are derived from untaxed sources	1,026,849	1,553,736	Decrease 526,887
Repayment of debts due to Government	1,325,496	3,037,728	Decrease 1,712,232
Total Estimated Revenues	62,995,643	68,588,266	Decrease 5,592,623

TABLE II.

EXPENDITURES.

Object.	9th Year. *Yen.*	8th Year. *Yen.*	Difference. *Yen.*
Reduction of National Debt	5,551,447	4,345,655	Increase 1,205,792
Imperial Expenditure and payments to the Emperor's Relations	827,500	727,500	Increase 100,000
Pensions for Meritorious Services, and Hereditary Pensions	17,705,377	17,805,366	Decrease 99,989
Sei-In	494,000	400,000	Increase 94,000
Genro-In	207,000	200,000	Increase 7,000
Kuaigi-In	30,000	30,000	
Foreign Dept	185,600	170,000	Increase 15,600
Home Dept	3,699,812	2,300,000	Increase 1,399,812
Finance Dept	1,798,600	1,604,600	Increase 194,000
War Dept	7,250,000	6,950,000	Increase 300,000
Navy Dept	3,549,700	2,700,000	Increase 849,700
Educational Dept	1,704,800	1,700,000	Increase 4,800
Dept. of Religion	73,000	70,000	Increase 3,000
Public Works Dept	4,900,000	4,750,000	Increase 150,000
Judicial Dept	1,420,500	1,250,000	Increase 170,500
Imperial Household	316,000	222,500	Increase 93,500
Kaitakushi Colonization Department	1,905,660	1,799,716	Increase 105,944
Land Tax Reformation Bureau	471,000	48,000	Increase 423,000
The Three Fu	452,520	553,608	Decrease 101,088
The Ken	3,709,980	3,746,392	Decrease 36,412
Police Dept	1,195,000	1,000,000	Increase 195,000
Local Police	750,000	600,000	Increase 150,000
Shrines	220,000	220,000	
Repairs and Constructions in Fu and Ken	1,639,000	1,370,000	Increase 269,000
Legations & Consulates in Foreign Countries	548,300	515,000	Increase 33,300
Miscellaneous Expenditures	559,051	6,920,169	Decrease 6,361,118
Loans by the Government	500,000	1,500,000	Decrease 1,000,000
Reserve fund for Contingencies	1,330,000	5,000,000	Decrease 3,670,000
Total Expenditures	62,993,847	68,498,506	Decrease 5,504,659

In the foregoing table the Revenues and Expenditures for the 8th and 9th years of Meiji are compared and the amounts are arrived at by careful calculation. In some particulars the 9th year shows an increase over the preceding year, and in others the reverse is the case. In both revenues and expenditures we have a perceptible decrease. With reference to the amount lent to the people (described in the table as Loans by the Government) I have given an explanation in my Introduction, and the large decrease in other items of expenditure is also explained, as is the very large increase in the expenditures for the local governments. As already said, in this table the 8th and 9th years of Meiji are compared. The reason why the 7th year is not included in the comparison, is that its accounts have not yet been accurately compiled. In future years I will show the estimates for the then current year in comparison with the revenues and expenditures of former years, indicating the increase and decrease in the various items.

TABLE III.

ESTIMATED REVENUES OF THE YEAR, FROM THE 7TH MONTH OF THE 9TH, TO THE 6TH MONTH OF THE 10TH, YEAR OF MEIJI.

1.—Duties of the 1st class		1,762,554

Out of this latter sum, *yen* 72,775 is reserved for Contingencies in Government Offices, and *yen* 9,382,485 for possible loans.

THE FACTS CONCERNING THE LATE VERY EXTRAORDINARY DISCOVERY IN YOKOHAMA.

As the remains lately discovered in Yokohama have been made the subject of so much ill-founded speculation, and created so very general an uneasiness in the public mind, we think it our duty to lay the real facts of that very extraordinary affair before our readers.

We wish particularly to draw attention to the incorrectness of the report, which has been so widely circulated, that the body was found enclosed in a "rough deal chest." Nothing could indeed be further from the truth, the so called "deal chest" being in reality a substantial oaken coffin. This we consider to have so important a bearing upon the conclusions which we think we are warranted in coming to, when all the facts are strung together, that we lay particular stress upon it. That the coffin, however, has been roughly put together must be admitted, and that it is deficient in angle plates and handles, and suchlike adjuncts to appearance and portability, is also obvious. Nay, more than that, that the boards of which it has been fashioned have not even been smoothed, for the marks of the saw are still visible upon them, yet in every other respect the coffin has been carefully joined and fitted; and as is emphatically *a stout oak coffin*.

As regards the position in which the remains were discovered. The mariner's compass shews that the head lay two points to the North of East, as though the *haste* in which the grave was prepared did not permit of the east point being fully and satisfactorily determined, and the body placed in accordance with the custom dictated by the Christian ritual.

Here, then, are two very important points in our chain of *a priori* reasoning (to be summed up hereafter), furnished by such external evidence as the condition of the coffin, and the position in which it lay when discovered, both, be it remarked, unmistakeably pointing to undue *haste* as their cause. Let us now see what we can gather from

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

internal evidence; let us mark carefully, in fact, what the *contents* of the coffin themselves have to say in the matter.

It is, of course, well known *now*, that the body found is *not* that of "one of our oldest and most esteemed residents." How that rumour ever got abroad, and obtained such general credence, is quite beyond our comprehension. We can only ascribe it to some such intellectual vagary as is prone to develop itself in the public mind, on the occurrence of anything which has to be accounted for at the expense of a little of that very rare commodity,—common sense.

Owing, probably, to the nature of the soil in which it was found imbedded, the processes incidental to decay would seem to have been so far arrested, that with the exception of some slight dessication, and discoloration, the tenant of the shell is so little altered as almost to warrant the supposition that the body had been subjected to some chemical process intended for its preservation. This, however, upon further investigation, turns out not to be the case. For not only are such signs of care as would have been the inevitable accompaniment of so complicated a proceeding, entirely absent, but that the remains have been most carelessly disposed of, is abundantly evident. For in fact *the man has been buried in his boots.* Nor has a single garment been removed, nor the contents of the pockets, even, been interfered with. His dress and general appearance are those of an individual of the latter half of the 17th century, and that he died posterior to 1688 may be inferred from the buckles on his shoes. Amongst the contents of his pockets—which we will presently enumerate *seriatim*, were several MSS. of very great interest, and which it is our purpose to present to our subscribers from time to time, if we obtain, as we have every reason to hope we shall, permission to print them.

These papers, it is greatly to be regretted, bear neither date nor signature, and so throw but little light upon who and what was their mysterious owner, but certain indications about them go to confirm the surmise as to his date—such, for instance, as the texture of the paper, the old-fashioned character of the hand-writing, the quaint and obsolete nature of the phraseology employed, and the strange turn of thought exhibited by them—so very different, it may be said, from that which now prevails. But our readers shall judge of that for themselves at no very distant date, we hope; for these manuscripts have been most kindly placed in our possession, and we only wait the permission of the authorities to publish them, should we see fit.

The remaining contents of the pockets may be shortly summed up, as:—a large and very curiously fashioned pocket timepiece, much rusted and damaged, but still sufficiently well preserved to permit of the inscription "T. Tompion fecit" being deciphered without much trouble.

A clumsy pair of horn spectacles.

A small volume entitled "Ye epigrammes of Martial, translated by P. Byssop"—the remainder of the title page is torn off.

A gold carolus with a hole in it, and two Spanish doubloons, complete the inventory of the effects found upon the body, and it is very remarkable and exceedingly unsatisfactory that not one of them throws any light upon the history of their unknown owner,—unless indeed, one of the MSS., written in the first person, and having somewhat of the character of a will or testament about it, can be said to do so.

Such is absolutely all that is known at present about this very extraordinary affair. It is not much, indeed, but yet, we think, sufficient to assist us to some pretty accurate conclusions in regard to it, when the whole evidence is carefully summed up. One of these conclusions enables us emphatically to contradict the rumour that had found its way into the public mind, to the effect that the man had been murdered, and was a member of the community. The latter portion of this rumour has already been disposed of. As regards the inaccuracy of the former, we consider ourselves entitled to deny it on the following grounds.

Firstly, no wounds or bruises are discoverable upon the body, nor has any poison been found, so far, in the stomach or intestines, which are still, however, undergoing examination at the hands of a properly appointed analytical chemist.

Secondly, none of the valuables upon his person have been disturbed.

Thirdly, the fact that the body was found enclosed in a coffin is in itself, to our mind, conclusive against the theory of murder. No murderer is ever so solicitous about the disposal of his victim as to go to the expense, and incur the risk of discovery involved, in the procuring for him of a coffin.

Fourthly, the evidence, in the position of the head, of hurried attempt to give him Christian burial.

Fifthly, the possibility that, after all, the poor fellow was *not dead*, although supposed to be, when buried. This shocking surmise we would willingly pass over in silence if we dared, but our duty as journalists forbids us to withhold one iota of the truth, and therefore, however repugnant to our feelings, we feel ourselves constrained to say that there is only too strong reason to suspect that he was prematurely interred, if the position of the body in the coffin means anything; for the man had *turned over upon his left side*, and the arms were found to have been discomposed from the position usually assumed in death or assigned to them afterwards.

So much for the evidence of negation. Have we anything of a positive or affirmative nature to bring forward? Unfortunately we can only point to the evidences of *haste* in the interment as leading to the conclusion that the mysterious stranger had died on board of some British ship which had made its way into the harbour—for we have no history of any settlement in those remote times—and been hastily interred, most probably at dead of night, in a hostile and unknown country, and being, it is likely, of too high a quality to permit of his being thrown overboard. Aye, but how came one who evidently was not a sailor, to judge by his dress (and if the will or testament alluded to is really his), to have found his way to Yokohama? Who can tell? Perhaps he was searching for the Kingdom of Prester John or was bound for far Cathay. Who will ever know? He must take his place, we fear, as far as we are concerned, amongst the many mysteries which are yet unsolved.

It is our purpose to recur to this very interesting subject in our next issue, but in the meantime, should any further particulars transpire of sufficient interest to demand the publication of a special slip, we shall not fail in our duty to our readers.

JAPANESE NEW YEAR CELEBRATIONS.

By

Mrs. Chaplin Ayrton.

Read before the Asiatic Society of Japan on the 24th January, 1877.

The most striking feature of New Year's day in Japan is the decoration placed with more or less completeness before every portal. Each object of which the decoration is composed has, as might be supposed, a symbolic meaning. Suppose the spectator to face the green arch; on his right will be a *Me-matsu* (*Pinus densiflora, Fam. Coniferæ*) with its reddish stem, and on his left will be the black trunk of the *O-matsu* (*Pinus thunbergius, Syn. Pinus massoniana*). Although pines are monœcius, fancy has attributed to the black trunked tree a masculine,—and to the lighter tree,—a feminine sex. Further, these hardy trees symbolize a stalwart age that has withstood the storms and struggles of existence.

Immediately behind the pines, rises on each side the graceful stem of the *Take-no-ki*, or bamboo, of which any kind that is convenient is selected. Its erect growth and succession of knots marking its increase during succeeding seasons, render it a symbol of hale life and a fullness of years.

The distance, of usually about six feet between the bamboos, is spanned by a grass rope (*nawa*), although convenience obliges this rope to be sufficiently high to allow of passage beneath, it should, to accord with its symbolic meaning, debar all bad and unclean things from crossing the threshold.

In the centre of the arch thus formed of pines, bamboos, and rope, is a group of several objects. The most con-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

spicuous is the scarlet *yebi*, or lobster, whose crooked body betokens the back of the aged bent with the weight of years. The lobster is embowered amongst *yusuri* branches. In this *yusuri*, (*Melia japonica, Fam. Meliaceæ*) when the young leaves have budded the old leaves yet remain unshed. So may the parents continue to flourish, while children and grandchildren spring forth!

In the centre also are the graceful fronds of the *shida* or *urajiro*, the *Polypodium dicotomon* of Thünberg. This fern symbolizes conjugal life, because the fronds spring in pairs from the stem. These uniform graceful leaves might suggest dangerous ideas of the equality of the sexes, but the simile has not in Japan been pushed to so desperate a length. Between the paired leaves nestles, as offspring, the little leaf-bud. Here and there are quaintly cut scraps of white paper, the *gohei*, or offering to the Gods, the form of the paper is said by some to be a conventionalized representation of a human form—that of the offerer,—devoting himself thus in effigy to the dieties.

Almost as conspicuous as the lobster is the orange-coloured *Daidai* (fruit of the *Citrus bigaradai, Fam. citronaceæ*). It enacts a pun, the second meaning of the word *daidai* being "generations" thus intimating a wish that the family pedigree may flourish. The juice of the *daidai* is much prized as a remedy against vomiting. This is interesting because the juice of lemon, also a citronaceous plant, is often considered by Europeans a palliative for sea-sickness. Also in the nature of a pun is the piece of charcoal, *sumi*, that word signifying the homestead.

The *honta-wara* or *zinbaso (Halochoa macrantha)*, is a sea-weed that is a memorial of good fortune, for once upon a time, about A. D. 200, when Queen Jingo-kogo reigned, she, concealing her husband's death least the troops should be discouraged, headed a campaign against Corea. Her troops stationed at the margin of the sea were in danger of defeat on account of the lack of fodder for their horses. However, she ordered this *honta-wara* to be plucked from the shore, and the horses invigorated by their meal of sea-weed rushed victoriously to battle. At the close of the war Jingo-kogo gave birth to a son, *Hachi-man*, who, appropriately to the circumstances of his birth, became the Mars of Japanese mythology.

Another seaweed decoration is the *kobu* or *Laminaria saccharina*. The word is a pun bearing on the verb *yoro-kobi*, which means to rejoice, to gladden.

The last of this group of decorations is the *fukustutsumi*, a square piece of white paper tied up as a bag by a red and white string, *midzu-shiki*, that marks a present. It may be considered as a lucky bag, for its contents are offerings suitable to the season as,—

Kachi-guri,—roasted chesnuts.

Kazu-no-ko,—the row of the herring (*nishin*).

Kaya-no-tane,—the seeds of the *Torreya nucifera, Fam. Coniferæ*, used in the making of sweetmeats.

Kushi-gaki,—the fruit of the *kaki* (*Diospyrus kaki, Fam. Ebenaceæ*) dried on a stick or *kushi*.

The New Year arches are cut down in Tôkiô on the 7th of January, and in some places on the 3rd of January.

Another decoration is the *Daikoku-jimé*, a miniature ship of twisted straw containing representations of bales of grain, bits of green and little ornaments, as fancy dictates. The idea of the ship is that of an offering of first fruits. In order to bring the sleeper lucky dreams it is customary on the night of the 2nd of January to cover the pillow with a rude picture of a *Takara-bune*, or ship of riches, in which are seated the seven Gods of wealth, *Bishamon-sama, Fuku-rokujin, Benten-sama, Jirojin-sama, Hotei-sama, Daikoku-sama, Ebes-sama*.

The little new year heap of some two—more usually three—round rice cakes, (*motchi*) of graduated size, piled one above the other and conspicuously placed on a lacquer stand, may be regarded partly as ornament, and having served this purpose are eaten on the 11th of January. At the close of the old year these *motchi* cakes are plentifully displayed at shops, and are also made by parties of three men who go about the streets for hire, provided with an oven, a bottomless tub, and some matting to replace the bottom, all carried slung on a pole and borne on the shoulders of two of the men, whilst the third carries the heavy mallet for the prolonged striking of the paste with resounding thuds the whilst, to prevent it rebounding. The sticky mass is placed on the soft mat in the tub. He also bears a board answering the purpose of a pastry-board on which to make up into form the well beaten cake.

Another feature of the New Year is the universal *visiting* when the orthodox greetings are,—*Shi-nen no go shingi wo moshi-agemas*, or more simply *omédetto*. The Japanese equivalent of a new year's gift is made at the end of the old year and is called *seibô*; however as a matter of convenience the present giving is often combined with the new year visiting.

The *games* played at this season of the year are very suitable. The girls dressed in their best which has been carefully hoarded during December, or better still in new clothes, with gaily ornamented battledores, of usually *kiri* wood (*Paulonia imperialis, Fam. Scrophularineæ*), strike briskly the airy little shuttlecock made of the black seed of the *muku* (*Homoioceltis aspera, Fam. Celtideæ*) winged with feathers and decorated, singing out the while,—

Hito-go ni futa-go—mi-watashi yo-mé-go
Itsu yoni musashi—nan no yakushi
Kokono-ya ja—to yo.

or,—

Hitori no musumé wo—futari shité
Miru tabi yoru tabi—itsu shika mudzu-kashi
Nan no yakushi—kokono-ya torasho.

Both these songs, it will be seen at once, are rhymes of the numbers up to ten.

Another pastime is the *ball* made of paper and wadding symmetrically wound about with thread or silk of various colours. A popular song of the ball, playing on the numbers is,—

Hi, fu, mi, yo—mi yo no yoshida no
Katasumi oroshité—kiri ni kizandé
Tamoto yé iréru—tamoto ga nuréru
Kiyomidzu kiyomidzu—kiyomidzuno
Sambon yénoki ni—sudzumé ga samba
Tômatta—ichiwa no sudzumé ga
Hato ni owareté—aré ga chin chiu
Koré ga pô pô—madzu ikkan kashimashita.

or,—

Mukô mîshai—shin-kawa mîshai
Odawara nanushi no—naka musumé
Iro-jirodé—sakura-irodé
Yédo-zaki shiwo ya yé—morawaréta
Sono shiwo-ya ga—daté no shiwo-ya dé
Kotoshi wa nâni wo—kisemashô
Kin-ran don-su ni—ai murasaki wo
Nana kasané—nana kasané
Ya-kasané kasanété—somété okureyo
Kôya san—kôya naraba
Somété mo shinjo ga—kata ni nani wo
Otsuké-yaru—yuki furi ni
Mumé no ori yéda—sakura no ori yéda
Naka wa Gô-jô no—sori hashi
Sono hashi wo—wataru hito toté
Watarana hito toté—chokin chokera ko to
Kokin kokera ko to—chaya no musumé ni
Utaréta—utaréta ga
Memboku nai toté—karasu-gawa ye
Mi wo nagéta—mi wa shidzumu
Kami wa ûkédo—sozo ea tongo no
On kokoro—madzu ikkan kashimashita.

A Japanese lady has kindly given me a rendering of this song, of which an exact translation would be difficult, as the song is old. The sudden transition of subject towards the end looks, she thinks, as if some part of the song had fallen into disuse. The tale runs thus:—

"See opposite,—see, Shin-kawa!

A very beautiful lady who is one of the daughters of a chief magistrate of Odawara-chô. She was married to a salt-merchant. He was a man fond of display and he thought how he would dress her this year. He said to the dyer: "Please dye this *Kinran* and *Donsu*, and the purple for the middle dress into seven or eight fold dresses," and the dyer said. "I am a dyer and, therefore, I will dye and stretch it. What pattern do you wish?" Either the dyer or the merchant reply. "The pattern of falling snow, and broken twigs, and in the centre the curved bridge,—*Gojo*."

Crossing or not crossing this bridge *chokin chokira, kokin kokira* (these words are inserted to fill up the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

rhythm and have no known meaning). The girl was struck here and there and the tea house girls laughed ; put out of countenance by this ridicule she drowned herself in the Karasgawa, the corpse sunk, the hair floated. How full of grief the husband's heart,—*now*, the ball counts one hundred !

Sometimes during a game of ball, simple counting of how many rebounds can be kept up seems to be going on ; the counting is, however, a regular game of debit and credit as I have endeavoured to explain in the following table.

FIRST TURN.

A KEEPS UP 100 BOUNDS.

A's Account.		*B's Account.*	
A lends B	A pays back to B	B lends A	B pays back to A
—	—	—	—
100			
	2nd Turn, B keeps up 60 bounds.		
			(and still owes A 40) 60
	3rd Turn, A keeps up 30 bounds.		
This with previous debt of 40 makes 70 that A lends B 30			
	4th Turn B keeps up 100 bounds.		
		30	70
	5th Turn. A keeps up 20 bounds.		
	20	10	
		and so on.	

The boys specially devote themselves to kite-flying. The kites are constructed of Japanese paper which is both thin and strong, and having light bamboo frames they fly very easily during this season of prevalent winds, and produced a loud humming noise due to a piece of whalebone which is attached to the kite being set in rapid vibration by the wind.

For bad weather, or amongst those who have ceased to care for these active sports, such games as *Jiu roku musashi*, in which the board is divided into squares and diagonals on which move sixteen men held by one player, and one large piece held by the second player. The point of the game is either that the holder of the sixteen pieces hedges the large piece so that it can make no move, or that the big piece takes all its adversaries ; a take can only be made by the large piece when it finds a piece immediately on each side of it and a blank point beyond. *Sugo-roku* is entirely a game of chance. It consists of a sheet of pictures,—educational pictures are at present fashionable—but the oldest *Sugo-roku* is *Dochiu Sugo-roku*, and is the journey between Kiôto and Tôkiô. The players write their names on slips of paper, or anything, and throw in turn a die ; the slips are placed on the pictures whose numbers correspond to the throw. At the next round, if the number you throw is written on the picture you find directions as to which picture you move forward or backward to. You may, however, find your throw a blank and have to remain at your place. Winning consists in reaching a certain picture.

Making verses, something like our own paper games ; simple lotteries, or *Fuku-biki*, for various objects, and card playing, *Karuta*, are popular amusements.

The passing *Tori-wo-oita*, a strolling *samisen* woman-player, or a party of *Kagura* performers are called in to afford pastime to the spectators ; the latter by the quaint animal-like movements of the draped figure who wears a huge grotesque scarlet mask on his head, and at times makes this monster appear to lengthen and retreat its neck by an unseen change in position of the mask from the head to the gradually extended and draped hand of the actor. The beat of a drum and the whistle of a bamboo flute form the accompaniment to the dumb show acting.

The 3rd and 4th of January are conspicuous days of the New Year. They are the "going out days" (*desoné, no, shi*) of the fire brigades. There are about fifty brigades in Tôkiô, each numbering 50 to 70 men. The men rally at an appointed place and form a procession to carry their new standard (*matoi*), ladders, lanterns, etc. This procession pauses at intervals when the men steady the ladder with their long fire hooks, whilst an agile member of the band mounts the erect ladder and performs gymnastics at the top ; his performance concluded, he dismounts and the march is continued, the men, as before, yelling joyously at the highest pitch of their voices.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of this Society was held on Wednesday, the 24th instant, in the Society's room, Kai Sei Gakko, Tôkiô, Dr. Syle, Vice-President, in the chair.

The Recording Secretary read the minutes of last meeting, which were approved, and he thereafter announced that at last Council Meeting the following gentlemen were duly elected members of the Society :—Messrs. Hodges, H. B.M. Consulate, Yokohama ; J. von Schaeffer, Austrian Legation; and E. Kinch, of the Japanese Agricultural Department. Dr. Murray, Kaga Yashiki, was elected a member of Council in place of the Hon. A. Mori, whose absence from the country prevented his taking an active part in the Society's work. The Library Committee reported some additions to their journals.

The Chairman referred to the reappearance among them after his return from America of Dr. Murray, who was while there, the accredited representative of this society to corresponding Societies, and bore to them its greetings. Dr. Murray, in response said that it had given him great satisfaction to meet, whenever possible, the learned Societies of the United States, and to convey to them the greetings of the Asiatic Society of Japan. He added that he found all greatly interested in matters pertaining to Japan and eager to obtain information regarding its moral and material history and development. At Washington he frequently attended the meetings of the Philosophical Society of which the venerable Professor Henry was the President ; that in New York he visited the Geographical Society whose President, Judge Daly and the principal leading members evinced the deepest interest in the Japanese people. He had the honour, also, of visiting the American Academy of Science, the Franklin Institute, the Society of Civil Engineering, the Society of Mining Engineers of the United States, and the Academy of Fine Arts, at Philadelphia ; the Museums of New York, Boston, Cambridge, etc. ; from all of which he received, as the representative of this Society, and of the Japanese Department of Education, repeated marks of courtesy and kindness. He conveyed to the Society the hearty congratulations and best wishes for its prosperity of its friends and correspondents in America.

In response to an allusion made by the Chairman, Dr. Murray spoke of a paper on the early study of the Dutch language in Japan by young Mr. Mitsukuri. This paper, he said, was prepared for publication in one of the Japanese journals, but the subject was of such great interest and so peculiarly adapted to the purposes of the Society, that it would be a matter of regret if it could not form a part of its proceedings. He hoped that arrangements might still be made to have this paper read before the Society. It possessed an additional interest from the fact that the young author was quite recently a student in the Kai Sei Gakko, and was now pursuing his studies in America. He was a descendant of a long line of distinguished scholars, and the ability and literary skill displayed in the paper gave evidence that the line would be continued. The early introduction of the study of English into Japan would doubtless present many analogous difficulties and incidents. Too much honour could not be paid to the early efforts of such men as Fukusawa, Nakamura, and the Mitsukuris, for their brave struggles in overcoming these difficulties. The want of proper dictionaries and other helps made the labour very arduous. It was said that amongst fifty scholars, who in the early days were engaged in studying the language and endeavouring to make translations of books, there was but one Webster's Dictionary, and that they were compelled to utilize the hours of night as well as of day, that each in turn might have the use of it. The history of this introduction of the study of the English language into Japan would make a most interesting paper for the proceedings of this Society.

The Corresponding Secretary was then called upon to read

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

a paper contributed by Mrs. Chaplin Ayrton on the Japanese New Year Celebrations.

The Chairman, after returning the thanks of the Society to the writer, remarked that the points of resemblance between the New Year amusements of Japan and those of China were numerous, especially in regard to what one might call symbol-puns, that is, plays upon words such as *lŏk*. This word meant *enjoyment, hilarity*, and at a marriage feast the idea was called up by the picture of a stag (*lok* also symbolizing *vigour*), and also by green tea, *lŏk cha*, (the green also representing freshness). On similar occasions a dish of ground nuts was placed on the table to symbolize longevity, their name, *tsang-sung*, meaning also continuous growth or long-life. Another prevalent custom of the Chinese New Year was for a company of the employés of a house of business to furnish themselves with a clarionet, a drum, a gong, castanets, and a trombone, and with these to make night, as well as day, hideous by reason of the din they kept up to the disturbance of the whole neighbourhood: this noisy operation was supposed to induce good-luck.

Mr. Chamberlain was now called upon to read his paper "On the use of 'Pillow-Words' and 'Plays upon Words' in Japanese poetry."

The Chairman, after returning the thanks of the Society to Mr. Chamberlain for his very interesting and erudite paper, apologized for recurring to China as the source of his illustrations; but as that was the field with which he was best acquainted, he hoped the Society would excuse his doing so. The stiffness and artificiality of Chinese poetry resulted in a great degree from their laws of rhythm which required certain sequences of *tones*, not *accent*. The almost universal metre was of eight syllables to each line, with a uniform caesural pause after the fourth, producing a dreary montony. There was also a metre of five syllables and another of seven, but the latter was seldom heard except in the doggerel lines composed or improvised by comic singers Nearly thirty years ago, the Chairman said, he had gone into the subject in association with the late Rev. Dr. Medhurst, for the purpose of seeing whether the Chinese existing metres and laws of versification could be made available for psalmody; but the conclusion was that little advantage, but rather on the contrary, much embarrassment would result from attempting to follow them.

In reply to some questions from Professors Grigsby and Smith, Mr. Chamberlain stated that the line dividing "pillow-words" of the first class from simple adjectives or similes, though, doubtless, sometimes a fine one, was yet in almost all cases one which a little consideration would render apparent. For instance, the "pillow-word" *nakukonasu*, which had been taken as an illustration, though suffering no phonetic decay, and though still applied to the expression it originally served to embellish, did certainly contain the slight element of obscurity necessary to constitute a "pillow-word." This was to be found in the syllables *nasu*, which generally signify "to do", or "to make," but which are here equivalent to *gotoku* (like), a fact which could not be known without enquiry, for many might at first sight be tempted to think that the word "*gotoku*" was simply suppressed after "*nasu*."

This same element of obscurity prevented the "pillow-words" from corresponding, as Professor Grigsby had suggested, to the Homeric epithets.

Mr. Chamberlain was unable to give the date of the first use of the term "pillow-word," or of the earliest treatise explanatory of their nature; but he informed the Society that the "pillow-words" themselves (whether already so termed or not) had been in use ever since the remotest ages of Japanese literature. The earliest thirty-one syllable ode, attributed to the god Suga-no-Mikoto, commences with the "pillow-word" *yakunimotatsu*.

Prof. Grigsby having enquired whether the ingenious and complicated explanations given by the commentators might not often be mere inventions of these same commentators, who attributed to the "pillow-words" more than they originally meant, Mr. Chamberlain replied that this might be the case with some few, but only with a few; and he then proceeded to quote and explain some more of these expressions, where, however far-fetched the interpretation might appear, there could be no doubt of its correctness. The way in which the true original meaning of many "pillow-words" was arrived at was by a reference to the *Jindaiki* and *Nihonki;* where they might be seen in a more primitive shape or in a more natural connection.

Mr. Chamberlain also incidentally drew attention to the striking contrast existing between the earlier and the later poems of the classic age. In the *Manyōshu* we seemed to breathe an altogether freer air, and to be nearer Europe than in any of the poems composed since the 8th century. In conclusion he begged to be excused if any of his explanations had seemed vague, for the subject was one of which vagueness formed more or less the essence and the charm.

In answer to Dr. Murray, who asked whether euphony might not be the determining cause of the use of "pillow-words," Mr. Chamberlain said this might to a certain extent be so, and that he had pointed to this in his paper by considering "pillow-words" and "plays upon words" as occupying in Japanese poetry the place of rhyme and other Western poetical ornaments. It would, however, in the mellifluous classical language of Japan, be hard to find one word which was less euphonious than another. In that tongue, so different from the semi-Chinese jargon of the present day, every syllable was a delight to listen to.

D. H. MARSHALL,
Recording Secretary.

MEETING OF FIRE INSURANCE COMPANY'S AGENTS.

A meeting of Fire Insurance Agents was held at No. 3, on Friday afternoon, the 2nd instant, the following offices being represented:—

Royal Exchange Assurance Corporation, The London and Lancashire Fire Insurance Co., The Phœnix Fire Insurance Co., The Manchester Fire Insurance Co., Norwich Union Fire Insurance Society, Sun Fire Office, London and Lancashire Fire Insurance Co., London Assurance Corporation, Lubeck Insurance Co., Britannia Fire Association of London, The North British and Mercantile Insurance Co., of London and Edinburgh, Scottish Commercial Insurance Co., The Staffordshire Fire Insurance Co., Imperial Fire Insurance Co., China Fire Insurance Co., The Queen Insurance Co., of Liverpool, The Commercial Union Assurance Co., London, Guardian Fire and Life Assurance Co., London, The Scottish Imperial Insurance Co., Hongkong Fire Insurance Co., Limited, Hamburg-Bremen Fire Insurance Co., Berlin-Cologne Insurance Co.

Mr. Wilkin was called to the chair, and after a lengthened discussion the following resolutions were passed:—

1.—That a surveyor be appointed for a twelvemonth from date of appointment, to at once inspect and report upon all chimnies and stoves in insured buildings, and to do so again at the commencement of the cold season, at a fee of (——) to be borne by the Companies interested, in proportion to their risks.

2.—That no application for renewals after 1 January 1878, or fresh risks from date, on buildings in which fires are used, be entertained, until a report has been received from said surveyor, cost not to exceed (——), and to be paid by the applicant.

3.—That the appointment of a surveyor be left in the hands of the standing Committee, at a fee to be fixed by them.

M. Louis Blanc and forty other Radical members have submitted to the Chamber of Deputies a bill for the abolition of capital punishment. They assign the following reasons:—"That the right to inflict an irreparable punishment implies an infallible judge; that to inflict death is a bad way on the part of society of inculcating respect for life, and consequently of arresting the arm of the murderer; that the spectacle of the blood shed by the executioner hardens perverse hearts, and is an obstacle to that refinement of manners which should be the result and is the sign of an advanced civilization; that the punishment of death has been condemned by the greatest criminal lawyers; that the countries where it is abolished have only had to congratulate themselves on its abolition; that the punishment of death, in a word, produces effects in every way contrary to those expected by its partisans."

It is announced that the Detached Squadron, under Rear-Admiral Lambert, C.B., consisting of the Narcissus, Immortalité, Newcastle, and Topaze, has been ordered to Japan.

Correspondence.

"YES: YES: IN THOSE MERRY DAYS."

To the Editor of the "Japan Weekly Mail."

Yokohama, 2nd February, 1877.

Dear Sir,—In your admirable, and unusually correct report of the complimentary dinner given at the Grand Hotel on the 24th instant to Mr. Howell, by no means the least successful speech of the evening appears to have been that of the gallant Captain of H. M. S. *Modeste* in reply to the toast 'Our Armies and Navies.' In deference, doubtless, to the fact that the army, at least, of the great country whose representative in Yokohama occupied the chair, is mainly a force of Volunteers, Captain Buller revived, in the recollection of his audience, one of the few occasions when a branch of the volunteer army of Yokohama—the 'Plungers' had an opportunity of distinguishing itself, which it seized with that rapid grasp and consummate judgment of concurrent circumstance, which must always be the prominent attributes of cavalry, if it is ever to be useful in warfare. But Captain Buller's memory had not retained all the circumstances of the incident: as they stand, his remarks hardly shed that lustre on the deeds of the 'First Yokohama Light Dragoons' which he evidently (to my mind) intended to throw. May I ask your permission to supplement this deficiency, and to lift from the eminently judicious strategic manœuvre of my *corps*, referred to by my gallant friend, the proverbial bushel which has hitherto obscured its light?

A field day and sham fight had been arranged—the 2nd battalion of the 20th Regiment was under arms, reinforced by a detachment of marines and 'Jacks,' under command, I think, of our eulogist of the other night. To us was assigned the post of honour (and of danger—for two of us came to grief in a ditch—) on the right of the line; and our orders were to 'keep a bright look out for the (imaginary) enemy, till tiffin time, when we were to retire on the main body, in good order and in face of an (imaginary) overwhelming force at the sound of a bugle.

We rode off, to the right, for about three miles, over a difficult country, till our commandant 'imagined' the enemy, and there we sat for more than two mortal hours, watching the red coats and blue jackets marching and counter-marching, and expending their quarter's allowance of powder in the dim perspective. Noon came, and passed, the 'distant gun' ceased firing and, through his opera glass, our Chief could discern that the 'army' was enjoying its tiffin. Still we watched the 'enemy' and waited for the bugle. No enemy, no bugle, interfered with our watch, and, about one o'clock, the chief announced that the army had apparently finished its tiffin, and was fast disappearing in the direction of Yokohama.

Then, Sir, occurred that opportunity for distinguishing himself by accepting responsibility, and acting with decision and promptitude, which has been the attribute of the British cavalry officer, from Anglesea to Cardigan. Our Chief did not hesitate a single instant. He *ordered his own bugle to sound*, and gave the word to fall back on our own tiffin baskets! And he found—as a British cavalry officer always will find—that his men were to be depended on!! The style in which we fell back on those tiffin baskets, I venture to state, will bear comparison with any movement of the kind on record!

Sir, I am a plain, blunt, long sword, saddle-bridle, &c. dragoon, and I cannot give you an accurate bill of fare of that tiffin. I just remember, (because I was opening a bottle, when the interruption occurred) that the champagne was a full flavoured and dark coloured brand—Lanson père et fils—which I can't get now; but of the viands all remembrance has vanished. They were, themselves, tending towards the vanishing point, when an *aide de camp* of Colonel Browne's came tumbling over our baskets with:—"Hullo, Plungers—what the devil are you doing here? The Colonel's orders are that you "are immediately to go to—Homoko!" (about 4 miles off). Did our gallant and judicious chief instantly obey that order? No. He reflected that, with tired horses and exhausted, starving men, his little force would be of no use at Homoko, but would be simply sacrificed. He therefore took upon himself to order us to stay where we were, and finish our tiffin. And then—mark the sequel—we went off at a hand-gallop to Homoko where, 'imagining' our enemy to have passed through the village, we fell on him quite unexpectedly in the rear and, unassisted, drove him, horse, foot, and artillery into the sea. It is hardly necessary for me to point out that, had we attended to the general's orders, we should have got to Homoko half-an-hour sooner, found ourselves in front, instead of in rear of the enemy, and the driving into the sea would have been all the other way.

This, Sir, is a short but correct account of the brilliant cavalry action of Homoko, which our gallant representative, Captain Buller, doubtless intended to include in his remarks, in returning thanks for the toast to our healths.

I am, Sir,

Yours modestly,

THE LAST OF THE PLUNGERS.

A NICE POINT OF LAW.

To the Editor of the "Japan Weekly Mail."

Yokohama, 1st February, 1877.

Dear Sir.—Some few months ago I communicated to you a few of what Artemus Ward would have called, "startlin fax" about Japanese Bankruptcy proceedings, and having again been in troubled waters with a *very high* officer, I think that the following may be of interest to many of those who think that the cruel Tojin rides roughshod over the poor Japanese.

Early in December last I was requested to attend at the Tôkiô *Saibansho* for the hearing of my case, which had then been pending nearly three months, against a Japanese official, and to bring my witnesses, etc. This I did, but the defendant did not appear, and his attorney said that without him he was unable to proceed with the case. The Judge expressed his regret that I had been put to such inconvenience, and said that the defendant would be punished accordingly; and I was eventually asked to send a memo of my expenses to the Tokio *Saibansho*. An order was made by that department that defendant should pay same, and I was informed that my case would be called again at an *early date*. Here is where the laugh comes in! The defendant *refuses to obey the order of the Tôkiô Saibansho*, and will not pay the expenses incurred, and therefore the matter will be treated criminally, and until the criminal prosecution is finished, the original case must stand over. This is particularly pleasant for me, as according to another very nice law, the period of thirty-five days must elapse before the criminal prosecution can take place, and this will doubtless be spun out by various excuses, sickness, deaths of fathers and uncles, wives, and so forth, so that if the original case is called on by January next year I shall be very lucky.

Yours truly,

IKE-NIYE.

The Austrian Minister of Commerce, in bringing forward some railway bills in the Lower House of the Reichsrath on the 1st inst., said, that if the House declared itself in favour of the State taking over the administration of the railways the Government would bring in a scheme to that effect. The Austrian Minister of Finance has concluded with the house of Rothschild and the groups connected with the Creditanstalt a loan of somewhat over 50,000,000 florins at 4 per cent. It is to be paid in gold, and it is stated that the price "materially exceeds 73 per cent. in paper currency."

Madame Patti's benefit at Moscow has been a tremendous success. An overcrowded house greeted Madame Patti with the utmost enthusiasm, which extended to the outside of the building among the crowd unable to gain admission. There were sixty calls for the *bénéficiaire* during the performances, and more than 300 bouquets were showered upon her, besides which she was presented with a beautiful pair of diamond and sapphire earrings.

The Berlin correspondent of the *Times* telegraphs that the Russian exploring expedition to Mongolia under the direction of M. de Patnine has been stopped by the Chinese at Tulta. Upon M. Patnine declaring his intention to proceed the Chinese authorities refused to guarantee his safety.

Law & Police.

IN H. B M.'s VICE-CONSULAR COURT AT TOKIO.

Before H. S. WILKINSON, Esq., Vice-Consul at Tokio.

Monday, January 29th, 1877.

In the matter of a petition and counter claim :—KUSUMOTO MASATAKA, *Gon-chiji* of Tokio *Fu*, plaintiff, *vs* ARTHUR BLOCKLEY and BRIDGET BLOCKLEY, his wife, defendants ; and ARTHUR BLOCKLEY and BRIDGET BLOCKLEY, his wife, plaintiffs *vs* KUSUMOTO MASATAKA, *Gon-chiji* of Tokio *Fu*, defendant.

Plaintiff in his petition claimed $618 ground rent due on the Yedo Hotel, Tsukiji, according to lease.

Defendants demanded that the petition be dismissed, and brought in a counter claim for $5,000 damages, in consequence of the Japanese Government having violated the lease by allowing foreigners to reside outside Tsukiji, and thereby injured defendants' trade as hotelkeepers there.

Mr. Lowder appeared for plaintiff; Mr. Kirkwood for defendants.

Mr. Kirkwood for defendants claimed that this action had not been brought altogether according to law. The Judicature Act stipulated the necessity of stating the grounds of law on which the plaintiffs' argue their motion. Such had not been stated, and Mr. Kirkwood was quite unaware of what tenor they might be and consequently was unprepared to meet them with the necessary argument.

Mr. Lowder maintained that he had carried this action wholly according to the requirements of law ; indeed he had followed in the words of the Judicature Act which had been cited by Mr. Kirkwood. Mr. Lowder cited a case showing this point in his favour.

After some discussion the Court decided that the motion should be amended by inserting the grounds of law upon which, principally, plaintiff intended to argue his case. The Court further decided that there should be no costs in the case, counsel on either having agreed upon the point.

Mr. Lowder amended his motion, and then opened the case for plaintiff as follows :—

The first ground upon which I demur is a technical one. It is that the parties are mis-joined and non-joined under a section in the Judicature Act, 1873, sec. 24, sub-sec. 3. By these it will be seen that in a contract in which a breach is alleged, there is a mis-jointure. It is nowhere stated that the *Chiji* of the Tokio *Fu* is a party to the contract. It is a non-joinder because the *Chiji* of the Tokio *Fu* is not mentioned as a party to the contract in which a breach is alleged. The contract stated is that foreigners should only reside within the limits of Tsukiji. The breach of contract, that foreigners have during the past four years, to the knowledge of plaintiff lived outside these limits. The contract was between the Japanese Government and the Foreign Ministers. Defendants, the Blockleys, were in no way parties in the contract and therefore cannot sue for any breach thereof. It is needless to cite any cases upon such a simple point. On those grounds I claim that defendants have no *locus standi* in this case. The Court would have had jurisdiction in the matter had the case been originally instituted by defendants I need not argue upon that point. It is evident that when a party is out of the jurisdiction of the Court, the Court cannot judge them. The English Courts, I maintain, will not judge in a suit of State, and that foreign governments cannot be sued by English subjects. It is an act of State. The counter claim also refers to an agreement entered into between the Government and the Foreign Ministers. I will refer to the case of the Duke of Brunswick *v.* the King of Hanover in Smith's Leading Cases, Vol. I, page 663. It is there decreed that a sovereign is not liable to be sued in matters of state. There are several other cases which I can cite to show this point (Mr Lowder then read several). My argument is that in the matter of the Government allowing foreigners to live outside Tsukiji limits, it is a political act of the Government, and this Court cannot interfere with its sovereign rights. I need not enter into long arguments on this point. This case should have been brought by the Foreign Ministers against the Japanese Government. The Blockleys had no action in the contract which they claim has been broken, and therefore have no right to sue on such a ground. A case has just been reported by last mail in which the decision serves to support fully the arguments I have used, where the Court had refused to grant an injunction against the Peruvian Government at the instance of a shareholder in a guano company. I refer to the *Times* of 8th December last.

This closed Mr. Lowder's argument for plaintiffs, and the Court adjourned till Saturday next at 10 o'clock.

Tuesday, January 30th, 1877.

W. HOWLES *v.* E. C. KIRBY, W. H. TALBOT and others.

Mr Kirkwood appeared for plaintiff, Mr Dickins for defendants.

JUDGMENT.

In this case Mr Dickins moved on behalf of the defendants that the plaintiff should be ordered to answer certain interrogatories. Mr Kirkwood asked that the motion be dismissed with costs on the ground that there was an agreement which rendered the motion unnecessary, and which he, on his part, had always been ready to carry out. The facts as to the agreement are not disputed It appears that on the 30th of October Mr Dickins wrote to Mr Kirkwood asking him if his client objected to answer certain interrogatories, or else he would have to make a motion. Mr Kirkwood replied on the 1st November, saying he had no objection to his client answering fair interrogatories, but that the costs connected therewith would have to be borne by the defendants. On the 6th Mr Dickins wrote to Mr Kirkwood saying that the costs would have to be costs in the cause, and on the 10th Mr Kirkwood requested that the delivery of the interogatories might be delayed, to which Mr Dickins replied saying that he would not send the interrogatories till Mr Kirkwood was ready. After a lapse of eleven days—on the 21st of November—Mr Kirkwood wrote to Mr Dickins requesting him to send to him the interrogatories. This letter Mr Dickins returned unopened, together with a memorandum stating that he declined to receive any communications on any subject whatever—that all business communications must come through the principals, and from Mr Dickins' side all such should be so sent. Mr Dickins follows this up by writing direct to the plaintiff, Mr Kirkwood's client, on the 22nd November, intimating that the interrogatories to be answered by him would be sent to him on the following day ; the interrogatories were accordingly sent to the plaintiff with a letter from Mr Dickins stating that he addressed himself direct to him because he was unable to hold communication with Mr Kirkwood. Mr Howles returned the interrogatories, stating that as he had put his case in Mr Kirkwood's hands, all communications must come through him. Mr Dickins then wrote again to Mr Howles, stating that he declined all communication with Mr Kirkwood, and as it was perfectly easy for Mr Howles to hand over any communication to him, he would apply to the Court, and he, Mr Howles, would have to stand the costs.

At the hearing of the motion, when these facts and the arguments of Counsel had been placed before me, I considered that as it had been agreed that interrogatories should be delivered, the granting of an order to that effect would of itself do no injustice to either side ; and I accordingly granted the order; but without prejudice to the question of costs, which was reserved.

The question appeared to me to be a very clear one ; but as the position taken by Mr Dickins was similar in many respects to the position he had taken in a case which came before me a short time previously, and in which I had expressed a strong opinion against Mr Dickins, I wished, before giving a decision, to have an opportunity of consulting the authorities, and therefore refrained from giving any expression to my views upon the point. Mr Dickins, to justify the course he has taken relies upon Section 225 of the Rules of Court, requiring that service of documents should be personal.

It is true that he did not lay great stress upon this contention, but it is necessary to consider it. The rule referred to requires that the person ordered by the Court to be served shall (except in special cases) be served personally ; but it does not, it appears to me, prevent the application of the rule which prevails in England, under which the person to be served is the solicitor engaged in the case—and indeed it has been the practice in this Court to serve the solicitors and not their clients. But it is unnecessary now to decide this point ; for, as I interpret the agreement which was come to between Mr Dickins and Mr Kirkwood as embodied in the correspondence, it was an agreement that the English practice should be observed, and that the rules of Court should be waived, so far as they might be inconsistent with that practice. The negociations up till the 10th of November had been carried on between Mr Dickins and Mr Kirkwood—not through their clients but in the ordinary way—and so far from there being any indication that that course should be departed from, Mr Dickins on that date writes to Mr Kirkwood - "I shall not send you the interrogatories until you tell me you are ready,"—showing, it appears to me, that the usual course of sending the interrogatories to Mr Kirkwood himself was distinctly contemplated. Now, where a solicitor is to be served, it is not sufficient to serve the client. This is clearly laid down in the case of *Stevens and Underwood* 6. L.I., C.P., 20, and I am of opinion that Mr Dickins, in send-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing the interrogatories to Mr Kirkwood's client, did not carry out the agreement entered into with Mr Kirkwood, and that if he had carried out the agreement, the application to the Court would have been unnecessary.

I am therefore of opinion that the costs of the motion have been incurred through Mr. Dickins' own fault, and that they ought therefore not to be borne by the plaintiff, and that the only question is whether they ought to be borne by the defendants, or by Mr Dickins himself.

It is clearly laid down that a solicitor cannot recover the costs of proceedings taken by him unnecessarily, and I consider these proceedings to have been taken by Mr Dickins unnecessarily; it is also clearly laid down that a Court may order a solicitor to pay out of his own pocket the costs which either his own client or the opposite side may have incurred through his fault, and I consider that the costs incurred by the plaintiff were incurred by Mr Dickins' fault. Not only has Mr Dickins failed to carry out his agreement with Mr Kirkwood, as I interpret it, but in communicating directly with Mr Kirkwood's client he did what, it appears to me, he ought carefully to have avoided. The authorities show that such direct communication with the opposite party, when he has a professional adviser, is strongly discouraged by all the superior Courts at home, and Mr Dickin's attention had but a short time before been called to this point by this Court, and Mr Dickins is not, in the exercise of his profession, entitled to mark out a course for himself different from that which the practice of the profession as recognised by the Courts has marked out for him, simply because the latter course is personally disagreeable to him. But on the other hand Mr Dickins in this case has been more careful to guard himself against the unfavorable construction to which he laid himself open in the case referred to, and the order to a solicitor to pay costs out of his own pocket is always considered a strong measure, and if such an order were now made in this case, it might convey a greater degree of censure on Mr. Dickins' action in the matter than is intended. While I consider it right therefore not to pass the matter over entirely, I shall confine myself at present to the usual order that the costs of the motion be paid by the defendants, and leave it to the defendants to take such action on the taxation of costs and otherwise as they may think right.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E. M.

(The Engineering & Mining Journal.)

The earliest accounts we have of Japan represent the country as having great mineral wealth, especially of precious and useful metals. Marco Polo, the Venetian traveler, in the thirteenth century writes of "Zipangu:" "They have gold in greatest abundance, its sources being inexhaustible. The king does not allow of its being exported. To this circumstance we are to attribute the extraordinary richness of the sovereign's palace. The entire roof is covered with a plating of gold. * * * The ceilings of the halls are of the same precious metals; many of the apartments have tables of pure gold of considerable thickness, and the windows also have golden ornaments." Marco Polo also gives an account of an unsuccessful Tartar expedition against Japan, prompted by the supposed great wealth of the country.

Columbus, as well as many other explorers, were attracted and encouraged by the prevalent reports of the wealth of the same island of Zipangu.

Kaempfer, writing in 1727, also speaks of the great mineral wealth of Japan and especially of the abundance of gold, which, he says, is found in many provinces.

The Portuguese and Dutch while they had trading posts in Japan, furnished tangible evidence of the truth of the early reports. Between 1550 and 1639 the Portuguese merchants sent home from Japan nearly three hundred million dollars' worth of bullion, most of which was gold. As the relative value of equal weights of gold and silver was then six to one, while in Europe, at the same time, it was nearly twelve to one, the exchange of silver bullion for gold was by no means an unimportant part of their business. After the Portuguese, the Dutch continued the exportation of bullion, and the exchange of silver for gold, through with less profit, as the relative value of gold increased with the demand. Between 1649 and 1671 the Dutch traders sent home over two hundred million dollars in bullion, of which, however, nearly two-thirds was silver.

In 1671 the Japanese Government, alarmed at the rapid rate at which the precious metals were leaving the country, issued an edict forbidding the exportation of gold or silver, under heavy penalties, which had the immediate effect of stopping this trade.

Besides bullion, copper formed at this time a most important article of export. According to Dr. Geerts, † who has examined the old books of the Dutch factory in Nagasaki, between 1609 and 1858 about 280,000 tons (of 2,000 lb.) were exported by the Dutch, and during the same period over 250,000 tons by Chinese merchants.

According to Japanese historians, the arts of mining and metallurgy were introduced from China, probably through Corea, toward the close of the seventh century. The following dates are given on the authority of Dr. Geerts, but some at least are open to doubt:

667 A.D.—Silver first discovered in Japan.
674 A.D.—Silver smelting works established.
‡684 A.D.—Copper first discovered in Japan.
‡706 A.D.—Copper coins first made.
749 A.D.—Gold first discovered in Japan.

Long before this time, however, the arts of mining and metallurgy must have reached a high state of development; for copper swords and spear-heads, copper tools of various kinds, and specimens of a very peculiar form of copper bell, are frequently found buried in the earth. If the statements of Japanese antiquarians concerning these articles be accepted, they must certainly be regarded as very ancient, possibly belonging to a pre-historic age of copper, but certainly antedating the years given above by many centuries. I have in my possession a large copper bell of this kind, which I hope to exhibit to the Institute at some future time.

But to return to historic times. Untill the advent of foreigners the processes in use were very rude, and the production of metals very small. The history of Japanese metallurgy really dates from about the year 1600 A.D., when copper was first smelted on a large scale. The production of gold, probably from easily-worked placer deposits, reached its maximum earlier, during the latter half of the sixteenth century; while silver, requiring greater metallurgical skill, was produced in largest quantity about the middle of the seventeenth century.

Owing to various causes, which will be fully discussed hereafter, the production of precious metals has gradually fallen off, so that the present annual yield is comparatively small. The amount of copper now produced is about the same as the average of former years, showing little increase or decrease.

Kaempfer, 1727, enumerates, in addition to gold, silver, and copper, the following as the mineral products of Japan, viz., sulphur, iron, tin, coal, salt, agates, jasper, and naptha. This list, with few additions, is nearly the same as we would give today. With respect to the production or exportation of these minerals in former times, we have no reliable information, but the amounts produced or exported must have been insignificant.

Past history, though making a very creditable showing of wealth, does not warrant the prevalent belief in the extraordinary mineral riches of the Japanese Islands, unless we suppose that the greater part of these riches are as yet undiscovered, and that more thorough exploration will greatly increase the number of valuable mines. This is the general belief both of Japanese and foreigners. The large amounts of gold, silver, and copper exported from Japan in past years are thought to be only a tithe of the possible yield under more advantageous circumstances. Japan is even now looked upon as an "El Dorado," waiting the advent of a more energetic people to yield her enormous riches. To-day foreign capitalists are anxiously awaiting the time when Japanese mines shall be opened to them, and are impatient of the restriction of the Government, which prevent them from developing the great resources of the country to their profit.

The Japanese, however, are very close observers of nature, and make good prospectors, and in the centuries since their attention was first turned to mineral deposits, they have left little or no ground unexplored; while in the mining districts every hill is riddled with tunnels and adits.

It seems probable that the gold, silver and copper of previous years have been derived from a large number of poor deposits, worked by very cheap labor; and most of these old mines cannot now be worked, owing to the increasing value of labor, and to a real and practical exhaustion of most of the deposits. Improved methods of mining are much needed, and will undoubtedly, if

* A paper read before the American Institute of Mining Engineers, at the Philadelphia meeting, June, 1876.

successfully introduced, increase largely the product of the mines.

Within the last few years the Japanese Government has done much to encourage mining industry, and to determine the real value of the mining deposits of the country. Foreign engineers and scientific men have been permitted to travel through the country, even when all others were excluded. The island of Yesso has been made the subject of several geological surveys and reconnaisances. Foreign mining engineers have been employed by the Government and private enterprise to examine and report upon mines and mineral lands in other parts of the country. The Government has also established a "Mining Office" under she direction of competent foreign engineers, having charge of the Government mines, many of which are now worked by the most approved foreign methods, with foreign mrchinery, and under the control of resident foreign engineers.

Much, however, remains to be done. The great want of the country is for a thorough and syctematic geological survey, in the broadest sense of that term; a survey which shall not only map out the topographical and geological features of the country, determine the age and thickness of its formations, but also take an inventory, as it were, of its mineral wealth, determine the boundaries of its mining districts, and the extent and value of the deposits of each; determine where further exploration should or should not be made, and collect into one repository the information already obtained by other explorers.

In the present paper I propose to show what has been learned with regard to the real mineral wealth of the country, and how much has been done towards a thorough and systematic development of the country's resources. For this purpose I shall supplement my own notes, the result of over three years, residence and travel in the country, with a free use of much that has been published on the subject, and of unpublished data and statistics furnished by friends, and derived from Japanese sources.

GEOLOGY OF JAPAN.

As an introduction to an account of the mineral wealth of Japan, it will be necessary to give some idea of the geological formation of the country. Reserving for another time and place a more elaborate description of the different rock formations, with their characteristic fossils, geographical distribution, and stratigraphical relations, I will attempt at present only a brief sketch of the subject.

The different strata of the Japanese Islands may be classed as follows, beginning with the most recent:

	Formation.	Approx. Thickness.
1.	*Alluvium and Terrace Formations*	10 to 85 feet.
2.	*Volcanic Rocks*, in veins and erupted masses, (mostly Basalts).....	50 to 500 "
3.	*Clay rocks and pumice tufas*, (Toshibets Group of the Yesso Survey).....2,000 to 2,300 "	
4.	*Shales and sandstone*, (Chingkombe group of the Yesso Survey) ..... 1,000 to 1,800 "	
5.	*Volcanic Rock*, in erupted masses (Andesites and Trachytes)	3,000 (?) "
6.	*Coal-bearing shales and sandstones*, (Horumui Group of the Yesso Survey)...	4,500 to 8000 "
7.	*Volcanic Tufas*, and erupted masses of volcanic rock. Porcelain clay rocks of Kiusiu, etc	4,000 (?) "
8.	*Shales and Sandstones*, (often metamorphic).....	
9.	*Granitic and Metamorphic rocks*, (Kamoikotan Group of the Yesso Survey)	3.000 to 4,000 "

The rocks of Japan, as will be noticed, are very largely volcanic; and even those of undoubted sedimentary origin are, with few exceptions, made up wholly or in part of volcanic material. Volcanic force makes itself everywhere manifest in folded and contorted strata, even the most recent rocks being often tilted at high angles. Volcanic action shows itself also in altered and metamorphic rocks, very new formations being represented in many places by slates and quartzites. Japanese coal, though of late tertiary age, is rarely found as a lignite, but usually as a true bituminous coal, and sometimes altered to anthracite or graphite.

Volcanic force continues to show itself even at the present day. Volcanoes, active and extinct, are numerous, and hot springs everywhere to be found; while earthquakes are almost of daily occurrence.

The scarcity of fossils in Japanese rocks may perhaps be attributed to the same cause. In the older rocks fossils have disappeared by metamorphic action, and in the later formations the great volcanic activity has retarded or prevented the development of organic life. For this reason it is impossible at present to say just what geological periods are represented by these Japanese strata. The coal-bearing rocks are now believed to be of tertiary age. The overlying rocks are still more recent, many of the fossil shells found therein being of the same species as those now living in Japanese waters. With regard to the age of the underlying strata, below the coal rocks, little or nothing is definitely known. Fossils said to be of Carboniferous age, and others said to be Devonian, have been reported; but, so far as I know, descriptions or figures of these fossils have not yet been published.

It is to be hoped that the fossils which were collected in the course of the Yesso survey, with others since obtained in different parts of Japan, when examined by some competent paleontologist, may furnish more definite information as to the age of these strata.

JAPANESE MINES AND MINING.

As a further introduction to the subject of this paper, it will be necessary here to say a few words about the methods of mining employed in Japan, and the present condition of the mines.

The oldest mines in the country are those worked for gold, silver, and copper: these, with the other metal mines more recently opened, follow, with few improvements, the rude methods of exploitation adopted centuries ago. Coal mining, being of more recent date, has profited more from foreign teachings and follows the method of the Western world, so far as it is possible to follow those methods without machinery, and with imperfect tools and appliances.

Method of Attack.—In the metal mines the deposit is usually attacked by an adit on the vein itself; or' in the case of a well-known lode, by a tunnel through the rock. The tunnels are usually constructed for drainage, and are often miles in length, requiring sometimes twenty or thirty years for their completion. To save labor, the airways, slopes, drifts, and exploring tunnels are made extremely small, and often very tortuous, following convenient seams in the hard rock, and choosing always the softest places—in vein or wall rock, as the case may be. The ore and rock are broken down with picks and wedges. Powder is used only in very hard rock, badly-shaped drills and unskilful use of powder making blasting troublesome and expensive.

Stopes.—The stopes are small, and the mine is generally "robbed" of its richest ore first, the poorer material being left in the mine, or taken out only when the miner is forced to it. The peculiar system of administration, by which the miner is allowed almost perfect liberty to select his own working place, and is paid by the amount of ore or metal produced, encourages this double waste of the miner's labor and of the resources of the mine.

Transportation.—The ore is brought to the surface by the shortest road on the backs of men or women; and the work of these ore-carriers is made doubly hard by the narrow and tortuous character of the passage.

Draining and Ventilation are, as a rule, effected by natural means, the lowest adit or tunnel forming the drainage level (*midzunuki*) and the highest the ventilation chimney (*kemuri dachi or kasatoshi*). When it becomes necessary to work below the drainage level, a series of rude wooden suction pumps are fitted up in a special slope, each pump raising the water about six feet and delivering it in a small reservoir or tank at the bottom of the next pump of the series. They are worked by hand, requiring one man to each pump, and can raise but a very small quantity of water, and that only at the cost of much time and labor. When the flow of water becomes large, or the height to which is must be raised great, the mine is abandoned.

Ore Washing.—The ore before smelting is handpicked, and the poorer parts crushed and concentrated by washing. The washing is effected by hand-jigging on shallow basket sieves of different degrees of fineness. The finest portion, which passess all the sieves, is washed on a sleeping table or on the *ita* or shallow washing board, which is used like our "pan" or the Mexican *batea*.

Coal Mining.—The coal mines are usually worked by a sort of pillar and stall method, the pillars being taken out, as far as possible, in retreating, after the workings have reached the desired extent. The drainage is generally natural. The drainage is generally natural, the workings being in the hill-sides, above the level of the streams. In the Karatsu district, one of the most important in Japan, where the hills are very low, and the workings are, for the most part, below water level, pumping is necessary. Rude wooden pumps, similar to those previously described, are there used; although in some places a drainage shaft fitted with a large bucket, rope, and pulley, and worked by half a dozen or more coolies, is preferred.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The coal mines, like the metal mines, are ventilated by natural means. In some places, where this proves insufficient, attempts are made to increase the flow of air by a rude chimney over the upcast shaft; but as only a small charcoal fire is employed, instead of a furnace, this has but little effect.

The galleries, levels, slopes, etc., are much more regular and of larger size than in the metal mines, and permit better method of transportation. The coal is usually brought out of the mine on flat baskets hauled by boys. Above ground, pack-horses or two-wheeled wagons propelled by man-power are used to take the coal to boats or junks, in which it comes to market.

ART AT HOME.

(Saturday Review.)

Wherewithal shall we learn to be æsthetic? is a question which many worthy people are obliged to ask themselves, without getting any definite answer. The Rector of Lincoln, in a recent speech at Oxford, has only shown them the difficulty, the hardness, the narrowness of the way. The Rector knows the toils of a reformer's career, but he does not spare his energies. Idle fellows and the "brutalized athlete of the arena" do not rouse his just anger more than the nefarious coal-scuttles and magenta rugs which desecrate the English household. The reformers of Household Art have never yet successfully tackled the coal-box. Mr. Pattison spoke regretfully of the honest copper articles of a past generation, and denounced the lacquered iron utensils which are generally adorned with a portrait of a young lady in a pink bonnet, or a coloured reproduction of one of Landseer's pictures of big dogs. These designs are nearly as pretty as tinted photographs; but perhaps a mind keenly alive to the fitness of things would deny them a place on a coal-box. After all, boxes of that sort are at least as convenient in use as the deep and delicate vase in *répoussé* work which serves their purpose in the frontispiece of a little manual of House Decoration by the Misses Garret. How the coals are to be coaxed out of that vase we fail to understand, but it seems that either a weapon like a rather large pair of sugar-tongs must be handled with loving care, or else the vase must be turned upside down, and the contents shot forth in an ugly rush.

The difficulties of the awakened and inquiring spirit are far from beginning or ending with coal-boxes. For example, there are Oriental rugs, which once were supposed to cover a multitude of sins. The Rector of Lincoln has found out that the base mechanic art of Europe has reached the dusky Orient, and the devout Persian —and the prayerful Khond, for what we know—now kneel on carpets tinged with magenta, and designed in the monotonous patterns of the British loom Venice glass, too, is no longer the strong tower that it once was. The time has been when there was a promise of safety and assurance of peace in the purchase of Murano ware. A few finger-glasses and opalescent jars made a reputation for orthodoxy, and a little money judiciously laid out in Japanese fans silenced the cavils of the severest critic. Now it seems that even Venice glass has somehow been affected with Philistinism, and only the most recent converts to art can persuade themselves that they like it. Ruby-coloured and sapphire claret-jugs are a mere stage in a spiritual evolution, no longer the crowning glory and fine flower of taste.

Venice glass and Oriental rugs are not the only things that have ceased to be visible signs of a cultivated mind. Even the youngest amongst us can remember the time when Mr. Pugin's "perpendicular" furniture was thought eminently correct. The name of "perpendicular" used to be given to the evening parties of a great academical dignitary, who did not expect undergraduates to sit down in his presence. The Gothic chairs were almost as likely to enforce an erect attitude as the expressed desire of the mightiest of dons, and they may have acquired their title from that fact. At all events they were the correct thing, and may still be seen in some old-fashioned London houses, as well as in the committee-rooms of our ancient Houses of Parliament. But the tide of taste has left them stranded, and, as we learn both from Miss Garrett's manual and from Mr. Loftie's interesting *Plea for Art in the House* (Macmillan & Co.), the modern upholsterer has profaned the perpendicular with his wicked machinery. In Mr. Loftie's painful sketch of the house of the benighted "Browns," it is said that "the furniture is of the last new pattern, designed in the Gothic style," Miss Garrett, too, has a severe word against the "Gothic furniture, with its gables and chamferings, and gashes here and there," which is, "for the most part, a gross libel on Mr. Eastlake's Sketches." The young couple just setting up house may well ask what they are to do to earn a permanent right to the name of being æsthetic? Mr. Eastlake's book they have studied perseveringly, and they have bought the most perpendicular furniture that they could afford. And now, it seems, they ought to have gone in for the Queen Anne style, which "sympathizes more with Wren than with Wolsey; and with Inigo Jones than with John of Padua." The young couple sympathize with John of Padua just as much as they do with Thaddeus of Warsaw, or with Dionysius of Halicarnassus; but their money is gone, and with it their hopes of being correct. Again, if there was one thing they were quite sure, of, it was that plates should be hung on the walls with wire, or with pieces of string. Mr. Loftie does not hold that this is right, and we are happy to agree with him; but the young couple will look very ruefully at their Persian plates and will think twice before investing in "shelves or a kind of dresser." Mr. Loftie concedes to human weakness "plenty of low arm-chairs on good, easy-running castors"; but the Misses Garrett say that hints may be obtained from models in old country houses, and in their view of a drawing-room we do not see one low arm-chair on good easy-running castors. Besides, old country houses are generally full of modern upholstery. Mr. Loftie likes an easy chair to have deep springs; his earnest colleagues think horse-hair and feathers good enough. Mr. Loftie has a leaning towards drawing-room papers with no patterns, and towards painted or panelled dining rooms. But if one turns from his manual to Miss Garrett's—and it is to be remarked that these works belong to the same series, and are bound in cloth of the same tint, "the bluest of things grey, the greyest of things blue"—there is a fresh perplexity. The dining-room paper in Miss Garrett's design is not plain, but laid out in large squares, interlaced with the leaves and flowers of some unknown specimen of the vegetable creation. After making all these things, persons about to furnish will be slow to follow the example of a gentleman favourably referred by Mr. Loftie who hung his room with grey paper, and then got a man to paint mottoes all over it in black.

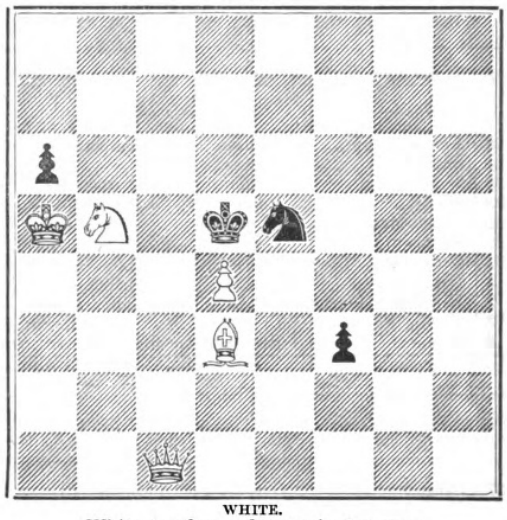
Some people persuade themselves that to indulge discreetly in "a taste" is really a prudent thing to do. One of the authorities before us has many interesting tales of collections which not only amused and occupied the person who made them, but were at last sold at an enormous profit. Four tracts of Wycliffe's were bought for four shillings and sold for four hundred pounds. Another man purchased a book for four shillings and sixpence, and others for little more, and when he was sated with the treasure disposed of it for 225*l*. With this kind of anecdote, Snuffy Davy and Monkbarns in the *Antiquary* made themselves merry. But there is another side to the question of the prudence of collecting. If the amateur of old door keys, mediæval bellows, and the warming-pans of the fourteenth century chances to be one of those beings who are enlightened by the early rays of a rising fashion, the time will come when his rubbish is worth its weight in gold. But with the vast majority of the race, fashion is infectious; they thirst for door-keys and sigh for ancient bellows because their neighbours do the same; they buy in a dear market, and, when their children sell their effects, the collection has reached its proper level, and goes at the price of old iron. The constant changes in taste, every new fad being put forth with the solemnity of infallible dogma, must ruin far more people than they enrich. Yet nothing is permanent apparently, except brass fenders. The very pleasure of the possession of a collection is in most cases a doubtful joy. A moment comes when a man asks himself, "Do I really like the Old English mottoes on the wall, on the Chelsea deformities in the cabinet?" Probably his friends have just reached the same stage of scepticism, and the market is flooded with depreciated wares. Pictures are quite as precarious investments. A man goes into Murillos and Claudes, and then comes Mr. Ruskin, and devotes the eloquence of a prophet to the task of "bearing" Claudes and Murillos. In another generation some one may find out that Turner was an impostor, and the hasty purchasers of Turner will leave a set of depreciated nightmares to their families. Who is to be certain of anything in household art when even the authentic Chippendale, like General Councils, may err, and sometimes has erred? It seems that in Chippendale's wooden stands for candelabra an iron wire is run inside through the bends and curves. Clearly household art belongs, as philosophers say, to the realm of the contingent, and the moral is that no one should give himself much trouble about the matter, except at the prompting of his natural taste.

The decorative craze has its good sides, like other hobbies. If it leads a man to turn his house upside down every two years, and to dash himself against the "unalterable facts, the coarse and clumsy doors" which Miss Garret laments over, at least it gives him occupation. When he wakens to the sense of depravity which a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

white ceiling causes in the orthodox, he has perhaps a few painful moments. He wonders where he will stop, if he commences by painting his ceiling black and filling the panels of his house-door with glass. When once that hesitation is overcome, he begins to have an object in life—namely, to keep up with the correct opinion in household art. Mental agility and money are needed, but the former will sometimes supply the place of the latter; and when a man sees that Queen Anne is once more on the point of death, he will dispose of his goods at a profit, and be the first to pick up a few sweet things in the style of the First Consulate. *Ondoyant et divers*, he will learn when to get out of Piero della Francesca, and to invest in Le Bruns, or Bouchers, or even in the works of Greuze, who is sure to have his second innings some day. By doing this, a man lets his consciousness play freely, and enters into the spirit of this harlequin age. We have no style of our own, because we know too much of the styles of the past, and learning has choked originality. Taste now consists in a series of rapid transformations, or in muddling together, in picturesque confusion, strays of the furniture of a dozen periods and races. Houses are furnished with the ruins of ages and of empires, and perhaps it is a comfort that the Victorian age will leave few productions that posterity can use in the same way.

It is curious that the speakers and writers who are most vexed by the popular indifference to household art fail to see that this indifference is natural and necessary, the result of fixed laws of human nature. The Rector of Lincoln says the public is as far as ever from appreciating the beauty of a Greek water-pitcher. But we must remember that the early potters were equally far from consciously realizing the merits of their own work; conscious good taste was never popular. Théophile Gautier observes that no civilized race can make three things—namely, a set of harness, an ordinary water-jug, and a mat—which could compete in point of taste with the productions of a barbaric race. Mr. Ruskin, too, has noticed, we, think, that perfection in certain decorative arrangements of colour and texture goes along with cannibalism and polyandry. As more things of ordinary use are wanted, and as the want is supplied by machinery, there is less room for the exercise of patient fancy, and more change in traditional patterns. Amateurs may give the movement a little wrench in the direction of better taste, but it is the general conditions of demand and supply that regulate production. If we may judge by the example of the Japanese and the Persians, the good taste of primitive races is unconscious and instinctive. If we could let a Greek potter of the eighth century B.C. pass a few days in Worcestershire or Staffordshire, he would follow the English style as eagerly as do the Japanese. Long experience slowly devises, in unsophisticated times, the very best mode of handling some few and simple materials. Tradition hands down the manner, which becomes sacred, and much fancy is spent when time is no object in elaborating unessential details. The buyer takes what is offered to him, just as most of us take the first convenient set of bedroom crockery, without thinking twice about its artistic value. When innovation reaches Oriental peoples we at once discover, that their taste is no better than ours, and they yield to the fresh influence. They go on imitating what æsthetic people think tasteless honors; æsthetic people go on trying to pick up specimens of the ancient traditional style. Every few months we see a change in the highest decorative society; one hobby is as good as another hobby, and no better. People who do not care about Queen Anne and Chippendale have their own tastes of some other sort, and do not mind being looked on as little better than the wicked. Perhaps the one great moral effect of the fashion of decoration is that it provides matter for talk as exciting as scandal, and less dangerous. When you pick a lady's curtains to pieces her character escapes criticism. To provide a harmless substitute for scandal, and to make even London houses not uninteresting to their occupants, is the office of domestic art.



"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

PROBLEM.

By Mons. L. de Bilow.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF J. H. FINLINSON'S PROBLEM OF LAST WEEK.

1.—Q. to B. 8. 1.—K. takes Q.
2.—R. takes P.
3.—mates.

Correct answers received from W. B. M., and W. H. S., Tôkiô, and C. B. Yokohama.

Correct solutions of the close of the Game we published last week have been received from W. B. M., and W. H. S., Tôkiô.

CHESS IN LONDON.

A brilliant little Game between Mr. P. T. DUFFY and Mr. JANSENS.—*(French Opening.)*

BLACK (Mr. D.)	WHITE (Mr. J.)
1. P to K 4th	P to K 3rd
2. P to Q 4th	P to Q 4th
3. P takes P	P takes P
4. Kt to K B 3rd	P to Q B 4th
5. B to Q 3rd	Kt to K B 3rd
6. Castles	P to K R 3rd
7. R to K sq (ch)	B to K 3rd
8. B to K B 5th	Q to Q Kt 3rd
9. Kt to K 5th	B to K 2nd

(It is hardly necessary to show, even to the youngest player, that if White had captured the Bishop he would have lost his Queen for a Rook and Bishop by a discovered check.)

10. Kt to K Kt 6th

(The beginning of a very pretty chain of moves.)

10.	P takes Kt
11. R takes B	Kt to Q B 3rd
12. B takes P (ch)	K to Q sq
13. Kt to Q B 3rd	P takes Q P
14. B to K B 4th	

BLACK (Mr. D.)	WHITE (Mr. J.)
(All this is extremely cleveron Mr. Duffy's part, and leads to a beautiful termination.)	
14.	P takes Kt

(A grave error; but it is hard to see how White could have avoided loss of some kind. The natural move of Queen taking the Q Kt Pawn would have been followed by R to Q Kt sq. and then R takes Q Kt P. After which White's position must have been indefensible.)

15. R takes K Kt Q to Q 5th

(If he had captured the Rook he would have been mated offhand.)

16. B to Q B 7th (ch)

(Highly ingenious. Winning the Queen by force.)

16. K to Q 2nd
17. B to K B 5th (ch) K takes B

(Compulsory, unless he prefer being mated in two moves.)

18. R takes Kt (ch) P takes R
19. Q takes Q, and wins easily.

TRAVELLERS, MISSIONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper, in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, *(Horniman's Museum.)* Forest Hill, LONDON. [ADVT.]

Treasure...	$32,301.00

Per Steam-ship *Tanais* from Hongkong.

From Europe...	1,656 packages.
Hongkong	1,069 ,,

REPORTS.

The *Egeria* reports, left Hongkong January 19th, and experienced fine weather with light winds and calms up to Van Dieman's Strait. Passed Cape Chichakoff on the 24th, where they experienced thick, rainy weather, the wind blowing strong from the S.E., and continuing to increase till the entrance of Kii channel was gained, raining heavily all the time. Off Oosima, on the 26th, had a severe gale, the wind veering from S.E. to N.W, blowing hardest from the S.W., with a heavy cross sea running. The gale continued with tremendous force from noon of the 26th till the morning of the 27th, with very heavy rain all the time, finishing in a sudden calm. Afterwards fine weather to port. Saw the volcano on Vries Island 60 miles off. Arrived in Port at 11 a.m. to-day.

The British ship *Coulnakyle* reports leaving London on the 28th August. Met with very severe westerly gales on entering the channel and had to put back and anchor under Dungeness, where she remained for a week, having split several sails during the gales. On again proceeding experienced changeable weather, westerly winds still prevailing. Passed the Lizard September 6th; had strong gales across the Bay of Biscay; found the N.E. trades very light, and only lasting steadily for three days, extending no farther than 12° North. Crossed the Equator October 8th in 24° 13' West. The S. E trades extending from the Equator to 13° South were moderate; afterwards towards the Cape, had light winds from the westward, with moderate weather. Were in the parallel of Cape November 1st. Running the Longitude down in 43° S., had very severe weather and a heavy sea, during which sustained considerable damage, having lost bulwarks, sails, stove in two boats, and smashed the wheel and binnacle. Sighted Sandal-wood island December 4th and were 13 days in sight of it, detained by light baffling winds, calms and contrary currents. On the 25th passed Gillolo, after being 3 weeks in the passage. In the Pacific had light variable winds for a time, afterwards met with northerly and N. E. gales with a heavy sea. On January 21st there were a great number of water spouts around the vessel, one of which passed within a few yards, causing considerable alarm, but all the sails were furled in preparation for it, it being perfectly calm at the time. The next day had a strong gale from the North, with a confused cross sea. Made the land near Owari on the 24th, since which time hap heavy gales from the East and N.E. till arrival in Port at 11 a.m. on the 28th instant, just 5 months from London.

The *Sunbeam* belonging to the Royal Yacht Squadron, owned and commanded by Thos. Brassey, Esq., M.P., arrived yesterday, having left England last July on a cruise, during which the vessel called at Madeira, Cape de Verd Islands, Rio de Janeiro, Monte Video, and Buenos Ayres; thence through the Straits of Magellan, calling at Valparaiso and the Sandwich Islands.

The *Caroline* reports: Came round by East side of Formosa and through Linschoten channel, having experienced rough stormy weather throughout with a heavy sea. Last Saturday and Sunday met with a severe gale from the N. W. off Owari Bay.

MISCELLANEOUS.

NOTICE.

THE Partnership heretofore existing between EDWD. Z. HOLME, CHARLES RYLEY, FREDK. RINGER and J. CARRICK SMITH, under the name of HOLME, RYLEY & Co. London, and HOLME, RINGER & Co. Nagasaki, has this day been dissolved by efflux of time.

HOLME, RINGER & Co.

Nagasaki, 1st January, 1877.

REFERRING to the above, the undersigned will carry on business in Nagasaki from and after this date under the style and name of

HOLME, RINGER & CO.

FREDERICK RINGER.

J. CARRICK SMITH.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market continues dull without material change in prices.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	$1.40	to	$1.80
8 lbs.	38½ yds.	44 in.	,,	1.80	to	2.35
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55	to	2.35
9 lbs.	38½ ,,	44 in.	,,	2.10	to	2 55
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40	to	1.60
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25

White Shirtings:—						
60 to 64 reed	40 yds.	35 in.	per pce.	2.20	to	2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	0.65	to	0.85
Black Velvets				7.50	to	8.75
English Drills	15 lbs.	40 yds,	30 in.	2.55	to	2.65
Taffachelass		13 yds,	43 in.	1.90	to	2.10

Yarns.—

No. 16 to 24	per picul	$29.00	to	32.50		
No. 28 to 32	per picul	$30.50	to	35.50		
No. 38 to 42	per picul	$36.00	to	40.00		
Reverse Twist	16-24	,,	$31.50			

Woollens.—Our market remains exceedingly quiet and transactions are on a very limited scale. There is no alteration in prices to report, and quotations given below must be considered entirely nominal.

Plain Orleans	40—42 yds.	32 in.	4.75	to	6.75	
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.25	
Shimagoro	30 yds.	30 in.	4.00	to	5.25	
Italian Cloth	—30 yds.	32 in.	0.24	to	0.33	
Camlet Cords	29—30 yds.	32 in.	5.75	to	6.00	
Camlets Asstd.	56—58 yds.	31 in.	16.50	to	17.50	
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00	
Plain Mousseline de Laine	—30 yds.	30 in.	0.17	to	0.19	

Figured Mousseline de Laine	30 yds.	30 in.	0.25	to	0.30	
Multicolored ,,	30 yds.	30 in.	0.30	to	0.36	
Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80	to	1.20	
Presidents	54 in.	to 56 in.	0.75	to	0.80	
Pilots	54 in.	to 56 in.	0.45	to	0.60	
Union	54 in.	to 56 in.	0.60	to	0.75	
Blankets, scarlet & green	6 to 8 lbs.	per lb	0.42	to	0.48	

Sugar.—Some new crop *Formosa* has now arrived, for which holders are asking $4.30, but dealers only offer $3.95 to $4.00, so that no operations have taken place. The business done in other kinds is small, and rates remain unaltered.

Sugar:—Takao in bag	per picul	$3.95	to	$4.00		
,, in basket	,,	$3.65				
Taiwanfoo in bag	,,	$3.70				
do. in basket	,,	$3.55				
China No. 1 Ping-fah	,,	$7.30				
,, No. 2 Ching-pak	,,	$6.80	to	$7.20		
,, No. 3 Ke-pak	,,	$6.00	to	$6.30		

China No. 4 Kook-fah	per picul	$5.30	to	$5.60		
,, No. 5 Kong-fun	,,	$4.80	to	$5.10		
,, No. 6 E-pak	,,	$4.00	to	$4.30		
Swatow Brown	,,	$3.00				
Daitong	,,	$3.50				
Japan Rice	,,	$2.05	to	$2.20		
Kerosene Oil	nom.	$4.60	to	$4.65		

Kerosene Oil.—The market remains quiet at quotations, which are nominal. Holders continue firm, and demand higher prices.

EXPORTS.

Silk.—The only political news on record since our last is the rupture of the conference of Constantinople, which was announced by a telegram of the 25th ultimo. Owing to the profound uncertainty which still prevails on future contingencies, the market has continued much depressed, and the few settlements reported during the week have been made at considerable reductions on our previous quotations. Very little has been done in Oshiu sorts, and present rates for other descriptions are, as far as we can ascertain, as follows:

Hanks.—No. 1 and 2	$760 to $780
,, No. 2	$740 to $750
,, No. 2½	$700 to $730
,, No. 3	$650 to $680
Mashta	$485
Filature Silk	$930

Since the 22nd ultimo arrivals are 160 bales, and settlements about 200.

Tea.—Rather more activity has been apparent in our market during the closing week, settlements amounting to 1,370 piculs, comprising all grades, the better classes having received a fair share of attention. Prices remain unchanged, and stocks being light, holders show a little more firmness.

Supplies are very moderate, and it is difficult to arrive at any approximation of the amount yet to come forward for the balance of the season. All statements to this effect are very conflicting, but they generally lead us to suppose that the supply will be very moderate.

Advices from the United States are rather more assuring, so that with the opening of the spring trade a recovery in prices is to be looked for.

Common	$11.00	to	13.00			
Good Common	14.00	to	16.00			
Medium	17.00	to	18.00			
Good Medium	19.00	to	22.00			
Fine	$24	to	30			
Finest	Nominal.					
Choice	Nominal.					

EXCHANGE AND BULLION.

Exchange.—Rates have somewhat declined but close steadier. There is, however, very little doing in either Bank Bills or Private Paper.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 2½d.
,, Bank Bills on demand	4s. 1¾d.
,, Private 6 months' sight	4s. 2⅞d.
On Paris—Bank Sight	5.20
,, Bank 6 months' sight	5.30
,, Private 6 ms. sight	5.40
On Hongkong—Bank sight	par.
,, Private 10 days' sight	¼% dis.
On Shanghai—Bank sight	74
,, Private 10 days sight	75
On New York—Bank Bills on demand	100
,, 30 days sight Private	102
On San Francisco—Bank Bills on demand	100½
,, 30 days sight Private	102½
Kinsatz	411
Gold Yen	408

All genuine goods bear the names of Crosse & Blackwell on the Labels, Corks and Capsules of the Bottles, Jars and Tins.

CROSSE & BLACKWELL,

PURVEYORS TO THE QUEEN.

SOHO SQUARE, LONDON.

June 10, 1876. 12ms.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At the German Consulate, No. 81, Main Street, on the 3rd February, the wife of E. ZAPPE, Esq., H. I. G. M.'s Consul, of a daughter.

At Yokohama, on the 5th February, the wife of C. V. MARTINHO MARQUES, of a son.

DEATH.

At Yokohama, on February 4th FRANCIS WALTER MARKS, Solicitor, aged 33 years.

Notes of the Week.

Rumours have been afloat for some days past of troubles in Satsuma. The *skizoku* were said to have seized the powder-magazine and that a man-of-war had been sent down to quiet them.

The truth of this affair seems to be as follows:—

On the 27th January, the Mitsu Bishi steamer *Sekirio Maru* arrived at Kagoshima, and on the 31st took on board 2,000 boxes of powder from the powder manufactory there. Arrangements had been made to take on board 1,800 boxes on the 1st February, when a body of *shizoku* numbering about 2,500 men, came forward and ordered the people from the *Sekirio Maru* to go away and leave the powder where it was, threatening to kill them to a man, if they attempted to take it away. The *shizoku* then carried off the powder, and the *Sekirio Maru* immediately put to sea, and reached Kôbe on the 6th instant.

It is said that Kagoshima must be the destination of Kawamura (a Satsuma man) Vice-Minister of Marine, who left Kôbe hurriedly in the *Takao Maru* for Kiushiu a few days since.

These accounts have since been fully confirmed. It is added that ten days ago the *shizoku* went to Saigo, and urged him to join them. He refused to do so, however, but on the contrary endeavoured to pacify them. Finding, however, that they were not to be reasoned with, he has disappeared, and it is not known what has become of him. Shimadzu has had nothing to do with this disturbance.

(The *Nichi Nichi Shimbun* of to-day says that the men who prevented the shipping of the powder were the students of the private school of Satsuma.)

In our columns will be found a detailed account of the opening of the Railroad which is furnished to us by the gentleman who kindly undertook to act as special correspondent on the occasion and which will, we feel sure, be read with interest, both or account of the subject and the writer.

It has been represented to us by a valued Tôkiô correspondent, that in our article of last week on the Estimates, we have not sufficiently taken into consideration the difficulties that the Finance Minister has had to encounter in publishing a statement, however imperfect, and that; while admitting that we are right in pointing out how much is required to prove its reliability, he is of opinion that we might have more generously awarded to the Minister his meed of praise for its compilation. We are sorry if we have been misunderstood by any of our readers, be they foreign or Japanese. No one more unaffectedly rejoices than ourselves, when we can find opportunity for expressing appreciation of the actions of a Government, whose earnest efforts to advance have always commanded our strongest sympathy, and whose success, we trust, may one day compel our admiration. It is not the Minister's ability that we question, but his system, or rather the absence of it. We are fully aware of the almost insuperable difficulties that have had to be encountered in compiling anything like a correct summary of National Finances. We know that a very perfect of system of foreign book-keeping has been introduced since last July, into the central office of the Finance Department, and that such system will be extended to all the branch offices, thus greatly simplifying the compilation of accounts in the future. In having introduced these valuable changes, Mr. Okuma naturally takes great pride, and is entitled to unstinted praise for all his efforts to improve the working of his Department, and to inspire with more confidence those who are most interested in its records. We are not unreasonable enough to suppose that a perfect European system of accounts can be introduced, and at once be made to work in an absolutely correct manner. Mere errors in matters of detail we should regard as of the slightest importance, but what we cannot pass over without protest is that no means are afforded either to the people of Japan, who are the first to be considered, or to the foreign bond-holders, of finding out whether such errors exist, and we are not prepared to subscribe to the doctrine of infallibility. It is the utter irresponsibility of the Finance Department, and the want of a system of audit, that must render its statement to a great extent devoid of value, and while we are prepared to credit Mr. Okuma with the most earnest labour, and sincere intention to furnish a true return of National Finances, he must pardon us if we cannot, without comment, accept an unaudited statement, which is regarded by the Japanese themselves as anything but reliable or satisfactory.

So hypercritically virtuous a journal as our contemporary of the capital should really be a little more careful to its own quotations from other papers, before it presumes in take others to task. In its issue of the 20th January, it claimed that the *Economist* was all on its side respecting

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

one of the errors of Protection—that an advantage of the system, is that it gives a country command of its own markets. It quotes from the *Economist*:—

> "The Americans, under protection, have improved production, and got the command of their own markets."

Now what did the *Economist* really say? Firstly, the whole gist of the article was to show how completely fallacious was the idea that Protection had done any good to the United States. Secondly, the *Economist* says in one passage:—

> "They may command their own home markets, but they do so at something approaching to an absolute loss."

And, thirdly,—this is the passage garbled by the *Tôkiô Times*, from which it would have its readers draw comfort:—

> "As yet *the Americans* have never been able to stand up before us in the open field of competition, and the conclusion that they will be able to do so, because *under Protection* they *have improved production and got the command of their own markets*, is a wholly illegitimate inference."

The words we italicize are those picked out by our contemporary to prove the *Economist* a champion of Protection. 'If the blind lead the blind' we know what happens. If the leader fail in honesty, as in eyesight, how much the worse for the led!

Really it makes one quite cheerful, in these gloomy times, to witness the buoyant spirits of one's neighbour. Neighbour? Near relative in fact—for is she not a sister port? It does our heart good, we say, to find that "Nagasaki is again asserting her vitality, in spite of all the invidious efforts that have been made to suppress it," for so we read in the *Cosmopolitan Press*, and we trust it does not tell us half the good tidings. We quote the rest of this exhilarating article in full:—

"Every one is interested in what is being done to return to the halcyon days when all was hopeful and prosperous. How much more should this interest be, when after some years of depression, brighter prospects for the future may be reasonably entertained, and every little incident conveying public feeling must be considered in its tendency towards the advancement of nearer social relations. A new era has now commenced in this respect, and the community which has for years past but rarely assembled for the purpose of public recreation has at length awakened to this happier feeling, and become convinced that they have been looking through a glass darkly. With all commercial prospects for the future assuming a more cheerful aspect, our amusements naturally take a certain position in our thoughts, and should be considered and carried out with the thoroughness and vigor inspired by renewed hope in the times to come.

Well, thank Heaven, we are not envious, nor "hate the excellence we cannot reach," and although, we ourselves are under a cloud of depressing influences of bad trade and general despondency, we rejoice to find that there is a little spot, that bears the well known name of Nagasaki, where the bright sun of prosperity is breaking through the clouds, and the rainbow of hope is giving golden promise for the future. Though we cannot join in the festivities that are to take place in honour of this return of vitality, and the recovery of our dear relative, who at one time seemed in the last stages of hopeless decline, we hold out the hand of hearty congratulation and say "Go ahead! rejoice! sing! assemble for public recreation! The festive tennis and the mild croquet! "'Let us be merry!" (here he took a captains' biscuit;) "It is a poor heart that never rejoices! And our hearts are not poor! No!"

The articles that have appeared in the Japanese Press translations of which we publish this week,—"The Building Mania" and "Change for Change' Sake" are certainly not called forth without good reason. What wonder, in looking over the list of changes (and we have not ventured to insert those of minor importance) that the writer complains that the people cannot quite comprehend the administration of the Government? When officials themselves cannot understand the signification of the change of name of many of the departments, nor explain for what purposes they have been instituted, can it be supposed the "people" can see aught but utter chaos? It is not the fault of the people, if they cannot accept as infallible the actions of a Government, whose chief aim seems to be, to institute for the purpose of abolishing, and apparently does not know its own mind from one month's end to the other. It is quite true that practical excellence in administration can only be attained by repeated trials, and it is a political maxim that "that which is best administered is best." It is the duty of the Government to make many changes; changes such as experience may dictate and the common weal demand; changes, so manifestly well considered, and necessary, that their adoption shall command increased confidence at home and abroad. But to build card-houses only for the pleasure of flipping them over, and re-erecting them in another form, in order again to upset and rebuild, argues a childishness, and an infirmity of purpose on the part of the heads of the Government, that may well call forth the distrust and scorn of those who love not change without reasonableness, reform with improvement.

The protest of the writer in the *Nichi Nichi Shimbun* against the squandering of public funds, in the constant erection of new buildings that are not required, is both sensible and just. Many of the buildings have been put up apparently with no other motive than to put money into the pockets of contractors, and have no single claim to utility, elegance, or impressiveness to warrant their erection. The people naturally object to seeing the money which is wrung from them thus recklessly and uselessly spent, and the government would do well to graciously listen to protests put forward in such moderate and sensible terms.

On behalf of this long suffering community, we respectfully and heartily offer our grateful thanks to His Excellency the Governor of Kanagawa, and beg him to "accept the assurance of our most distinguished consideration" for his recent Notification, which has for its object the ridding of the settlement of the "stray, noisy and mischievous dogs" which have so long infested it.

> "For in that town a dog was found,
> As many dogs there be,
> Both mongrel, puppy, whelp and hound,
> And cur of low degree."

and there is now every hope that we shall be no longer sickened by the sight of the loathsome, half starved, and wholly wretched animals which meet our eyes at every corner, and that our nights may be passed in peace and quietness, undisturbed by the sounds that made them hideous. As for the small charge that is to be made for taking care of any animal worth caring for, we cannot see how any man who loves his dog can object to pay it—was not Launce content, himself to "sit in the stocks" for Crab's misdemeanours?—while if he wants to get rid of the poor beast, by quiet means, and not stain his soul with something very like murder, the way is now opened to him. The strict enforcing of the regulation will undoubtedly be a great boon to the settlement, "Ask my dog; if he say ay, it will; if he say no, it will; if he shake his tail and say nothing, it will."

We learn from the *Hôchi Shimbun* that sentence has been passed on the party of *samurai* charged with killing the three policemen who attempted to arrest them at Shian-bashi, at the time of the outbreak in the south. It will be remembered that Nagaoka, the leader of the party, died some time ago in prison, from wounds received at the time of his arrest. The following are the sentences, all being deprived of their rank of *shizoku* in addition:—Inokuchi, a *shizoku* of Iwate *ken*, Takemura and Nakabara, *shizoku* of Awomori *ken*, were all sentenced to decapitation; Hitoyanagi, a *shizoku* of Tôkiô *Fu*, to hard labour for life; Kimura, a *shizoku* of Fukushima *ken* to ten years' penal servitude; Matsumoto, a *shizoku* of Shimané *ken*, to seven years penal servitude; Takahisa, a *shizoku* of Shidzuoka *ken* and Michigi, a *shizoku* of Kagoshima *ken*, to five years' penal servitude; Kurokawaji, a *shizoku* of Yezo, to three years' penal servitude, and Horiuchi, a *shizoku* of Awomori *ken* to one years' penal servitude. A *heimin* named Nômé, belonging to the Kagoshima *ken*, who was also convicted of being

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

among the attacking party, was sentenced to penal servitude for one year. It was supposed at the time of the arrest of these men, that their intention was to proceed to Chiba *ken*, enlist followers, and make an attack on the garrison of Utsunomiya. It has since been ascertained that they were undoubtedly connected with Mayebara's party, and it is further with good reason supposed that it was the intention of this party that their revolutionary proceedings should take place simultaneously with the rebellious movement in the South. Three of the party, including Mr. Maki, formerly editor of the *Hiôron Shimbun*, escaped arrest at Shian-bashi and escaped to Niigata, but were there secured by the authorities and returned to Tôkiô, where they now lie in prison, waiting for the sentence which, it is expected, will shortly be passed on them.

Some years ago the name of 'the boy Jones' was in every body's mouth in England, but as some of our readers may not have heard of him, it may be well to give an outline of the facts which have identified his name imperishably with the domestic annals of the reign of Queen Victoria.

The boy Jones, then, was a sweep, who was seized with an uncontrollable desire to see the Queen—not, as she may constantly be seen by her loyal subjects, driving in Hyde or Windsor Park, but in the retirement of her own private apartments. In view of Jones's condition of life, this was difficult, to say the least of it; but in view of his occupation, it presented no insurmountable obstacle. Jones was not in the habit of entering the rooms of the rich by way of the door, but he constantly entered them by way of the chimney, and he made this fact the key to his position. *Tout vient a ce qui sait attendre*, and after some years of scheming he contrived to introduce himself into one of Her Majesty's private apartments by this professional method of entrance. He was disappointed indeed in his desire to see the Queen, who, as it happened, was away from the palace at the time, and the worst that came of his *escapade* was, that he was discovered by the servants, interrogated as to his intentions by some officer of the household, and dismissed with a severe reprimand. This we rather think was at Windsor. But the boy Jones's ambition was not satisfied. He had introduced himself into the Queen's apartments, but he had not seen Her Majesty, and was determined to make another attempt. And thus it was that, one fine morning, he was again discovered, hidden away in one of the rooms of Buckingham palace, waiting until the Queen should pass through. Jones did not indeed achieve the object of his ambition, which was to see his Sovereign in her own apartments, and there is no record, so far as we know, that he ever repeated his surreptitious attempts to invade her retirement, but not the less had he identified himself permanently with the domestic annals of her reign, and this probably did something to console him for his special disappointment.

It is a trite saying that history has a tendency to repeat itself, and in a recent occurence at Kobe we think this tendency may be traced in a very marked way.

Mr. Nathan J. Newwitter is American Consul at that cheerful, yet slightly torpid, port, and he seems to have become unaccountably possessed with a desire of forcing himself upon the notice of the Mikado of Japan. The first method he employed was to send His Majesty an invitation to dine or breakfast at the United States Consulate, in anticipation of his arrival at Kobe on the way to Kiôto. The invitation was declined in courteous terms by the Japanese, as their manner is, but the impertinence of it was doubtless fully recognized, and we presume that no representation of it was made in other quarters, because they did not care to betray any touchiness upon what they deemed a piece of mere ill-breeding. But Mr. Nathan J. Newwitter was not to be foiled. By some unaccountable stroke of irony, fate had made him President of the Kobe Municipal Council, and in this capacity he thought he could approach the Mikado without let or hindrance. Accordingly he drew up the following document—we believe absolutely without the concurrence of his colleagues or even any reference to them—and the copy which was handed to us for publication is *verbatim et literatim* as follows:—

Mr. Nathan J. Newwitter the United States Consul and President of the Hiogo Municipality delivered the following address to the Emperor on the 5th instant.

The pleasant and honored duty of welcoming Your Majesty to this section of Your Empire and to greet Your Majesty in behalf of the Hiogo Municipality and its residents representing all nations has devolved upon me. In offering Your Majesty sincere congratulation on your safe arrival from the pleasant visit and sojourn at the western capital the historical cities and beautiful homes of Your brave, honored and heroic ancestors, I but interpret the feeling of the foreign community of Hiogo, when in their name I tender you a cordial welcome.

I have reason to know that Your Majesty's visit to Kioto, Osaka, Narra and Hiogo, and the days you have sojourned in the midst of Your people has added joy and inspired Your people with patriotic impulses, and the demonstrations with which you have been received is but a proof of a people's love, fidelity and loyalty.

The history of all ages have from time to time recorded the glory of their Rulers, but none will appear brighter on the pages of the world's history than that of Your Majesty's Empire, powerful and majestic now as well as centuries ago and progressive to a degree which must redown in continued National honor and glory. It is a source of pleasure to those who from foreign shores, have made Your Majesty's land their home who have watched the prosperity of Your people and that progress and glory amongst the Nations of the world, which Your Majesty's Government has achieved in so brief a time, aided by Your Majesty's personal efforts to promote the welfare of Your people. Wishing Your Majesty continued good health, and that Your Majesty's Reign may be happy and long continnud as well as marked by constant advancement in everything that will benefit Your land and people, that peace and plenty essential to greatness and glory may ever surround Your Majesty's Government and People.

It will be observed, that the heading of this paper states that the address was delivered to His Majesty on the 5th instant, but as it certainly was not delivered publicly, and formed no part of the official programme, the statement can only be regarded as conveying an absolutely false impression to the public. That Mr. Newwitter may, *more* boy Jones, have pushed it, and even himself, upon the notice of the Emperor in some unauthorized and informal way, we shall not undertake absolutely to contradict, but that the delivery of the address formed any part of the day's official proceedings we emphatically deny. It is impossible to swear that some one did not come down the chimney into the room set apart for His Majesty, and might have thus achieved his entrance, and presented an address. The inevitable superadded nigritude would indeed betray even the most adroit performer in this narrow sphere of activity; but what 'little Sootie' did at Windsor might undoubtedly be done elsewhere.

Now what is to be said about this case? Ill-breeding is not criminal, there are no courts of good manners, and a man who boasts of his intimacy with General Grant, whatever may be the truth of his vaunt, may imagine that he has a right to inflict his impertinent presence upon the Mikado of Japan. You don't know where to have such a man. To talk to him about proprieties, forms, delicacy of conduct, decent human reticence, is as absurd as to talk to a blind man about colours or a deaf man about music. But on behalf of his countrymen specially, and on behalf of the community of Kobe and its Municipal officers, we are warranted in stating that Mr. Newwitter's behaviour has created the strongest feeling of annoyance and disgust, and that they one and all repudiate all participation in his acts or his pretended public address. To the language in which this precious instrument is drawn up we can only refer in terms of merriment. "The history of all nations *have*"—(have it?) "The days you have sojourned in the midst of your people *has* added joy, &c.,"—(has they?)—"To a degree which must *redown*, *&c.*,—(What is *redown*?) "The demonstrations with which you have been received *is* but a proof, &c. (Is they, really?) Then the headless and tailless sentences, which lose themselves *in nubibus*, the claim to represent the Kobe community, and the tender of welcome and congratulations—in infamous grammar—in their name. This is really too hard on the little model settlement and its residents. We understand that the whole affair is under the consideration of those who are principally concerned in setting themselves right with the public, and we trust that such representations as may be made in regard to this serious trespass upon good manners and the proprieties of official life, will meet with proper attention. It is out of all reason that the reputation of a whole community should suffer for the bad manners of one man.

THE FOREIGN PRESS.

There has been but little of importance in the columns of our contemporaries during the past week, the principal news of interest being the opening of the Railroad by His Majesty the Mikado, of which the *Herald* has published a very full and amusingly written account. We tremble, however, for the safety of the *Herald's* Special, if the justly incensed inhabitants of Kobe should read his description of their settlement, before he can get away. They will certainly fall on him in a body, and attempt his annihilation, his only chance of escape being in the paucity of their numbers.

The *Herald* also devotes some space to showing up a very ingenious system of swindling on the part of certain Japanese brokers (we object entirely to the term 'merchant' being applied to them; one might as well call the gang of forgers, who have just been caught, 'financiers'). The *Herald's* account is supplemented by a letter from a correspondent, giving a detailed account of an actual case of this kind, which only failed in being thoroughly successful by the vigorous action of one of the judges at the *Saibansho*, and the cleverness and loyalty of the detectives, to whom, we are glad to see, unqualified praise is awarded. These "brokers" are a curse both to the Japanese and foreign community, and are, in fact, nothing less than an organised band of thieves. There can be no doubt that they are aided and abetted in their knavery by some of the lower officials in the various departments of the Government, who, like dishonest servants open the door of the house to the robbers, on condition of sharing the plunder. The Government should make it its immediate duty to inquire into these facts, and where guilt can be proved, to punish it by the most severe penalties, rigidly enforced, and if it can succeed in breaking up this den of thieves, it will earn the gratitude of all honest merchants, both native and foreign.

The *Herald* of last night gave to Mr. Newwitter of Kobe, even severer castigation than we have administered ourselves, in an excellent article, which we trust will be transmitted to Washington, by the same mail which carries Mr. Newwitter's own dispatches.

To the attack in the *Tôkiô Times* of this morning, accusing us of want of journalistic etiquette, and in support of its complaint, mis-interpreting our acknowledgement of our indebtedness for the bulk of our copy of Financial Estimates, we can only reply in Dean Swift's words:—

> "By disputing, I will never
> To convince you once endeavour;
> Thus we both shall have our ends,
> And continue special friends."

On Monday, the *Echo* concluded its article on our publication of the Second National Bank's statement of its circulation of the *Shosha* notes. The writer refers with great effect to the celebrated Notification of the Governor of Yokohama last year, which tried to raise the character of these notes, at the expense of those issued by the foreign banks; and to an article written at the time, suggesting, with a shrewdness and forecast which the *Echo* commends, that the establishment of these Banks was the first step towards inflating the currency on the American plan; a theory, which the acknowledgement that this issue is of the Government's notes, not the Bank's, appears to confirm. But we think we may venture to set at rest the suspicion of the *Echo* that any other of the National Banks issue notes besides the Second: should any such issue take place elsewhere, we shall not fail to notice it. The other remarks of the *Echo*,—on the absence of a signature to the return, and on the form of the return itself, are of less value. The form is simply that of the Bank of England's Issue Department, which appears weekly in the *Economist*; and as for its requiring the signature of the Bank's Manager or Chief Cashier, we confess that we put just as much faith in the correctness of the return as it stands. If the Japanese Government wish this, or any other financial statement they choose to issue, to be received by foreigners will equal confidence with which we accept the States of the Banks of France or England, the name of a foreign inspector of reputation must appear at its foot. No Japanese document of the sort, without such guarantee, has any more value than those of a similar character issued in Turkey, Egypt, Russia, or other countries on her own financial level.

From the "Japan Mail Daily Advertiser."

Monday, 5th.

Private telegrams have been received up to the 1st instant which make no mention of alarming complications of the Eastern question, so that it is to be hoped that there is no fear of war being imminent.

From the *Chôya Shimbun.*

A newspaper called the *Saikiô Shimbun* was published for the first time at Kiôto on the 28th instant.

From the same.

Some seventy to eighty thousand dollars worth of fish were caught on the shores of Chiba *ken* (Kadzusa) on the 30th instant.

From the *Hôchi Shimbun.*

Another newspaper, called the *Sekkai Shimbun*, was published at Kobe at the end of last month.

From the same.

Hitherto the cost of building and repairing the *Kencho* and other local offices was borne by the people, but hereafter such expenses will be paid by the Government.

From the *Akébono Shimbun.*

Mr. Kato, late member of the *Genro-In*, was appointed to the office of Director of the *Kaisei Gakko* on the 2nd instant.

From the *Nichi Nichi Shimbun.*

The *Kôkôgakusha* (school for the nobles) was opened on the 25th instant. Mr. Kitabatake was chosen President and Mr. Mitsukuri Director of the institution.

From the same.

A provincial assembly will take place in the Miyagi *ken* (Sendai) this month.

From the same.

A fire occured at Gobancho, Tôkiô, on the evening of the 1st instant, but was happily extinguished after only destroying five houses.

Tuesday, 6th.

From the *Nichi Nichi Shimbun.*

We hear that the schools in which the English language was taught at Aichi, Hiroshima, Niigata, Nagasaki and Miyagi, together with the Normal Schools at Aichi, and Hiroshima, all of which were hitherto under the supervision of the Educational Department, have been abolished. There are also rumours the Female Normal School and the Public Library at Tôkiô will no longer be kept up.

From the same.

We hear that Her Majesty the Empress, on her return from Kiôto, will proceed by rail to Kobe and thence to the capital by sea.

From the same.

The riding course which has been laid out round the gardens of the Fukiage Palace is in excellent condition, and was tried for the first time on the 3rd instant.

From the same.

Another newspaper, to be called the *Saikiô Nichi Nichi Shimbun*, is announced for publication at Kiôto.

From the same.

A company at Kôfu, called *Kôyeki-sha*, is about to start a Tenth National Bank, with a capital of 150,000 *yen*.

From the *Hôchi Shimbun.*

The business the Post Office Savings Bank has greatly increased since the late dismissal of the officials, over a thousand *yen* being deposited daily.

From the *Osaka Nippô.*

A literary magazine, to be called the *Kakumin Shinshi*, is about to published at Osaka, to which many of the men of learning residing in that city will contribute.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Mainichi Shimbun.*

Several of the principal merchants of Osaka have joined in establishing a night school, where all who choose to attend are instructed free of charge.

From the same.

His Majesty the Mikado will proceed to the province of Yamato on the 7th instant, and will visit the Imperial tombs at Kashiwabara. After the consequent ceremonies His Majesty will revisit Kiôto, where he will remain for another week before returning to the capital.

SECOND NATIONAL BANK.

Statement for the week ending 3rd February, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	849,610	
In circulation	350,390	
	1,200,000	
Reserve Fund		350,389
In dollars (coin) on hand	$265,356	
In dollars (Foreign Bank notes)	20,948	
Deposited with Foreign Banks	64,085	
	350,389	

Wednesday, 7th.

From Kobe we have received particulars of the ceremony of the official opening of the Kiôto and Osaka Railway. The Mikado left the Imperial palace at Kiôto in a carriage and pair on the 5th instant at 9 a.m., being accompanied H.I.H. Arisugawa no Miya and Sankai no Miya, the Prime Minister, the Minister of the Imperial Household, the Vice Minister of Marine, other Government officers, a large number of local officials, a numerous retinue, and a brilliant escort of naval and military officers and troops, several banners, also, being borne in the procession. On arrival at the Railway Station His Majesty was received by the Minister of Public Works and the Chief Commissioner of Railways, and the Foreign Representatives were in waiting to pay their respects to His Majesty. After a short delay the Mikado, followed by the officials and Foreign Representatives, entered the train which was drawn up at the platform, the band in attendance playing the national anthem. On arrival at Osaka the Mikado entered a waiting-room which had been specially prepared for him, where he received the Governor and other officials of Osaka and the Foreign Consuls. Salutes were fired by the Fort at Temposan and the men-of-war lying in the bay. After a brief stay at Osaka His Majesty re-entered the train and proceeded to Kobe, being received on arrival by the *Ken* officials, and the Foreign Representatives there took the opportunity of offering their congratulations to His Majesty. A return was shortly afterwards made to Kiôto, and before leaving the station at that city His Majesty sent for the Minister of Public Works, the Chief Commissioner and Foreign Director of Railways, and expressed his entire satisfaction at all the arrangements which had been made for his reception. At the Kiôto, Osaka and Kobe stations a deputation of merchants presented addresses to the Mikado. In the evening His Majesty entertained some of the high officials and the Foreign Representatives at dinner at Kenninji, the large temple which was used, with two others, for the first Kiôto Exhibition. The weather was not very favourable, and snow having fallen on the previous day the roads were in bad condition, but every available spot was crowded by people from far and near, who were anxious to catch a sight of their sovereign, and who testified their delight at the novelty of the whole scene. From time immemorial no such immense crowd had ever thronged the streets of the western capital. Everything connected with the ceremony passed off most successfully.

The P. M. S. S. Company's steamer *Alaska* left San Francisco on the 1st instant, and her arrival here may consequently be looked for about the end of the month.

It has hitherto been the rule that all agreements for the employment of foreigners, either by any Government Department or unofficial Japanese, should be submitted to the *Gaimusho* for approval before any final arrangement was permitted, but it has been notified that this proceeding may now be dispensed with.

A fire broke out in one of the barrack buildings at Kasumiga seki, Tôkiô, at 4.15 a.m. on the 5th instant, which it completely destroyed. All these buildings are constructed of brick, and it is probably owing to this fact that the fire was fortunately prevented from extending beyond the one in which it originated.

From the *Nichi Nichi Shimbun.*

Several battalions of the Tôkiô troops, including a detachment of the Imperial Body Guard, have been ordered to march to Nagoya. When this order first became known it gave rise to various false rumours, among others that the troops were despatched to check the progress of certain *samurai* who were advancing to the capital by the Tokaidô. The real fact is that the troops are ordered out on a long march in order to thoroughly test their endurance and the serviceableness of their equipments.

From the same.

A fire broke out at the village of Kadori, in the province of Shimôsa, on the morning of the 3rd instant, which destroyed about twenty houses.

From the *Akébono Shimbun.*

An order has been given that a division of troops now garisoned at Kokura shall be quartered at Nagasaki.

From the same.

The number of conscripts to be enrolled in the army this year will be 14,537. This exceeds the enrolment of last year by 3,840, the increase being rendered necessary by the fact that more deaths have occurred, and more men have been discharged from the ranks for various causes during the last three years than was anticipated.

From the *Hôchi Shimbun.*

Several of the *kuazuoku* are about to establish a banking company, in which the Shimadzu (Satsuma) and Mori (Chôshiu) families will hold large shares.

Thursday, 8th.

An extremely clever and almost successful attempt at defrauding the Hongkong and Shanghai Bank by means of forged notes was fortunately discovered the night before last, it is believed on the first attempt to put the false currency into circulation. A man named Williams, an American citizen, on Tuesday, about 5.30 p.m. presented for exchange, at one of the numerous petty Chinese shroff's establishments in the town, a Hongkong and Shanghai Bank Note for $500. The shroff had his suspicions aroused, and moreover, was somewhat startled at the amount of the proposed transaction; and sent the note to the compradore of the Bank for examination. The compradore detected the forgery as the document was a photograph, coloured,—and the tinting immediately gave way to the application of a wet finger. He sent instructions to the shroff to detain the man ; which was done by alleging the necessity of sending to a distance for the *satsu* required for change—and, meanwhile the shop was guarded by a large body of Chinamen, until the arrival of Mr. Walter, the Manager of the Bank, who had been hastily summoned from his house on the Bluff.

On being given in charge, the man affirmed his innocence, and entire ignorance of the whole matter, further than that a 'friend' had given him the note to get changed. On being interrogated, however, by General Van Buren, he broke down in his story, and ultimately gave up the name of his 'friend,' who is a man going by the name of Bennett, a Dane by birth, and a photographer by trade. Williams avers that Bennett has made a number of these false notes, but we believe no others have as yet been discovered, though the rooms occupied by both men have been carefully searched. Two other men who are implicated, both named Hansen, have also been arrested, one of whom is alleged to have furnished the good bank note which Bennett photographed. It is said that several of the counterfeit notes were prepared, and it is feared that an attempt has been made—whether successfully or not is at present uncertain—to pass some of them in Yedo. All the four men implicated are in safe custody.

The Mikado's intended movements are as follows:—His Majesty was to leave Kiôto yesterday, the 7th instant, on a trip into the province of Yamato, resting at Uji last night

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

after a stoppage for refreshment at Fushimi. On the 8th the Mikado will leave Uji, and, passing through Nagaike will arrive at Nara, where he will stay until the morning of the 10th instant, when he will start for Imai-mura, whence he will visit the Imperial tombs at Unibe-yama on the following day, returning to Imai-mura in the evening. On the 12th His Majesty will visit Dômiô-ji, stopping at mid-day at Shimoda, and on the 14th will start for Sakai, where he will remain for the night. On the 14th His Majesty will go into Osaka, remaining there until the morning of the 16th, when he will return by rail to Kiôto. On the 21st His Majesty will finally leave Kiôto for Kobe, where he will embark on board the *Takao Kan* for Yokohama.

It is rather a notable fact that no criminal charge has been heard in the British Court since the 18th October last, until yesterday.

The arangements which have been made by the foreign Consuls and the governor of Kanagawa for impounding stray, noisy and mischievous dogs, as are embodied in the advertisement we publish to-day, cannot fail to be of great benefit to the community, as most people here have suffered by being kept awake at night by the barking and yelping of unowned curs which roam at will about the Settlement and Bluff. The rules for the disposition of dogs which are taken charge of by the police are fair and reasonable, and no owner of a dog can, under the circumstances, object to that one which requires him to provide his animal with a collar bearing the name and residence of its master. Still if the police are going to impound all the noisy dogs in Yokohama they will have their work cut out; but what a blessing it would be to all residents, provided they are only destroyed after the advertised detention of seven days.

From the *Nichi Nichi Shimbun.*

The Japanese Government having purchased the building hitherto occupied by the French Legation at Yokohama, it is to be converted into a *Saibansho*. The Court business at present carried on in the building in Chôja-machi will be transferred to the new *Saibansho* at the end of next month.

From the same.

We hear that this year being the thirteenth since the death of Kômei Tenno, a notification has been sent to the various *Saibansho* that the sentences of criminals now undergoing imprisonment are to be lightened two degrees, according to ancient custom.

From the same.

Rumours are again current that the *samurai* of Satsuma are creating some disturbance.

From the same.

Some robbers entered the branch office of the Mining Department on the Island of Sado, killed three officials, and then made their escape with about five thousand *yen*. They have not yet been discovered.

From the *Chôya Shimbun.*

The Government is about to purchase a large plot of land at Hongô, Tôkiô, for the purpose of constructing stables for the Army Department.

From the same.

One hundred and fifty police constables who had been sent to Miya and Aichi *ken*, returned to the capital on the 6th instant.

Friday, 9th.

The two men named Hansen, one of whom is a Swede and the other claims to be a naturalized British subject, underwent preliminary examinations before their respective Consuls yesterday morning, concerning their implication in the forgery case of Tuesday. We understand they have been remanded for trial.

Yesterday morning H. B. M.'s Acting-Consul, Mr. Wilkinson, held a special sitting in the Court Room to revise the Jury List for the current year. Mr. J. W. Hall, accountant, applied to have his name again erased, stating as a cause his inability to perform the duties of a Juror on account of a slight deafness. The motion was granted, and the Court, after ordering additional names to the List as it now stands, adjourned till Thursday, the 15th instant, when the amended form will be examined for approval.

The long-pending case in H. B. M.'s Court in connexion with the Community and the Race Club (Jaffray *v.* Strachan, Keswick and others) has, we believe, been satisfactorily arranged between the parties, and consequently withdrawn from Court.

A telegram from Kobe yesterday announced the sad news of the sudden death from an aneurism of Mr. Smeaton, so long in the employ of the Oriental Bank Corporation here.

The *Mainichi Shimbun* states that an armed vessel, the *Mikumi Maru*, left Satsuma on the 6th instant for Yokohama. There is another rumour that ex-*Sadaijin* Shimadzu arrived at Tôkiô at the end of last month, with the intention of demanding an interview with the Mikado, but finding that His Majesty had left for Kiôto followed him to that city, where the interview required was granted him. It is also stated that Shimadzu telegraphed to his relatives in Tôkiô that it was his intention to leave Kiôto before the Mikado started for his return to the capital.

From the *Hôchi Shimbun.*

Mr. Yoshimura, a *Dai-shoku-kuan* of the *Okurasho*, left by the *Hiroshima Maru* on a tour of inspection of the Customs at the ports of Kobe, Osaka and Nagasaki. After he has completed this work he will visit Shanghai.

From the same.

We hear that the Governor of Kanagawa *Ken* is now contemplating the discontinuation of sending printed copies of official notifications to the various *Kucho* and *Kocho*, and will hereafter only advertise them in the newspapers.

From the same.

Several military officers have formed a club at Kudan, Tôkiô, called the *Kaikô-sha*, which will be opened for the first time on the 15th instant.

From the *Chôya Shimbun.*

The *Sendai Shimbun* commenced its publication on the first instant, and will be issued every other day.

From the *Nichi Nichi Shimbun.*

All those recently dismissed officials who had a good character for diligence, and who had been in Government employ for upwards of four years, are to be rewarded with a present of money amounting to their former salary for one year.

From the same.

The following sentences were passed on criminals at the Tôkiô *Saibansho* during the past year.

	1st Jan. to 30th June.	*1st July to 28th Dec.*
Imprisonment...	31	55
„ in chains	2	52
„ with hard labour not exceeding 100 days ...	1,327	1,286
„ „ „ 10 years...	182	116
„ „ for life	16	31
To be hanged	4	—
To decapitation	47	27
„ with exposure of heads	—	2

Saturday, 10th.

A fire broke out at about 1.30 a.m. on the 9th instant at Karafuto, that part of the town of Yokohama adjoining the creek and opposite to Ishikawa. It originated in a match manufactory and quickly destroyed that building and the row of adjoining houses, extending also across the road to the opposite row. Large numbers of native firemen were quickly in attendance, and as there was fortunately no wind, they succeeded in subduing the fire in about half-an-hour.

From the *Nichi Nichi Shimbun.*

Mr. Kato, the editor of the *Yomiuri Shimbun*, was tried at the *Saibansho* yesterday for certain articles published in that paper which were said to contravene the Press-laws. Mr. Torii, the editor of the *Sômô Jijô*, was also summoned to the *Saibansho* yesterday.

The numerous friends of Sir Brooke Robertson, or indeed we may say the Foreign communities of China and Japan, will rejoice to hear that the unfavorable symptoms that his case presented early in the week have disappeared and that there is again a fair hope of his sure recovery. After this just attribution of the general esteem of the Foreign communities, it would be an omission not easily justified were the esteem and confidence of all classes of the Chinese left unacknowledged.—*China Mail.*

A PRIMER OF POLITICAL ECONOMY.

Chap. I. Protection.

If the *Japan Mail* addressed foreign readers only, or cared for foreign interests alone, these articles need not have been written. A very large majority of our fellow residents here stand in no need of being taught the elementary principles of the English system of trade,—many of them could probably state them as clearly as ourselves. Were such our only clients, we should hardly, indeed, have the presumption to hope that the articles would be read. The fact that this is not the case,—the knowledge that the essays which appear in the leading columns of foreign newspapers in Japan are generally translated for the information of Japanese statesmen, and are frequently made the subjects of comment by the native Press,—constitute, at once, our apology for writing, and our assurance that what we write will not be wholly devoid of interest to those, who are as deeply concerned as ourselves, that the Japanese Government and Japan trade should be guided in the right way.

We have no wish to deny or disguise the fact, that the *Tôkiô Times* has furnished us with the incentive to our present work. Having stated in its prospectus that "its "chief animating impulse will be to assist the advancement "of honorable effort toward progress in this country," it has devoted a large portion of its first four numbers to the advocacy of a doctrine which is daily losing ground in all countries which have any claim to be called progressive, and which its disciples themselves are forced to call 'reactionary.' And it has gone to the extremest lengths in its advocacy of that doctrine, by gravely affirming that "a land which can make itself self-supporting, and fails to do so, forfeits its right to independence." We do not purpose,—nor would our readers probably permit us,—to enter into any such lengthened controversy as the *Tôkiô Times* appears to invite; and we must, of necessity, postpone the discussion of the various side issues which properly belong to the question. But we cannot, as journalists in Japan, allow errors of such a character to remain unexposed, and we, therefore, take leave to enunciate our own creed of Political Economy. We propose to state, succintly but fairly, all the arguments in favour of Protection which have been, or can be, adduced in the particular instance with which we are concerned—the nascent Japan trade: to expose their fallacy: to state, as briefly, the arguments in favour of Free Trade: and then, to leave those most immediately interested, to choose which guide they prefer to follow, which policy it will be most to their interest to adopt.

The objects of a protective system are stated to be:—to render a country independent of foreign products and manufactures; to compel the development of the country's own resources; to give its native producers and manufacturers the command of their own markets; to give the Government such a revenue from the Customs as will enable it to reduce Excise and other internal taxation; and, of course, as a general result, to secure the greatest happiness of the greatest number. And the trade and condition of the United States of America are triumphantly adduced, as proving that Protection confers these benefits; and from this example the deduction is made that Protection will do as much for Japan.

Our object is not so much to prove the general case for Free Trade, as the particular; we commence therefore by giving direct denial to the proposition that Japan must necessarily benefit by adopting a commercial policy which has—or has not—proved beneficial to America. We are quite prepared to maintain that American trade

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

has prospered in spite of Protection, and would have been infinitely more prosperous, had it been guided, during the last twenty years, by the sounder economic rules laid down by ADAM SMITH and RICARDO. We could even afford to concede the latter proposition, and fight the question on the ground that the congeries of States, differing in conditions of climate, race, advantages and necessities, which are held together by so loose and merely sentimental a bond as that of Federal Union, and entituled the United States of America, has never yet felt the pressure of Protection, inasmuch as trade amongst these States themselves has always been practically free. And, as a corollary, we might admit that a continent, stretching from the Frigid to the Torrid Zone, might, without physical inconvenience to its inhabitants, cut itself off from commercial or political intercourse with the rest of the world. That it might miss chances of moral and æsthetic advancement would be of little moment, inasmuch as it would rapidly develope a civilization of its own. But all such contention is beside the question as regards this country. Japan, in entering, or being dragged into, the family of nations, must content herself with aspiring to a lowlier position than that occupied by the United States. It appears to us that if, in her own quarter of the world, and regarding China as her Europe, she can ever attain to a moderately close approximation to the same relative position held by Great Britain and Ireland, she will have done as much as her most enthusiastic statesmen of to-day can hope for, and considerably more than her visionary well-wishers can expect.

Taking in order, therefore, the objects of Protection here;—can Japan make herself 'independent of foreign products and manufactures?' A very simple answer to the question instantly obtrudes itself:—she was so before 1858. But the Japan of to-day, with her aspirations towards 'civilization;' her struggle against the trammels of an 'extra-territoriality clause;' her ambition to compete, even with England and America, in the carrying trade of the Far East; with her art manufactures visibly influencing European taste, while she is adopting and acclimatizing what we have to teach her of homely and useful industries—this Japan of 1877 cannot return—even if other interested nations would allow her to recede, into her ancient isolation. When EVE set her pretty teeth in the fruit of the Tree of Knowledge, she could not take her pleasure without its consequences. It appears to us that Japan is in much the same position. Before the country was opened to foreign commerce, or had felt the stress of foreign ideas, protected prostitution and infanticide all but legalized had kept down the population of these islands to the point at which, with the assistance of an occasional epidemic, it could produce that sufficiency of food, and means of clothing, housing and amusing itself—without assistance from outside—which constitutes 'independence' according to the advocates of Protection *in excelsis*. That three-fourths of the population toiled in comparative penury, to support the remainder in idle luxury; that the nation made no 'progress' whatever, as we understand 'progress' to be—improvement of the condition of all; but remained sunk in a slumber of anything but sleeping Beauty:—all this to Protectionists of the true type matters not a whit. The country was 'independent.' But the conditions of the problem are changed. Japan is awake; both the evil practices we have mentioned are recognised by the government, as, at all events, something to be ashamed of, and as the last *census* shows us, the population is increasing at something like the normal rate. Its people are no longer contented with their misery; they clamour for real 'progress'; new wants have been created, new habits are forming, new voices speaking for the inarticulate; twice has the nation been 'dependent' on foreign imports of grain for salvation from famine:—and, we take it, the problem, as it will soon begin to press on Japanese economists, is much the same as that which began to distress English statesmen about 1840:—not, whether the country can be made independent of foreign products and manufactures;—but how can its limited acreage be best utilized, so as to produce enough of valuable consideration to purchase needful supplies. We are sorely tempted here, to wander into a digressive argument, and to show how the idea of Free Trade must, of necessity, have been first developed in an island. But the proposition appears so self-evident:—that an increasing population, in a limited area, must ultimately face the choice between artificial restriction, forced emigration, or purchasing its food supply;—that the impulse is easily resisted, and we content ourselves with taking the fact as proved. We must also guard ourselves, here, against possible misconception of our argument. Cheap food is the first necessity to a country, and, with respect to its food supply, the comparison between England and Japan does not at present hold. But the commercial position of Japan among the nations is unfixed; her mineral resources are, as yet, a quantity so undetermined, that it is impossible to predict in which of the two grand divisions—agricultural or manufacturing—she will be classed. It may be that her labour may be more profitably employed than in growing rice; in which case she must, as her population expands, accept foreign-grown food; abandon, thus, the hope of 'protecting' her own food growers, and sink, with Great Britain, into the degrading position of having 'forfeited her right to independence'—in the eyes of American Protectionists. Besides, 'man does not live by bread alone'—other wants than those of the mouth must be supplied, and it is Free Trade only, which, admitting into a country at the lowest cost, the necessaries or luxuries of life, from other countries which can produce them cheapest, releases labour to develope to best advantage the nation's special resources; and enables it to pay, with their proceeds, for imports required. But this argument properly belongs to the other division of this essay—a summary of the advantages of Free Trade: we pass, now, to the refutation of the second of the Protectionist fallacies we have stated—that Protection would 'compel the development of the country's own resources.'

This is an error the more dangerous, that it enfolds a particle of truth. To follow the track we have been so far pursuing,—food supply—it is clear that, if the import into a country of foreign grain were prohibited, grain growers would be stimulated, by high prices and the necessities of the people, to get the utmost out of the land. Precisely the same result might be predicated of any other single industry, any other branch of production or manufacture. But the growth and expansion of any such 'resource,' so stimulated, would be artificial, unnatural, temporary, and attainable only by the sacrifice or neglect, of other valuable 'resources.' Grant the benefit to the special class of producers—(transient and illusory, as it will be our business to show, in another chapter) what would this not cost all other classes, not interested, except as consumers? And how, thus, is to be secured the ultimate object of Protection—'the greatest happiness of the greatest number?' The *Tôkiô Times* holds it to be,—

"as plainly the duty of a Government to *compel, by protective measures,* the development of a country's re-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sources, as is that of a father to enforce the physical and mental development of his children."

Substituting 'stimulate' for 'compel' and leaving out the other words we have italicised, the simile is happy and the sentiment just. But we should reprobate the conduct of a father who educated, physically and mentally, one of his children at the expense of the rest. If it be answered, that all industries are to be protected alike, that each 'resource' is to be equally developed, all classes of producers stimulated by high prices and the necessities of their neighbours; we come, very speedily, round the same vicious circle to the same point:—that a country like Japan can only render itself 'independent'—in the Protectionist sense,—by some process of checking the growth of its population.

There is another phase of this 'development' theory to be considered. It is clear that it takes place—if at all—at the expense of those not specially interested in the particular industry to be fostered. But is the progress of the industry itself sound and healthy? We affirm the contrary; we aver that the growth of the industry is positively checked by Protection. But our argument on this head necessarily includes the consideration of the third section of our subject—the command of home markets claimed to be given by the protective system, and its exposition must therefore be deferred until this point is touched upon.

But one more point remains to be disposed of, to conclude this part of our work. There is a section of political economists who may be classified as 'Homœopathic Protectionists.' They would protect an infant industry; would nurse, and pet, and pamper it, only till it was strong enough to hold its own against rivals differently trained. And, in an evil hour for his own reputation, and for the doctrine which he had spent his life in advocating, JOHN STUART MILL once so far wavered in his faith as to write the passage quoted by the *Tôkiô Times* of January 13th, and which has always given occasion to the enemies of Free Trade to blaspheme:—

"The superiority of one country over another, in a branch of production, often arises only from having begun it sooner. There may be no inherent advantage on one part, or disadvantage on the other, but only a present superiority of acquired skill and experience. A country which has this skill and experience to acquire may in other respects be better adapted to the production than those which were earlier in the field; and, besides, it is a just remark, that nothing has a greater tendency to promote improvements in any branch of production than its trial under a new set of conditions. But it cannot be expected that individuals should, at their own risk, or, rather, at their certain loss, introduce a new manufacture, and bear the burden of carrying it on, until the producers have been educated up to the level of those with whom the processes are traditional. A protecting duty, continued for a reasonable time, will sometimes be the least inconvenient mode in which a nation can tax itself for the support of such an experiment."

But Mr. MILL certainly repented this solitary lapse from full and firm belief; for, in the preface to a subsequent work to that from which the above quotation is taken,—reviewing approvingly Colonel TORRENS' Budget, of which the bases were defensive Protection and reciprocal Free Trade, he writes that he

"has been careful to point out, that from these opinions no justification can be derived for any *protecting* duty, or other preference given to domestic over foreign industry:—

A recantation as complete as could be made of his error, in allowing that even homœopathic protection could fail to injure an industry, however infantile. And do not experience and facts confirm reason and authority? Is it not invariably the case that a protected industry always whimpers for more and more protection, for higher duties; instead of growing robust and powerful in the healthier air of free competition? Does it not even become converted into a vested interest, requiring only a comparatively short period to establish a claim for compensation when the protection is removed? And the cost, both of the protection and the compensation, has to be borne by the uninterested classes of the community—first, in the increased cost of the commodity; last, as an item in taxation. And does it not, in too many instances, have the effect of damaging some other interest equally important with itself? Examples of both evils will readily occur to our foreign readers: we may give simple mention to the import duties on English cotton manufactures in India, over which the Governor General and the Secretary of State came into collision last year; and to the protection of American ship builders and their iron and machinery industries, which destroyed the American carrying trade. But the details of these measures, and their application, are too important to be discussed at the end of an article.

SPIRIT OF THE JAPANESE PRESS.

THE BUILDING MANIA.

("Nichi Nichi Shimbun," 31st January.)

We were rejoiced to learn that His Majesty the Mikado, previous to leaving the capital for Kiôto, had given the following order to the chief officials. "As I said on the 4th of January last that it is my wish to see the people in a state of happiness, and contentment, I therefore now order you to carry on the Administration in accordance with my will." Now to promote the welfare and happiness of the people is in our opinion a task that cannot be accomplished with ease. The main thing is to reduce the burdens hitherto borne by the people, and the Emperor's wishes evidently point to this. The Budget of the Financial Minister shows that the revenue for the year 1876 was 4,949,000 *yen* less than the previous year, and this deficit probably arises from the reduction in the land tax, now in course of being carried out.

To what can we trace the disturbance among the farmers in the course of last year? It must have been that the reduction has not been sufficient to enable them to live in such comfort as they desire, but if the officials should now properly carry out the late edict of the Emperor, the farmers will be relieved and rendered more contented, and unless they prove very ungrateful, will not again rise in rebellion against the Government.

On account of this reduction of taxation on land, the revenue has been diminished one-eighth, and to meet this deficiency, the Government has boldly abolished or amalgamated many of its institutions, especially the lower offices, and dismissed a large number of officials. But while reforms of this kind are being carried out, which undoubtedly have for their aim the good of the people, there is one request that we wish to place before the Government, which is to urge them to discontinue the erection of new buildings, for which there can be no urgent need, and which we can only regard as unnecessary. There seems to be a rage for the construction of new buildings, and every year a large proportion of the revenue is devoted to this purpose. To such an extent has this been carried on, that the people say that during the last few years, one half of the revenue has been consumed in this manner. It may be a very nice thing for the Government to have their buildings constructed in grand style, but we fail to appreciate the great inconvenience that would arise from the use of the old offices. If the arrangements of the latter prevent a proper discharge of the duties of the department, it is then, of course, desirable that new buildings should be erected, but when there is no such reason, the expense of putting up other offices should be studiously avoided.

Whenever a chief department establishes a sub-department the first thing that the people say is "well, we may expect to see a new building in a few months;" and in most cases they are right. But the erection of a new house will not teach the officials the performance of their duties. Moreover, whenever one department

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

erects new offices, none of the others are content to remain in their old quarters, and this kind of work has been carried on by every sub-department to such an extent, that, with the exception of the Palace and the *Daijokuan*, there is not a government office within the castle moats that has not been newly constructed in some form or another.

But the evil of this building mania does not terminate here. An ancient writer has said that "whenever superiors do any thing, inferiors always copy it to a greater extent," and the saying proves true in the present case. Thus when in the interior any institution is contemplated the first thing to be done is to put up a new building. Suppose a school is to be established, the people say "we must have a new school-house," but when they are asked, what is going to be taught there, they say that has nothing to do with them; all they want is a new building for the school, and the matter of teaching must be left for the others to look after. Then the people in the neighbouring village begin to say, "they have got a fine new school house over there and we must have one," and so on; the same spirit prevailing all over the country. The worst of it is that all such acts of absurdity are praised and fostered by the Government. Building is undoubtedly good to a moderate extent, but it is too lamentable that so large a proportion of the results of the toil of the people should be lavished in such a manner. Had there been no better mode of spending the money, we would have made no mention of these matters, but when there is such an ample field for more beneficial and sensible outlay, we cannot but condemn the expenditure as an absurdity. We therefore request that the Government will discontinue the construction of buildings which are not an immediate necessity. This will not only reduce the expenditure of the Government, but will cause the people to refrain from this absurd mania which prevails throughout the country. The above opinion is not held by ourselves alone; it is entertained by nearly all writers, and if the course we point out be adopted, it will surely greatly assist in promoting the welfare of the people, according to the gracious will of our Sovereign.

Change for Change' Sake.

("*Chôya Shimbun*," 26 January.)

There is a common saying that people will become dull, unless varying incidents keep their minds stimulated. Although we may admit that this might have been true in times long past, we maintain that no such dictum can safely be made to guide men of the present day. To adhere to one principle in all that concerns the Government is of vital importance, and the abolition, amalgamation and division which are constantly being made in the Government Establishments, on the plea that reforms are of absolute necessity, should be strenuously avoided. Such changes not only mislead the people and prevent them from getting anything like a clear idea of the constitution of the Government, but also cause great, though perhaps only temporary, inconvenience to the officials in the discharge of their duties. The same remarks apply to the Regulations for the conduct of the various offices. When a Regulation is enforced and it proves on trial that it does not work well, it should be changed and changed again, until it becomes such, that no fault can be found with it; but when changes are made with such excessive frequency as to mislead the people and inconvenience the officials, the wisest heads cannot approve of them.

We hear that with the English Government, there are offices, institutions and rules, which seem inconvenient and even unnecessary, yet the English Government carefully guards against frequent and excessive reforms and abolitions, and keeps the old institutions standing. This is because such changes have, if any, but a very slight practical benefit, and at the same time do away with any prestige that may have attached to the institutions, and is quite sufficient to prove that the English Government does not make the changes in the names and regulations of its offices without due consideration, nor treat such matters as subjects of trifling importance.

Ten years have now passed since the restoration, and both Government and people have been progressing in civilization. We are now in a state of general tranquillity; yet we see such frequent changes in the Government; one office instituted and another abolished; a law issued to-day and repealed to-morrow, that there seems to be no end to them. Surely there is something very strange in all this. Ask any man what he thinks of the state of Government to-day, he will surely say that it is a busy one. The words "Reform" and "Abolition" are getting familiar to many a farmer who has never read a single page of a book. But for the past ten years the people have enjoyed comparatively uninterrupted peace, though some misguided men have occasionally incited others to rise in arms against the Government. They have, however, been quickly suppressed, and saying that the Government is busy must mean that it is busy in reforming, abolishing and re-instituting. Since the restoration no great changes have been made among the officials at the head of the Government, which has hitherto carried on its administration with ability and satisfaction. These officials must therefore, we presume, have become thoroughly experienced in their duties. Why then should these continued changes take place? It may be that as the power of the country had been for so long a time in the hands of the *samurai* and their feudal lords, great difficulty is experienced in laying a sound foundation for the new Government, and therefore every new measure presents some difficulty or is capable of improvement.

The abolition of the *Rio* (sub-departments)—which recently took place can be accounted for by the Imperial decree of the 4th January last, in which a reduction of the expenditure was ordered. In the changes may be involved some deep meaning not possible of comprehension by men of ordinary attainments. Still, reasonable as this may be, we cannot see any sense in changing such names as *Daijô* and *Shojo*, with which the people are so familiar to *Daishôkikuwan* and *Shoshôkikuwan*.

The great changes that have taken place since the restoration, which we are going to refer to, are ten in number.

The first change of any note which took place after the restoration was in November of the first year of Keiô (1867), when the offices of *Seishô*, *Kuanbaku* and *Tai-shôgun* were abolished and three kinds of offices called the *Sôsai*, *Gijo*, and *Sanyo* were instituted. The second was in January, 1868, when the above were divided into eight offices, namely *Sôsai* (Council of State), *Jingi Jimu* (Religion), *Naikoku Jimu* (Interior), *Guwaikoku Jimu* (Foreign), *Kaigun Jimu* (Navy), *Rikugun Jimu* (Army), *Kuaikei Jimu* (Finance), *Keiho Jimu* (Judicial), *Seido Rio* (Legislature). The third was in April of the same year. On this occasion the above offices were reformed to *Gisei Kuan* (Council of State), *Giôsei Kuan* (Executive), *Jingi Kuan*, *Kuwaikei Kuan*, *Gummu Kuan* (War), *Guwaikoku Kuan* and *Keiko Kuan*. The fourth was in May, 1869, when the *Gisei* was abolished, and the offices of *Gijo* and *Sanyo* instituted. The fifth took place in July of the same year, when all titles of the officials were reformed. The *Giôsei* was then done away with and and replaced by *Daijô Kuan* and all the other offices were reformed as follows: *Jingi Kuan*, *Mimbusho* (Interior), *Ôkurasho*, *Hiyobusho* (War), *Keibusho* (Judicial), *Kunaisho* and *Guaimusho*. The sixth was in August of the same year, official ranks being all reformed. The seventh was in July 1871. A reform took place in the *Daijô Kuan*, the *Sei-In*, set apart for the meeting of the *Daijô Daijin* and the *Sangi*; the *U-In* and *Sa-In* were established, and the *Mimbusho* done away with. The seventh was in August of the same year when the classes of officials were settled at fifteen grades, and the offices of *Sadaijin* and *Udaijin* were established. The eighth was in January, 1872, when a great reform took place in the functions of the various Government departments, In October, the *Saibansho*, and in November, the *Naimusho* were established. The ninth change took place in April 1875, the *Sa-In* and *U-In* being abolished, and the *Genro-In* and *Daishiu-In* instituted, and the tenth was made, as we all know, a short time ago, in accordance with the Imperial decree of the 4th January.

The above is a brief sketch of the great changes during the past ten years. Of course many of minor importance have taken place in the lesser departments, and in the *Ken* and *Fu*, but for want of space we have given merely a brief outline. We remark that each change causes an increase of officers, but this very likely is accounted for by our Government's desire to make the foundations substantial. The Government, with eagerness, acquires western ideas, and tries to act in accordance with them; in so doing its duties increase, and its officers must necessarily increase in proportion to the duties. But we do not approve of the increasing number of officials, though this has probably been remedied by the recent reforms. But again, cannot matters be gradually improved without such frequent changes which do undoubtedly mislead the people? It does not seem possible, and yet there must be some secret cause which urges the Government to act in this manner.

Such reason must indeed be a forcible one, as the changes are made by experienced officials, only after mature deliberation, so that we cannot for a moment accuse the Government of heedlessness!!

Nothing should be thoughlessly done, and in all its reforms a Government must look well to this. In acting in this way, the officials doubtless cherish some well grounded hope for the future, and we can only trust that these constant institutions, abolitions and reforms, will not cause confusion in the Government.

On Cultivating the Powers of the Mind.

("Hôchi Shimbun," 27th January.)

On viewing mountains and valleys in a strange country, our thoughts are excited and recall the scenes of home. On meeting an old friend our mind immediately reflects upon events which had passed between us in the days long past. But although such scenes and events may be deeply impressed upon our minds, unless something occurs to recall them to our memory, the past is not always present with us.

When a person sees a fine piece of cloth, he immediately thinks of the great labour that must have been required to produce it, and then he meditates upon the means by which such cloths can be obtained. Or let him see a magnificent building, or anything finer than he is ordinarily accustomed to contemplate, and immediately his imagination is excited, and the spirit of ambition arises in his heart. This proves that the minds of men do not actively work without exciting causes. Stagnant water is of no use, but when forced to flow, it can be made to render service to men. And so it is with the mind; though the quality of the intellect be good, it is worthless unless forced into action by surrounding influences. The only difference between men of learning and those of ordinary capacity, is that the former has a greater number of causes to excite his thinking faculties than the latter. There are numbers of men whose minds are capable of reasoning and comprehending, but from the absence of any exciting influence they never use the powers with which they have been endowed. For those men who have no minds to exercise we have no sympathy, regarding them as natural idiots, but we feel grieved for those whose minds remain undeveloped from the absence of those surroundings which would rouse them into action.

Let us now ask what are the best influences to excite the thinking faculties. They are books, newspapers, good friends and teachers. Let the people take pains to surround themselves with these, for as long as our towns and villages are without such aids to enlightenment, they are far below the civilization of other countries. It is sad to think that so many around us should pursue their path of life, without ever using the mental faculties with which they have been endowed.

THE STATE OPENING OF THE RAILWAY BETWEEN HIOGO AND KIOTO.

(From our Special Correspondent.)

ALTHOUGH the section of Railway opened formally by the Mikado on Monday last has been in operation for some months, it was fitting that some state ceremonial should mark the completion of a work which has carried into the ancient capital of the monarchs of Japan, one of the prime agents in the promotion of that new order of things, which has happily marked the reign of the present Sovereign. It was therefore determined that opportunity should be taken of the Mikado's intended visit to Kiyôto, to celebrate the completion of the line in such a manner as to indicate the importance of the work, and the interest felt in it by His Majesty. With this view, preparations were ordered to be made for a state ceremonial of unusual magnificence, at which the Representatives of the Treaty Powers were invited to be present, and the great officers of state were ordered to attend. Accommodation was also provided for the representatives of the native and foreign press, and every preparation was made befitting the importance of the occasion.

The Mikado and his suite embarked on the 24th ult. for Hiôgo, in order to spend some few days in the ancient capital of his ancestors previous to the ceremonial. On the 1st inst. the *Meiji Maru*, the new tender belonging to the Lighthouse Department, left to convey the Foreign Representatives to the same port, and other guests of the Government left on the *Thabor* in the Wednesday evening of last week. The weather was such as is usual at this time of year, days of calm alternating with a brisk breeze, the sun gracious or distant as suits the caprice of the season, and the temperature varying with his humour. So far as the *Thabor* is concerned, in which it was my lot to travel, she encountered a gale of wind not very long after leaving Yedo Bay, and obeyed its impulses so playfully during twenty-four hours, that most of my fellow passengers were plunged into the miseries of sea-sickness, and we were glad to put into the harbour of Metoya on the second night, which we passed in grateful calm. The next day and night were spent in reaching to Kobe, where we anchored on Friday morning in weather which hardly looked promising for the coming occasion.

There is so much to see at Kiyôto, that time is begrudged at Kobe for all but necessary duties, and I was glad to find myself on Saturday afternoon at Nakamuraya's tea-house in the old capital, with some hours to spend in sight-seeing. Kiyôto has been so much visited and described of late, that there seems no necessity for repetition which might be tedious. But every visitor must be struck with the number and stateliness of the temples which abound in the city, the beauty of the temple-grounds and groves, their enchanting calm, and what seemed to me the more than ordinary reverence of the casual worshippers who are encountered at their devotions. I doubt, however, if anything of that magnificence of decoration can be found in Kiyôto which distinguishes Shiba, and specially Nikko. The temples are of very grand and imposing exterior, and contain images, idols, paintings and wood-carvings of high antiquity and interest. But I saw nothing of the beautiful design, the exquisite harmony of colouring, or indeed the richness of ornamentation which distinguish the shrine of Shôguns. Not the less, however, are these temples well worth a careful visit and reverent exploration. For the most part they are far older than those just referred to, and while their general architectural characteristics and proportions are the same, their antiquity enhanced their merit in my eyes, and I willingly submitted to the absence of the decoration which I missed for the enhanced pleasure which the thought of their great age, yet unimpaired condition, afforded me. I can well imagine that in the spring time, when the cherry-trees are in blossom, and the temple grounds are gay with the young green of the year, Kiyôto is extremely attractive and agreeable, and that a fortnight might be spent there with the greatest satisfaction and profit. The city and neighbourhood abound with objects of interest, the hills in the vicinity are high enough to afford and reward an exhilarating climb, the potteries and keramic collections present an endless field for observation and study, and I doubt whether any city in Japan would better repay intelligent examination. Nor would it be less attractive in autumn, when nature is preparing to cast her summer garb, and the red leaf of the maple lends colour and richness to every garden and grove of the city. But neither in summer nor winter is Kiyôto attractive. In the former the heat is most oppressive, in the latter the cold is quite as trying, and under both conditions sight-seeing loses half its attractions.

Sunday was a most unpromising day. The mist which had hung indolently over the city during the morning, turned into snow, which fell incessantly during the afternoon, and melting as it fell, rendered walking so disagreeable as practically to forbid it. Tea-house life in Japan in fine warm weather is not without many charms. Through the open slides of his room the traveller may watch that Joyous Life of which Sir Charles Dilke writes so prettily and happily. There is movement and colour, play and laughter everywhere. But when cold compels the closing of the slides, and the clouds are dark and lowering, the imprisonment becomes the very acme of tedium. The view of all external life is obstructed by the absence of glass, and such light as the paper slides admit makes the reading of anything but very large print impossible. The books of familiar companionship refuse their solace, and in vain is amusement sought from Elia or Boswell. The hours which usually fly so much too fast, hang heavily and wearily, there is no possible source of distraction, and such poor beguilement of the time as a meal affords is liable to be sadly marred by the eccentricities of cooks whose dishes present every conceiveable kind of culinary discord. My quarters happened to be adjacent to a room in which an entertainment of *geyshas** was to be given, and shortly after dinner the twang of

* Dancing and Singing girls.

the *samisen* and tattoo of the small drum used on these occasions made me tremble for the prospects of the evening. Before long, the company—which was distinguished—had assembled, the preliminary tuning was over (and I am bound to say that this is not a whit worse than that of an amateur band of European enthusiasts) and the evening's performance began. I am unfortunately deficient in that large catholicity of sentiment which enables some Europeans to sit patiently through several hours of Japanese music and dancing. The one is as intolerable to my ears as is the other to my sight. A false gamut, and the perpetual recurrence of an imperfect fourth, which is the only attempt at harmony I can detect, are quite enough to forbid all possibility of pleasure from the music. The dancing, however, is far worse. It consists, as many of my readers know, of a variety of the most ungraceful contortions into which the human body can be thrown. There is no lithesome or easy play of the limbs, the feet are perpetually crossed, the toes, being turned inwards, no smile is permitted to play on the face, which is painted a ghastly pearl white, and though the fan is occasionally used with something approaching to grace and archness, the whole ideal of the movements of the dancer is as false and displeasing as anything can possibly be. It is only fair, however, to add, that the severest propriety is maintained throughout the performance, and an art which all the world over has been seriously, and not without reason, upbraided for its equivocal tendencies, is not, now at all events, open to this reproach in Japan. On the other hand, as I have said, it is absolutely wanting in all approach to grace, beauty or poetry of motion. The entertainment was prolonged into the small hours of the morning, and broke up with a boisterous hilarity very trying to the tempers of those who had long before sought refuge in sleep from the twanging and tattoo of the musical instruments, and the dreadful quavering which constitutes Japanese singing.

The sunshine which the English call Queen's weather, and which all nations believe to be the meteorological prerogative of their sovereigns, was not wanting on Monday morning. The air was keen, the sky clear, the snow lay lightly on the ground, and at an early hour the whole city was astir to enjoy the event of the day.

The Station at Kiyôto was gaily decorated with innumerable streamers, flags and banners. The columns supporting the upper story were twined with evergreens, or ornamented with devices showing the skill and taste for which the Japanese are so remarkable. In front of the building a pavilion had been erected extending some forty or fifty feet into the open space in front, the floor carpeted, and the back wall enriched with tapestries, chiefly of native needlework. Yet, among them, I observed two of foreign origin, probably presents made to some former sovereign from one or other of the European courts. Both were of classical story; one obviously represented the sacrifice of Iphigenia; the other suggested several incidents of Greek lore, though I could not undertake with any certainty to affix it to any one of them. At the back was a raised dais, supporting a handsome chair of state, and surmounted with a rich canopy. On the other side of the road, and opposite the pavilion, was a spacious stand put up to accommodate the sightseers, and conveniently arranged to enable them to witness the entire ceremony. Shortly after nine o'clock many Japanese officials of various departments of the public service, dressed in rich uniforms of European fashion, together with the foreign officials of the Railway department, mustered on the platform. Then arrived the Diplomatic Body, led by Sir Harry Parkes as *Doyen*. The members, with the exception of Count Fé, were in full official dress and wore the decorations of the various orders presented to them by their own or other sovereigns. Count Fé, the Italian Minister, wore the uniform of the Regiment of Hussars of which he is the colonel. The streets were lined with troops, and crowded with the loyal citizens of Kiyôto.

At half-past nine a movement was noticeable down the long street to the left of the station which leads from the palace, and the rapid advance of an escort of cavalry showed that the Emperor was approaching. In a few moments the horsemen swept past the building, and the Imperial carriage, drawn by two tall bays, deposited his Majesty and the Lord Chamberlain who was in attendance at the foot of the steps leading to the pavilion. A second carriage conveyed their Imperial Highnesses, Arisugawa-no-Miya and Yamashima-no-Miya, uncles of the Mikado, and a third four members of the Cabinet, Mr. Kido, Controller of the Household, Mr. Yamagata, Minister of War, Mr. Ito Minister of Public Works, and Mr. Kawamura, Vice-Minister of Marine. Other carriages were filled with officials of the Household or officers attached to other departments. As the Emperor advanced upon the platform the Diplomatic Body came forward, and Sir Harry Parkes addressed a few words of welcome to him. Then, preceded by his Chamberlain, the Minister of Public Works, and the Chief Commissioner of Railways, he proceeded to the platform of the line, where the Imperial train was drawn up which was to convey the party, and stepped into his state carriage, the band playing the national anthem. On this beautiful carriage great skill and taste have been lavished. It is constructed very solidly of the finest wood richly lacquered, and surmounted by an entablature displaying all the resources of the carver's and gilder's art. The interior, which is very spacious, is lined with blue satin and rep, richly carpeted, and furnished with luxurious seats and tables. A door at the back leads into a lavatory compactly and ingeniously disposed. When His Majesty and the high officers of state had taken their seats, and the whole party, which was very numerous, had found accommodation, the signal was given, and the train moved forwards, the band playing a lively air, and the artillery, which was ranged on the outer side of the line, firing a royal salute. The train, which was conducted, as is usual on such occasions, by the Engineer-in-Chief, Mr. R. V. Boyle C.S.I., ran rapidly down to Osaka, a distance of 27 miles. The villagers along the line everywhere mustered to see the train pass, and at the stations, which were decorated with flags and evergreens, the school children of the district were drawn up to witness the sight and catch a passing glimpse of their Sovereign, nor was there anything in the day's proceedings prettier than these lines of happy, rosy, chubby faces. On arriving at Osaka, His Majesty and suite alighted, and were conducted to another pavilion in front of the station, where preparations had been made similar to those in Kiyôto. At a timely moment the Governor of Osaka, a man of singularly fine presence and dignified bearing, advanced in front of the officials of the *Fu* to the foot of the throne, and read an address of welcome and congratulation to His Majesty, who replied in a short form handed to him by his Chamberlain. He was then conducted back to his carriage and the train again started for Kobe, which was reached shortly before noon. Here the vessels in harbour were all gaily dressed, the French flag ship *Atalante* fired a royal salute, and her fine band, drawn up in the station, and subsequently in the station grounds, contributed to the pleasure of the day by playing some excellent music in a manner only too rare in this country. His Majesty was received with loud cheers by the foreigners who were assembled in the station, and seemed much gratified with the enthusiastic reception they gave him. We have omitted to state that the Emperor seemed in excellent health and spirits, took the greatest interest in the whole proceedings and expressed a strong sense of the gratification he derived from them.

In a convenient place near the station a pavilion had been erected similar to those in Osaka and Kiyôto, and to this His Majesty was again conducted, followed by his suite, the Diplomatic Body and the rest of the party. The proceedings here were more formal and protracted. First, the Diplomatic Body advanced and Sir Harry Parkes, as *Doyen*, delivered the following address to the Mikado:—

"On the part of the Corps Diplomatique, I beg to express to Your Majesty the sincere pleasure which it affords us to participate in the interesting ceremony of the opening of a new line of railway to the ancient capital of Your Majesty's realm.

"The invitation to be present on this occasion, with which Your Majesty has graciously honored us, furnishes an unmistakeable sign of the friendship which marks Your Majesty's relations with the Sovereigns and Presidents whom we have the honor to represent. But this is not the only meaning which that invitation conveys. It shows that Your Majesty is sensible that a great industrial enterprise, which so nearly affects the welfare of many of Your Majesty's subjects, affects also the interests of the foreigners who are resident in this land, and who will always gladly join with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Your Majesty's people in promoting those works of industry and peace which contribute to the brotherhood of nations and to their mutual profit and prosperity.

"In the case of the useful work now inaugurated by Your Majesty, both native and foreign interests are so closely allied, that it is evident that our wishes for its success can scarcely be second to those which are entertained by Your Majesty, Your Government, and Your people. Great difficulties attend the earlier construction of railway works in any country, and the way in which these difficulties have been overcome in the present instance reflects high credit upon all concerned. But we may be permitted to add that the event of to-day marks an epoch in the history of Japan, for it furnishes a durable record of those new relations which she has established with the world; it is a proof of her design to advance as other nations have advanced, and also of the intelligence and practical capacity of the people; and it shows how closely Your Majesty identifies Yourself with the interests of Your people and how willing Your Majesty and Your Government labour to promote the national progress of Your nation.

"These, may it please Your Majesty, are the sentiments which animate my colleagues and myself in uniting with your loyal subjects in offering our congratulations on this occasion. Most cordially do we join with Your Majesty in wishing success to the Hiôgo, Osaka, and Kiôto Railway, and to all the efforts that may be made by Your Majesty's Government to provide Your country with such means of communication and transport, whether by Rail or Road, as may be best suited to its advancing requirements."

His Majesty made a brief reply, which was translated by an official of the Court, thanking the Foreign Representatives for their congratulations. The Governor of Hiôgo then advanced and read an address of welcome to the Emperor to which His Majesty replied in a few words. Sir Harry Parkes then presented Mr. Brassey, M.P., and Mr. Freer; Mr. Bingham presented Commander Marvin of the U. S. Sloop *Alert*, and M. St. Quentin presented Admiral Véron, and the Captains of the *Atalante* and *La Clocheterie*.

Luncheon was then announced, and the Mikado took his seat of the head of the table which had been laid for him and his immediate suite, the other guests being accommodated in another room. In both, the entertainment was ample and excellent.

At 2 o'clock the train started on the return journey for Kiyôto, arriving there at 4 p.m. On alighting from the carriage His Majesty was again conducted to the pavilion, and taking his place before the throne, in a few words declared the line open for traffic. This concluded the public ceremony, and His Majesty stepped into his carriage and drove off, accompanied by his officers of state and escorted by a troop of lancers, the band playing and buglers calling the troops into column.

Subsequently to this, Mr. Cargill, Director of Railways, and Mr. Boyle, Engineer in Chief, were summoned to the palace and there presented to the Emperor, who said a few gracious words to each of them, thanking them for their services and bidding them farewell upon the termination of their duties.

In the evening the two Imperial Princes who had accompanied His Majesty throughout the day, entertained the Foreign Representatives at dinner.

At 6.15 a special train left Kiyôto for Osaka, to convey the guests invited by the Minister of Public Works to a banquet given at the Municipal Hall to the Railway officials and others. On arriving at the station, where a plentiful supply of *jinrikishas* had been ordered to be in attendance, all the guests drove to the Town-hall, a large handsome building erected recently for the transaction of the business of the *Fu*, on plans which, with some alterations of purely Japanese origin, were made by Major Kinder, the late Master of the Mint. In the main room in the left wing of the building, covers had been laid on two parallel tables for about eighty guests, who soon assembled to do justice to the entertainment. The Minister of Public Works took the head of one table, with the Governor of Osaka on his right and Mr. Cargill on his left; the chair of the other table was occupied by Mr. Inouyé Masaru, Chief Commissioner of Railways, supported by Mr. Boyle on his right. On the conclusion of the dinner His Excellency the Minister of Public Works rose and proposed in Japanese, and subsequently in English, the health of His Imperial Majesty the Tenno of Japan, which was drunk with full honours. He subsequently proposed the health of the Governor of Osaka. His Excellency, however, was forced by a severe cold caught during the day's proceedings to transfer his chairmanship to Mr. Inouye Masaru, whose admirable mastery of English, coupled with his native good humour, enabled him to do the honours with entire success, and if his modesty induced him on one or two occasions to depute his duties to others, I can assure him that there was no need for the substitution, as he acquitted himself admirably, wanting neither the knowledge of forms requisite for the occasion, nor words in which to give them outward and appropriate expression. The health of the Railway officials was drunk, with all honours, and responded to by Mr. Boyle, who spoke of the valuable assistance he had received from the entire staff, and specially from Mr. England, and the hearty co-operation and support he had experienced from the Minister of Public Works and the Chief Commissioner. The health of Mr. Cargill was afterwards proposed and duly responded to. And other toasts followed in due succession. The evening broke up after a very agreeable entertainment, and a special train conveyed to their destination those who desired to return to Kobe.

Thus terminated a day memorable in the modern annals of this country—a day which proved how completely the events of the past ten years have destroyed the spirit which had hitherto been dominant in Kiyôto, and which placed the Sovereign of the country prominently before his people, as the active participator in, and even leader of that movement. Surrounded by many who had formerly been closely identified with the old *régime*, and with others who had brought about the new, the Emperor stood before the people of his ancient capital, the visible sign of the change, and yet representing the unbroken unity of the exalted office he fills. Many as have been the pageants witnessed by the temples, shrines and pagodas with which the loyalty or superstition of former ages has enriched Kiyôto, never before had they seen one of such deep significance and ample promise. It bore witness to a change more marked and complete than any which has been exhibited, so far as human records testify, in the history of the world—a change which, though chiefly due to external causes, has been brought about by little external pressure, and with a minimum of distress and disturbance to those who have been or will be benefited by it.

It remains only for us to bear witness to the complete success of the whole ceremonial, the details of which were arranged with admirable order and propriety, and carried out without a single accident, or mishap of any kind. The plans were exclusively of Japanese origin, and of Japanese execution. Yet so carefully were they conceived, on so excellent a model, and so admirably were they carried out, that success attended every part of them. Nor can the care bestowed upon the guests of the Government be too highly praised or gratefully acknowledged. The foreign Representatives were treated with every attention and distinction which hospitality and a studied courtesy could suggest or contrive. They were housed and entertained as became the guests of a bountiful monarch, and no observance or provision was omitted which their rank or comfort demanded. Similar kindness and attention, made all the more acceptable by graceful personal courtesies, was displayed towards guests less distinguished.

A telegram says that news has been received at New York from Mexico to the 13th inst. stating that ex-Chief Justice Iglesias had declared himself President of the Republic and formed a Government at Ganajuato. Troops were moving against him.—*Pall Mall Gazette.*

There has been discovered in New Orleans, the *Picayune* of that city says, "The last Supper," painted by Raphael shortly before his death, in the year 1520. The painting has been rudely cut from its original frame and adjusted to one of smaller capacity. Under a fold was found Raphael's monogram.

The *Athenæum* says that no students have yet offered themselves to Dr. Legge, the Professor of Chinese at the University of Oxford, but it is expected that the lectures which the reverend gentleman is about to deliver will bring some.

Mr. Ruskin, the *Athenæum* says, is occupied at Venice in studies fo the completion of a supplementary volume to "The Stones of Venice," a work in which he has made considerable progress. Mr. Ruskin is likewise occupied in the preparation of a work which cannot but be highly acceptable to students and visitors in Venice, being a sort of art-guide or art-history of the master-pieces existing in the city.

A FEW MORE FACTS CONCERNING THE LATE MOST EXTRAORDINARY AND INTERESTING DISCOVERY.

We regret exceedingly that we are unable to place in the hands of our readers this week, a transcript of any of the papers found upon the body lately discovered in Yokohama. This is the more to be deplored, inasmuch as we had looked forward ourselves to their production, not only as an intellectual morsel likely to satisfy, in some degree, the natural appetite of the community for news, but also as a means whereby certain very disturbing rumours rife in the settlement might receive their *quietus*.

The fact is, however, that the handwriting of the MSS is so crabbed and illegible, and the erasures, corrections, and interlineations so numerous and perplexing, as to render it absolutely necessary, in the first place, to have fair and readable copies of them prepared. When this has been done, the work is, after all, only in its earliest stage, so to speak, for the language in which they are couched is so quaint and all but obsolete, that it has to be altered so as to meet the requirements of modern readers. Added to which—we are obliged in self defence to mention what otherwise perhaps we might have left unsaid—there is such a superabundance of oaths and expletives, such an overflowing measure of abusive language in these papers, (we fear that the writer was a man of an exceedingly violent disposition) that a very constant use of the pruning knife is necessitated in their preparation. All this requires judgment, and necessarily makes a considerable inroad upon our time, already sufficiently pre-occupied. Hence the unavoidable delay.

We promised in our last issue to keep the public fully informed of any new fact which might be brought to light concerning this very mysterious business, nor have we forgotten our obligation; but the official enquiry into the circumstances connected with the discovery of the remains, so recently concluded, has placed everybody in the same position, with regard to the very latest items, as we occupy ourselves, and makes, of necessity, a further reference to them a reiteration chiefly, and therefore a work of supererogation.

That we have been censured for omitting to make mention of the ring which was found upon the middle finger of his lefthand, we are of course aware; but we would plead in extenuation of this omission, that the position of the left arm underneath the body effectually concealed it from our view. And whilst we are making confession of our faults, we take the opportunity to admit that we were in error in describing the gold carolus as having "*a hole in it*," for it has in reality *two*. This may appear to some to be of so little moment as to be hardly worth recording, but we are so convinced of the inflexible necessity for a rigid adherence to truth of detail in every case such as the present one,—in which the smallest circumstance may turn out to be a connecting link in a chain of discovery—that we give it for what it is worth.

The ring—which by the way is an undoubted antique, polished in the best fashion in all the ramifications of its inscription—is really an interesting relic. We confess to an overpowering curiosity to fathom the mystery of its crossed arrows, dividing the stone into four panels, with the cabalistic legend $\frac{\text{Gan} \mid \text{Kat}}{\text{Aki} \mid \text{Poni}}$ We trust that some ingenious gentleman in our midst, who has devoted his time to the study of antiquities, may be induced to turn his attention to the deciphering of these characters. Advantage might indeed be taken, perhaps, of the opportune presence amongst us at this moment of a celebrated connoisseur, to have the light of his very great experience thrown into this obscure affair.

The body itself will soon have resolved itself into its component "ultimate elements," and so escape for ever from further observation and conjecture. For whether the forces of nature, so long held back, have gathered strength during the temporary cessation of their operation, or the natural processes of disintegration and decay only, are going on, certain it is that remarkable changes have lately made themselves apparent. We would therefore advise those who are curious in such matters, and have not yet inspected the remains, to do so without delay. They will find that no difficulties will be thrown in their way. We ourselves take this opportunity of most gratefully acknowledging the uniform courtesy of all the Consular officers, and we know well, that in so doing, we only echo the public sentiment upon the same subject. We believe that the body is to be re-interred on Tuesday next; this time in a fitter and more becoming situation than that from which it was unearthed.

There is nothing more to be said upon this interesting affair; everything is now known which ever can be known about it, and soon the matter will have been forgotten. We think it our duty, however, before finally dismissing it to take advantage of the occasion to make a few remarks to which the demeanour of the public in regard to it has given rise. We do this with, be it understood, the greater reluctance, inasmuch as in so doing we are handling, as it were, the human heart. That so delicate an organism requires the tenderest of manipulation we are well aware, and we trust, therefore, if we seem to grasp it somewhat roughly, we shall be acquitted of any intention to produce pain. We allude in this figurative way, of course, to the amazing and incredible rumours which have lately passed current in the settlement, but more particularly to the latest.

The extraordinary tendency of the human mind towards error has always been a subject of the deepest interest to theologians and psychologists. Profound thinkers —such as Herbert Spencer—have endeavoured by the process of elimination to divest it layer by layer, so to speak, of the different biases by which it is known to be influenced, in the hope that they would arrive at last at the naked essence itself, and by such means succeed in tracing out the proper orbit in which it moves, noting carefully, the while, the laws by which its action is governed, how it is attracted hither, repelled thither, believing thereby, that any future aberration might as certainly be calculated for and anticipated as that of any of the Heavenly bodies. Chateaubriand no doubt had some such idea in his head when he wrote that "It should be possible to frame a table or chart in which all the given imaginable events of the history of a people would be reduced to a mathematical exactness." Whether such a result will ever be attained, we are not prepared to say; but, that it needs must be arrived at by a most complex process is very evident, if we shall ever be able to foresee and predict the birth of so incredible a belief as that which now holds the community by the ears. The lightest feathers float the longest, and we can only suppose that it owes it to its utter want of specific gravity that the story has not long ago fallen to the ground and been trampled under foot. The lack of sequence in it; the untruth of the conclusions, drawn from premises as false, and the rapid and mushroom nature of its sudden growth, ought at once to have proclaimed it for what it's worth.

The amusing ingenuity of one other canard, however, we cannot forbear to mention before concluding, namely, the so called discovery of an embroidered P upon the linen of stranger, and the conclusion therefrom that its owner was Psalmanazaar on his way to Formosa. Had this discovery really been made, and had the initials only stood as G P, we suspect that no amount of direct evidence to the contrary would ever have disturbed the identity. Fortunately the G has not been contended for, and as for the P, it disappears at once when it is revealed that *the stranger had no shirt.*

TRAVELLERS, MISSIONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper, in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, *(Horniman's Museum.)* Forest Hill, LONDON. [ADVT.]

"Berkeley, Sept. 1869.—Gentlemen. I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Correspondence.

MRS. BROWN IN JAPAN.

To the Heditor of the "Japan Weakly Male."

Grand 'Otel, 8th Febuwary, 1877.

Mrs. Brown presents her compliment to the Heditor of the *Male*, and will feel much obligated if you will read my letter attentive, as is a stranger in a furrin' land, though no stranger to you Mr. Heditor as well I know, being a gentleman, as is all your other readers, and cannot be hignorant of me as I am aweer some people calls a "gossipin old thing," which them as says so oughter cast their own eyes into the moat, as the saying is, for my gossipin aint nothin' to Yokohammer which is the gossipest place, and which you must hexcuse me, it aint no business of any of your good ladies, as is not as bad as men, why I come to this dropsy-turvy country, as left Brown in San Francisco, all through Mrs. Elkins' second floor lodger's husband's sister, as blood is thicker than water as the sayin' is, and married a Japanese Dammyo as lodged next door, and, was a learnin' the English langwidge with a bad cough, as give her two beautiful chrystial ear drops, as white as dimonds and twice as valuble, which Dammyo is his title and his nature, as have often 'eard her father supply the epitaph, when he didn't come back, being called away by the Micoon to take the place of Prime Minister, and thinks he must have cut 'isself into ten thousand pieces, as I 'ear all the Dammyos is obligated to do before they die, as shows that they never done nothin' disgraceful, and get large pensions, and so determined to come and look for 'im, as is too young to go trapesing about the world by 'erself and so left Brown in San Francisco to look after 'is shares, as is a old school feller of O'Brien's as 'as put 'im up to a thing or two, and come on 'ere to look for 'er 'usband, as is likely to ave bin deceived by an 'eathen.

And I must say the perlitness of every body on board the *City of Peking*, as is Americans, and is always as perlite to old ladies as to young ones, and can travel alone in their country, and no need of a he-scort, as the sayin' is, which is a national tray, as is also Japanese, which Mrs. Billins had 'one as she used only 'igh days and 'olidays and said it were lacker, which was beautiful black and shiny and gold flowers, and I shall buy a set before I leaves, unless the Dammyo gives me a gold one for taking care of 'is wife as is their custom, which I am told takes care of several of their own, though not so bad as Mormons, and don't wonder, as is such little things, and takes three to make one good sized woman; as the sayin' is, but will probably object, being English, with an 'orful temper when put up, and likely to make it 'ot for the Dammyo when she finds 'im, as is twice 'is size and cause hemotion in his 'arem, but as I tell her being in Turkey must do as Turkeys do, as the sayin' is.

But this ain't what I've got to say, but 'as a ready pen when I 'as somethin' to write about, though 'ard writin' it is with two broken shins and a spraned thumb, which nothin' is better than laudanum and the white of a hegg and takes out the soreness wonderful.

Of course I ain't one o' them women as expecs to find the Mile End Road in the desserts of Afriky, but what I say is 'if you can't afford a lamp in your passage, dont leave the coal skuttle on the stairs for your visitors to fall over, which is what I want to talk about Mr. Heditor, not 'avin been brought up to consider good manners, though always savin' and not likin' to see people extravagant, though I do think that if their bizness is so bad, as can't afford to pay for lights to put into the lamp posts, they better shut up sh p, which is shameful to see themselves beaten by the natives, which I am not surprised at, as is a people immergin' from darkness as the sayin' is.

So I says to 'er "My dear, 'owever are we to set about findin' this 'usband of yours" as we found were not Prime Minister, through the name being different.

"Oh! Mrs. Brown" she says' "I think we 'ad better go and call on the Micoon."

So I made inquiry, but found that he 'ad gone to open a Ralerode, with a lovely carridge made of gold and hamber, decorated with chrysamthums, which is a beautiful flower as Mrs. Bewlay and I once went to see in the Temple Gardings, though a foggy day, and the white ones very smutty with the blacks which was dreadful.

So I says, "My dear, I think we ought to hadvertise" and I asked the clark what was the best paper for an abandoned female who wanted to find her lost Dammyo.

Says he, "I should think the *Male*; as as got a new heditor, as is known to be a tender 'arted gentleman and very fond of the ladies, and will give you h'every information."

Says I, "I'll put a advertisement in to-morrow mornin'."

"It's too late to-night" 'he says, 'cos the office is shut, but you can go to is 'ouse on the 'ill."

"Certainly" says I "which is the way"?

"You better take a ginricky'" says he.'

"Thank you young man," says I, "I prefer mine with peppermint, which though now and then, I 'ave found a small drop soothing, when much put about but never exceeding, though once overcome, when forgetful. But I found he meant a preambulator, which am not a hinfant in harms, and can't abide to turn my fellow creturs into beasts of burden, though 'aving once or twice ridden on a donkey on 'Amstead 'Eath, still very different when puttin' them in the shafts, and not what I call pleasin' to the heye or helevatin' to the hanimals.

So says I, "No thank you, I'd rather walk."

"Then I'll send a boy with you" he says quite perlite. But lor! When I got out on the Bung, as you call the place opposite the sea, it blew that strong, that the lantern couldn't keep alight, and the boy had only his night gown on, that showed his legs, that I couldn't abear to take him out in the cold.

So I says' "Take me over the bridge and show me the road and run back to bed, for you'll catch your death as sure as if you was a Christian."

So he takes me over the bridge and he says, "'Hundred leven, topside, all right," and then he makes a most perlite bow and says" "oyassume" which means I am told "take it easy" 'as is their custom to do at the 'otel.

Well, it was pitch dark, but the road seemed straight and good, and on I goes. I was gettin' on very well, though slightly blowed, as am not so young as I was, and rather fleshy, as was said to me by an American lady on the steamer, though true, but soundin' strange to English hears. I was walkin' on, just wonderin' whether I could n't n't find a public 'ouse, where I could get three pennor'th, with a little 'ot water and just a taste of peppermint, as is very good for the wind, through eatin' too many prawns, and layin' a little 'eavy on the stomach, as I am very partial to, and large than I ever see before, though the oysters is not so good as natives, but too dear in London, when I brought both my shins against a plank of wood, and fell all asprawl on a 'eap of gravel.

Well, I wondered where I'd got to, and was 'arf stunned, and when I come to, I found I'd tumbled over a box full of gravel, which 'ad been put in the middle of the road, for some purpus or other that I did not care about, but 'ighly dangerous and ill-convenient, and a disgrace to a Christian community, let alone an 'eathen, without a lantern to show the danger.

I found I 'ad barked both shins pretty badly, beside brusing my knees and spranein' my thumb, and sets myself down to derange my dress and rub my legs, when a perliceman in minnerture come up, and takes off his 'at quite perlite and says, "you're a she"? "Of course I am Sir," says I, rather sharp, for my shins was paining me dredful." Of course I am, and I've done nothin' to make me ashamed of my sect.

"Oh!" says he "you're a she, alright!" and off he walks. I wonder what he'd a done if I had been an he?

Well there I sat, quite confuged like, afraid to move for fear of tumblin' over somethin' else, and every thing as black as Egyp, and not knowin' wot to do, when a gentleman come up in a white lookin' shay, and stops when he see me.

"What is the matter Madam," says he, in a most pleasant voice, which sounded a little like Mike Maloney that married Brown's second cousin Betsy. "What is the matter, Madam? Can I be of any hassistance?"

I told him I'd tumbled over somethink or other and couldn't get back to the 'otel.

He jumps out of 'is trap, and says with the greatest perliteness. "Let me drive you back, my dear Madam. I

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

see that I 'ave the honour to address the celebrated Mrs. Brown; I little thought that our hintroduction would be hunder such circumstances. It is indeed shameful that such things should be purmitted by our Munissiple Directorship" (I don't know what he meant, as I 'ave not yet learned any Japanese, but it must be somethink that don't work as it ought to do). "The box that you 'ave just fallen over is only one of many that are filled with gravel, and placed for the reparin' of the roads. Still I must not complain against them, as I 'ave now six patients as is sufferin' from tumbles of such nature as your own, and from carridges bein' upset by drivin' against 'em in the dark. Puttin' aside 'owever pussonal benefit, I think it 'igh time that complaint should be lodged with the proper authorities. Allow me to hinspeck the shin. Thank you, yes! I must trouble you to take off your stockins. Ah! very badly grazed. Well! yes, as you suggest I should think laudanum and white of hegg about as good a thing as you could apply."

Then he bid me good night, and all I can say is Mr. Heditor, that you ought to be 'appy in Yokohammer, if you can always get such a nice well spoken gentleman, as is a downright pleasure to suggest anythink to, to doctor your shins as smarted 'orrid, and so I made up my mind to let you know about 'im, and ask you to do what you can to 'ave gravel boxes taken away or lighted up, and if the Dammyo should come enquirin' after Jemimah Hann, please send 'im down to me, as can't write any more, bein' obligated to keep my legs in a chair with the cramp.

Your 'umble Servant,

MARTHA BROWN.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Friday, February 9th, 1877.

HONGKONG & SHANGHAI BANKING CORPORATION *v.* PETER GERHARD HANSEN.

Accused was charged with forgery, uttering a forged bank-note and conspiring to defraud the prosecutors.

Mr Dickins appeared as solicitor for the prosecutors, who were also represented by Mr A. H. C. Haselwood, Accountant

Mr Dickins asked leave to alter the charge slightly. He had not drawn it up himself, and having just seen it, he would like to improve its basis.

His Honour said a warrant for arrest had been granted on the present charge, so that it should not be changed, though another might be added and both tried together.

Mr Dickins said the change he wished to make was perhaps only in the form of the charge. He would like to show its true basis more plainly by saying instead of "uttering a Bank note," "uttering a note of the Hongkong and Shanghai Banking Corporation,' and further to omit "conspiring to defraud the prosecutors" because such was already implied in the rest of the charge.

His Honour said he would make an addition in charging prisoner by saying "with forging, uttering, (and aiding and abetting in forging and uttering) with intent to defraud, a bank-note of the Hongkong and Shanghai Banking Corporation for $500, and with conspiring, with other persons, to forge and utter such bank-note and thereby to defraud."

Prisoner asked now many charges there were altogether.

His Honour said there were three distinct charges, besides the charge of "aiding and abetting." In fact there were four charges in all. His Honour then repeated these at the request of prisoner.

Mr Dickins then said that the case consisted mainly in the charge against prisoner as above stated. A bank note had been photographed and coloured, and had been presented at one of the exchanges in town; had been detected as a forgery by the Chinaman, who had informed the Bank of the fact. But as Mr Dickins had not yet become acquainted minutely with the facts of the case, he asked the Court to take Mr Haselwood's evidence, in which they would be made known.

Alfred Henry Charles Haselwood, sworn:—I am acting accountant at the Hongkong and Shanghai Bank. That is not a note of our Bank. It is a forgery. The first I knew of this attempt was on the evening of Tuesday last, when Mr Walter came to my house about eight o'clock, and asked me to accompany him to the Bank to confirm his suspicions about a note which the schroff had brought up to him as looking suspicious.

Prisoner here asked leave to interrupt the proceedings and requested to know if the case had really begun. His Honour answering in the affirmative, prisoner begged for an adjournment, stating that he had been locked up in jail for the last two or three days, and had not known the tenor of the charge till now. He wished to employ a legal adviser, and would like to have Mr Ness defend him. Mr Ness was expected from Kobe in a day or two.

The Court, upon being informed that Mr. Ness was already in town, resolved, with the consent of all parties, to adjourn the case till Monday next, the 12th instant.

BENOIT DE JUNG *v.* CHARLES LESTER.

This was a claim by plaintiff, who is a barber, against defendant a musician, for $10, due for shaving him for five months.

Plaintiff only appeared.

Consular Constable Hodges sworn, stated:—I served the summons in this case on the defendant personally on the morning of the 7th instant. He only remarked it was all right.

Plaintiff, sworn:—I live at No. 118. I am a barber. Defendant owes me this $10 for shaving during three months in 1875, and two months from November 18th of last year. I charge at the rate of $2 a month. He promised to pay me for the first three months, and said he was going into the service of the Russian Consul. I presented this bill to him and he acknowledged its correctness. He has had work for the last six months and therefore must have money.

Decree for plaintiff for sum claimed and $3 costs, to be paid in ten days.

H. M. PERKINS *v.* WALTER HARVEY.

This was a claim for $40 for work done and materials supplied. Neither party appeared, though the Registrar informed the Court that the plaintiff was told of the time of hearing when he took out the summons.

His Honour ordered the cause to be struck out.

Wednesday, February 7th, 1877.

Hugh Collet, a seaman, was charged with being drunk and incapable.

Police-constable Wm. Hazzell, sworn.—A Japanese constable brought prisoner to the station last night about 10 o'clock, charging him with drunkenness. He was very quiet.

Prisoner did not deny the charge, and had nothing to say for himself. Fined $1 and costs.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E.M.

(The Engineering and Mining Journal.)

PRESENT CONDITION OF JAPANESE MINES.

According to the records of the Mining Office,† there were in 1874 no less than 1,856 productive mines in Japan, and in the same year 637 permits to explore for minerals and metals were granted. Of this large number of mines, my own observations lead me to believe that not more than four or five per cent. are actively worked; and these few supply sixty to seventy per cent. of the total product of the empire.

The following table gives the mineral product of Japan, for 1874, as estimated by Mr. J. G. H. Godfrey, Chief Engineer of the Mining Office‡:

MINERAL PRODUCT OF JAPAN.—1874.

1.—Coal	390,000	tons (2,240 lb.)
2.—Iron	5,000	,, ,,
3.—Copper	3,360	,, (2,000 lb.)
4.—Lead	207	,, ,,
5.—Tin	84	,, ,,
6.—Silver	312,000	oz. troy. ,,
7.—Gold	12,000	,, ,,
8.—Petroleum	275,000	gallons.

Compared with the yield of the country in the times of the Portuguese and Dutch trade, this table shows a great falling off; particularly in the production of gold and silver. This falling off is mainly due to two causes, viz.:

1.—The increased and increasing value of labor.

2.—The exhaustion, real or practical, of the richer or more easily worked deposits.

---

* A paper read before the American Institute of Mining Engineers, at the Philadelphia meeting, June. 1876.

† Quoted by Mr. PLUNKETT, Mines of Japan, a. 2.

‡ Private communication. See also Mines of Japan, p. 5, and Official Catalogue, Japanese Section, Phla. 1876, p. 39.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

1.—The first cause, the rise in the value of labor, is still operative, and can be only partially overcome by labor-saving appliances. In fact, the value of labor has not yet reached its proper level, and will certainly continue to rise for some time to come. This cause alone will prevent most of the abandoned mines from being reopened with profit, even with the aid of the most approved methods of mining.

2.—Many of the best mines of the country have been exhausted as far as the lowest natural drainage level; the workings having been carried to considerable depths, and the life of the mine prolonged to the utmost limit, by the aid of long drainage tunnels, run with great skill, and often requiring the patient work of generations for their completion. These mines cannot now be worked for want of means to get rid of the water, the Japanese pumps and water-buckets being capable of dealing only with small quantities of water and moderate depths.

There are doubtless a number of really valuable mines in the country, particularly of silver and of copper, which, for this cause, either have been abandoned, or are worked on a small scale in the upper levels only. By the use of small mining pumps, driven by steam or compressed air, most of these mines can easily be reopened By the introduction of better tools, skilled labor, improved methods of mining, and a more rational system of administration, they can be worked with profit.

In most cases, these mines, if reopened, will not yield large profits, owing to changed conditions and the poverty of the deposits. There are, however, a few mines which are exceedingly rich, some of which are even now yielding more or less profit, though worked in the most careless and extravagant manner. As a rule, indeed, the richer the mine, the greater the mismanagement. These mines, properly worked, would undoubtedly prove exceedingly valuable.

Much has already been done toward improving the art of mining in Japan. Two members of this Institute, Messrs. Blake and Pumpelly, who visited that country about fifteen years ago, had the honor to introduce the application of powder in mining; and, although the miners have but imperfectly mastered its use, they have been enabled thereby to undertake many works otherwise impossible.

Other engineers have since visited Japan; some merely to examine and report upon particular mines or districts, some to open mines and establish smelting works.

The Government Mining Office has under its direction a large number of mines, four or five of which have resident foreign engineers with efficient foreign assistants. In this way large bodies of Japanese miners and furnace-men are being trained, and foreign methods and processes introduced in the most effectual manner. Incidentally, some of these mines have already been made to yield pecuniary profit; eventually, it is expected, all will at least pay expenses. Until within a year or so the mines available for these governmental experiments were, for the most part, those which yielded little or no profit by Japanese methods; the richest mines being under the control of private parties. The temporary losses resulting from the working of these poor mines will, however, be more than balanced by the advantages gained by the the introduction of improved mining methods; and when the operations of the Mining Office are extended to the richer mines which have recently come under its control, large pecuniary profits will certainly appear.

All these advantages might, however, be far better attained, and attained at much less expense, by private enterprise. The capitalist, whose fortune is sunk in the mine, demands of the engineer in charge a rigid account of every expenditure; and an economy of working is thus secured which is impossible under the perfunctory supervision of government officers. In conducting experiments and making explorations for private parties the engineer is forced to feel that economy is of the first importance; and while he is thus fettered to some extent, and often obliged up to give some pet scheme, still the restraint is wholesome, and gives a powerful incentive to careful thought and well-digested plans of work. Engineers may of course be found who will do as good and as careful work for a government as for private capitalists; but they do this from a sense of duty alone, knowing that their efforts are not likely to be appreciated.

From private enterprise will result economy of working, and therefore increase of profits. Better methods will be selected, and experiments and explorations will be more carefully conducted. The government also, no less than the country at large, may reap direct advantage from the introduction of private capital; for, by a system of royalties, it may obtain revenue as great as, or even greater than, that now realized by working the mines. The capitalist will be amply repaid if he saves and secures the money which under government would have been wasted, and might in some cases safely agree to pay as royalty twice or three times the profits obtained under governmental supervision.

Some means must, of course, be taken in such case to prevent wasteful mining, which is sometimes most profitable, and to secure the safety of the miner, which is often disregarded. With carefully-framed laws and occasional governmental inspection these evils may be, in great measure, prevented, and all the benefits of private enterprise secured.

These benefits cannot, I fear, be secured by the use of Japanese capital. If familiar with mining enterprise, the Japanese capitalist usually invests his money in some mine which is yielding a profit by Japanese methods of working; and, even though this profit may be small, he is naturally unwilling to jeopardize it by changing the plan of work for foreign methods with which he is unfamiliar; especially as he sees that most of the government mines, where these foreign methods are employed, are now worked at a loss. And, on the other hand, in case the Japanese capitalist adopts foreign methods, he would in most cases be suspicious of the foreign engineers in his employ, and would harass and hamper them by his want of confidence. Finally, through his ignorance of these new methods of mining, he would be unable to properly check the expenditures, and thus the most important element of success, the oversight and control of the owner, would be wanting.

At present, by the Japanese mining laws, no foreigner is permitted to have pecuniary interest in a Japanese mine, and the governmental permits to explore or mine, become null and void if transferred wholly or in part to a foreign capitalist. In view of the objections to Governmental mining and to the use of Japanese capital, it would seem highly advisable that this law should be altered or repealed. The introduction, under proper restrictions, of foreign capital, either alone or, better, associated with Japanese capital, offers the best and cheapest means for realizing the advantages of foreign mining methods, and securing the best services of foreign mining engineers.

A number of Japanese students have been sent abroad to study mining; others are beginning a similar course of study in their own country, in the Engineering College of the Department of Public Works; and the Department of Education proposes to establish a Mining College, in connection with the University of Tokio. These students, when they finish their respective courses of study, though hardly competent to take charge of large works, will be of great service as assistants to foreign engineers, and at the same time may obtain the necessary practical experience to fit them for positions of greater responsibility. When the mines of the country shall be under the supervision of well educated and experienced Japanese engineers, the objections to the use of Japanese capital disappear. But this, of course, will not be possible for many years.

By far the most important of the mineral resources of Japan, though at present but imperfec ly known, and still more imperfectly developed, lies in the large and numerous deposits of coal found in so many parts of the country. Coal occurs in all its varieties—peat, qogwood, lignite, brown coal, bituminous coal, both dry and coking, anthracite and graphite. Out of the thirty-eight *ken** and *fu* into which Japan proper is divided, coal is found, or reported to occur, in at least thirty-five, anthracite coal in two, bituminous coal in eleven, and lignite in sixteen. In the case of the other six *ken* I have learned from various sources, the fact of the occurrence of coal, but not as yet its kind.

The following table, based on my own notes and on other source of information will indicate somethiug of the extent and character of the more important of the Japanese coal fields:

* The former division of Japan into provinces (or shu) is now retained only in Yesso. The remainder of the empire excluding three, *fu*, or imperial cities, Tokio, Kioto, and Ozaka—is divided into administrative districts, or *ken*. Of these *ken* there were, in October 1876, thirty-five.

JAPANESE COAL FIELD.

Island.	Name of Coal Field.	Estimated Area. Sq. miles.	No. of Workable Seams.	Thickness of Seams. feet.	Est'd. Thickness of Coal. feet.	Kind of Coal.

Total Area of Coals Fields, about 5,000 square miles.
Average thickness of Coal.....15 feet.

+ Including Takashima and other islands in Nagasaki harbor.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The area of the Ishikari coal fields is calculated on the supposition that the coal rocks are continuous between the Ishikari Valley and the exposures of the same rocks on the south coast. This continuity has not been proved, but seems probable. The area of the Kayanoma fields was determined by actual survey. The areas of the Iwaki, Nagasaki, Miike coal fields are estimated from data obtained in visits to these places. The estimated area of the other fields is based on well authenticated report of coal at many localities within the assigned limit.

Allowing for fields whose area is yet unknown, and for coal areas not included in the above table, it seems probable that the total area of the coal fields of Japan is not far from 5,000 square miles, as stated above. Assuming that of this area one-eighth only is underlaid by the upper measures, with fifty feet of coal, the average thickness must be at least fifteen feet.

COAL FIELDS OF YESSO.

The coal fields of Yesso, probably the most important of Japan, have been very thoroughly explored by Mr. Lyman and his party in the course of his Yesso Survey, but until his final report shall be published we can give but a general idea of their extent and character.

There seem to be three areas of coal-bearing rocks in Yesso: the Kayanoma coal field, the Ishikari coal field, and the Akkeshi coal field. Of these the Kayanoma field is small, less than a square mile in area, and the Akkeshi field is unimportant, as containing little or no workable coal. In the Ishikari field I include the Horimui, Sorachi, and other coal regions of the Ishikari Valley, the Makumbetsu coal to the south, and the Rurumope coal of the northwest coast.

It seems probable that this coal field extends continuously from the southern coast of Yesso, in the province of Hitaka, northward through the province of Ishikari nearly or quite to the northwest coast in Teshio province, a distance of about one hundred and fifty miles, with an average breadth of twenty or twenty-four miles.

The thick seams of coal seem to be confined to the upper measures, constituting the more valuable portion of this large coal field, are found only in the middle of the island and in the Ishikari Valley. The attention of the survey has been directed chiefly to this portion of the field

On the Sorachi River there are twelve seams of coal exposed, all but one within a total thickness of three hundred and fifty feet of rock. The upper seam, about five feet thick, is separated from the others by 1,200 or 1,300 feet of sandstone. The different measurements of these coal seams show great variation in thickness, perhaps due to the fact that they were made on the outcrops, but probably due to the varying thickness of the beds themselves. The following are the average of the different measurements given by Mr. Lyman, deducting bony coal and shaly partings in each case, and beginning at the upper coal, viz.: 5·10 feet, 2·75 feet, 18·6 feet, 2·15 feet, 3·40 feet, 2·60 feet, 7·00 feet, 2·15 feet, 2 70 feet, 7·25 feet; total sixty-four feet of workable coal.† Thickness of measures, five thousand feet: 1,500 feet above the upper coal, 1,300 feet between this coal and the second seam, and about 1,800 feet below the 350 feet of production measures.

On the Horumui, 25 miles south of the Sorachi, and still in the Ishikari Valley, these same coals are again exposed, but the beds are neither as numerous nor as thick. Mr. Lyman's section‡ shows ten seams of coal in about three hundred and fifty feet of rock; of which six only contain good coal of workable thickness, 4·20 feet, 5·00 feet, 2·00 feet, 5·00 feet, 2·80 feet, and 6·90 feet respectively, giving a total thickness of about twenty-six feet of coal.

Near the south coast, in the province of Hikata, a detailed survey of a portion of this same coal field was made by the Japanese assistants under my direction, which resulted in finding four coal seams of workable thickness, 2·3 ft., 2·6 ft., 3·5 ft., and 4·ft., the last reported not measured. The total thickness of rocks, sandstone and shales was about 2,250 ft., the coal seams being within 370 ft. According to Mr. Lyman, this section corresponds to that of a portion of the lower coal measures exposed in the Ishikari valley. The coal is of inferior quality.

Similar thin beds were found at the northern extremity of the field, near the northwest coast, but the indications there were even less favourable.

Of the three thousand square miles covered by this Ishikari coal field, about six hundred square miles are known to be underlaid by the upper measures with twenty-six to sixty feet of coal, and it is probable that further explorations may extend this area. The remainder of the field, where the lower measures alone occur, with only three or four thin seams of coal, will prove of little value.

The coals of the lower measures have not been assayed, but they seem inferior, and probably contain large precentages of ash.

The coals of the upper measures of this field have not as yet been mined, though several tons of samples and specimens have been brought from the different outcrops in the Ishikari valley. The lower coals have been mined in two places in Hitaka province, near the south coast, but after taking out forty or fifty tons at each place the work was abandoned.

The Kayanoma Coal Field is in Shiribeshi province, on the west coast of Yesso. The area of this field is somewhat less than a square mile. The section‡ given by Mr. Lyman shows twelve seams of fair and good coal of workable thickness, respectively 4·00 ft., 267 ft., 5.75 ft., 2.30 ft., 5.68 ft., 3 39 ft., 2.25 ft., 5.80 ft., 1 .90 ft., 6.08 ft., 2.60 ft., and 7.40 ft. thick. All these seams are contained within less than six hundred feet of strata. The total thickness of workable coal would seem to be nearly fifty feet.

The coal is not so good as that of the Ishikari field, containing usually six to fifteen per cent. of ash, and in some beds twenty per cent. and more. The water varies from one to eleven per cent., being usually between five and eight per cent. It is, however, a bituminous coal, though of poor quality, and not a lignite. One bed furnishes a very fat, long-flaming, blacksmith's coal, while most of the others are steam coals or dry coals with a long flame, a few only being short-flaming.

A mine was opened here about eight or ten years ago, which was for a time under the superintendence of Mr. E. H. M. Gower. The work was interrupted by the revolution, and resumed later under Japanese management. At the time of our visit in 1873 the mine was producing, if I remember aright, only about fifty tons of coal per week, and this so badly mined as to be mostly slack.

The Akkeshi Coal Field.—At the northeastern corner of the Island of Yesso there is a large area of coal-bearing rocks; but coal has been found in only two or three places. Mr. Lyman gives several sections,* the best of which shows ten or more small seams of coal, four of which barely exceed the two foot limit; and even these are split up into thin benches by thick partings of shale. In other places the showing is even more unsatisfactory; and, as the coal is only of fair quality, this coal field promises to be of little importance. A small coal mine was opened by the government here in 1871, but abandoned the next year. Like coal from many other parts of Japan, this sometimes contains small beads of amber (?) or some other fossil resin.

COAL FIELDS OF NIPPON.

Iwaki Coal Field.—On the Island of Nippon coal has been found in many places; but with the exception of the Iwaki coal field on the east coast, we know little or nothing with regard to the extent or character of the deposits.

This coal field is in the ken of Fukushima and Ibaraki, and about a hundred to a hundred and twenty miles north of Tokio. At the time of my first visit, in December, 1874, I estimated its total length at twenty-five to thirty miles in a north and south direction, along the coast, with a breadth of three to five miles, from the coast to the hills of granite and other metamorphic rocks which from its western boundary. This estimate agrees very closely with that given by Mr. Plunkett,† who makes the field thirty miles long by seven broad.

Since the time of my visit coal has been discovered at several places to the north, making it probable that the field is at least fifty miles long. Coal is also reported to occur near Sendai, fifty miles farther north; but, if this be the case, it is probably another basin, and not a part of the same field.

In this coal field there seem to be but two workable seams, respectively four and a half and six feet in thickness; but a careful survey would, undoubtedly, show many more. The coal is of only fair quality, containing ten per cent. of ash, and about the same amount of water. It does not coke, belonging to the class of dry

† More than one-half of the coal product of Japan is obtained from beds of coal less than two feet in thickness, and seams even less than one foot thick are worked in many places, though yielding a profit only under very favorable circumstances. Mr. Lyman in his report assumes three feet as the limit of workable beds, but in view of the above facts this limit seems unnecessarily high. On account of the varying condition in different parts of the country, and the increasing value of labor, etc., it is impossible to fix the exact limit below which coal beds become unworkable, but if we take two feet as our standard, we shall have abundant margin.

* Yesso coals, Kaitakushi Reports, p. 6.

† Kaitakushi Reports, 1871-75, pages 411-121.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

coals with a long flame. Coal is mined in a small way at several places in this field, and is sent by junks to Tokio, where it is used, to a limited extent, for steam and household purposes.

Other Coal Fields in Nippon.—North of the Iwaki coal field there are many small local deposits of lignite, but none of coal. On the West coal is reported to occur in Niigata ken; from which ken I have received specimens both of bituminous coal and lignite. According to Mr. Plunkett, this Niigata coal has been used by the Government steamers and at the Government gold mines of Sado. The coal is of good quality and abundant; but the limited local demand, and the want of a good harbor have so far prevented the development of the mines, and tho present production is quite small.

Bituminous coal of good quality is also found in many places near the western extremity of Nippon, on the north coast; and it seems probable that there may be one or more large coal fields in that region. Anthracite coal of excellent quality, of which I have received several specimens, is found in Miye ken (province of Kii) at the southern end of Nippon. Captain St. John, of H. M. S. Sylvia, when in the harbor of Katsûra, took on board fifty tons of this coal for trial, which he describes as excellent in appearance, very hard and heavy, and free from dust. Apparently unacquainted with anthracite, he expresses some surprise that this coal, when tested, "simply refused to burn"; when mixed with other coal, however, it did "fairly well.' ‡

(To be continued.)

AGRICULTURAL.

In the old Country, to economize labour, a new triple plough drawn by horses is exciting attention. This simple and effective implement ploughs up three furrows at once, and is likely to prove very valuable, not only in England where labour is dear, but in other Countries, where with variable climate, large tracts of land have to be ploughed up quickly by horses or oxen. The double plough, which cuts two furrows at once, is not however as many suppose a modern implement, it having been in use so long ago as the middle of last century. It is only during the last few years that the double plough has been used to any great extent in England, while in many other Countries, where immense tracts of virgin soil are brought under cultivation every year, it is comparatively an unknown implement. This is the more surprising when it is considered that one man with three horses can with a double plough, do as much work as two men using two single ploughs with four horses, —thus ensuring a direct saving of at least one third during each working day, so that double ploughs, as many farmers in the Mother Country have practically demonstrated, soon pay for themselves by the economy they effect in labour and horses. In England the various Agricultural Societies are fully alive to the importance of this matter, and thus we see that at their Annual Ploughing Matches, several of the most important prizes are allotted to classes in which double ploughs only are allowed to compete. By the Mail just in we have received a report of the last of these competitions for 1876, which took place in December, at Cottenham, near Cambridge. It is said to have been not only the last but the largest Match in the kingdom. No fewer than 23 teams entered the field, and every one of them was under the management of local ploughmen only. The test was therefore looked upon as fair and genuine, professional ploughmen, that is, ploughmakers' men with trained horses and racing ploughs being excluded. The ploughs were by Hornsby, Howard, and Ransome, and the match excited wide-spread interest. After the public dinner, at which there was a large gathering, it was announced that all the first and second prizes were won with the Howard plough. Next year we may have to report that the new triple plough has so far advanced in the old Country that as the double is superseding the single, so the triple will supplant the double.

NOTICE.

THE Partnership heretofore existing between Edwd. Z. Holme, Charles Ryley, Fredk. Ringer and J. Carrick Smith, under the name of HOLME, RYLEY & Co. London, and HOLME, RINGER & Co. Nagasaki, has this day been dissolved by efflux of time.

HOLME, RINGER & Co.

Nagasaki, 1st January, 1877.

REFERRING to the above, the undersigned will carry on business in Nagasaki from and after this date under the style and name of

HOLME, RINGER & CO.

FREDERICK RINGER.

J. CARRICK SMITH.

Nagasaki, 1st January, 1877. 4w.

BROADWELL'S
BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

MANUFACTURERS and Patentees of the **IMPROVED-BREECH**, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market has gone from bad to worse, and 16/24 *Yarns* are perhaps the only articles saleable, but that only to a small extent. Everything else is more or less depressed. *Shirtings* fail to attract buyers even at a decline in rates. Some sales of *Velvets* have taken place, but at very low prices.

Grey Shirtings:—							
7 lbs.	38½	yds.	39 in.	per pce.	$1.35	to	$1.75
8 lbs.	38½	yds.	44 in.	,,	1.70	to	2.25
8 lbs. 4 to 8½ lbs.	38½	,,	39 in.	,,	1.50	to	2.25
9 lbs.	38½	,,	44 in.	,,	2.05	to	2 50
T. Cloth 7lbs.	24	,,	32 in.	,,	1.35	to	1 55
,, 6lbs.	24	,,	32 in.	,,	1.05	to	1.20

White Shirtings:—							
60 to 64 reed 40 yds. 35 in.				per pce.	2.20	to	2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.				per lb.	0.65	to	0 85
Black Velvets					7.50	to	8.50
English Drills 15 lbs.	40	yds,	30 in.		2.55	to	2.65
Taffachelass	12	yds,	43 in.		1.90	to	2.10

Yarns.—

No 16 to 24	per picul	$29.00	to 32.50
No. 28 to 32	per picul	$30.50	to 35.00
No. 38 to 42	per picul	$36.00	to 40.00
Reverse Twist 16/24	,,	$31.50	

Woollens.—Business in this staple has been exceedingly quiet since our last, *Mousselines de Laine* remain very dull and *Black Italians* of good quality are alone saleable at greatly reduced prices. In *Plain* and *Figured Orleans* there is nothing doing whatever. Quotations all round are quite nominal.

Plain Orleans	40—42	yds.	32 in.		4 75	to	6.75
Figured Orleans	29—30	yds.	31 in.		4 25	to	5.25
Shimagoro	30	yds.	30 in.		4.00	to	5.25
Italian Cloth	—30	yds.	32 in.		0 24½	to	0.31
Camlet Cords	29—30	yds.	32 in.		5.75	to	6.00
Camlets Asstd.	56—58	yds.	31 in.		16 50	to	17.50
Lastings, Japan	22—30	yds.	32 in.		12.00	to	13.00
Plain Mousseline de Laine	—30	yds.	30 in.		0.16½	to	0.19

Figured Mousseline de Laine	30	yds.	30 in.		0.25	to	0.30
Multicolored ,,	30	yds.	30 in.		0.30	to	0.36
Cloth, all wool plain or fancy	48	in.	to 52 in.		0.80	to	1.20
Presidents	54	in.	to 56 in.		0.60	to	0.65
Pilots	54	in.	to 56 in.		0.45	to	0.55
Union	54	in.	to 56 in.		0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.			per lb	0.39	to	0.45

Sugar.—There have been some sales of new crop *Formosa* at $4.07, but holders decline further business except at an advance in price. Some of last seasons' *Formosa* has been sold at $3.85.

Sugar:—Takao in bag	per picul	$3.85	to $4.10
,, in basket	,,	$3.65	
Taiwanfoo in bag	,,	$3.70	
do. in basket	,,	$3.55	
China No. 1 Ping-fah	,,	$7.30	
,, No. 2 Ching-pak	,,	$6.80	to $7.20
,, No. 3 Ke-pak	,,	$6.00	to $6.30

China No. 4 Kook-fah	per picul	$5.30	to $5.60
,, No. 5 Kong-fun	,,	$4 80	to $5.10
,, No. 6 E-pak	,,	$4.00	to $4.30
Swatow Brown	,,	$3.00	
Daitong	,,	$3.50	
Japan Rice	,,	$2.05	to $2.20
Kerosene Oil		noml. $4 50	

Kerosene Oil.—The Tôkiô quotation reaches *yen* 4.75, but here it is nominal at $4.50, holders being firm for higher prices. Our market is supplied from China only.

EXPORTS.

Silk.—The news of the failure of the Constantinople conference was received here on the 27th ultimo, and a telegram dated 5th instant reported a further decline in prices at home. Under these circumstances this market has continued much depressed, and the few transactions which have led to final settlements between buyers and sellers, show that prices have given way to the extent of about $100 for Hanks and 50 for Oshiu sorts. Settlements since the 22nd ultimo are 175 bales of Hanks, 100 of Oshiu and Taysam sorts, and 25 of filatures.

The shipments for the same period are 411 bales, making the total export since 1st July 19,214 bales, against 10,583 last year at the same date.

The stock, estimated at 2,000 bales, is for the greater part composed of Oshiu sorts, and we hear that a reserve of some 1,000 bales is kept in Yedo.

	At Exchange 4/3½ in London.	*At Exchange 5.45 at 6 m.s. in Lyons.*		*At Exchange 4/3½ in London.*	*At Exchange 5.45 at 6 m.s. in Lyons.*

The Best Ploughs in the World.

J. & F. HOWARD,

Britannia Iron Works,

BEDFORD, ENGLAND.

MANUFACTURERS OF

SINGLE PLOUGHS,	HARROWS,
DOUBLE PLOUGHS,	HORSE RAKES,
TRIPLE PLOUGHS,	HAYMAKERS,
QUADRUPLE PLOUGHS,	MOWERS,
AMERICAN PLOUGHS,	REAPERS,
SWEDISH PLOUGHS,	ROLLERS,

ALSO,

STEAM PLOUGHING AND CULTIVATING MACHINERY.

For many years J. and F. HOWARD have shipped large numbers of Implements and Machines to all parts of the World. From their extensive experience they are fully acquainted with the requirements of all countries and they have always kept in view the importance of strength as well as simplicity. J. & F. HOWARD use only the BEST MATERIALS, and as far as possible WROUGHT IRON OR STEEL, so as to reduce to a minimum the risk of breakages, which involve serious loss, especially where repairs are difficult to execute. Their Implements and Machines are not only strongly and substantially made, but are constructed so as to take to pieces for packing in the smallest compass, and they are so simply arranged as to leave no difficulty in putting them together.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

MARRIAGE.

At the Cathedral, Hongkong, on the 2nd February, by the Bishop of Victoria, assisted by the Revd. R. HAYWARD KIDD, Colonial Chaplain, D. A. J. CROMBIE, Esq., Shanghai, to MARY FORRESTER, eldest daughter of GEORGE FORTUNE, Esq., J.P., Barnsmuir, Crail, Fifeshire.

Notes of the Week.

With reference to a paragraph that has appeared in several of the foreign newspapers, to the effect that Mr. Charles Rickerby has joined the new proprietary of the *Japan Mail*, we think it well to state that the rumour is wholly destitute of any foundation.

In our last week's issue we called attention to a flagrant case of literary perversion on the part of the *Tôkiô Times*, in giving a garbled version of a quotation, which was so ingeniously twisted as to seem to support a statement which the *Times* had put forward in a former number, whereas, if the extract had been fully and honestly quoted, it would have shown a distinct refutation of the *Times'* expressed views. We allude of course to the extract from the *Economist*, and in order that our readers may judge whether the exposure was deserved or not, we republish the paragraph, containing the passage referred to and our remarks thereon.

The *Tôkiô Times* quotes from the *Economist* :—

> "The Americans, under protection, have improved production, and got the command of their own markets."

Now what did the *Economist* really say? Firstly, the whole gist of the article was to show how completely fallacious was the idea that Protection had done any good to the United States. Secondly, the *Economist* says in one passage:

> "They may command their own home markets, but they do so at something approaching to an absolute loss."

And, thirdly,—this is the passage garbled by the *Tôkiô Times*, from which it would have its readers draw comfort:

> "As yet *the Americans* have never been able to stand up before us in the open field of competition, and the conclusion that they will be able to do so, because *under Protection* they *have improved production and got the command of their own markets*, is a wholly illegitimate inference."

The words we italicize are those picked out by our contemporary to prove the *Economist* a champion of Protection.

The *Tôkiô Times* assuming now an air of indignant virtue, asks "What is Honesty"? While we grieve that we have not time to undertake the instruction of the *Times* on this vital point, we would urge it to cease not from its enquiry, and if, when the virtue is found, its guidance be implicitly followed, the *Times* will be preserved in the future from errors that have not an honest look, and will surely find it the best policy in the end. Perhaps it does not care seriously to enquire, but puts the question in the same jeering spirit as Pilate when he asked "What is truth?" for it is always your weaker sort of politicians who are the greatest dissemblers. Passing this over, there is a little piece of advice that we will venture to give, which if the *Times* will accept, will we feel sure be found beneficial. The *Tôkiô Times* proposes (let us hope uninfluenced by any selfish interests) to instruct the Japanese. This is a most laudable object; but the *Times* is more likely to attain to the desired end if it will devote its columns to other matter than peevish reviews of those of the *Mail*, which seems to be almost the only source whence it derives any literary nourishment. Unpointed irony and feeble banter can scarcely prove instructive or even amusing to the native reader. Besides is it quite graceful for the mistletoe to abuse the oak?

It is satisfactory to observe that explanations have been demanded from Mr. Newitter by the Municipal Council at Kobe, of the steps unwarrantably taken by him in its name on the occasion of the late visit of the Mikado to that port.

It willl be in the recollection of some of our readers that the meteorological observations made in the Japanese lighthouses and compiled by the Lighthouse Department, were embodied in an official form by Commander Tizard and presented to the Meteorological Department in London. It will also be remembered that some criticisms upon them of an adverse character appeared in *Nature*, in which it was urged that if the deductions made from them are correct, they afford exception to theories hitherto universally accepted by scientific men. Of course this could only mean that they *must* be incorrect. It is pleaded, however, by the late foreign superintendent of the Lighthouse Department that the observations were made by intelligent and careful men instructed to that end, and that though the instruments used were not perfect, they were shown to Professor Thomson in order that he might form his own judgment upon them, and their suitability to the purpose to which they were put. Their adjustment was attempted on three several occasions by the foreign superintendent, but this was somewhat imperfect, as shown by Commander Tizard, owing to the want of a standard instrument. On the other hand their height above the sea level is correct within a foot or two in each case, and thus, though the observations may not be absolutely accurate, they are sufficiently so to warrant deductions being made from them such as those contained in Commander Tizard's work. They are further so numerous and extend over so long a period that an isolated error may be at once detected. They were taken at fourteen stations situated comparatively close together, and twice a day for from two to three years. It is impossible therefore that they should *agree* in giving fallacious isobars. So correct are they generally, that Commander

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Tizard rightly inferred in each case, from the greater sensitiveness exhibited, where aneroids had been used. Regarding the extraordinary gradient between Yedo and Sagami spoken of by *Nature*, the greatest variation to be found in the reading is .3 of an inch in August, which equals 1 inch in 150 miles. *Nature* says it is 1 inch in 60 miles—certainly an impossible gradient. Its remarks upon the relative position of the isobars point no doubt to some real incongruity, but this may possibly be capable of explanation, and due to local causes, such as the configuration of the land, the warm currents, etc. What may be pleaded therefore generally is, that though the observations are not absolutely correct, they are as good as circumstances permitted, and certainly not without substantial value.

The following extract from Kœmpfer's work on Japan, Chap. 27, as translated by Hildreth, bears out fully the remarks made by Sir Harry Parkes at the last meeting of the Asiatic Society, when speaking of the ability of the Dutch interpreters at Nagasaki in former times, and of the valuable information on Japanese affairs attained through their assistance.

"Naturally the Japanese were, their pride of warlike humour being set aside, as civil, as polite and curious a nation as any in the world, naturally inclined to commerce and familiarity with foreigners, and desirous to excess to be informed of their histories, arts and sciences. But, as we are only merchants, whom they place in the lowest class of mankind, and as the narrow inspection we are kept under must naturally lead them to some jealousy and mistrust, so there is no other way to gain their friendship, and to win them over to our interest, but a willingness to comply with their desires, a liberality to please their avaricious inclinations, and a submissive conduct to flatter their vanity. 'Ts was by this means I worked myself into such a friendship and familiarity with my interpreters, and the officers of island, who daily come over to us, as I believe none before me could boast of, ever since we have been put under such narrow regulations. Liberally assisting them as I did with my advice and medicines, with what information I was able to give them in astronomy and mathematics, and with a cordial and plentiful supply of European liquors, I could also in my turn freely put to them what questions I pleased about the affairs of their country, whether relating to the government in civil or ecclesiastical affairs, to the customs of the natives, to the natural and political history; and there was none that ever refused to give me all the information he could, when we were alone, even of things which they are strictly charged to keep secret. The private informations thus procured from those who came to visit me were of great use to me in collecting materials for my intended history of this country; but yet they fell far short of being altogether satisfactory, and I should not, perhaps, have been able to compass that design, if I had not by good luck met with other opportunities, and in particular the assistance of a discreet young man, by whose means I was richly supplied with whatever information I wanted concerning the affairs of Japan. He was about twenty-four years of age, well versed in the Chinese and Japanese languages, and very desirous of improving himself. Upon my arrival, he was appointed to wait upon me as my servant, and at the same time to be by me instructed in physic and surgery. The Ottona, who is the chief officer of our island [of Desima], having been attended by him under my inspection in a serious illness, suffered him to continue in my service during the whole time of my abode in the country, which was two years, and to attend me in our two journeys to court, consequently four times, almost from one end of the Empire to the other, a favor seldom granted to young men of his age and never for so long a time. As I could not well have obtained my end without giving him a competent knowledge of the Dutch language, I instructed him therein with so much success, that in a year's time he could write and read it better than any of our interpreters. I also gave him all the information I could in anatomy and physic, and further allowed him a handsome yearly salary to the best of my ability. In return I employed him to procure me as ample accounts as possible of the then state and condition of the country, its government, the imperial court, the religions established in the Empire, the history of former ages, and remarkable daily occurrences. There was not a book I desired to see on these and other subjects, which he did not bring to me, and explain to me out of it whatever I wanted to know. And because he was obliged, in several things, to inquire, or to borrow, or to buy of other people, I never dismissed him without providing him with money for such purposes, besides his yearly allowance. So expensive, so difficult a thing is it to foreigners, ever since the shutting up of the Japanese empire, to procure any information about it."

A signboard of a very remarkable character, suspended from a *yose* lamp in the Main Street of Tôkiô, has for some weeks past claimed attention from the passers by. Depicted upon it may be seen the figure of an individual habited in sacerdotal vestments (said, by the way, by a native, with the true loafer cast of countenance—whose sole business in life it would seem to be to stand hands in pockets beside the placard in question, and enjoy the amazement with which any foreigner whose eye it may have attracted regards it—to be intended for a priest of the Greek Church) who, adorned himself as to his head-dress with a cross, yet stands beside a smoking brazier and points upwards to another emerging from its fumes. Nor is this all, for on looking down the laneway towards the *yose* to which this is an advertisement, a picture of the Crucifixion, surmounted by two white flags, embellished each with a large red cross in their centres, meets the gaze. On enquiring at the theatre we found that these sacred emblems, instead of being in a grotesque way, as we had at first supposed possible, an advertisement of a scripture class or Bible Society, were intended to convey to the beholders the information that a juggler held his court within, and supplemented his performances with a lecture upon strange sights and stories, in which a lay figure is produced and stabbed to show the way in which the Son of Man was wounded on the Cross.

The *Mainichi Shimbun* of this morning contains an extraordinary account of the visit of Admiral Kawamura and Mr. Hayashi to Satsuma. It says that when they arrived at Mayenohama in the man-of-war *Riujô Kan*, about one hundred *samurai*, armed with swords, put off in fishing junks and surrounded the *Riujô Kan*, making every demonstration of their intention to board her, when Mr. Oyama, the Governor of Kagoshima, who had been apprised of the proceedings of the *samurai*, mounted his horse in haste and rode down to the beach, obtained a boat, put off by himself for the junks in which his countrymen were, and, expostulating with them, endeavoured to dissuade them from rashly attempting to attack the man-of-war. At first it seemed as if success was about to attend the Governor's efforts, but the *samurai* having been reinforced by another party of about one hundred and fifty, who arrived on the scene in a number of junks, disregarded all further remonstrances and boldly made preparations to board the *Riujô Kan*. The Governor, despairing of being able to induce the *samurai* to desist from the attack, and fearing the consequences of being left among them, sought safety on board the man-of-war, which immediately steamed away, leaving the baffled *samurai* behind, vainly endeavouring to urge on their boatmen to try to catch up with the *Riujô Kan*, and impotently threatening those on board her.

After the statement which appeared in the columns of this journal on the 23rd December last, the Community are doubtless somewhat surprised that there is still no sign of any arrangement having been made for lighting the streets with gas. It is, however, only fair to state that the onus of delay does not rest with the Committee appointed, but is due entirely to the dilatoriness of the Gas Company. On the 29th December the Committee requested the officials of the Machigaisho, in whose hands the affairs of the Gas Company are now vested, to prepare an agreement for lighting the lamps for three weeks in each month, thus dispensing with gas-light on moonlight nights. No notice of this communication having been taken, the Committee waited until the 7th January when they again wrote calling attention to the application the had made. To this a reply was sent by the Machigaisho officials, excusing the delay which had occurred, on account of recent extensive reductions in the staff of their establishment, and begging to be allowed still further delay. Upon this the Committee reminded them that as the urgent necessity for lighting the streets would disappear to some extent with the winter months, it was very desirable that the agreement should be circulated among the Community for signature as soon as possible, and for this reason requested prompt attention to their application. Nothing, however, was heard from the Machigaisho until a few days ago, when a reply was received by the Committee, promising that the agreement should be drawn up immediately. As the Gas Company will derive an increase of income from their agreement with the Committee amounting to about $4,000 per annum, this continued delay is quite unaccountable, and we should have thought they

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

would have been only too anxious to close with the Committee's offer at once.

The following are translations of the addresses presented to His Majesty the Mikado at the ceremony of opening the Ôsaka and Kiôto Railway on the 5th instant.

By the *Chiji* of Ôsaka.

Upon careful consideration, we find that Ôsaka, being a spot possessing natural advantages, owing to the sea-way lying open on its south-west, has, from ancient times, been the most important locality in the Central Provinces. Now, however, in this prosperous and fortunate age, by artificial means a mighty railroad has been laid down towards the north-east, by which heavy goods can be transported to far distances, so that this city has undoubtedly become the very centre of communication with the surrounding country. Your servants fortunately chance to dwell therein, and have thus received an immeasurable favour, and enjoy the blessings of the boundless Imperial beneficence. We will assuredly devote ourselves to our occupations and be diligent in our duties, and thereby requite one ten-thousandth part of the Imperial favour, and endeavour to bring about the wealth and prosperity of our country and homes. A lucky day has now been selected, and the ceremony of the opening has been performed by Your Majesty in person. I, therefore, in the name of the whole inhabitants of this city, humbly beg to present to Your Majesty this short address, and pray that, in our future prosperity, the steam from the locomotive's funnel may rise aloft together with the smoke from our hearths, while the sound of the train may be mingled with our own shouts of joy.

(Signed) WATANABE NOBORI,
Chiji of Osaka *Fu*.

By the *Gonrêi* of Hiôgo.

Your Majesty has been graciously pleased to be present at the ceremony of opening the railway between Kiôto and Kobe. I Morioka Masadzumi, *Shôgoi*, *Gonrei* of Hiôgo, am humbly of the opinion that the wealth and power of a nation is founded on its facilities of communication. Some years ago the main line between Tôkiô and Yokohama was opened, and now the line between this port and Kiôto and Ôsaka has been completed, an event which is this day being celebrated by this auspicious ceremonial. Your Majesty has used every possible means to enrich your subjects and give prosperity to this land.

There is an old saying that everything has a beginning, but few are brought to a successful end. It is the humble prayer of Masadzumi and the subjects belonging to his jurisdiction, that Your Majesty will be graciously pleased not to abandon this great undertaking, but that you will extend the line of railway far to east and west, so that all the subjects of the Empire may share in the enjoyment of its benefits.

(Signed) MORIOKA MASADZUMI, *Shôgoi*,
Gonrei of Hiôgo *ken*.

By the *Chiji* of Kiôto.

I reverentially venture to hold the opinion that the virtues of H. M. the Tennô are as wide as the Heavens and Earth, that his meritorious actions lend assistance to Creation, and that, devising an important benefit to this nation, he has now constructed a railroad westward of the Hakoné barrier, and has been graciously pleased to be present to-day at the ceremony of opening the same. The time is exactly the commencement of spring. The wide extent of the Imperial beneficence is similar to the fostering effect of the spring breezes upon all things throughout the world. The endeavours of the people, who have received these great favours, to requite,—by increasing attention to their callings, by greater diligence in their duties, by emulating one another in promoting the prosperity of their country,—the munificence of their Emperor, should also resemble the budding of grass and trees under the influence of spring time. We are filled with inexpressible delight at the wide extent of the Imperial bounty. Your servant Masatada, on behalf of the people in his jurisdiction, humbly prays that Your Majesty's line may last long, and that Your Majesty's own life may be perpetual as the Heavens and Earth.

(Signed) MAKIMURA MASATADA, *Jiugoi*,
Chiji of the Kiôto *Fu*.

Reply of His Majesty to the *Chiji* of Kiôto.

We are pleased with your address; and We hope that by the diligent efforts of you all to promote the public weal, you may long enjoy prosperity and happiness.

Replies to the addresses at Ôsaka and at Kôbé were precisely similar to the above.

From the "Japan Mail Daily Advertiser."

Monday, 12*th*.

From the *Chôya Shimbun*.

Six hundred police constables were drawn up at the Chief Police Station this morning (10th instant). From this body detachments of 200 men were to be sent to both Nagasaki and Kumamoto, and detachments of 100 men to the Saga and Fukuoka *ken*. These constables, who are under the command of inspectors, will leave for their several destinations by the Mitsu Bishi Company's steamer *Toyoshima Maru*.

From the *Mainichi Shimbun*.

Mr. Narahara, the manager of the affairs of the house of Shimadzu, arrived at Kiôto about a week ago with a certain Mr. Umiyeda, and there carried on consultations with the retainers of some of the other large families. *Samurai* have also arrived from Tosa, Awa, Chôshiu and Chikuzen in parties of seven or eight, and they meet together at Maruyama in Kiôto. The above is only rumour, but it is feared that some rising may take place. The people of Kiôto and Osaka are in a state of great anxiety, and the Governor of Kiôto *Fu* with the Governor of Jiga *ken* have gone to Osaka in haste. The Emperor was expected to return to Yokohama on the 25th instant, but it is now said he will return earlier.

From the same.

The dock yards at Ishikawa-jima, Tôkiô, are being improved to such an extent, that it is proposed to endeavour to get foreign vessels to go there for such repairs as are needed.

From the same.

An order has been given by the Army Department for about two thousand knapsacks, to be delivered immediately.

From the *Nichi Nichi Shimbun*.

We hear that pickets from the Kumamoto garrison have been posted on the borders of Kagoshima *ken*, but we cannot vouch for the truth of this statement.

From the same.

By the *Tôkiô Maru*, on the 9th instant, arrived several officials from the Kagoshima *ken*, who left their province on the 3rd instant. They proceeded without delay to the capital, and it is thought their intention is to offer some explanation of the recent disturbance at Kagoshima.

Wednesday, 14*th*.

Mr. Okubo and a large party of officials left Yokohama yesterday afternoon, in the *Gembu Maru*, for the South.

From the *Mainichi Shimbun*.

The *Riujô Kan*, which escorted the Mikado to Kobe has been ordered down to Kiushu. She is proceed to Nagasaki with the *Môshun Kan* and *Hôshô Kan* which left Yokohama for the South on the 9th instant. The Mikado is to return in the *Thabor*.

The *Nichi Nichi Shimbun* publishes the following about the Satsuma difficulty:—

H. M. the Mikado will start from Kobe at 10 a.m. on the 21st instant, and is expected to arrive in Yokohama on the 23rd instant.

Several police officers and Government spies have fallen into the hands of the insurgents.

The *shidzoku* of Miyazaki, in the province of Hiuga, are said to be giving assistance to the Satsuma *samurai*, and they have been sending some ammunition to the insurgents.

The *samurai* who are at the boundary of Satsuma declare that there are men coming in from other parts, perverting the minds of the young men, and they will therefore examine every man before he enters the province.

From the *Chôya Shimbun* we gather the following:—

We hear that the insurgents of Satsuma attacked the Kumamoto garrison at 4 a.m. on the 10th instant and that the garrison troops suffered very severely.

Some disturbance is reported at Ishikawa *ken* (Kaga).

We hear that the Kagoshima insurgents have purchased a large number of fire arms from the French.

There are said to be four thousand five hundred small arms —among which are fifteen hundred Sneider rifles—in the hands of the Satsuma *samurai*. They also possess four large guns. The men who have caused the recent disturbance are, it is said, merely a set of young students without any discipline, and, it is thought, without any settled plans. Had such been the case they would undoubtedly have taken possession of the *Mikuni Maru*.

As we stated in an extra yesterday, it is believed that the *samurai* have attacked the Kencho, but all the Kencho officials being Satsuma men there is no reason to believe that they succeeded in getting possession of it.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

It is said that there are many detectives posted at various parts of Yokohama, as was the case during the Kumamoto insurrection.

The *samurai* of Kurume, Yanagawa, Kumamoto and Saga are showing a disposition to join the Satsuma party. But as they have so frequently been fooled, it is not expected that they will commence action till they see the Satsuma men actually at work.

Mr. Kawamura, the Vice-Minister of the Navy, has it is reported gone as far as Onomitsu in the province of Bingo.

We hear that the Satsuma insurgents intend to make a sudden attack upon the Kumamoto garrison.

We hear that many of the *samurai* of Kumamoto have gone to Satsuma. One hundred and fifty more policemen have been sent to Kiushiu from the capital.

We hear that the *samurai* of Hirato, Hizen, are showing disposition to unite with the Satsuma insurgents. The *samurai* of Chôshiu have gone to Kumamoto and the *samurai* of Kiushiu are assembling at Satsuma.

We hear that the *samurai* of Satsuma have presented a memorial to the government, who are, it is said, going to endeavour to suppress the disturbance without using either the Army or Navy.

About one hundred *samurai* of Satsuma clan have made their way to Kurume in the province of Chikugo.

Thursday, 15th.

The ex-*Sangi* Goto and Itagaki, both of Tosa, Hosokawa, the ex-*Daimio* of Kumamoto and the former Governor of Kanagawa, and Mr. Oye Taku left for Kobe by the M. B. steamer *Tôkiô Maru* yesterday afternoon. There were also on board a number of other prominent men in the Government, and a great many military officers. It is reported that Mr. Okubo, who left on the 13th for Kiôto, was accompanied by one of the most influential men of the Satsuma clan.

The *Tôkiô Maru* also took away five hundred men of the Imperial Guards. A further number of these troops, together with a battalion of men from the Tôkiô garrison, were to leave by another steamer last night.

The ex-*Sangi* and ex-*Daimio* are said to be leaving to endeavour to alley the excitement on their respective provinces.

A fire broke out last evening at six o'clock at Iida-machi, Tôkiô, and was extinguished in about two hours after destroying some fifty-five houses.

The *Mainichi Shimbun* says:—

The gunsmiths of Sakai, in the province of Idzumi, have been placed at the disposal of the Osaka garrison.

It is expected that a battalion of the Imperial Body Guard, a troop of cavalry and a detachment of the commisariat will start for Kobe to-day by one of the Mitsu Bishi steamers, which will also take down a number of large guns and a quantity of ammunition.

The officers of the Osaka garrison have been ordered to reside at the barracks, and the soldiers are no longer allowed to go out on Sundays and Wednesdays, as hitherto customary.

The *Chôya Shimbun* says:—

Mr. Narahara, of Kagoshima, had an interview with the Minister of Home Affairs at the *Daijo-kuan*, on the 10th instant and went to Mr. Iwakura's residence on the 11th. He again visited the *Daijokuan* on the 12th instant.

The battalion of infantry which arrived at Yokohama by the 3,45 train from Tôkiô yesterday, left for Kobe by the *Hiogo Maru*

The following notification to *Fu*, *Han* and *Ken* was issued by the *Udaijin* Iwakura on the 13th instant.

"It is hereby made known that no arms or ammunition, with the exception of those required for the use of the Army, Navy and Garrisons, shall for the present be sold, bought or transported, even by those who duly possess licenses."

On account of a vast number of officials being Satsuma men, the present disturbance has been the cause of great anxiety, but it is said that they have agreed and declared that all who turn their arms against the Sovereign, shall be suppressed. This will calm the anxiety to a certain extent but, if this is intended to mean that the Satsuma officials in the Government will fight against their own people, we cannot regard the announcement as very reassuring.

Mr. Yamagata, the Minister of War, left Kobe on the 10th instant and proceeded to Shimonoseki, where he will take charge of the affairs concerning the South.

Mr. Ito, the Minister of Public Works, is at Kobe. He is preparing for defence, and is in constant communication with the capital.

Messers. Yanagiwara, and Nakajima, members of the *Genrô In*, and several other officials, proceeded to Kiôto on the 13th instant.

During the absence of the Minister of Home Affairs, Mr. Mayeshima, the *Shôyu* of the same Department, will act for him.

Mr. Chisaka, of the *Naimusho*, has gone as far as Shidzuoka, on the Tôkaidô, for the purpose of ascertaining the spirit of the people on that road.

The *samurai* of Tosa having been reported in rebellion, ex-*Sangi* Itagaki, and the former *Daimio* are to be sent down there to suppress them.

Mr. Oyama, the Governor of Kagoshima, is said to have, been wounded when the attack was made upon the *Kencho* of that district on the 9th instant.

It is reported that the company of troops garrisoned at Nagasaki, had a conflict with the insurgents on the 10th instant, and that 32 on the Imperial side were killed and wounded.

It is reported that the insurgents are planning to take possession of the Takashima coal mine.

The *Asama Kan* had arrived at Onomichi, in the province of Bingo, and left immediately for Kiushiu.

The statement that Mr. Hayashi, the Vice-Minister of Home Affairs, has been killed by the insurgents is false. He accompanied Mr. Kawamura, the Vice-Minister of the Navy, to Kagoshima to try to quiet the *samurai*, but having found, on his arrival, that the insurgents were ready to fire upon his vessel, he decided that they were not to be calmed by words. Returning with Mr. Kawamura to Onomichi, in the province of Bingo, he reported what he had ascertained to the capital, and Mr. Okubo deciding that preparations for hostilities must be made, has proceeded to Kiôto.

The *Riujo-kan*, on her arrival in Yokohama from Onomichi, will immediately be sent South.

The Mitsu Bishi steamer *Taihei Maru* from the Loo-choo Islands, which calls at Kagoshima, is due, but she has not yet arrived and there is consequently great anxiety about her. It is currently reported that she has been siezed by the insurgents, who effected he capture with a very small body of men.

From the *Chôya Shimbun*.

It is anticipated that a rising will take place in Shônai in in Oshiu (North.)

Some farmers of the Tonami district, in the province of Yettchu, brought a petition before the *Kencho* but it was not not listened to. They have since assembled in large numbers—about 1,000 in all,—and are on the point of breaking out into rebellion. Two companies of the Nagoya garrison have been called out to subdue them.

From the *Hôchi Shimbun* we gather that:—

Mr. Matsukata, the Vice-Minister of Finance, is to proceed at once to the south.

The editors of the *Nichi Nichi*, *Chôya*, *Yomiuri* and *Hôchi Shimbun*, were summoned to the *Saibansho* on the 13th instant, and there examined in reference to a statement made about Mr. Hayashi, of the *Naimusho*.

There are signs of discontent shown among the farmers of Kumamoto *ken*.

The entrance to Kagoshima harbour is guarded by fortifications on which are mounted more than twenty peices of artillery, among them being seven or eight

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Krupp guns, but there is only ammunition enough for about 100 rounds.

Some farmers of Gifu *ken* having assembled at a certain temple, a police force of some eighteen in number was sent down to disperse them. It is said that the farmers, who number about 300, assaulted and killed three of the policemen.

The *samurai* of Sadowara, in the province of Hiuga, have sent the powder that they possessed to the Students of the Kagoshima Private School.

The mails cannot be carried any further than Kumamoto. The *samurai* of Kumamoto are assembling, some having already left their homes; the *samurai* of Miyazaki have also joined the Satsuma *samurai*, and have sent them arms and ammunition.

The students of the private school in Kagoshima had previously shown some disposition to cause a disturbance during their examination, which took place on the 12th and 13th of last month, and on this account, several men who were in the confidence of Shimadzu, Kirino, and other prominent men, gave them good advice, and they seemed for a while to have been quieted, but they have now broken out unexpectedly, and Saigo is hiding himself on the Hiätari-yama.

Three battalions of troops are now being prepared at Tôkiô, to be sent to Kumamoto and Nagasaki under General Ôyama.

The troops of the Osaka garrison, who were ordered down to the south to suppress the insurgents, arrived at Fukuoka in Chikuzen at 2 a.m. on the 11th instant.

All the Governors and subordinate officials of the various *ken* who were in Tôkiô, returned to their several departments on the 13th instant.

The Kumamoto *samurai* who assisted the Satsuma *samurai*, have all (the number unknown) been arrested by the Kumamoto *Kencho* officials.

The *Nichi Nichi Shimbun* says:—

Asano, the former *Daimio* of Hiroshima, proceeded to that city on the 10th instant.

Mr. Funakoshi, of the *Naimusho*, went to Yamagata in the province of Uzen on the 13th instant, by order of the Government.

About one hundred new police constables have been enrolled in Tôkiô.

General Ôyama to said to have left with Mr. Okubo on the 13th instant, with a number of troops.

All telegraphic messages, excepting those of the Government, have been stopped since the 13th instant.

The *Naimusho* officials yesterday kindly set apart a room for newspaper reporters.

From the *Akébono Shimbun*.

It has been stated that the Mikado would return to Yokohama on the 23rd instant, but we now hear that Mr. Okubo left yesterday with a message to the Emperor, and whether H. M. will or will not return immediately, can only be decided after his interview with Okubo.

The police are making very strict search in the provinces of Hizen, Higo, Chikuzen and Chikugo for suspected persons.

The magazines of the Navy Department at Shirokane-dai, Tôkiô, have been carefully guarded since the 11th instant.

SECOND NATIONAL BANK.

Statement for the week ending 10th February, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	798,805	
In circulation	401,195	
	1,200,000	
Reserve Fund		311,195
In dollars (coin) on hand	$272,999.71	
In dollars (Foreign Bank notes)	12,445.29	
Deposited with Foreign Banks	63,650.00	
	349,195.00	

Friday, 16*th*.

A fire occurred last evening at Yamanoshiku-machi, Tôkiô, commencing at 6.30 p.m. It raged till nine o'clock and destroyed over one hundred houses.

A telegram announces that the Mikado left Sakai at 9 a.m. on the 14th instant, and will very probably arrive at Kiôto on the 16th instant.

We gather the following news of the Satsuma difficulty from the *Hôchi Shimbun* of yesterday.

It is really a fact that the Mitsu Bishi Co.'s steamer *Taihei Maru* has been seized by the insurgent *samurai*, ten of whom boarded her for the purpose. Nothing is known of her crew.

Since the 9th instant about 300 *samurai* of Sadowara, in the province of Hiuga, have joined those of Kagoshima, and others from Nobuoka in the same province are making their way also towards their Satsuma friends.

The Satsuma *samurai* have constructed several sand-bag batteries at points where defence was needed.

The Government has ordered all the steamers in Nagasaki harbour to remain at their anchorage, and has appointed special officers to observe that this order is strictly obeyed. Compensation is granted to each vessel for expenses incurred on account of this prohibition.

We hear that nearly all the roads in Satsuma are very narrow and of an extremely rugged nature, so that they can be easily defended by a few determined men against a superior attacking force. The broadest road, leading from Akuné to Nagasaki, is too narrow even for *jinrikishas*, and therefore quite impracticable for artillery. The harbour of Kagoshima is strongly fortified, there being more than twenty large guns—eight of them Krupp's—in position, for which at present the insurgents have one hundred rounds of ammunition. The Government small arms factory at Kagoshima is able turn out as many small arms as required, while the powder mills of the Army Department at the same place can manufacture a large quantity of powder, so that if these two establishments are taken possession of by the insurgent *samurai*, the task of subduing them entailed on the Government will not be so easy as it was in the case of Yeto Shimpei and Mayebara. There is some comfort, however, to be derived from the fact that the Satsuma insurgents do not seem to be skilled in warfare, as events since the 31st ultimo show, so that there is no fear that they will be ultimately successful in their rebellion.

It is well know that a large military force has always existed in Satsuma. Those under the command of Shimadzu, called the *Kinko-tai*, number about three thousand; those under Kirino, called the *Sogeki-tai* about the same, while Saigo's party, called the *Gengin-tai* number about fifteen thousand, and are all able-bodied men.

The *Hôchi Shimbun* also says:—

The poor *samurai* of Ibaraki *ken* (Mito) and those farmers who took part in the recent riot there, are now consulting about the Kiushiu affair, and further disturbance is feared in consequence.

A letter has been received from Tosa by an officer of the Army in Tôkiô, who is a native of that province, to the effect that the *samurai* of Tosa are watching the doings of the Satsuma men, but that there is not much apprehension of a disturbance breaking out at Tosa.

The Government having urgent need of the three men-of-war now building in England, sent a telegram enquiring when they would be ready, and a reply was received that they would be launched about the middle of next month.

Messrs. Kusuda and Yamaguchi, both members of the *Genro-In*, Kitamura and Tanimoto of the Navy, have been ordered to Kobe, whence the former will proceed to the province of Hizen, whilst the latter will remain at Kobe.

It has been discovered that a band of *samurai* at Yonedzu, in Satsuma, were making a practice of robbing the mails, and it was owing to this that postal communication was interrupted. Since the 13th instant communication has been restored.

From the *Nichi Nichi Shimbun*.

We hear that the students of the Private School of Satsuma number about 7,000, of whom 3,000 live in Kagoshima while the rest reside in different parts of the province.

From the *Mainichi Shimbun*.

The Mitsu Bishi Company's steamers *Tokai Maru* and *Tsuruga Maru* were yesterday placed at the disposal of the Government.

It was stated that Messrs. Goto and Oye Taku had left for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tosa, but this is a mistake, as they are going to Nagasaki for the purpose of defending the Takashima coal mine.

Saturday, 17th.

From native sources we hear that several medical men belonging to the Army Hospital Corps left for Kobe on the 15th instant. Another battalion of infantry and a troop of cavalry were despatched from the capital yesterday *en route* southwards, it having been arranged that in all six battalions of the Tôkiô garrison troops should be despatched to Kobe, there to receive further marching orders. The members of the Government were doubtful at first about employing these soldiers in suppressing the rebellion, as seven-tenths of them are Satsuma men, but it is now understood that they are all actuated by the spirit of loyalty, and will do their duty to a man. It is reported that the troops of Hiroshima garrison were ordered to Kumamoto on the 12th instant. The Satsuma students of the Private School at Kagoshima are said have imprisoned all natives of other *ken* than their own, who happened to be fellow pupils with them at the time of the outbreak, as they dreaded a failure to secure their assistance in the rebellion and feared their opposition. The *Chôya Shimbun* asserts that the adherents of Shimadzu are actively engaged in the present disturbance, and point out as a significant fact, that whereas formerly the coasting steamers carried many passengers from the Kagoshima and Kumamoto *ken*, recently no natives of those places have not been travelling, which would indicate that the present rising has been contemplated for some time. The same paper says that some of Government vessels have been placed at the disposal of the Mitsu Bishi Company as so many of their own steamers have been made use of on Government service. The gain to the Company in this respect must be a very doubtful one, as, were the Government vessels at all serviceable, they would we imagine, be used for the transport of troops and such other purposes for which the Mitsu Bishi Company's steamers have been called into requisition.

It is even said that the Mikado himself, in emulation of the glorious deeds of his ancestors, is bent on

"Seeking the bubble reputation
Even in the canon's mouth,"

and will hasten to chastise the southern rebels at the head of his own army.

The police of Tôkiô are strictly guarding all the rivers and canals, and have been authorized to examine all boats passing to and fro, and interrogate passengers as to their destination.

It is feared that some trouble may be given by the *samurai* of Tottori in Inshiu, who number over three thousand, and show some disposition to oppose the Government, and it is also apprehended that the large number of telegrams which have lately been received from the Awomori *ken* may have been of a disquieting nature.

From the *Nichi Nichi Shimbun.*

Mr. Yebihara, the former manager of the *Chiugai Hiôron*, was arrested for some cause unknown a few days ago.

From the *Akébono Shimbun.*

Several *samurai* of Fukuoka *ken* are said to have been arrested some few days ago as suspicious persons.

From the *Chôya Shimbun.*

Our editor, Mr. Okubo, was released from confinement on the 15th instant, on the expiration of his sentence of imprisonment for a violation of the Press-laws, and informs us that he fortunately left all the others, who are undergoing imprisonment for similar offences, in good health.

From the *Hôchi Shimbun.*

The editors of the *Nichi Nichi*, *Chôya*, *Yomiuri*, *Eiri* and *Hôchi Shimbun* were summoned to the *Saibansho* yesterday, and again examined about the statements they had made about the Kagoshima affair a few days ago.

The former *Daimio* of Tosa will leave Tôkiô on the 17th for Kiôto, whence, if circumstances demand, he will proceed to the province he formerly ruled.

From the *Mainichi Shimbun.*

A newspaper called the *Shôhô Shimbun* will shortly be published at Osaka.

THE DEFECTION OF SATSUMA.

THE alarming news from Satsuma has, during the past few days, engrossed the public attention to the almost entire exclusion of every other subject. The vagueness of the thousand and one reports published in the native press, and repeated at every corner, the impossibility of obtaining any reliable information whatever, and the mystery with which every incident connected with the outbreak is enshrouded, supply matter for the wildest conjectures, and give good cause for the general uneasiness. There can be no question, however, of the extreme perturbation of the Government, rendered the more evident by the secrecy it endeavours to preserve with regard to the outbreak, while at the same time it cannot conceal the open measures it is taking for its own protection. The telegraph is jealously guarded, none but official messages being allowed to be transmitted. Large bodies of troops and of policemen are being sent south as fast as steamers can be got ready to transport them. One of the finest vessels of the Japanese navy is ordered to take up her position at Shinagawa. At all the Government establishments the guards have been largely reinforced. Most of the higher officials of the Government, in obedience to telegraphic summons, have left for Kiôto, the only ministers remaining being IWAKURA, *Udaijin*, OKUMA, Minister of Finance, and OGI, Minister of Justice. There is thus evidently occasion for extraordinary and vigorous action, and it is natural that men should be induced to think the worst.

Without, however, taking the pessimist view of matters, judging from what we see of preparation, and from the little truth that we can disentangle from the mass of rumours, there can be no doubt that the present is the most serious difficulty which the Government has had to encounter since it was established. The Saga rebellion, and, more recently, that headed by MAYEBARA, in which he sacrificed his own and so many valuable lives, in a rash attempt to overthrow a Government which he had himself helped to establish, and from which he imagined he had suffered personal wrongs, were to a certain extent alarming, but the difficulties to which they gave rise were altogether unimportant when compared with those which threaten the country from the present attitude of Satsuma; difficulties, in which the Government has, apparently, quietly allowed itself to be involved, and from which we fear it will require all its craft and all its vigour to extricate itself.

We will take a brief review of the events which have culminated in the present crisis.

For some time past, there has been established in Kagoshima an institution popularly known as a "Private School" or College. This school was founded by General SAIGO and other leading men of the Satsuma clan, and supported by them out of the pensions allotted to them by the Government in acknowledgement of their services on its behalf. Although ostensibly established for the purposes of general education, it is actually nothing less than a military academy. The pupils numbering, it is supposed, some thousands, comprise the flower of the Satsuma men, and are a remarkably robust and well trained body. Among these pupils are nearly all the men, soldiers and policemen, who were in SAIGO's command during the time he was in the Imperial service, and who, almost to a man, accompanied him to his home when he resigned his position. Here then is the making of a formidable army, and it is strange, to say the least, that if SAIGO and the leading men in Satsuma are anxious to cultivate only the arts of peace, they should be at such pains and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

expense to found and support an academy on a gigantic scale to teach thoroughly all the arts of war. At Sakura Shima, a place distant a few miles from Kagoshima, is a powder manufactory, where has been stored a large amount of powder, and, it is said, other ammunition, which the Government was naturally desirous to remove from so dangerous a neighbourhood and to get into its own custody. The necessity of keeping this ammunition in their own hands led to an act of resistance on the part of the more impatient of the *samurai*, which compelled the disclosure of a plot that has long been preparing, but which its originators would have preferred to conceal until all was ready for its consummation. This may account for the conduct of some of the leaders of Satsuma, who are reported to be holding themselves aloof from the movement, as they see that the success of their designs is imperilled by the headstrong actions of their hot-headed followers.

It is impossible to believe that the Government could have been ignorant of the coming of this storm, the gathering clouds of which have been visible to anyone who casts even a glance into the political heavens. "Shepherds of people had need know the Calenders of Tempest in State, and as there are certain hollow blasts of wind, and secret swellings of seas before Tempest, so are there in States." Surely none of these signs have been wanting, and yet the storm bursts, and the Government is taken all unprepared. Can it be that its officers have heard the mutterings of so many storms, that have gone over and broken not, or that have burst and done little harm, that they have grown careless, and paid no heed to these "hollow blasts" and "secret swellings," thinking they presaged no worse tempest than those that have passed? Can it be that they felt so secure in their strength, and that the good ship of State was so well trimmed, and so staunchly built, that they need pay no heed to the signs which foretold the tempest? Or can it be that while they knew the meaning of the angry sky, the frequent thunder gusts and treacherous calms, they dared not take the vigorous measures necessary to ensure their own and the country's safety? Be that as it may, "storms though they blow over divers time, may fall at last," and it shows either fatal indifference, heedless confidence, or confessed weakness and inability, on the part of those who allowed the warnings of its coming to pass unheeded.

We know the general cause of this disturbance and of all others of less importance that have so often taken place—much poverty and much discontent. "It is certain, so many overthrown estates, so many votes for troubles. And if this Poverty and broken Estate in the better sort, be joined with a want and necessity in the mean people, the danger is imminent and great." But of the special cause of the present outbreak we have nothing but rumours, any of which may or may not be correct. That Satsuma unaided can maintain the position of defiance towards the administration that she has always assumed, we do not believe. She can, from her present stronghold, for a long time hold at bay the forces that the Government may be compelled to send against her in their endeavours to reduce her to submission. The country is almost unapproachable by an invading army by land, and the fortifications at Kagoshima and on the coast have been so strengthened, that they are too formidable for the present navy to venture an attack. Moreover, it is not an undisciplined mob of boys, or a few thousand farmers, with flails, and mattocks, and bamboo spears, that have to be encountered, but an army, hardy and well drilled, and as well officered as the Imperial troops—it may be as well armed. The movement is not the outcome of a week, and there is every reason to suppose that abundance of arms and ammunition has been collected, for, in addition to permitting the establishment of a military school, the Government has never dared to insist that the Satsuma Arsenal be handed over,—moreover there may be traitors in the Imperial camp, and this is what we believe the Government most fears. More than half of its officials are Satsuma men, while the navy is largely manned and officered by members of the disaffected clan. Can the Government count on their fidelity to the extent of sending them against their clansmen? We think not. There is an ominous little paragraph in the Japanese papers to the effect that the Government will attempt to settle the difficulty without having recourse to Army or Navy. Why does the Government temporize? Why does it not send all its forces against this turbulent clan as it did against Saga and Kumamoto, as it would do against any clan less powerful than Satsuma? The troops that have already left are said to be only for the Emperor's protection. The answer seems plain. Satsuma's influence is too great, and too diffused, to permit the Government to use force except as a last resource.

On the other hand it is known that there are in the Satsuma clan two parties. The present outbreak is said to have proceeded from what is called the more advanced party, and that their impatience has thus urged forward a crisis, which the cooler heads intended to delay as long as possible, and which it was hoped, by means of calm representation and discussion of the required reforms, to have altogether avoided. In that case the house is divided against itself, and if this be so, the division will greatly aid the Government. There is still another strong point in its favour. Satsuma is no favourite with her sister provinces. She has too often been faithless to them; too often induced them to plunge into deep water, and then, standing quietly on the bank, calmly witnessed their drowning struggles. It is even believed that MAYEBARA and his misguided followers were among these victims of Satsuma's infidelity to her friends. Be that as it may, there is a want of confidence in her which will prevent those who would like to join issue with her against the existing administration from lending their support, and this distrust is another point and a strong one in favour of the Government. Should she however be able to prove her power to sustain the position she has assumed, there can be little doubt that she will be largely assisted in her rebellion by the *samurai* of other provinces, and the country plunged into a civil war, of which no one can pretend to tell the issue.

"What does Satsuma want?" is a question, asked alike by Japanese and foreigners, of which no one seems capable of giving any satisfactory solution. Satsuma has always been, not the best loved, but the most feared province in Japan, and has become the spoiled child of the country. The other members of the family of provinces have been bullied, beaten, and coerced into obedience whenever they showed signs of insubordination, but Satsuma has been allowed in nearly everything to have her own way, and the Government, like an unwise parent, has always given her whatever she set her mind on having. She had only violently to make demands, or obstinately refuse to comply with the orders of her rulers, and any concession was made for the sake of peace and quietness. The parent, in the end, suffers for such weak indulgence, and the day comes when all authority is defied, and the whole house is set by the ears. But what does she want now? It is given out that her pre-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sent grievances are the abolition of the wearing of swords, the capitilization of the life-pensions of the *samurai*, and the loss to the country by the cession of Saghalien, and that unless these be redressed she will make no terms with the Government, until compelled by force to do so.

We have some slight grounds for hoping that the tumult may be quelled without bloodshed. It is not generally believed that any fighting has taken place, as the attack on the Kumamoto Kencho is contradicted. The first shot fired may be the signal for a civil war that will lay waste the land from one end to the other. The Government must bitterly rue the day when it alienated from itself the good will of Saigo and his followers, as their influence now could doubtless have prevented the present outbreak. It may be that they are not actively aiding the insurgents, but though they be not openly for the Government they can scarcely be against it.

REVIEW.*

Much has been written on the subject of Japan since the time of Lord Elgin's mission; the history, religion, customs, scenery, botany, and general literature of the country, have all found expositors, but until very recently its art has been dismissed with scant notice, and yet the subject not only presents much that is novel and beautiful to all who can estimate its excellencies, but offers to every observer a kind of autographic outline, boldly and faithfully sketched, of the physical, moral, and intellectual characteristics of the Japanese people. The investigator of Japanese art has advantages rarely afforded by matter of even far less general interest, his search is unforestalled by predecessors and undisputed by competitors, and he may calculate upon an eager and appreciative reception of anything of value that he can bring to light. The first effort to fill this gap in our knowledge of the far East is the production of the little book now before us, the aim of which, as stated by the author, is to represent Japanese art without reference to its history or mechanism, but "to lead others to enjoy as he does the purely æsthetic features of art and to unravel the tangled skeins of thought which have led to the development of its various mental phases."

The work is divided into five sections headed as follows:

1. The psychological and material basis and historical origin of the art.
2. The religious art—its divinities, myths and heroes.
3. The literature and poetry of Japan.
4. The conditions of life of the Japanese artisan, and his work.
5. Japanese decorative and ornamental art—its principles and rules.

The first section touches upon the main characteristics of the artistic work of the Japanese: the passages quoted below will serve as specimens of the author's views upon this point, and in their candour leave us quite unprepared for many of the glowing expressions afterwards emitted as the writer warms with his subject.

"By no charity of taste can we train ourselves to admire "their effigies of cumbersomely dressed men and women "with their narrow elongated eyes, noses, mouths, and chins, "false eyebrows, hideous toilets of hair, ungraceful con- "tours and movement, and deficiency of elevated sentiments "in their features . . . Instead of attempting to idealize "forms, actions, and ideas or emotions, there is an irresis- "tible artistic impulse to see life on its humorous or "ridiculous side and to convert humanity into anything "but a phase of beauty according to our notions. Their "pictorial standard of the human figure seems based on "the savage taste of transforming the natural into the "unnatural, if not by the direct mutilation of separate "features by giving to them as a whole a deformed or "impossible aspect. . . . . Added to this, the "Japanese artist knows nothing of anatomy as a science. "Consequently while their powers of observation as "regards general action are wonderfully acute and cor- "rect in expression, they utterly fail in truth of anato- "mical details, such as rightly rendering joints, muscles, "&c., foreshortening, and those elementary facts of de- "sign without a knowledge of which European art would "seem wonderfully imbecile. . . . . Their gods "and heroes impress chiefly by the extravagance of their "postures and costumes, their intense action and passion, "or the grotesqueness of their symbolizations. . . . . "There is no modelling in these pictorial figures, they "are perfectly flat, shadowless, angular, and sharp in "outlines, faulty as can be if judged by the canons of a "Leonardo da Vinci, but as we shall see by and by, full "of merits of another character not less requisite in the "construction of a perfectly artistic whole, and in "sculpture or casting almost perfect as to general pro- "portions and forms."

It will be noticed that the Japanese representation of the human figure is spoken of in strong terms, stronger indeed than might be advanced by one with a far less unqualified admiration of the art than the author manifests later. That a certain class of work, and especially the historical, is singularly deficient in grace and truth is apparent to every one who has seen the ambitiously illuminated illustrations to the *Gengi yume monogatari*, and some other manuscripts, but this defect is an affectation that appears to be traditionally attached to subjects of this order, but from which the artists who perpetrate these gaudy enormities show themselves easily able to escape when attempting anything that permits a less ceremonious approach. It is however a mistake to suppose that the Japanese sees anything humorous or ridiculous in these travesties upon humanity; the stiff drapery, acquiline noses, small oblique eyes, rigid bearing and studied suppression of facial expression are merely a reverential exaggeration of an ideal of aristocratic elegance and dignity, the original traits of which really existed among the class of the old nobility, and may not uncommonly be met with now. "The absence of anatomical knowledge" is commented upon, but this is not wholly answerable for the clumsy, almost shapeless limbs which the highest artists appear to consider a satisfactory representation of contours which the crowded streets offer to their eyes daily, in thousands of good examples. The root of the error is partly in the general acceptation of certain conventional forms as symbolical of nature, and partly from a dislike to copy directly and conscientiously the actual object which is to be depicted. The Japanese artist is generally supposed to be a laborious imitator of nature, but nothing can be further from the truth than this opinion. As a rule nearly all the forms of birds and other animals, flowers, trees, landscapes, etc., are taken from models handed down for generations from master to pupil in the various schools of drawing, and from time to time undergoing slight modifications, accidental or intentional, by individual workers. Many of the types are of great antiquity and may sometimes be seen with little or no variation, either of errors or beauties, in drawings which date back two or three centuries. An ordinary modern painter will dash off a wonderfully correct and lifelike sketch of a bird which he has never seen, and nothing but the lightless eye will indicate that the picture owes its existence to a school tradition; in other representations the same practice is usually followed, but in most cases with a far less successful result. The comparatively few artists who are noted for original productions are indebted to nature for little more than a momentary glance, in which they seize more or less correctly the general characters of an object, and the impressions so obtained are at once realized by the brush, in the conventional style of the school to which the painter belongs.

To return to our author—we are disappointed to find that the greater part of the remainder of the section, as well as much of he rest of the work, is devoted to long dissertations upon Japanese politics, religion, morals, habits and other matters which have but a slender connexion with the subject of the book. Any criticism of these in detail would be out of place here, but on reading through them and observing the fractional amount of knowledge of facts displayed in the formation of very striking conclusions, we are irresistably reminded of a

* A Glimpse of the Art of Japan, by James Jackson Jarves, Esq., *Hard & Houghton, New York.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

syllabub, which deceives us by its imposing size and apparent solidity; but the gas removed, we find it owed its being to the laborious whipping up of a scanty basis of dubious composition. The almost invariable tendency of the digressions is to assert the inferiority of Europe in those very matters in which Japan is daily approximating to our types under the guidance of its most distinguished statesmen. Mr. Jarves, however, succeeds in demonstrating that it is not only in Art that he looks upon the representation of "the facts of things" as altogether secondary to a misty idealism.

Towards the close of the section the writer reverts to his subject in speaking of the relations between European and Japanese art.

"To paint a month in sole reference to its adaptation "to eating is quite another thing from painting it to ex- "press the emotions which intensify its movements with "pleasure or pain; so with the nose, eyes, or entire "figure. . . . . European art of our time has a "marked tendency towards the scientific extreme, con- "tenting itself over much with the dumb show of mate- "rial objects and finding its supreme satisfaction in their "outward likeness. Japanese art tips the æsthetic scale "towards the other extreme, paying less heed to the "grammar of art, and bestowing its greatest attention on "the vivid rendering of the specific motive in its highest "scale of idealization. In other words it conceives art to "be a supreme spiritual function of man, appealing to his "faculties of mind more than to those of his body, and "best fulfilling its office when it affects the imagination "by limitless capacity of suggestion, in preference to pleas- "ing the senses by the superior skill of a downright re- "alistic imitation. Its abstract superiority, therefore, rests "on its profound recognition of the higher to the lower law "of art."

These conclusions are somewhat startling after the remarks previously made as to the the deficiency of elevated sentiments in the features of the men and women depicted by the Japanese artist, their deformed impossible aspect, etc. There is no doubt that much of the lower average of European art is merely imitative, but it is difficult to imagine that any person who has seen the highest degree of pathetic idealism, combined with the most scientific rendering of principals and accessories in some of the paintings of Millais, Delaroche, and many others, can talk with an air of conviction about the abstract superiority of Japanese art, and with a touch of condescension assure us that "while eulogizing as they deserve, Japanese art and character, he does not mean to assert for either any absolute superiority in the whole, over European."

An artistic idealization of nature should be an improvement upon its common aspects, a realization of the suggestions which natural objects offer to the mind of the artist. If the idealization detract from the beauties of nature it is, so far, bad, and indicates a condition of imperfect development of art which may be traced step by step downwards until we reach that which should be, according to the author's theory, the highest point of idealization, in the hieroglyphics of the North American Indians. The union of the ideal and scientific is as essential to form a complete artistic whole, as the combination of theory and practice in the exercise of the powers of a physicist or physician. We should, however, complain far less of our author's assumption, could he show in what manner the Japanese manifest their possession of this "limitless capacity of suggestion." That a few clever disjointed strokes of a brush should suggest a bamboo; that the interposition of golden clouds in a landscape should suggest distance; that the inversion of the vanishing point which makes parallel lines widen as they recede should suggest perspective, shows, without doubt, a power of expressing nature in a manner which is received as a recognizable indication of the artist's intention, but the adoption of such a conventional and erroneous means of suggestion in itself indicates a serious weakness. If, however, Mr. Jarves implies that it is not in this manner, but in a higher and intellectual suggestiveness that the Japanese artist excels the European, we can only pass in review a few of the works that strike us at every step in the art collections of Paris, Rome, London, Antwerp, and elsewhere, and recalling the highest effort of the Japanese brush or carving implements, wonder in what respect a serious comparison can be instituted. In the 'Glimpse' we can only find one attempt to demonstrate the superior originality of conception which is frequently asserted by the author for the Japanese artist, and this we shall afterwards refer to.

Section 2 commences with a discourse upon the nature of idealism in art, and passes on to an account of the Japanese representations of Buddha, the *Shichifuku-jin*, dragons, ghosts, thunder and wind gods, and the other supernatural elements which supply the native artist with endless subjects for the exercise of his tools.

The boundless enthusiasm of the author is indicated by a passage describing 'a remarkable picture,' and causes us to recall regretfully the hopes excited in the preface by the promise of an endeavour to be "explicit, direct, and intelligible, without overflowing into word painting or profound theorizing." The subject of the *makenono* is a common one, especially in the older pictures, but its meaning is curiously misinterpreted by the admiring critic.

"There is another painting which haunts my imagina- "tion like an apocalyptic vision. It is done on finest silk, "mounted on ivory rollers and is about five feet long by "two wide. The composition, combining as it does pro- "soundest mysticism with extreme simplicity of treat- "ment and extraordinary grandeur of invention, fills the "mind with a consciousness of the primeval spheres "when the world was formless and void. One hears, as "it were, an elemental voice out of the night of ages; "deep calling to deep, as the Divine Will bids light and "water and land appear. Unscientific and heathen "although the conception of this composition may be, its "mystic awe penetrates the soul, and suggests the symbo- "lical presence of the Supreme.

"I will briefly recount its features even at the risk of "making this confession of its power over me seem pure "hyperbole. Let those who have eyes and ears only for "sheer human uproar, or the whiffs of human vanity, "deride and pass on."

Here follows a description of an 'illimitable ocean;' a 'cosmic hurricane;' driving heaps of vast clouds that repeat the 'cosmic forms of the foaming hemispheres of the storm waves;' the sacred turtle upon a sharp volcanic rock; '*Tsouri-sama*, the Holy Lord,' a gigantic crane in strong relief against a 'huge blood red orb with lurid glare;' a 'mystical air spout with a gyratory spirit-like movement' descending from the beak of the stork to the mouth of the turtle; 'the infinite empyrean;' &c., &c. The passage concludes with a misquotation and a climax.

"Does Milton's verse,—

> 'Those who with mighty wings outspread
> Dove-like sat brooding o'er the dark abyss,
> And made it pregnant, &c.'

"surpass this work of the artist's pencil? Were ever the "stupendous creative forces of the Universe more potently "or beautifully symbolised?"

Could this be translated to the artist who, good man, has skilfully drawn for perhaps the hundredth time the stork and turtle as handed down to him by long tradition, the former, as usual, with a background of vermilion sun, the latter on a conventional rock surrounded by conventional waves—who would be more surprized than he to learn that the picture which he had intended for an effective combination of the fabled types of longevity in their appropriate elements, had filled the foreign mind with "a consciousness of the primeval spheres" and suggests "the symbolical presence of the supreme" or the "stupendous creative forces of the universe." For ourselves, much as we object to be ranked with "those who have eyes and ears only for sheer human uproar and the whiffs of human vanity" we must perforce submit, if there be no choice between sharing the authors rhapsodies and receiving his condemnation.

We cannot pass unnoticed the remark of the author that "the Japanese do not associate sensuality with nudity as we do," and one or two other passages elevating Japanese morality at the expense of our own. There is little doubt that the habit of seeing the unclothed figure as a part of every day life would prevent any association of pruriency with nudity *per se*, but this fact by no means involves the absence of pruriency in a people who have, perchance, learned to look upon the removal of their garments during the day as a simple matter of convenience. On the other hand there is a suspicious and uncomfortable kind of morality in the spirit which leads a man to speak of

Digitized by Google UNIVERSITY OF CALIFORNIA

the 'libidinous provocations' of the ball-room costumes and the "calculated exposures of person" of his countrymen's wives and sisters, and to infer that with us nudity is incompatible with decency, and that hence we are unable to look chastely upon the 'Venus di Medicis' the 'Andromeda' of Ingres, the 'Hero' of Armytage, or any of the numerous works of art in which nakedness and purity have been united, though—strange to say—by European artists. The feeling termed by Herbert Spencer the 'antipatriotic bias' is strongly marked in the views of Mr. Jarves, and moreover betrays him again into an exposure of his ignorance of the country, on the condition of which he is venturing to instruct others. The "foul sensualisms of Doré," the "hidden or obtruded sensualism of our Schools of Art" are referred to as having no counterparts in the Japanese, but here "obscenity and libidinousness are relegated to their own vile haunts, instead of being paraded in conspicuous places." And yet, in the very book to which the author is indebted for nearly the whole of his illustrations, some drawings will be found as coarse and indecent as the worst of the woodcuts in the 'Contes Drolatiques,' and it is well known to all old residents in Japan, that before the judicious repressive efforts of the present Government, plays at 'respectable' theatres, new year decorations in the public streets, books with unchecked sale, and even the toys and amusements of children, offered spectacles of indecency having few parallels in European nations.

The third section, on the literature and poetry of Japan, contains as usual a large amount of material out of place; but we find some justly laudatory remarks on the well known *Hokŭsai-no-tehon*. This artist, probably the greatest that his country can boast, has produced a monument of versatile talent that has not a single rival in Japan. It not only embraces almost the entire range of Japanese pictorial art as to style, but represents at least one half of the subjects which form the stock in trade of the Japanese artist. The monster with the long legs, and the monster with the long arms, who form a mutually advantageous alliance; the *Rokurokubi*, the terror of naughty children, whose necks, elongating at will, bear their heads to places which their arms cannot reach; the *Mitsu me no kozo*, or three eyed boy, and other bogies; the chest perforated men who utilize the thoracic aperture as a passage for a pole by means of which they may be borne, comfortably suspended in air, by stalwart coolies; the concourse of Chinese philosophers; the twenty-four acts of filial obedience; the seven household deities; the thunder and wind gods; dragons; dog-lions; sea-unicorns; wrestlers; horsemen; and other designs which are repeated in various manners, and with various materials, in hundreds of thousands of the products of Japan. The *Fuji hiak'ke* is another very characteristic work of Hokŭsai, but is not referred to in the "Glimpse."

The author says that perspective is known to Japanese artists, but although books in perspective were left by the Dutch, and a few pupils were even instructed by them in the principles of Western art, the laws of perspective have in general been either ignored or utterly misunderstood. A perspective drawing, apparently imitated from some old Dutch work, is seen in the Hokŭsai Album, but even this is erroneous. Hokŭsai was however less an offender against the rules of perspective than most of his fellows, many of whom committed blunders almost as absurd as those burlesqued in the ludricrous etching made by Hogarth for the benefit of Walpole.

In the fourth section the author dives into a review of the feudal system, food, wages, castes, deportment, and etiquette of the Japanese, and at length comes again to the surface on the epochs of Japanese art, concerning which, however, he has little to tell us. A "costly highly decorated album" which reveals the "mysteries of fashionable life" is described at some length, but why introduced in a chapter supposed to treat of the "life and work of the artisan" we cannot explain. We may quote a reference to one of the pictures in this "epitome of high life."

"The artist further violates our rules by omitting all "shadows. Whenever he attempts anything on our system "he loses the fascination of his own. We may smile on "looking out of one of his brilliantly lighted rooms—for "example that of the musical party—into the dark night "outside, to see the blossoms on the trees as distinctly out-"standing and coloured as if the Sun shone on them. But he "is no fool for all this. He knows as well as any one how "much of them he could see under the circumstances; but "he wants us to know that the air of that room is filled "with their fragrance. To the concert of sweet sounds he "adds a concert of sweet odours and doubles our sensuous "enjoyment at the expense of an unimportant material "fact. This is the duty of the artist, founded on an "æsthetic consciousness of a far higher quality than any "possible fidelity of literal draughtsmanship."

We will not stop to discuss the peculiar special pleading which causes the writer to eulogize an absurd violation of possibility because it gives him an opportunity of framing a theory of intention of which the Japanese artist never dreamed. In every illustrated tale book will be found drawings of night scenes, in which even our author's inventive genius would be puzzled to find an excuse for the artist's assumption of the cat-like faculty of seeing in the dark, unless we suppose that distant *Matsu* trees and garden stones (altogether unconnected with the story) give off sweet odours, or otherwise heighten our "sensuous enjoyment" to a sufficient extent, to compensate for the enormous sacrifice of artistic force and truth in the picture.

A little farther on we are told that "our art tends to destroy itself by a fruitless rivalry with nature, and is slain as was Marsyas for his insane presumption in vying with a God." The simile is showy but empty; our art, never attempts to vie with the God Nature, but humbly seeks instruction from it, and this is certainly nobler than to bow down to an idol of man's manufacture, the conventional and false ideal of the Japanese.

Finally, in the 5th chapter is reached the most important part of the subject, the stronghold of Japanese art, Decorative and Ornamental work; and we should be little inclined to quarrel with the author for the praise he lavishes, were it not for the characteristic exaggeration of expression which places in opposition such terms as "bestial" "stupidly ugly," "imbecile in motive," "dwarfed, distorted and befouled nature," applied to European grotesques; and "heaps of uncomfortable trash, frivolous in idea, inane in look, &c.", "distorted, pretentions or pitiful" "crude and inharmonious," applied to European decorative products—together with the phrases "physical grasp and grandeur bordering on the terribly sublime," "truthful appreciation of nature,", "unlimited suggestion for the mind," &c., &c., in referring to corresponding work in Japan.

Our patience is sorely tested by a writer who can witness to nothing but foulness and sensuality in Doré, who rarely refers to European art except to point out what he considers its defects—while he can see a "cosmic spectacle in the dawn of creation" in a flight of cranes around the margin of a Yedo bowl, a "symbolization of the stupendous creative forces of the universe" in a *kakemono* of the stork and tortoise, the "downy flush of an infants cheek" in the tint of a Kiyoto dish, and æsthetic skill," "æsthetic genuineness, æsthetic descrimination," "æsthetic invention," "æsthetic" every-thing in all that is not foreign to Japan.

We are willing to concede that the porcelain painting and nearly all of the modern decorative work of Europe are inferior to the *best* productions of a similar kind in Japan, and the reason of our inferiority is not difficult to discover. The best artists of Japan find employment in the various branches of the Decorative section; and the conventionality, which is a grave defect in realistic art, is of advantage where the object is simply ornament, where bold and graceful outlines and pleasing combinations of colour are of more importance than an absolutely truthful representation of nature, which indeed is commonly rendered impossible by the requirements of shape in the article to be produced. In modern Europe, artists of the higher order of merit rarely devote their powers to this department of art, and hence with us it tends to sink to a comparatively low level. That much, however, has been done in Europe during the last twenty years to improve the artistic qualities of ornamental or useful objects, is apparent in many of the designs submitted to the public in the various Exhibitions of London, Paris, and Vienna; but until the artisan-artist exists in Europe, as in Japan, the higher class of decorative work will, for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the most part, necessarily be beyond the reach of the greater number of purchasers. Even in Japan there is an enormous quantity of worthless art, a fact which our author ignores, and it must be understood that individual manifestations of true appreciation of art or nature, as shown by domestic attempts at tasteful decoration, are as exceptional as in any country in Europe, any reputation in this respect which the people may have gained amongst foreigners being as well founded as the existence of that "almost exaggerated love of the picturesque both in the objective and mystical side of nature" with which Mr. Jarves generously endows the Japanese peasant.

In the description of porcelain which occupies a great portion of the chapter, a "purest cream" or "premium spring butter" coloured ware, with an extremely minute craquelé glaze is introduced as from Satsuma, but from some points in the description of certain specimens, we are suspicious that we have been making the acquaintance of modern natives of Kiyoto. A flat dish covered with figures in red outline does duty as the representative of Kiyoto china: Nagasaki ware is merely referred to as resembling that of Kiyoto, except in its lightness and in the presence of blue medallions: of Hizen china we learn only that it is the most highly prized variety: of Imari and Kaga porcelain there is no mention. The preface of the 'Glimpse' denies us the right to expect technical details, or distinctions of the varieties of keramic products, but surely some notice of the peculiarities of artistic decoration of the three last mentioned, might have been considered as appropriate to the subject, as the author's views on ritualism and sectarianism which we find interpolated in the midst of the account.

A description of some examples of metal work and ivory carving closes the book.

The illustrations are for the most part reproductions on a reduced scale from the and Hokŭsai book, a few are taken from the *Wa Kan seki-hitsu gaye* and other sources. They are well selected and accurately imitated, but are unfortunately marred by a blurred and broken outline, probably owing to the use of a recent impression of the original, instead of one of the older copies printed before the blocks had become worn. The subject of the engraving is sometimes misunderstood, as for instance in plates 5, 6, and 18, said to represent respectively "The dream of the tired water carrier," "Figure drawings made from the vulgar and aristocratic or literary alphabets," and "The demon of gambling watching his victims at play." In plate 6, the double mistake is made of supposing that the lines of the drawings are made up of combinations of Japanese characters, and that the *Katakana* form the literary, the *Hiragana* the exclusive vulgar "alphabet"—plate 18 is an illustration of an old story and has no connexion whatever with the demon of gambling—in plate 5 the pail-bearers in the dream of the sleeping man are not water-carriers, and the humour of the sketch rests upon a burlesque reference in the text.

As the spelling of the Japanese proper names in the book has been taken, the author tells us, from those writers who "seem to be the best authority", we should be glad to know to what orthographical dictator we are indebted for such appellations as Hoffksai, Siogoon, Prince Hake, Fusiyama, Shinba, Hitzen, Quamon, ("Queen of Heaven,") Zinmon, Daiboudhs, Fasi, Koma-inow, and others which struck us as rather "Chaucerian" in construction.

As the sum of our impressions of the "Glimpse at the Art of Japan" we are compelled with regret to say that the work entirely fails to fulfil its object. Its style is inflated, diffuse, and pretentious, although redeemed in places by passages showing a power capable of effecting much, had it been well directed. Its matter is badly arranged, and is marked by grave faults of commission and omission, such as the prolonged discussion of subjects too remotely connected with art to require more than a brief reference, and demanding a knowledge of facts which the author obviously has not acquired; the absence of much information that might have replaced with advantage nearly two thirds of the contents of the book; and a kind of two-fold bias which places both European and Japanese art in false positions. The writer is proud to avow himself an enthusiast, but he forgets that enthusiasm is of value, only so far as it lends earnestness to inquiry, but becomes detrimental when it places before the eyes of the observer a medium which transmits only certain elements of the pure uncoloured ray of truth, and deludes him with highly tinted images of sober realities.

We have too much admiration for the strong indications of artistic talent in the Japanese, to welcome an injudiciously flattering criticism which, if noticed by them, might induce a fatuous self-satisfaction, calculated to retard their progress to a higher and more intelligent use of their abilities. We are confident that with a sound instruction, happily already begun, in the technicalities and principles of art, and a careful study of the best European works, Japan may yet boast of painters and sculptors, whose fame will extend far beyond the seas that bound their little group of islands.

A TRIP TO VRIES.

Hearing that the volcano on Oshima (Vries Island) was in eruption, a few friends and I resolved to pay it a visit. For this purpose we hired the small steamer *Yokoska Maru*, and started from Yokohama on Friday, the 20th ultimo, at half-past 2 P.M. Our party, which consisted of six Europeans and one Japanese, had been unfortunately reduced to half its original number, as the autocrat of a certain college refused to allow any of its employés to take part in the trip. These gentlemen were informed, a few hours before starting, that professors should spend their leisure time more usefully than in visiting volcanoes, and that no encouragement could be given to the indulgence of idle curiosity. This was the more extraordinary, as the authorities of the Kaisei Gakko had most kindly exerted themselves to forward the wishes of the members of their staff, both native and foreign, who desired to join the party. They have even gone so far as to make arrangements for another expedition to Vries for the purpose of scientific observation.

As we steamed down the bay we were amused by the gambols of a number of porpoises *(Delphinus longirostris)*, and before dark reached Misaki, which lies on the south side of the Uraga peninsula. Here the captain suggested that we should run in and lie for a few hours, under the shelter of the island opposite the town, as he thought there might be some difficulty in finding the landing place on Oshima during the night. This was accordingly done, and we took advantage of the opportunity to go ashore and explore the town, which did not, however, present any features of special interest.

The steamer started again at 3 A.M. on the 21st, and directly we left our anchorage, the volcano, about 18 *ri* distant, became visible, looking in the darkness like a veritable "pillar of fire." The temperature here was very mild, 48° Fahrenheit inshore and 51° a couple of miles off the land. After a pleasant run of about four hours we reached Habu, on the eastern side of Oshima, made our way easily into the harbour, and anchored in eight fathoms of water. Although the channel is rather narrow, a steamer of greater draft than the *Yokoska Maru* could enter at high tide, and defy, in safety, all the storm-raising arts of Prospero himself.

The principal house in the village was promptly placed at our disposal, but after some deliberation we resolved to remain on board. When breakfast was over we engaged six coolies to carry our *impedimenta* and act as guides, but had not gone far before it was discovered that these valuable assistants knew nothing of the road, as none of them had ever ascended the mountain, although they had lived on the island all their lives. With a growl at their inadventurous dispositions we determined to find a way for ourselves, and, striking up a valley formed by an old stream of lava, came out on the western side of the island. After some rather rough travelling we reached the bare ash-strewn summit, which is of very considerable extent. Here I found imbedded in solidified fine ash the bole of a tree and a number of leaves in a semi-fossilized condition. The whole of the top of the island had originally formed one enormous crater, which is now nearly filled up, and looks like a level plane with a border of low ridges some 150 to 200 feet in height, more or less complete, all round. About the centre of this plane rises a regular cone, from which quantities of red hot ashes were being hurled high in the air. When we began to ascend the cone our excitement was intense, but on reaching the top

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a scene, far surpassing our utmost expectations, burst upon the view. We found ourselves standing on the narrow edge of an immense circular cavity, the bottom, about 400 feet below us, being nearly level. On looking down we saw that at the western side a small cone was being rapidly thrown up, perfect towards the east, south and west. A defect, however, on the northern side, afforded a splendid view into the centre of the burning lake, from which jets of lava of the most lovely cherry colour were being thrown up, accompanied by explosions at the rate of about three a minute. Fragments of ashes were at the same time ejected hundreds of feet above our heads. These were at first red, but on reaching their greatest height they turned black and fell, the heavier masses inside the cone, and the lighter, outside. Those that had fallen on the outside would then burst and disclose their glowing interiors. The whole formed a grand fountain of fire. Every now and then the side of the cone would slip inwards, and once an immense bubble rose to the surface of the lake and burst with a roar like thunder. Volumes of steam and smoke were rising continually, and over all clouds of cinders hovered like flocks of ill-omened birds. The scene might well be compared to that described by Milton :—

"A dungeon horrible on all sides round
"As one great furnace flamed."

We seemed to be looking down on the abyss of Malebolge.

Unfortunately it began to rain in torrents just as we reached the summit. Mist often filled the crater, shutting it out from our view, and also preventing a descent to the bottom to examine the fissures from which steam was issuing.

After securing a mass of freshly-fallen cinder, some of us started off and walked round the edge. On getting to leeward, we had a very unpleasant experience, as the wind had risen to a gale and blew the sulphurous smoke in our faces, obliging us to stop for breath several times. Having made our way out of the fumes we commenced to descend in what we guessed to be the right direction. After some delay, as nothing could be seen in the mist that enveloped us, we reached vegetation and soon came on a path leading to a village, from which in twenty minutes we arrived at Habu, getting on board the steamer at 8 p.m. After dinner I went ashore, and had a long talk with the headman of the village, from whom I gathered the following information :

Earthquakes are never felt on the island. The last eruption took place six years ago, and continued two days. About twenty years ago the mountain was supposed to be constantly active, but nobody ever ascended. The harbour at Habu has been in existence only about 100 years, as before that time the sea had not obtained an entrance into what now forms an almost entirely land-locked inlet. There are a number of cattle and ponies on the island, the only other animals being rats and weasels. Formerly there existed a large wild beast with crooked horns and hair like a cow's, but as it destroyed the crops the people used to turn out for a grand hunt on the 3rd day of the 3rd month every year, and now it is quite extinct, none having been seen for twenty years. The only export from the island at present is firewood. Formerly fish, camellia seed oil and seaweed were also exported; rice is brought from the mainland, the island itself producing only yams and corn. Water is very scarce in winter.

The inhabitants are civil and obliging. Their dialect sounded a little strange, but I had no difficulty in understanding all that was said. The women are generally taller and more upright than their sisters on the mainland, but their hair is worn hanging down their backs in a very untidy manner,—a peculiarity probably due to the practice of carrying burdens on the head. I cannot praise the beauty of the women I saw, not being so fortunate as Mr. Hodges in this respect—or perhaps not so easily fascinated.

The winter appears to be very mild, as alder trees had not lost their last year's leaves.

I had half-an-hour's ramble on the morning the of 22nd and gathered two plants in flower (*Solidago Virga-aurea*, and *Pyrethrum Decaisneanums*), also eight species of ferns (*Pteris cretica, P. semipinnata, Aspidium varians, A. falcatum, A. aculeatum, Asplenium incisum, Lygodium Japonicum*, and *Onychium Japonicum*). When weascended the mountain on the previous day several other ferns were noticed which I intended to gather on the way down, but was prevented by the rain.

I shot a thrush, new to me, resembling *Turdus Chrysolaus*, also a specimen of *Herbivox cantans* (Japanese nightingale).

On the shore I saw another thrush (*Petrocinclus Manila*). *Ruticilla aurorea* had taken up its quarters here in considerable numbers. More specimens were found in half-an-hour than I have ever seen before. I also saw what certainly seemed to be a specimen of *Calliope Kamtschatikensis*, and much regretted not having my gun at the time. *Parus minor* was busy among the fir trees, and the screecher (*Hypsipetes Amoorensis*) was as common here as it is on the mainland. Among the houses there were plenty of sparrows, which were remarkably tame. I noticed a hawk floating over a high part of the island, but could not approach near enough to identify it. Pheasants and pigeons abound.

The whistle of the steamer sounded about one o'clock, and we were obliged to leave this interesting island. We started at 2 p.m. expecting to arrive in time to catch the last train from Yokohama to Tôkiô, but little knew what was in store for us. It was blowing fresh outside the harbour, but we did not pay much attention to the weather, as our little steamer rode over the huge waves like a duck, only now and then shipping a little water. The wind, however, soon began to blow in earnest, increasing eventually to one of those furious gales which are common at this season. Although the sun was shining brightly overhead, the whole horizon was concealed by a dense yellow haze, which showed that a dust storm was raging on shore. Thrice the the engine room was flooded, and a resistless sea swept off the fore companion hatch. Had it been followed by another, the steamer would probably have been swamped. The pumps were kept going nearly the whole time. After great difficulty we managed to hoist the foretopsail and bore away for Ajiro, in Idzu, which, greatly to the relief of all on board, was reached just after sunset. The night was passed in a tolerably comfortable tea-house, which we were glad to have found, as we entertained small hope of being able to get away next morning, but when day broke we found that the gale had subsided, and our voyage might be resumed.

As we were getting under way, I noticed numbers of a species of *Amphioxus* swimming about in the harbour.

We left Ajiro at 9 o'clock, and reached Yokohama at 3 p.m. on the 23rd. Thus ended our not uneventful cruise to Oshima.

An Indian contemporary is responsible for the report that Sir Edmund Hornby has applied to be sent out to Peking in the capacity of Her Majesty's representative. It may be an open question whether the tenderness for Chinese foibles which characterised Sir Edmund as a Judge, would be an equally powerful element in his actions as a Minister. Probablynot.—*Shanghai Courier.*

There is a report that a well-known Chinese banker, in Shanghai, is attempting to negotiate a loan of five million taels with one of the foreign banks, the object in view being the defrayment of expenses incident to the campaign in Kansuh and the outlying provinces. Money is urgently required : and this bears out the rumour which reached us a short time ago from Peking, that extensive operations are being contemplated as soon as the frost breaks up.—*Shanghai Courier.*

ASIATIC SOCIETY OF JAPAN.

The usual monthly meeting of the Society was held on Wednesday, the 14th instant, at the Grand Hotel, Yokohama, with Sir Harry Parkes, the President, in the Chair.

The minutes of the previous meeting held in Tôkiô on the 24th January, which were published in the *Japan Mail* of the 3rd February, were, upon motion duly made and seconded, taken as read. Mr. House gave notice of his intention to bring before the next meeting the question of admitting public reporters. At the last meeting in Yokohama two gentlemen attended from two of the local papers, but were informed that the practice of the Society did not permit their presence as reporters, though with all possible courtesy they were invited to remain as visitors. He considered that the Society could only gain by having its meetings more widely reported, and he would take the steps provided in the by-laws to recommend at the first opportunity the admission of reporters

On the invitation of the President Mr. House stated that the paper he had sent in to the Society on "The Early Study of Dutch in Japan" was the production of a young Japanese student of about eighteen years of age, who had been a pupil of his own, and who was now studying in the United States. The author, Mr. K. Mitsukuri, was one of a family that had made itself a name in Japanese literary circles. The father was eminent in Dutch learning, an elder brother after matriculating with honours at the London University has taken a good place at Cambridge, and a cousin bearing the same name was one of the most distinguished of the French translators. In spite of the extreme youth of the author he felt that the paper was one he could confidently recommend to the notice of the Society.

Mr. Mitsukuri's paper on "The early study of Dutch in Japan" was then read by the Recording Secretary.

On its conclusion the President inquired whether the composition of the paper was entirely Mr. Mutsukuri's own work, and Mr. House assured the meeting that it was *verbatim et literatim* as he had received it from Mr. Mitsukuri. He had been requested to make some additions to it, notably to insert, in the list of scholars mentioned, the name of the author's father, but he had persistently refused to make any change whatever, in order that it might be published exactly as it left the hands of the youthful author.

The President remarked that Mr. House's explanation added materially to the interest of the paper, as apart from the valuable information it supplied, and the graphic picture which it drew of the Japan of olden days, the excellent English in which it was written proved the capacity of the Japanese student to obtain a complete mastery of a foreign language. This mastery, he believed, had been so seldom acquired, that some doubts were entertained as to the ability of the Japanese for linguistic studies. The paper showed, however, that if the Japanese did not usually advance in the acquisition of modern languages beyond a certain point, the circumstance was not attributable to any want of capacity, but to other causes.

Mr. House was of opinion that it might be in some degree attributed to the fact, that the studies of the Japanese pupils at the present time were directed more to special subjects, on which information was to be gained through the medium of a foreign language, than to the accurate acquirement of the language itself. They were thus satisfied with such a modicum of knowledge as enabled them to gather the sense of a book, or to understand the gist of a Professor's lecture, but that few, if any, cultivated the art of expressing themselves appropriately either on paper or by word of mouth.

Mr. J. C. Hall remarked that the original work, *Rangaku Koto-hajime*, of which the paper just read was a rapid epitome, was in two thin volumes written in a simple style, printed in exceedingly clear type, and for these reasons was the first book to which his teachers directed his attention on his commencing the study of Japanese. The dates mentioned exactly corresponded with those given in Mr. Satow's paper on "Pure Shintô", as the periods at which special attention was directed to foreign productions and foreign learning. He thought, however, that the author was in error in his remarks on the extraordinary ignorance displayed by the Japanese interpreters attached to the Dutch factory at Desima.

After some conversation on that subject the President observed that the writer's information must have been at fault on that point, as we had the evidence of the early Dutch writers themselves on this subject, and knew that all the valuable information relative to Japan with which they had supplied the world had been obtained through the medium of the Nagasaki interpreters, who must consequently have possessed a considerable knowledge of Dutch. Kæmpfer, who visited Japan as early as 1690, expressly mentions that he obtained all his information though Japanese interpretation. Probably, however, the Shôgun's Government endeavoured to keep to themselves all the information obtained from time to time through the Dutch, and were not willing to allow the benefit of such knowledge to be shared by other than their own officers.

In conclusion the President begged Mr. House to convey to Mr. Mitsukuri the thanks of the Society for the paper. Mr. House was also entitled to their thanks for having so kindly placed the paper at the disposal of the Society. He trusted that other Japanese students of the stamp of Mr. Mitsukuri would favour the Society with similar papers, which he needed not to say would be most welcome, as the Society cordially desired to invite Japanese co-operation whether in the form of membership or of literary contributions.

The meeting then separated.

CHARLES H. DALLAS,
Recording Secretary.

Correspondence.

NATIVE SIGNS.

To the Editor of the "Japan Weekly Mail."

Dear Sir,—You know my temperament. You have already been admitted to my confidence and are sufficiently aware that I am impelled by an enquiring turn of mind—which I inherit from a near ancestor, one "Peeping Tom"—to keep myself informed of everything which goeth on around me, whether I am directly concerned therein or not. I am, I take it, of the stuff of which investigators are made, and receive it as a compliment that my acquaintances are wont to say of me that I am a "prying, spying fellow, who minds everybody's business but his own." I rejoice in being so summed up, and it gives me unbounded satisfaction to make it hereby known that I have so well ordered my affairs, as to be able to devote the largest half of my time to busying myself about matters, which persons with more narrow minded views than mine might be found to say did not concern me.

I have, upon a former occasion, whispered into your friendly ear, Sir, if I mistake not, the dislike which I entertain towards a mystery which opens not its portals to me when I knock, and the corresponding delight which possesses me when I succeed in bursting the bars and bolts and let the daylight in amongst the wheels and springs. I am bound to say that I rarely encounter a lock so well constructed, but what I can contrive to pick it, and inspect the secret which lurks behind it, but when I do, I feel the disappointment sorely. I am really to be pitied on such occasions. To think that any body should be better informed anent a mystery than myself, is gall and wormwood to one of my mental constitution. I cannot sleep, my appetite fails me, and my quick and restless eye becomes dull and inefficient. It is then that I feel my burden lightened by an appeal to your sagacity. I have already communicated to you my suspicions that there might be some deep and dangerous meaning in such an obviously significant sign as

ENROL HAIRED OIL,

and, would you believe it, the moment the affair had received publicity in your journal, *the inscription was withdrawn!* Yes, Sir! *withdrawn*,—nobody knows whither! And, mark you, simultaneously with that withdrawal, the troubles in the south commenced! Let it now never be said (in view of the manifest connection between

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

these events), that it is not of the utmost importance to solve such problems. Had we but had the key thereto in this case, who dare tell what might not have happened. But "forewarned is forearmed," and I venture to solicit your very particular attention to the following most mysterious cryptogram:

PANKOKVMEICHIOVRISAPAKI

This is obviously Russian, and in the present complicated condition of affairs in the East it might be of the last importance that its meaning should be divined. What if it were a pass word? Or contained a secret understanding between Dai Nippon and all the Russias?

It is true that an ingenious friend of mine, whose mind refuses to see a mystery in anything, pretends to have discovered in it a simple beer advertisement, and avers that it should be read in this wise:—

Bankoku meishu urisabaki

"Good liquors from everywhere, sold on the premises"—to which it must be admitted an array of bottles inside the premises gives an air of verisimilitude. This is all very fine, to be sure, but you and I, Sir, know better than that. Besides what if he were in the plot?

ANTEMETIC
OF
NAUSEAMARINA

is another puzzle. Can it be that this is a specimen of that universal brotherhood of languages dimly foreseen by Mr. Mori, and hoped for in the millenium? A logistic protoplasm, so to speak, as yet formless and void. And yet not altogether so formless and void, methinks, by reason of a super-stoutness in that second joint,—hinting of bone—sturdy Anglo-Saxon emetic, but withal pleasant sounding and Italian as to its extremities, vibrating tunefully upon the ear.

OLD CURIOUS

looks placidly down upon the wayfarer by the Odori. Which of us has not heard—perhaps to our stomach's cost—of "*Curious old*," bolstering up somewhat ostentatiously the pretensions of Homatoxylum decoction to a brotherhood with "Port"? That is not altogether unintelligible, I admit, but this is of quite a different kidney. Here we have an *adjectivum in loco nominis*, or noun. There's a wierdness about "*Old Curious*" which savoureth of sulphur—a kind of cousinship to "Old Hornie," as it were, or "Old Nick." The d——l has a hand in it, I'm persuaded.

HORSESHOEMAKER
IMSTRACTED
BY
FRENCHHORSELEECH.

is bewildering chiefly from the impetuosity with which it is blurted out upon you. There is an obstreperous force about it, which all but knocks you off your legs. It is a stammer in type,—a sentence delivered in indecent haste; or liker, perhaps, to a lesson imperfectly learned by rote, and in danger of being forgotten altogether unless discharged at once and in the lump.

And, prithee, good master Farrier, amplify thy sign a little; let it have more longitude. Deploy your capitals in open order, and, harkye, mend your manners somewhat whilst you are about it. We like not that "leech."

TAILOR NATIVE GOUNTRY

is laconic enough for an epigram. My word for it, Sir, there's more in it than is apparent on the surface. But whether the shell of it, or

COOK CINDOR

will ever be cracked and the kernel found, is more than can be confidently predicted by

Your obedient servant,

PAUL PRY.

The natives appear, from all accounts, to be hard pressed just now. They are soliciting foreigners to ship silk for them on joint account, and if not, on consignment, in order to get rid of the burden of their stocks. The Chinese are also hawking their sterling bills about the market for advances, but they find it difficult to get the requisite accommodation from the foreign banks.—*Shanghai Courier.*

Law & Police.

IN H. B. M.'s PROVINCIAL COURT.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Monday, February 12th, 1877.

HONGKONG AND SHANGHAI BANKING CORPORATION *v.* PETER GERHARD HANSEN.

Accused was charged with forging, uttering (and aiding and abetting in forging and uttering) with intent to defraud, a bank-note of the Hongkong and Shanghai Banking Corporation for $500, and with conspiring, with other persons, to forge and utter such bank note and thereby to defraud.

Mr Dickins appeared as solicitor for the prosecutors, who were also represented by Mr A. H. C. Haselwood, accountant.

Prisoner said he had obtained the services of Mr Ness, as his Counsel, who would not appear at this hearing, however.

(Continued from 9th instant.)

Mr Dickins said that owing to circumstances Mr Haselwood could not appear. Mr Walter, the manager of the Bank, was present and would give evidence much to the same effect as Mr Haselwood.

His Honour agreed to strike out the evidence of Mr Haselwood, as taken down in Friday's hearing.

John Walter, Acting Manager H. K. & S. Banking Corporation, sworn:—I remember the 6th of February. I remember receiving a message from our Compradore about seven o'clock in the evening. I went to the Bank and there I found a Chinaman who conducted me to his exchange shop, where I found the man Williams, who was stated to have tendered a note. I told Williams the note was a forgery. He did not deny having presented it. That is the note (shown) I told him he must go with me to the Police Station. I should judge the note had been manufactured by means of photography. Nothing further took place in the exchange shop. I went to the station with the men from the exchange shop, some Japanese policemen and Mr Haselwood. I there made a charge against Williams. On the way to the station Williams said he had better see the American Consul at once to prevent the man who gave him the note from leaving Yokohama. I then went to seee General Van Buren and reported him. Williams at first refused to give the name of the man who gave him the note. Afterwards, in my presence he said a man named Bennett had given it him. (Mr Dickins here remarked that this evidence was educed merely to show that there had been a forgery.) I went to Mr Bavier, the Danish Consul. Bennett was found at No. 93. The premises were searched by Elmer, the American deputy—marshall, and Mr Loxton, constable. Nothing of importance was found in my presence. After Bennett was arrested, I left No. 93, before the search was finished, and returned home. Loxton took charge of Bennett. No further search of No. 93 has been made in my presence. No other search has been made in my presence. I have seen two ficticious notes besides the one now in Court. Mr Van Oordt, the Swedish Consul showed it me. The notes all bear the same numbers It is not the custom of our Bank to issue notes bearing the same number. To the best of my belief, these now shown to me are the notes Mr Van Oordt showed me. The paper of which this note is made is far thicker than that of our genuine notes. That is a true note (shown). It bears genuine signatures.

Prisoner had no questions to ask witness.

Mr Dickins said he would only ask Mr Walter now to point out William and Bennett if they were present in Court. Mr Walter did so.

His Honour then read his notes of the above evidence. Mr Walter begged leave to correct a slight irregularity. Mr Cook of the Bank sent him the two notes spoken of, from Mr Van Oordt. Mr Van Oordt did not show them to him, as he said. Mr Van Oordt told him subsequently, however, that he had sent them.

Obase Izaburo, cautioned:—I live in Yokohama. I go to Tôkiô, daily. I am a *banto* at No. 62. I remember the 6th of this month. Sekiya a money changer, came to me with a note. It was for $500, of the H. K. and S'hai Bank. It was brought to me because it was suspicious; and the money changer did not know whether he would change it or not. I was not sure about it and gave it back to him. Okamoto and Heikichi were together. The note presented was like these (shown.) I did not see any foreigner in connection with the note. I was in Okamoto's house, and Sekiya brought the note to me there.

Sekiya Heikichi, cautioned:—I am a money-changer in Tôkiô. I remember a foreigner coming to my shop on the evening the 6th instant. He came accompanied by a watch-maker's man. The foreigner had bought a watch and presented a $500 note in payment. I did not see the watch. The note was brought to be changed. The messenger was a young man of eight or nine and twenty. The foreigner only asked to have the note changed. He pulled it out of his pocket. Not being able to make myself sure of the note I took it to Okamoto s. He was not certain about it either. Okamoto is also a money-changer. I then only brought it back to my house and gave it to the foreigner again. I could not change it. I met last witness at Okamoto's house. It was about five o'clock. I did not go to Okamoto's house. My master did (The interpreter here remarked that witness had not used any pronou... It would be better to say "The note was taken to Okamoto s house") I saw the note given back to the foreigner. My master, Zempachi returned it. Zempachi said he could not be sure about the note and could not change it. The foreigner said nothing but put the note in his breast and went away. The note was very like both of these (shown). I saw the foreigner who

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

presented the note now in Court. (Witness pointed to George Hansen.) Zempachi himself took the note to Okamoto's house.

The Court here adjourned till 2 p.m.

Court reassembled at 2 P M.

General Van Buren, who was present during part of the afternoon, was accommodated with a seat on the Bench beside his Honour.

Yang Pow Ching, money changer, was now asked to give his evidence. Ah Fai was requested to interpret but was unable to do so because his dialect was that of Canton, and witness came from Shanghai. Witness asked leave to speak in Japanese, and the Court interpreter was called, but failed to understand witness' language.

Mew Ah Fai, cautioned:—I am compradore at the H. K. and S. Bank I remember the 6th instant. I sent a message to Mr Walter on the evening of that day, asking him to come to the bank, He came, about seven o'clock. The exchange man Poro Ching brought a bank note to my house about half past five which I saw was false. I then sent for Mr Walter, and he went to the exchange shop. That is all I know about it. That is the note given me by the exchange shopman, (shown) I showed it to Mr Walter. It is not a true one.

Felix Beato, sworn.—I live at No 57. I have much experience in photography and for many years have carried on a photographic business. (Notes shown) They are photographed and painted afterwards. They have been produced in the usual way by copying from a negative.

Antonine Bennett, sworn,—I am a seaman. I was on board the *Tennessee* last. I left the *Tennessee* in July or August last year. I was not in the *Nevada* after that. I had about $50 in my pocket when I left the *Tennessee*. I have been dealing in skins and doing some account work, collecting postage stamps and working in photography. When I first began photography I worked for Wong Cheong, doing mostly outside business He paid me. I did not make more than enough to live on during all those months. I have never been the owner of $500 during that time. I never carried on photography on my own account. I had learned from my father how to photograph. I know defendant. I have know him from November last year. I met him at Peter Clausen's. Defendant has asked me to do several things for him. He promised to help me to get a photographic business. I can't say why. He was to help me with money. He gave me some and I bought instruments, cameras, pencils and paper in Tôkiô. I do not know the name of the street. I think George Hansen with with me. Prisoner did not go, but paid the money. I brought the apparatus to his residence in Yokohama, at the corner of Homura Road, No. 107. I have taken the negative of a $500 note with this apparatus. I got the note from Mr Hansen, defendant. The first was taken about the last of December. I have taken about a dozen negatives, or more. The first one was no good for the purpose of copying from it. Mr. Hansen, defendant, helped me to take these negatives. The last were as good as I could take them. They were used for the purpose of making copies. These are copies from those negatives (notes shown). I printed the notes from the negatives. Defendant assisted me. I made perhaps twenty, from the same bank note. It is common writing paper. I bought it from a Japanese. The front is one piece and the back is another. I pasted them together, and was assisted by defendant. Eight of them were coloured. I coloured them. I used water colours. I bought them in Tôkiô. I had no assistance in colouring them. I submitted the printed notes to defendant to see if they were right. He said they were too dark, too black. All but eight of these prints were burned. The last I know of them was that I gave them to George Hansen. I speak of the eight that were not burned. George Hansen was to change them. He asked me for them I did not see defendant after I gave them to George Hansen. I gave him them perhaps fourteen days after they were printed. During that time they lay in a drawer in a room of a house belonging to defendant. These operations were carried on in defendant's house. The doors were usually fastened when we worked. There was no reason for this precaution, for no one lived in the house. Defendant gave me the note "to see if I *were* a photographer." I did not try to photograph anything besides these bank notes. I did not know of any other reason at the time. I knew afterwards. The other reason was to get them exchanged. When they were ready I got to know this. They told me. Defendant asked me to exchange some of the notes. I did not exchange any, because I did not want to run into danger. I knew that they were not good, and I did not want to have anything to do with it. I knew that it was intended to use these notes when they were finished. I did try to prevent these notes being used. I made an objection to their being put into circulation to defendant when he told me to get them exchanged. He said it did not matter. If I did not try to get them exchanged he would give me up to the bank. I told him I *would* try to get them exchanged, though as a matter of fact I did not try to get them exchanged. The good note was exchanged by George Hansen after the negative was taken. Defendant only assisted me to make these notes. He helped me in whatever way he could. When I took the negatives, he was present. He was also present when I prepared the negatives before printing from them. I was paid some money now and then. I can't say it was just for taking these notes. Defendant lived at No. 107, alone. I put two of the notes between the top of the table and the frame in the house at No. 93. George Hansen occupied the room in which this table was. He never told me what he did with the notes I gave him, nor did defendant ever mention where they went to. Defendant never offered me any special reward for making these notes. I suppose I was to exchange the notes defendant gave me for his benefit. I do not know where the photographic instruments are now. The last time I saw them was when George Hansen went to Tôkiô, on Monday last, to change the five notes. He told me himself he was going for that purpose. He took the photographic lens with him. He was to see it. The rest of the instrument remained in No. 93. It had been taken some days previous from No. 107. He brought the lens back from Tôkiô. He did not give it to me. I do not know to whom he did give it. I know a man called Williams. I know he intended to change one. He got that note from me (shown). Williams asked me for it. He had known of my making the photographic copies. I told him of it. Defendant knew I told Williams. He expressed many objections to Williams' knowing. Williams knew, through me, that defendant took part in the affair. I knew Williams at the time he was in the *Tennessee* with me. He was discharged the same day as I was. I gave five notes to George Hansen, not eight. I don't know if any of the five were torn up. I do not know that any of these notes were torn up in the closet attached to my room.

Antoine Williams, sworn:—I was formerly a seaman on board the U. S. S. *Tennessee*. I was discharged when last witness was. I boarded for some time with Peter Clausen. Then I worked on board the *Nevada* for four months. I remember taking a bank-note for $500 to the exchange shop on the 6th instant. Antoine Bennett gave it me. I was to change it and bring the money to him. He owed me some money from the time I was living in the boarding house, and I went up to ask him for some that day. I did not know it was a forged note. Bennett told me he was making some money, but did not say in what way. Bennett told me Hansen, the defendant, had made some money; but I did not understand him to mean he was to imitate coin. When I make money I make it by working. I met defendant at Peter Clansen's some time before Christmas. I know George Hansen. He was a shipmate of mine. He was with the *Tennessee* for some time after I left it. Bennett told me on Monday morning that George Hansen was going to Tôkiô. I did not know till next morning after my arrest, that he had gone for the purpose of changing notes. I have talked with defendant several times, but never on such a subject as this. It was quite daylight when Bennett gave me the note. I cannot tell if that is the note (shown). It was like that. Bennett said he had no time to go, and I went because he promised to give me some of the money he owed me. I do not know of defendant's connection with these notes; nothing whatever. I know where the exchange shop is, but not the number.

George Hansen, sworn:—I was seaman on board the *Tennessee*. I am a Swede. I have been doing nothing for several months. I knew Bennett and Williams. I lived at first at No. 82 and afterwards at No. 193. Bennett and I lived together; he had one room and I had another. I knew he was a photographer. He was taking likenesses in Yokohama with a Chinaman in Homura Road. I know defendant. I knew where he lived the night Bennet was arrested; I did not know before. I remember a conversation at Peter Clausen's with Williams, who was a little drunk and talked about making a couple of thousand dollars in a day or two. That was since Christmas, about five or six days after he left the *Neveda*. Mr Clausen was present, so was defendant; but I do not know if he heard of this. William did not say how he was going to make this money. I went up with Bennett to Yedo, but did not know till we returned to Yokohama that he had bought this stuff. I came down with him. He did not keep the parcel he brought down from Yedo in our house. He did not tell me what it was. I was friendly at the time. He did not tell me about setting up a photographic shop. Bennett never gave me any notes to change. Defendant gave me one, which I changed. It was a $500 note I took to Yedo. I could not get it changed. Defendant told me the Japanese paper up there was better than down here. That was in Yedo, a little after 12 o'clock. I was searching for an exchange shop and could not find one. At last I went into a watchmaker's shop and the people there showed me an exchange shop. I did not ask to buy a watch. I asked how much they wanted for a gold watch. They said $90; but I never intended to buy it. The exchange people said they had not enough money to change the note. They looked at it, and then gave it me back. I then returned to Yokohama, and gave it back to Hansen. Bennett sent me out to Clausen's on the night that Williams was arrested, to tell him to come and speak to him. I could not find Williams and went back to No. 93. Bennett was asleep. That was about half-past seven. I saw Bennett that afternoon tearing up papers, some painted and some white. They resembled writing paper in shape and size. He went to the closet and took these papers with him. I did not tell Williams I was taking five notes up to Yedo. I had changed a note for defendant the Saturday before. It was also for $500. That was in Japanese town, Yokohama. I could show you the house. It is in the second street down from the Machigaisho. Defendant only asked me to change it. He gave me a dollar for my trouble. I have said on a previous occasion that Bennett never gave me a note to change for him in Tôkiô. I still stick to that.

Adjourned till the following day at 10 a.m.

Tuesday, 13th February.

Mr Dickins said that he would be obliged to apply for a remand after this hearing. Owing to circumstances several of his witnesses were unable to appear.

Sekimoto Tatsu, a Japanese woman, cautioned:—I lived at No 107, with the defendant. I know a man named Bennett. He came often to our house. When he came he went to a different room from mine. My master usually went with him. I never entered it, nor even looked into it, because my master was so strict about excluding me from it. It seemed to be constantly shut whilst they were in. I never thought of peeping into it even, defendant was so strict about it. I had not the least idea of what they did in there. The door was constantly shut, and unless seeing them

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

going in and out I never noticed anything peculiar about it. We went to live there about the 20th November last year.

Sergeant Walter Loxton, sworn, deposed:—I arrested, on the evening of the 6th instant, Antoine Bennett, but had previously taken charge of Williams. About 8 o'clock that evening Mr Walter and Mr Haselwood of the H. K. & S. Bank came, accompanied by Williams, to the station. Mr Walter showed me a note of the H. K & S. Bank for $500, telling me at the time it was a counterfeit, in William's presence. Williams had tried to pass it in a Chinese exchange shop. I believe No. 126. I asked Williams where he got it. He said he would not tell any one but General Van Buren, his Consul. In consequence of that Mr Walter asked me to take charge of Williams, while he went to see General Van Buren. Shortly afterwards Elmer came to the station, asked for Williams and took him to the American Consulate. I accompanied them. Williams was questioned by the Consul, who asked him where he got the note. Williams wanted to stipulate with the General that if he told all about it he would be set free. After that interview I went to Mr Bavier's to procure a warrant for the arrest of Bennett, and then went to Bennett's house, No. 93. I showed Bennett the warrant, and told him I was there to arrest him. I read the charge. He got up and dressed This was about a quarter past ten. After he was dressed we commenced to search the premises, but found nothing bearing on the charge. I took him to the police station. I did not arrest prisoner, but have searched his premises in company with Constable Toms and Mr Elmer. We found a leather box and a portmanteau and then 403 *yen* in Japanese money. Also an old cash-box containing paints, thick painted glass, and a small piece of paper, similar to that of which these notes are made. It appeared to have been soaked in oil and had some green paint on it. We also found his clothes and letters in the portmanteau. In the small room were some old clothes, which looked do if they had been much worn. Also, three bottles, one containing a colourless liquid, like water. In the grate was a lot of burnt paper. No photographic instruments were found: (Bottle shown, containing the liquid.) There was a strong smell, reminding one of a photographic studio. The clothes were worn and stained. A light coloured waistcoat was found, with no particular stains, but very dirty. The clothes had no particular smell. (Leather portmanteau produced and opened). That is the waistcoat I refer to. All the other articles, as I have mentioned them, I recognise. That is now all I know about it.

Mr. Dickins now said this was all the evidence he had to offer at present. The other witnesses he had proposed to call were unable to attend, and would be engaged during most part of the day. Mr Dickins therefore asked to have a remand till past Chinese New Year. He might be able to continue offer of the evidence on Saturday, but would prefer waiting till the beginning of the week.

His Honour agreed to adjourn till Tuesday next, the 20th instant. Prisoner remarked, when asked if he had any objection to the proposal, that he wished, of course, to get done with it at once; but if it could not be, of course it could not be, and he agreed.

Neil Morrison was charged with being drunk. He was a sailor on board the *Benarty*.

Sergeant Walter Loxton, sworn, stated:—Prisoner was brought to the station this morning by the Japanese police very much the worse for liquor. He had been lying about the Yoshiwara drunk and incapable.

Prisoner admitted having been drunk, and was sorry for giving so much trouble, though he did not remember having done any harm.

Ordered to pay $1 and costs, besides 25 cents for damage done to property.

IN H. B. M.'S COURT OF KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, February 14th, 1877.

NOMI DAISUKI *v.* J. W. SUTHERLAND.

Rehearing with a jury. Claim of *yen* 262.67, 8 *rin*, 2 *mon*. balance of account for goods sold. This case was heard on the 6th December, 1875, and was referred for account to Mr J. C. Hall. The referee filed his report on the 20th December, 1875. The plaintiff applied for a rehearing, which was granted.

The following gentlemen were sworn as a Jury:—William Curtis, Andrew Jaffray (foreman), Charles Wirgman, John Rickett and Felix Beato.

Plaintiff being unable definitely to state his claim, the Court adjourned till the following (yesterday) morning.

Thursday, February 15th.

Reassembled, 15th instant, at 10 a.m.

Plaintiff had informed the Court that 548 bags of barley had been delivered to defendant up till July 31st, 1874. Defendant said he could not tell exactly the amount up to that date, but knew the total amount for the whole year. It would take a long time to find that fact out from the Day Books. But the total number of bags as mentioned by both parties was the same. After some discussion defendant admitted the point. The weight next came into consideration. Defendant admitted having received 991.50 piculs in all; but His Honour said this was insufficient, and defendant must either admit receipt of the quantities at the times specified or deny having received any. Defendant denied having bought at gross weight. The picul was 133⅓ English pounds, and the price $1.18 per picul, net weight. Defendant admitted that the market price then was $1.25 per picul, net. Defendant admitted $29.69 for rice, beans and hay. Defendant denied having contracted to pay the coolie and cart hire. Defendant admitted having paid plaintiff 1,804 *yen*. Defendant admitted eight pounds per bag tare; plaintiff only seven. From December, 1874, plaintiff received receipts for the quantities delivered; but prior to that date none were asked, as the transactions were carried out on a perfectly friendly footing.

Adjourned till 2 p.m.

Resumed at 2 p.m.

Plaintiff was asked to enumerate the items which served to make up the 461 piculs. He did so; but defendant's account not tallying with plaintiff's, His Honour ordered the issue to be left compulsorily in Mr Hall's hand. The evidence in support of the claim was now heard.

Fugi, wife of plaintiff, cautioned, stated:—Defendant has had dealings with us since the 3rd year of Meiji, 1870. I keep a tea-house at Kanagawa. Sutherland and Iyo who were on very friendly terms, came to me and said they were greatly distressed because they were unable to obtain fodder as usual from the stores at Kanagawa, and asked me to buy for them. That was in January, 1874. I refused; but they again came, saying they were really pressed for want of fodder, so I consented to help them, though Daisuki was sick at the time. I made inquiries and reported to them that I could get barley for them at one *yen* one *bu* per bag of five *to*. Iyo said it would do. Five *to* equal fifteen *momme* gross. With regard to bran, I got it for them at $1.50 per picul, net. The accounts were settled twice on that basis during February and March. After that, payments were made monthly on account. On one occasion when I went for payment to Sutherland's, Smith told me two month's payments had been made on account already. After that I resolved I would not supply fodder to Sutherland's horses, though they were all to die. During the existence of the contract I supplied the grain according to the market value. When, in April, 1875, Sutherland made these objections and claimed tare, I felt very grieved. At the time of the original contract there was no mention of tare, simply five *bus* per bag of 15 *momme*. From first to last no change was made with regard to weight or deduction of tare. I was annoyed when I heard they were making up the accounts without consulting me on the question of tare. Bran was sold at six *bus* for two bags weighing 16 *momme*. When it became cheap I sold it cheaper; but I do not remember when that was.

To defendant:—When I went on the 11th April to your place for the balance of account, there was still some money due to me. I forget how much. It was over 200 *rios*. I did not claim 65 *rios* then. I was in the habit of going there sometimes to compare my book with yours. There was no written contract, because I looked on you, Mr Sutherland, in the light of a brother. I am not aware that it is the custom to allow tare.

Defendant here stated that it was in fact the custom at present to allow a tare of eight pounds per bag for grain. Several people in the trade could witness to the fact.

To the Jury:—I sometimes sent the grain by boat when Sutherland could not come for it. I claim $260.

Funabashi Zenzaburo:—I am out of employment at present. I live in Aichi *ken*. At the time of the contract I was in the employ of Nomi Daisuke, from the beginning of 1874. At that time an application was made by Sutherland, saying that he had from fifty to sixty horses and nothing for them to eat; would Nomi Daisuke help him? The mistress and I declined, saying it was not our business. A second time Sutherland came accompanied by Iyo, saying that he trusted to their assistance as he could get help from no other quarter. At their earnest solicitations, and sympathising with Sutherland in his distress, we agreed to enquire all round, and tell him if we could help him. The cheapest rate for best quality barley was $1.25 per bag of five *masu*. In the presence of Nomi Daisuke and myself, Iyo interpreted for Sutherland, who signified his consent and the business was commenced accordingly. At the same time the arrangement was made about the bran, which was to be sold at $1.50 per picul net. The accounts for the second and third months were squared twice on the contract basis just made. In April, 1874, some of Sutherland's people made a demand for deduction of tare. Sutherland's clerk was changed then, and the new one made the demand that tare should be deducted. Sutherland then owed $88. In the conversation which took place about that time, on a Sunday, I agreed only to continue the contract on the original basis, and defendant acquiesced in the proposal.

Court adjourned till Thursday, the 22nd instant.

IN H. B. M.'s COURT AT YEDO.

Before H. S. WILKINSON, Esq., Vice-Consul.

Friday, February 16th, 1877.

In matter of a petition and counter claim:—KUSUMOTO MASATAKA, *Gon-chiji* of Tôkiô *Fu*, plaintiff, *vs.* ARTHUR BLOCKLEY and BRIDGET BLOCKLEY, his wife, defendants; and ARTHUR BLOCKLEY and BRIDGET BLOCKLEY, his wife, plaintiffs *vs.* KUSUMOTO MASATAKA, *Gon-chiji* of Tôkiô *Fu*, defendant.

Plaintiff in his petition claimed $618 ground rent due on the Yedo Hotel, Tsukiji according to lease.

Defendants demanded that the petition be dismissed, and brought in a counter claim for $5,000 damages, in consequence of the Japanese Government having violated the lease by allowing foreigners to reside outside Tsukiji, and thereby injured defendants' trade as hotelkeepers there.

(Continued from 29th ultimo.)

Mr Lowder appeared for plaintiff; Mr Kirkwood for defendants.

Mr Kirkwood, in answer to Mr Lowder's argument said:—With

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

respect to the alleged misjoinder of parties, Mr Lowder argued under Sec. 24 of the Judicature Act that the Court could not entertain this claim, but I maintain that this does not refer to the jurisdiction of the Court. It simply states that the Court can only entertain the counter claim and only refers to the administration of law and equity. In our own Courts the rules with regard to foreigners suing British subjects are clearly laid down. With respect to the objection that a foreign Government cannot be sued as a defendant in an action in which it is interested, I argue, that because no individual name was mentioned in the contract, the Government should be liable to sue and be sued as an individual. I admit that on the counter claim as it stands there is no privity of contract between the plaintiff and defendants. The contract as stated was made between the Blockleys and the Japanese Government. I say, further, that on the whole of the pleadings the right of the original plaintiff to make any claim at all is denied, it being averred that the contract was not made with him but with other parties, and that the counter claim only sets up that we still deny plaintiff's right to sell, but if plaintiff has a right to sue we have a counter claim against him.

The Court here suggested that "Kusumoto Masataka on behalf of the Japanese Government" should be entered on all the pleadings, for the Japanese would of course object were the Mikado personally to be named in any document of this nature.

Mr Kirkwood continued:—With regard to the objection that a foreign sovereign cannot be forced to answer a counter claim, I am inclined to differ, and all the cases referred to by Mr Lowder hardly, in my opinion, touched upon the point in question, but were rather in my favour. The oldest case on record is perhaps that of the King of Spain *vs.* Hullest, in which the former was named personally as plaintiff. The chief point is that if the demurrer hold good, it alters the whole of the proceedings in the case.

After some discussion Mr Kirkwood agreed to amend the petition slightly. Mr Lowder informed the Court that he was willing to accept the above suggestion, on the understanding that there should be no demurrer on the part of his learned friend. Mr Kirkwood replied that if Mr Lowder persevered in his demurrers he should certainly claim the right to name the Mikado as a party in the pleadings.

It was agreed between the learned Counsel on both sides that the defendants in the original claim are assignees of the original lessee. The contract cannot be an act of state if embodied in a contract with defendants.

Adjourned till the afternoon.

When the Court resumed its sitting at 2 p.m., Mr Lowder said that according to the title deed the *Chiji* of the Tōkiō *Fu* had the right to sue in his own name as the proper local authority, and that a counter claim could be brought against him in that capacity. A list of the foreigners who lived inside and outside of Tsukiji from 1867 to 1876 could be shown. The authorities knew that large numbers of foreigners lived outside the limits, but were unacquainted with what they did; it would be for Mr Kirkwood to prove by evidence that the Government *did* know. Mr Lowder denied the propriety of mentioning the Mikado as plaintiff.

Mr Kirkwood said he wished to act according to form and would leave it to the decision of the Court whether this should be or not.

It was here agreed to postpone the demurrer till Friday next, the 23rd instant, Counsel in the meanwhile to settle issues.

DR. SCHLIEMANN'S DISCOVERIES.

(The Times.)

Antiquity, as if to chide our busy present and scheming future, has suddenly made a splendid revelation. A faithful devotee has struck the ground with his divining rod, and brought to light a treasury hitherto supposed to be fabulous, or rifled ages ago. All at once Mycenæ is found to be a reality. People had forgotten that some of the powers which they believe to be eminently destructive are, in truth, the most conservative. War, anarchy, neglect, barbarism, oblivion most of all, often bury to preserve. Mycenæ always fared ill. Even before the Trojan war it had suffered by revolution and sedition. From the unsung ages before Agamemnon, it emerged into a flash of glory, instantly quenched in crimes and catastrophes. Even then its greatness was rather traditional than real, for the twin city of Argos was increasing, while Mycenæ, instead of living hosts, had its Cyclopean walls, its colossal edifices, and the neighbouring Temple of Juno, which it still held in partnership with its more prosperous neighbour. The terrible legend that the Athenian playgoers were never tired of hearing recited in every stage of the history and every form of the dramatic art seemed to throw a dark spell over the locality. A long decay was only consummated when the Argives, jealous, it is said—though why jealous it is hard to say—laid the city waste, nearly five centuries before the Christian æra. Strabo, in the time of Augustus, spoke of the site itself as doubtful. But gold had been buried there, and of that it may be truly said that its spirit never ceases to hover over the sepulchre. That tradition never dies. The whole Poloponnesus has shared the decay of its once most famous city, and travellers, merchants, philosophers, artists, and the whole tribe of wanderers have only sighted or touched the peninsula to fly off to Athens, or across the sea to Ionian cities or Trojan plains. Chandler, a most careful and conscientious traveller, as well as thoroughly informed, with Pausanias and all the authorities at his side, and his eyes open to every promising object, closes his chapter on Mycenæ with the confession that he missed the site he had been looking for:—"On reviewing our journey, I found with "regret that Mycenæ was at no great distance on our right "when we entered between the mountains." Before and even since his time, Greeks, barbarians, Turks, and Albanians have found the very spot indeed, and thrown everything about into the wildest confusion, only to desist when a few inches from the great prize of all. Our ancestors might have suspected that some misleading genie, like the instinct ascribed to certain birds, had all these ages been baffling the curiosity of prying visitors, by distracting their attention and putting them on one false scent or another, till in fulness of time the great King of Men who found a bard in Homer should have his royal state once more shown to the world by Dr. Schliemann?

History tells of many such obsequies as are here brought to light, but they are hardly credited. Survivors are heartless, rapacious. Courts are not often the schools of sentiment. It is easier, too, to say that the accumulated wealth of a reign has been buried with its owner than to do it. Would Clytemnestra, faithless herself, bury her faithless lord in this gorgeous fashion? Would she make Cassandra the sharer of such a pomp? That is the tradition, and here are the facts, which are at least in keeping. By the removal of some slabs there is found, a few inches below the surface, or below what was the surface, a whole museum of precious antiquities, in every sense precious. The mere value of the metal to be melted down is several thousand pounds but that is nothing to the historical and artistic value. As the discoverer truly says, the collection will add even to the unequalled and inexhaustible attractions of the Hellenic capital. Here are found lying the gigantic heroes we read of and hardly believed in, with not only their entire armour of gold and bronze, but with all their ornaments and furniture, whether of festivity or of State; their offerings to their tutelary gods, and everything they had fondly cherished in their lifetime. In countless profusion lie shields, breastplates, shield and sword belts, plates and leaves of gold for the more flexible parts of the body armour, gold pins, buttons, sword hilts, lances and swords in gold and bronze, gold statuettes of quaint and fanciful device, unique specimens of unknown epochs of art, double cups, goblets, immense vases in gold and bronze, and, most signigticant of all—perhaps to propitiate the divine guardian of the tomb—the silver head and gold horns of the animal sacred to the ox-eyed goddess. Precious as the metal was, and still is, the workmanship surpasses it. Bronze it is needles say, had a greater value in those days than it has now, when it comes low in the third rank after gold and silver. That is not surprising when it is considered that, so far as can be ascertained, every bit of ancient bronze—or brass, as it is improperly called in the authorized version—contained a proportion of British tin. From the famous transaction between Diomedes and Glaucus it appears that while a suit of gold armour could be bought for a hundred head of cattle, one of bronze would cost nine, thus raising the proportionate value of the inferior metal to one-eleventh. But among these ornaments of war and peace are other relics even more interesting. Have we indeed the whole jewel-box and toilet of the ill-fated prophetess who told everybody his doom and her own in vain, and who suffered the additional misery of foreknowing all the misery to come? Cassandra is here—a fairy-like form, with all her pretty trinkets, her earrings, necklaces, bracelets, hair-pins, lockets, and clasps. It was Clytemnestra that buried them with her, soon to follow her to the same tomb; for the daughter of Tyndarus and sister of Helen is here. Strangest of all, the hero himself, Agamemnon, remains, and is found to be just such a giant as a hundred Chiefs would choose for their leader—a head and shoulders taller than all. It has always been impossible to believe that any ordinary man could put on Achilles such an atrocious injury and such a gross affront as the poet records. The incident has at least some corroboration in the bulk of the man. The bones must have been iron to survive to this day. Dr. Schliemann is still at work, most liberally assisted, though almost overdone with control of that assistance. Every day brings to light the ornaments, not of Kings and Queens only, but of a whole Court and people, as if lavished on the open grave. The curious varieties in the form of the prevailing idol will probably help to elucidate the question which sorely puzzled the Father of History himself—viz., whence

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the Greeks derived their mythology. These discoveries only confirm his belief that it came from Egypt. The Greeks made Juno their own, but there can be little doubt she was an Egyptian long before the Trojan War.

But why was this discovery reserved for the latter end of the 19th century? It is made in the very nick of time. What is it that all Europe is looking for? It is the King of Men, the great head of the Hellenic race, the man whom a thousand galleys and a thousand men submitted to on a simple recognition of his personal qualities, and obeyed for ten long years. Here are his arms, his shield, and all his familiar accoutrements, as well as the sword and other weapons that had become in a manner part of his own natural frame. It was only a mile and a half from the very spot where these are found that Pythagoras walked one day into the Temple of Juno, and recognized for his own the shield he had carried in the Trojan War under the form of Euphorbus, who perished by the hand of Menelaus. Let the shield of Agamemnon be hung up amid a number of other shields of the antique form. Let the greatest men of this not degenerate age be invited to prove their true identity. The man who, as soon as he enters, can single out the shield of the King of Men, and say, "That is mine," must be the man to head the entire Greek race and the races mixed with it in their impending struggle with the remnant of the Asiatic Power. It must be a true Philhellene, a scholar, a statesman, a man of unflinching courage and irrepressible enterprise, full of resources, and ready to look in the face a rival or a foe. He must have sat at Homer's feet and learnt his lore as Pelides did the learned Centaur's. The man who can challenge for his own the Shield of Agamemnon, now waiting for the challenge, is the true Emperor of the East, and our easiest escape from our present difficulties.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E.M.

(The Engineering and Mining Journal.)

PRESENT CONDITION OF JAPANESE MINES.

COAL FIELDS OF SHIKOKU.

Awa Coal Field.—Coal is reported to occur in many places on this island; and there is probably a coal field of some size on the east coast. I have specimens of coal from this region which seem to be of fine quality. One specimen, at least, is of a fat, caking coal. Mr. Frecheville, of the Mining Office, spent the summer of 1875 in exploring this island, of whose mineral resources little is known. His report, however, has not yet been published.

COAL FIELDS OF KIUSHIU.

The most important coal fields of Japan, as being best developed and producing most coal, are, at present, those of the Island of Kiushiu. These yielded, in 1874, eighty per cent. of the total product of the empire. Last summer, with a party of students, I made a rapid trip through this island, under the auspices of the Imperial University, in the course of which we visited all but one of these coal fields.

It seems that there are five important fields on this island, which may be styled as follows, viz.: The Chikuzen Coal Field; the Karatsu Coal Field; the Nagasaki Coal Field; the Miike Coal Field, and the Amakusa Anthracite Fields.

The Nagasaki Coal Field.—The most important of these, although of small extent, lies in the harbor of Nagasaki. The available area of this field is not more than a couple of square miles, comprising a few small islands at the mouth of the harbor, and a small strip of the adjoining coast. A vastly greater area lies between these islands, beneath the sea; but it is, of course, doubtful whether any large portion of this can ever be profitably worked. Certain capitalists have the exclusive right to mine coal on three or four of the largest of these island. Their energies are at present concentrated on one island (Takashima), where they have a large and well-developed mine under English superintendence. In 1874 this mine produced over seventy-two thousand tons of coal, averaging two hundred and forty to two hundred and fifty tons per working day. In 1875 the production was increased between three and four hundred tons per day; and lately, the daily output has reached an average of six to seven hundred tons.

There are reported to be thirteen or more seams of coal on this island, three to sixteen feet in thickness. The upper beds have been in former years exhausted by the Japanese, and but three seams are now worked, the "five feet," and the "eight" and "ten-feet" seams. These last are separated by a parting of shale about one foot thick, and form really one bed, averaging sixteen feet in thickness. Other thick seams are reported; and there is said to be enough coal on the island to maintain a daily production of four or five hundred tons for seventeen years.

Borings have been made on the other island showing several seams of workable thickness; and the company are now making preparations for the sinking of one or more new shafts.

The coal of Takashima Island is of very fine quality, being a fat, caking blacksmith's coal with but five per cent. of ash, and one to two per cent. of water. It is the favorite fuel of the various lines of steamers which visit Japanese ports, and the supply by no means equals the demand. In addition to the superior quality of its coal, this Nagasaki field has another great advantage in being situated at the mouth of one of the best harbors in the country. If necessary, large vessels could be loaded with coal at the mouth of the mine. A small navy of junks, and several large hulks and lighters, bring the coal to Nagasaki; adding, however, but little to the cost.

Their situation, of course, gives these mines a great advantage in competition with those of other regions; and could they supply the demand, but very little coal would be mined elsewhere in Japan. Even now the miners of other less favored localities look forward anxiously to the time when, as they say, "the Takashima working shall be drowned out by the sea."

The coal of the Ishikari region alone approaches the Takashima coal in quality, being in some respects, perhaps, even better; but, as it lies in the interior of the Island of Yesso, the expense of bringing it to market eighty miles by rail, or by river a still greater distance, places it at a serious disadvantage in competition with the Takashima.

Karatsu Coal Field.—North of Nagasaki, on the west coast of Kiushiu, in Nagasaki ken, lies the large coal-producing area which I have styled the Karatsu coal field, the coal brought from this region being everywhere known as Karatsu coal, though but a small part of it comes from the Karatsu district proper. This field is divided in two places by large and narrow bays, from which many small harbors radiate on all sides. These harbors afford shelter to numerous junks, and facilitate the transportation of coal to market, encouraging the opening of mines at many different points.

In visiting this coal field, I was fortunate in that my road several times crossed the boundaries, so that I am enabled to map the extent, and to approximate very closely to the truth in my estimate of the area of the field. Mr. Godfrey estimates this area at two hundred and sixty square miles; dividing it into mining districts—which have, however, no natural boundaries—as follows:

Imabuku District	70	square miles.
Taku „	36	„ „
Karatsu „	40	„ „
Hirado „	120	„ „
Total estimated area	266	square miles.

From the rough map resulting from my reconnoisance, I am inclined to believe that this is much less than the true area of the field, which I estimated at somewhat over three hundred and sixty square miles; as follows:

Karatsu peninsula (including Taku District?)	140	square miles.
Hirado peninsula (including Imabuku District)	180	„ „
Southern peninsula (including Matsushima)	40	„ „
Total estimated area	350	square miles.

With regard to this southern peninsula, I am informed that sandstones, etc., similar to the coal-bearing rocks, are continuous along the west coast nearly to Nagasaki bay. If these are coal measures, the peninsula has an area of coal-bearing rocks several times larger than my estimate. No coal has yet, to my knowledge, been discovered on this peninsula; though large quantities are brought from Matsushima, a large island off the coast.

The coal beds of the Karatsu field are all very thin. In the lower measures there are perhaps ten seams, from one foot or less up to one and eight-tenths feet in thickness. In the upper measures there are, at least, two or three workable seams; the best reported at four feet. The thickness that I saw was but two and nine-tenths feet.

Notwithstanding the thinness of the coal beds, this field is vigorously worked, producing in 1874 over one hundred and seventy-six thousand tons of coal, or about forty-five per cent. of the total product of the Empire. Nearly all of this coal was obtained from beds

* A paper read before the American Institute of Mining Engineers, at the Philadelphia meeting, June, 1876.

Original from UNIVERSITY OF CALIFORNIA

between one and two feet in thickness; while in very favorable situations, seams only six-tenth of a foot thick have been worked with profit.

The coal of the Karatsu field is mainly a non-caking dry coal with a long flame, or a caking coal with a short flame. The quantity of ash is sometimes small, but usually ten per cent. or more and of water, not often more than three per cent. Karatsu coal is largely used by Japanese steamers and for manufacturing purposes, being carried by junks to all parts of country. Its principal consumption, however, is in salt boiling, being used for final evaporation of the brine from sea-water, previously concentrated by the sun and wind.

Miike Coal Field.—This coal field is situated about forty miles northeast of Nagasaki, for the most part in the ken of Fukuoka, near the boundary of Kumamoto ken, and on the coast of the Gulf of Shimabara. The coal rocks are exposed in a belt parallel to the coast, with a width of one or two miles, covering an area of nearly twenty-five square miles. They have a general dip of about five feet in a hundred, towards the sea; but in some places they are said to be locally folded and faulted. Near the coast they are overlaid by more recents clay rocks, but taking into account the gentle dip of the coal strata, it seems probable that they will be found beneath these clay rocks at a depth of not more than one thousand feet, over an additional area of twenty or thirty square miles, making the total available area of this field perhaps fifty square miles.

So far but two seams of coal have been worked; the upper bed six to eight feet thick, and the lower, separated from this by twenty feet of rock, four to five feet in thickness. A third bed is reported to occur below these; but it has not yet been mined.

This coal field is actively worked by the Government Mining Office, under Japanese superintendence, and produces annually sixty to seventy thousand tons of coal. The coal is a fat, caking, blacksmith's coal, resembling that of Takashima. It is used principally for salt-boiling, though a small preportion of the product is brought to Nagasaki and other ports, where it is gradually finding favor as a steam coal. It is also used, to a limited extent, for the manufacture of coke; the different foundries of Nagasaki, Kobe, and Yokohama creating a small demand for this fuel. It has also been used as a gas coal in Yokohama and Tokio, though to what extent I am unable to say.

The Miike coal is somewhat inferior in quality to that of Takashima, containing a larger percentage of ash. From my own assay, of a small hand specimen, this would seem to reach seventeen per cent, but it may be that my sample was unusually bad. The water, by the same assay, was only one-half of one per cent. The coal of the upper bed is said to be the best.

The Miike coal field labors under a serious disadvantage in that only vessels of very light draught can approach the shore, the water being very shallow, and mud-flats of a mile or more in width appearing at low tide. The coal must, therefore, be taken in these small vessels, eighty or ninety miles by water, to Nagasaki for transhipment, this being the nearest port.

Amakusa Anthracite Fields.—On the west coast of the island of Amakusa are two small coal fields, each but a few square-miles in area. The coal is an anthracite; sometimes even graphitic. The beds are but two to three feet thick, and two seams only are recognized, though there are probably more.

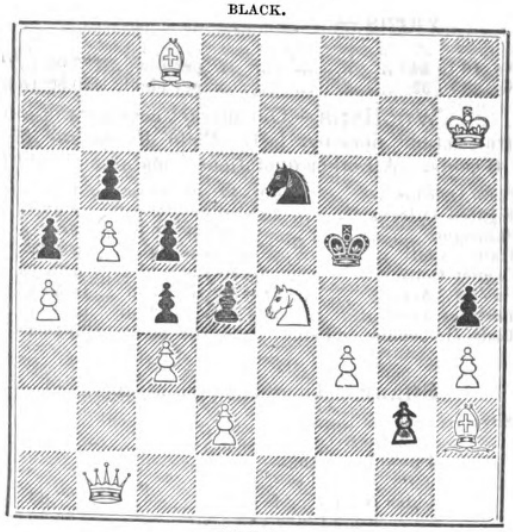
The coal is mined in many places, but only on a small scale. The whole product is used in the neighboring provinces for lime-burning.

Graphite.—In Kagoshima ken near the southern extremity of the island of Kiushiu, a small deposit of graphite has recently been discovered. The graphite occurs in irregular masses, scattered through the fissured, broken, and partially metamorphosed rocks forming the foot wall of a volcanic dyke. Similar well defined dykes, one hundred to one hundred and twenty feet in thickness, everywhere penetrate the shales and sandstones of this vicinity.

Deposits of coal, of a very inferior quality, are said to occur within a few miles of this place; and, from their reported direction, are probably in the same series of sandstones and shales. It seems, therefore, not unlikely that this graphite may prove to be the result of a local alteration of one of these beds of coal and that further development of the mine may lead to the discovery of this bed.

The graphite is of very good quality, as will appear from the following analyses made by Mr. Gowland of the Imperial Mint:

	I.	II.
Carbon	88.09	89.22
Ash (pale grey)	11.01	10.78
	29.10	10.78



This graphite has not yet been utilized, though experimental crucibles have been made from it which are said to work well.

(To be Continued.)

PROBLEM.

By Mr. Klett.

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of A. Sorensen's problem of last week.

,, No. 6 E-pak	...	...	,,	...	$4.00	to	$4.50
Swatow Brown	...	...	,,	...	$3.40		
Daitong	...	...	,,	...	$3.50		
Japan Rice	...	...	,,	...	$2.10	to	$2.30
Kerosene Oil	...	...	,,	...	$4.50		nominal.

Kerosene Oil.—The market is quiet at quotations, and very few transactions are reported.

EXPORTS.

Silk.—During the past week the market has been rather more active; but the large percentage of Silk rejected after inspection shows that about price and quality there must have been much difference of opinion between buyers and sellers. The latest telegrams report a further fall in prices at home, a fact which the unsettled state of political affairs, the most unsatisfactory condition of the Silk manufacturing trade, and the approach of the crop will probably account for. Here, prices have advanced $20 for the better Hanks, and receded about as much for the fine Oshius. Hamatski all round are offered at $500, at which price they find no buyers. Since the 9th instant arrivals are 65 bales, and settlements appear to be about 200 bales. The French mail of 12th instant took 77 bales. We quote:

Hanks.—Best	No. 1 and 2	...	...	...	$760	to	$780
,, Good	No. 2	...	...	...	$720	to	$750
,, Medium	No. 2½	...	...	...	$680	to	$710
,, Common	No. 3	...	...	...	$630	to	$660
,, Inferior	No. 4 and 5	...	...	...	$570	to	$600
Oshiu.—Best	..	...	...	...	$690	to	$710
,, Medium to Good		...	...	...	$650	to	$680
Hamatski 1 and 2	...	...	...	...	$500	to	$520
,, 3 and 4	...	...	...	...	$460	to	$480
Kakeda.—Best	...	...	...	...	$780	to	$800
,, Medium to Good		...	...	...	$720	to	$760
Filature Silk	...	...	...	...	$820	to	$965

Tea.—Operations in this article have lately been restricted to almost one buyer, settlements for the week only amounting to 570 piculs, including one line of 400 piculs at $22. Arrivals are almost nil, and stocks probably under 1,000 piculs.

Prices remain much as last quoted, but from the general disturbed state of political affairs holders would gladly convert their merchandize into cash even at a great sacrifice, but the latest advices from New York make buyers chary of operating, as it seems impossible to foretell to what low figure Japan Teas may be forced on that market.

The *Coulnakyle* is reported to have been taken up for New York, loading a portion of her cargo here and proceeding to Kobe to fill up. The rate of freight has not yet transpired, but will probably be £2. 10 to £2. 12.6 per ton of 40 cubic feet.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Another week has elapsed and we have no further actual knowledge of the state of affairs in Satsuma and the country generally, than at the date of our last issue. Every avenue by which information might be gained is jealously guarded, and beyond the statements published in the columns of the native press, we are utterly in the dark on the subject. The following are the latest reports, obtained from this source:

From the *Nichi Nichi Shimbun* we learn that a telegram despatched from Nagasaki on the 22nd instant, at 6.25 P.M., states that the insurgents had marched into Higo in two columns, which united at Yashiro in that province; that a battle had taken place in the city of Kumamoto on the previous day, but that the result was unknown. Seven-tenths of the city had been destroyed by fire. It also mentions the arrest of thirteen men at Kurumi whose supposed object was to spread the disaffection. There are also troubles in Tsurugaoka in the province of Uzen, necessitating the calling not of the garrison of Miyagi (Sendai.)

The *Akébono Shimbun* asserts that in the engagement of the 21st instant, the Imperial forces were altogether victorious. One column of insurgents advancing towards the city from Tsuboi, were met by the Government troops and dispersed with grape shot. Another column advanced by the high road and gave battle, when a man-of-war arriving in the neighbourhood landed reinforcements, which gained possession of the hills. The Satsuma men, finding themselves attacked on both sides, broke and fled.

The *Choya Shimbun* states that Nagayama with three thousand men is guarding the coast of Satsuma, and that Saigo with five battalions has entered Higo.

From the *Hôchi Shimbun* we learn that a temporary *Daijô-kuan* has been established at Kiôto, and that Sanjo, Kido, Okubo, Ito, Kawa-mura and the members of the *Genro-In*, daily attend the sittings. There is also a rumour that a disturbance has been commenced by the notorious *Jijosha* society, in the Province of Awa.

H. I. J. M's Screw Corvette *Tsukuba Kan*, 1033, 200 H. P., the ship which our readers may remember to have made the voyage to San Francisco last year, and to have behaved so admirably in the very heavy weather which she then encountered, has been despatched with all possible speed to Kobe to join the fleet at present assembled there. She was originally intended for a sea going training ship, and in anticipation of an early cruise in that capacity, has been refitting at Yokosuka. She is commanded by Capt. Matsumura, (an efficient Naval officer trained in America) and carries a complement of 245 men all told. Her armament consists of sixteen guns —eight muzzle loading Krupp 70 pounders, and six 40 pounder bronze, (Japanese made) besides two pivot 7 inch breech loading Krupp's, only one of which, however, has been shipped. It is worthy of notice, perhaps, that of the old crew which navigated her across the Pacific, not one, we believe, is at present borne upon her books. Of the fifteen or sixteen ships of war which, including transports, comprise the Japanese Navy, with the exception of the two at present being fitted out for sea at Yokosuka, and the two others supposed to be at Kagoshima, the whole are collected together at Kobe. In consequence of all these unexpected interferences with the course of Naval instruction pursued at Yokosuka, etc., the Foreign Instructors, whose duties have hitherto required their absence from headquarters, have been recalled for the present to the *Kaigunsho*. In the College, however, little if any disturbance of the usual curriculum has taken place.

The past week has been one of exceptional activity in many of the Government Offices. In some of the Departments, indeed, the officials have been obliged to meet the unusual strain upon them by working day and night. Troops and policemen have been continually upon the move towards the South, as many of the former as 4,200 having been forwarded by rail to Yokohama from Tôkiô between 14th and 21st instants; and 1,280 of the latter between 19th and 20th. Gunpowder in large quantities, besides arms and accoutrements and other munitions of war,—to say nothing of provisions— have been shipped away by every available steamer. In fact no indications are wanting to show that the Government is now fully alive to the gravity of the crisis, which we earnestly hope has not thrust itself upon them unawares. That a certain amount of uneasiness is experienced in Tôkiô is evident from the frequent sight of policemen in unaccustomed places. Stations within convenient distances of one another have been established along the coast between the mouth of the Sumida river and Shinagawa, and guard-boats ply unceasingly in the vicinity of the Laboratory at Tsukiji, where the milling of powder and the loading of shells and fuzes is being carried on with the utmost possible despatch.

The twenty-third report of the Hongkong and Shanghai Banking Corporation has just been handed to us, and we note, with much satisfaction, the prosperous condition of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the affairs of the Bank. The payment of a dividend of one pound sterling per share is recommended, while $300,000 are to be carried forward to the Reserve Fund, which will then stand at half a million dollars. This shows a most encouraging result in view of the depressed condition of the affairs of the Bank two years ago, and reflects great credit on the managership.

In the present clear fresh mornings when the bright sun lends a cheerfulness to everything in motion, it will be found a not unprofitable expenditure of a spare hour or two to watch the fleets of heavy laden junks which make their way upon the flowing tide past Tsukidji, and into Yedo by the Sumidagawa. Cargoes of rice in endless succession will be seen to file past and disappear, as it were, down the mighty throat of the voracious river, to find their way, no doubt, by innumerable creeks and inlets to the extremities of the city. Whole forests of timber, turned to charcoal, keep pace with them, as though to be in time to boil the pots in which the rice is destined to be cooked, or light the pipes which the huge consignments of tobacco in their wake are meant to fill, and to keep the good folks warm, the while, until the genial south-west wind gets the better of their braziers. Boatloads of dried fish, too, there are in plenty, and soy wherewith to flavour them, and rare old *saké* to assuage the thirst they generate, and drive away dull care, perhaps, these troublous times. Nor are the possibilities of fire forgotten, for here are rafts of timber to rebuild the burned habitations, with, if necessary, chips of pine in plenty to roof them in, and stone for their foundations. Endless in the procession, and past counting, the number and variety of the commodities. It is, indeed, a lively panorama, to which the shouts of the *sendos* and the shrill cries of the orange sellers and tea and cakemen,—who dart in and out amongst the craft in glancing skiffs to advertise their little wares and seek for custom—and the sparkle of the sun upon the ripples add an exhilarating vivacity. It is impossible to regard this traffic without wondering why it is that the Government has not taken some steps to try and divert a portion of it to the Railway, where, for a little extra expenditure in the way of facilitating landing and transhipment, it could be carried with so much advantage to both sides in respect of expedition—for it is often greatly delayed by adverse winds—and cheapness upon the one hand, and a reasonable profit and considerable diminution in the number of Custom House officials upon the other.

In the article on Protection in our issue of February 10th we wrote as follows :—

The objects of a protective system are stated to be:—to render a country independent of foreign products and manufactures; to compel the development of the country's own resources; to give its native producers and manufacturers the command of their own markets; to give the Government such a revenue from the Customs as will enable it to reduce Excise and other internal taxation; and, of course, as a general result, to secure the greatest happiness of the greatest number. And the trade and condition of the United States of America are triumphantly adduced, as proving that Protection confers these benefits.

We now call the attention of our readers to the following extract from a long letter which appeared in the London *Mail* of 29th December, headed the "American Labour Market," in which, after a brief review of the resources and industries of the United States, and noticing the general extreme depression prevailing throughout America, the writer sums up as follows :—

When some of your Sheffield people the other day asked the Ministers to protect their trade from the encroachments of the Yankees, the manufacturers here in the Press were quite elated, for they considered it good evidence that Americans were surpassing Englishmen in mechanical skill and enterprise. I fear there is some degree of truth in the assertion, for good machinery is freely used in all manufactories here, as Americans are constantly devising means to abridge or lighten labour, a matter not so much attended to in England as its importance deserves. The great dramatist said, "Fear makes mischief greater than it is," and I presume, influenced by some weak delusion, the political economists of Sheffield would fain revive the policy of Protection that had been so long the bane of Great Britain and *which is ruining this fine country*. But I have no fear that the Americans, or the people of any other nation, can wrest from Great Britain her manufacturing supremacy, for she has the most hardworking and enduring population on the earth, and much of the materials for her industries are within her borders and close to hand, and any of her numerous seaports can be easily reached and at little cost. I see it is stated occasionally in the newspapers that some of your manufacturers purpose to transfer a portion of their business to this country. To them I would give the advice that *Punch* gave to persons about to marry —"Don't." There are bankrupts enough here, for this country is passing through the greatest commercial and industrial depression it has ever experienced, and I fear it will be intensified by the deadlock in the Presidential election. The State of Pennsylvania in 1870 had a population of 3,521,791; at the present time it has scarcely as much as the population of London, yet I believe there are more persons, able and willing to work, out of employment in this State than there are in all England. On Saturday night last one-half of the mines in the anthracite coal region, employing from 30,000 to 40,000 men, were shut down until spring and in a short time many more will be closed. I pity these poor workmen with a long hard winter before them. In the best of times there are twice as many miners as the trade require; consequently very few, if any, were able to prepare for the winter. The iron trade is even in a worse condition than the coal trade. In the Lehigh Valley and other centres, large works have been stopped for a long time, but a slight revival of the trade is reported from the Pittsburgh district. On account of the Centennial Exhibition the trade of Philadelphia has been much better than of most other cities in the union; still there are numbers out of work and in distress. During the month of November the police arrested 4,057 persons, and during the same period 10,025 poor persons were provided with lodgings in the station-house. Those in employment find it difficult to live on reduced wages, and numbers only work two or three days a week. A Dewsbury man informs me he gets from 8c. to 16c. a yard for weaving carpets. The price is better at home, and "he has not worked five square months" the last year. A steelroller at Distin's saw factory was employed at Sheffield to come out here at Dols. 7 a day; he is now working two days a week at Dols. 3½ a day. The men who were employed by the Delaware, Lackawana, and Western Railroad Company at their car works in Scranton have had three reductions of 10 per cent. each since last March, which would bring down the wages of good mechanics to Dols. 1 20c. a day. There are nearly 2,000 men on strike resisting the last reduction. At the New Jersey Iron and Steel Works, at Trenton, the wages of labourers were reduced on December 1 to 90c. a day, and all the other hands in the same proportion. The wages of artisans in this city run from Dols. 1 50c. to Dols. 2 50c., labourers from 90c. to Dols. 1 25c. per day. A workman's board in a respectable house will cost from Dols. 4 50c. to Dols. 5 per week. House rent and coals are a little dearer than in London, provisions are about the same price, with meat a little cheaper. I remember some years since Mr. Abraham Hewitt, New York, gave evidence before the Trades' Union Commission in London. He was asked by the chairman, Sir William Erle, if he considered wages in America would ever come down to the level of wages in England. Mr. Hewitt replied that they could not, for where men did not earn a fair wage in the forge or factory they would fall back on the cultivation of the land. It is often difficult to reconcile theory and practice, and I fear Mr. Hewitt's statement before the Commissioners is not sustained by the state of the labour market here at present. I know a number of men out of work who would gladly settle on land if they had the means to get to it and to commence its cultivation. There are 60 families going from here in a short time to settle in Texas, but they will have some money to commence with. Politicians and political economists are exerting all their ingenuity to account for the great depression of every industry in this country, each after his own fashion. But it is said that there are no persons more blind than those that will not see, for if those clever gentlemen would only open their eyes they would discover that it is the incubus of Protection that prostrates the business of the country, as it had for long years paralyzed the industries of Great Britain and Ireland, until the genius of Richard Cobden and the eloquence of John Bright ostracized it from these lands. *It is on the altar of a spurious political economy that the prosperity and happiness of this great industrious and law abiding people are sacrificed.* Her politicians burdened the people that made incalculable sacrifices to preserve their country intact with the immediate payment of a war debt that wise statesmen would leave for future generations to assist in liquidating, and with undue haste to become a great manufacturing nation they built up cities, towns, and factories which they bolstered up with Protection, while taxing the tiller of the soil until the necessaries of life in this broad and fertile country are as dear as in the old countries of Europe with their teeming populations. And those factories have been multiplied until the goods of all kinds produced are far in excess of the demand, and as a consequence production had to be curtailed. Mills and factories are stopped or running short time, and workmen compelled to live on a pittance or on credit where they can get it. But I am convinced this country cannot long remain in its present state and that it will in due time regain its wonted prosperity, for the politicians cannot steal away its unbounded natural resources and the people are laborious. Their good sense will ultimately correct misgovernment, for they are thoroughly loyal to their country and its Republican form of Government, notwithstanding any apparent defects in it.

Now, however perfect the theory of protection may seem to its enthusiastic upholders, it is here plainly evident that it is not altogether so satisfactory in practice, even in a country that possesses peculiar natural advantages for development of their pet idea.

But without further comment we may safely leave our readers to draw their own deductions.

We adduce the following instance to show that the industries of a country certainly do not require for their development the imposition of a high protective tariff. Previous to the year 1860, the commerce of the whole of Italy, and more especially that of the United Kingdom of Naples and Sicily was 'protected' by very heavy duties. On the overthrow of the Bourbons, and the advent of Victor Emmanuel, a commercial treaty was arranged with England, and with other countries on the same basis, in accordance with which the tariff was reduced to an almost nominal impost. At first, trade appeared to suffer, owing to the influx of foreign manufactured goods, but in ten years the efforts of Italian manufacturers to hold their own had developed trade to such an extent, that Lancashire goods of certain kinds, more especially heavy domestics and yarns, could not compete with Italian productions. At the present time printed goods compete very closely with those of Man-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

chester, and industries of all kinds in Italy are in a most prosperous and hopeful condition.

In June 1875, Messrs. Simon, Evers & Co. brought an action in the German Consular Court against the ship *Mathilde*, claiming $2,825.31 for loss sustained by them through damage to pilot cloth and felt consigned to them. Judgment was then given in their favour, but the Counsel for the owners of the vessel appealed against it to the Court of Appeal at at Stettin, where, however, the judgment of the Consular Court was sustained. Not satisfied with this, the owners further appealed to the Supreme Court at Leipzig, where the judgments of both of the lower Courts were reversed. As all matters relating to shipping cases are of considerable interest to many of our readers, we shall lay before them at a future date the translation of the decision of the Supreme Court, but may mention now that the substance of that decision was as follows :—Plaintiffs and defendants are mutually to bear the law costs incurred, but plaintiffs are to make good to defendants all extra costs; the judgment against the ship being, of course, cancelled.

From the "Japan Mail Daily Advertiser."

Monday, 19*th*.

It would appear from the following that the turbulently disposal *samurai* are not wanting in ready excuses for assembling together to plot mischief. Those of Ibaraki *ken* (Mito), to the number of seven hundred, waited upon the Governor with a request that they might be permitted to visit Tsuruga, in the province of Echizen. They asserted that their desire was there to worship at the tomb of Takéda Kô-unsai, the celebrated leador of the Righteous Party who was engaged in the civil war which preceded the Restoration, and who was captured by the Shôgun's forces early in 1866 and decapitated by order of the Bakufu. But honoured as Takéda is by those of his followers who are still alive, and their descendants, it is only now discovered that the deceased warrior had more relatives that man ever dreamt of. The proposed exodus on so large a scale of the *samurai* of Ibaraki, even for so laudable a purpose, somewhat alarmed the Governor, who thought he would get out of the difficulty by refusing permission to visit the tomb to all who could not claim relationship with Takéda. The ruse was of no avail, for immediately came forward hosts of would-be worshippers, claiming to be uncles, nephews, grandsons, and cousins to the remotest degrees of Takéda's, until the number of those who would visit his shrine swelled to about fifteen thousand. We have not heard how the Governor got out of his difficulty.

The *Raiden Maru*, belonging to the *Kaitakushi* Department, has been fitted up as a war ship and arrived in Yokohama on the evening of the 16th instant.

The Governor of Nagasaki is said to have asked for advice from the Government as to the way in which foreign residents at Nagasaki should be treated in the case of war. The foreigners themselves do not seem to know much about the disturbance which is at present going on in the Satsuma, although that province is so much nearer to them than it is to us, for, strange to say, the Nagasaki papers received by the last steamer, make no mention of Satsuma in any way whatever.

When the detectives examined the room of Mr. Yebihara, the former manager of the late *Chugai Hiôron*, (formerly *Hiôron Shimbun* and now the *Bummei Shinshi*) many papers suspected to be treasonable were found in it, and it is not therefore for any offience against the Press-laws that he was arrested.

From the *Chôya Shimbun*.

Two detachments of the Hiroshima garrison have arrived at Shimonoseki.

Some disturbance is reported in the province of Bungo.

The *Hôchi Shimbun* gives us the following news of the Satsuma difficulty :—

The policemen sent from Tôkiô are said to have arrested some ten Satsuma spies, but when they were captured we cannot say.

It is said that a telegram has been received stating that twenty thousand of the Satsuma *samurai* are now ready to take the field.

General Yamada and Post Captain Hayashi will proceed to Kôbe on the 18th instant, when Captain Hayashi will start for Nagasaki as soon as he has had an interview with the Minister of Home Affairs and the Vice-Minister of the Navy.

The Army Department has received one hundred thousand *yen*, and the *Sei-In* one thousand *yen*, from the *Okurasho*, as an extra allowance to meet unlooked-for expenses incurred by the disturbance in the South.

Tuesday, 20*th*.

There is now no doubt about the position of affairs in the South, as the following notification, declaring war against the Satsuma rebels, has been published in to-day's *Mainichi Shimbun* by authority. The strength of the Imperial army to be employed is not yet known, but it may be fairly presumed that a sufficiently strong force will be sent to finally and completely subdue the refractory province of Satsuma. It will be seen by another notification that the Mikado has elected to remain at Kiôto instead of returning to Tôkiô.

NOTIFICATION.

As the insurgents of Satsuma have forced their way into the Kumanoto *ken*, unlawfully bearing arms against the Imperial Authority, His Majesty the Mikado has ordered an expedition to be sent against them, of which H.I.H. Arisugawa no Miya has been appointed Commander-in-Chief.

The above having been telegraphed from the Imperial Palace, Kiôto, is hereby made known.

NOTE.—As many of the insurgents may make their escape to various parts of the Empire, strict orders have been given to the authorities of *Shi*, *Fu* and *Ken* to take every precaution to have them at once arrested.

(Signed) IWAKURA TOMOMI,
Udaijin.

NOTIFICATION.

As a telegraphic message has arrived to the effect that His Majesty the Mikado would remain at Kiôto for the present, the above is hereby made known.

IWAKURA TOMOMI,
Udaijin.

From the *Nichi Nichi Shimbun*.

Mr. Shibusawa of the First National Bank has arrived at Nagasaki. He is said have brought his business to a satisfactory conclusion at Shanghai.

From the same.

Merchants are sending over large quantities of grain to Corea, to relieve the famine now prevailing in that country.

From the same.

The following notification was issued by the *Udaijin* Iwakura on the 16th instant, to the Department of Home Affairs, War, Navy, Kaitakushi and the various *Fu* and *ken* situated on the coast of Japan.

"The regulations for the protection of ports and harbours in times of disturbances not being yet enacted, until such are issued the following regulations will be enforced.

Art. 1.—Whenever any persons who do not belong to the Military or Naval services, or Police force, attempt to land with fire arms or swords in their possession, they shall be arrested and examined, and if resistance is offered, the authorities may use any force considered necessary.

Art. 2.—Any persons arriving at any port may be examined by the police, even if they do not carry arms, and unless they can give a satisfactory account of themselves shall be taken into custody. Any attempt to resist the police may be met with force.

Art. 3.—Vessels carrying arms or munitions of war not belonging to the Government, shall be seized unless satisfactory explanations can be given, and armed force may be used, as in the two former cases, if any resistance is shown by the crew.

Original from UNIVERSITY OF CALIFORNIA

From the *Akébono Shimbun.*

Yamagata, the Minister of War, is at Shimonoseki, and occupied solely in directing the movements of the troops.

From the *Nichi Nichi Shimbun.*

As many of the troops of the Tôkiô garrison have been despatched to Osaka, a battalion of infantry from the Utsunomiya garrison arrived at Tôkiô on the 17th instant to supply their place.

We hear that the Department of Home Affairs is about to subscribe for all the newspapers published in Tôkiô, and forward them to the Bonin Islands.

The *Hôchi Shimbnn* gives us the following:—

On the 17th instant an order was received from Admiral Kawamura to forward 700 shells.

H. E. Okubo and party arrived at Kobe on the 16th instant.

It is now rumoured that the leader of the present disturbance at Kagoshima is Uchida, a *karei* or manager of the affairs of the House of Shimadzu.

Mr. Ônuma, a *Shôsa* of the Military Department, started in great haste for Sendai garrison on the 18th instant.

A person who has arrived from Shidzuoka reports that some *samurai* there are holding assemblages, perhaps for the purpose of sedition.

Wednesday, 21*st*.

A fire broke out last night at half past two o'clock in the restaurant kept by M. Beguex, No. 81, Homura Road. An alarm was immediately given, and the "Victoria" steam engine and two or three hand engines were quickly on the spot, and by their efforts fortunately succeeded in extinguishing the fire, but not before it had done considered damage to the interior of the building.

An agrarian riot is reported in the province of Etchiu. For some time the farmers have shown discontent, which even the reduction of the land-tax did not allay. Several meetings were held by them about a fortnight ago, and the officials, fearing that the unruly conduct of some of the farmers would lead to a serious disturbance, called in the aid of the police to disperse them. In this the police were unsuccessful. The farmers made a combined attack on them and the officials, wounded thirty of the former, and seized and carried off one unfortunate *Kucho*, who has not since been heard of. The rioters subsequently looted many houses in the neighbourhood, and it became necessary to call in the aid of the troops to suppress them. Three companies of infantry were sent against the rioters on the 11th instant and succeeded in arresting sixty of them and dispersing the rest.

A *samurai* of Fukuoka, in custody of the police, arrived here from Yokkaichi on board the Mitsu Bishi Co.'s steamer *Shinagawa Maru*. He is supposed to have been one of the leaders of the serious riot which took place in the Miyé *ken* last December, and will be examined at the Judicial Department, Tôkiô.

News has arrived that a fire broke out at Ôgaki, in the province of Mino, during the afternoon of the 14th instant, which destroyed some two hundred houses besides several godowns and junks.

A notification has been issued by *Udaijin* Iwakura reforming the regulations for conducting cases in the Law Courts.

From the *Chôya Shimbun.*

NOTIFICATION 1. OF THE *Mombusho.*

The Female School of Tôkiô, the Normal and English Schools of Aichi *ken*, the Normal and English Schools of Hiroshima *ken*, the English School of Nagasaki *ken*, the Normal and English Schools of Niigata *ken*, and the English School of Miyagi *ken* are hereby abolished.

TANAKA FUJIMARO,
Vice-Minister of Education.

9th of February, 1877.

From the *Hôchi Shimbun.*

NOTIFICATION No. 21.

An expedition having been ordered against the rebels of Kagoshima *ken* (Satsuma), it is hereby made known that the newspapers must not recklessly publish false reports concerning the above.

IWAKURA TOMOMI,
Udaiiin.

It was intended that H. I. H. Arisugawa no Miya, accompanied by Yanagiwara, a member of *Genro-In*, should proceed to Satsuma in the *Meiji Maru*, taking with them, for safety's sake, an escort of cavalry, their object being to try and settle the grievances of the Satsuma *samurai* by peaceful negociations. An order from the Emperor to the above effect had already been given, but on the 18th instant news was received from Kumamoto that the insurgents of Satsuma were pushing their way towards that place by the Midzumata and Hitoyoshi roads, and, morover, that ten Satsuma *samurai* had actually arrived in Kumamoto *ken* for the purpose of arranging billets for the armed force which was following them. On receipt of the intelligence of this definitely hostile movement on the part of the rebels, an order for an expedition against them was immediately given.

A telegram received from Kumamoto at 2 p.m. yesterday stated that the barracks of the Kumamoto garrison had taken fire, but whether this was the work on an incendiary or merely an accident, is not known.

From the *Mainichi Shimbun.*

It is rumoured that about one hundred policemen from Tôkiô are going to Shidzuoka to guard the residence of the late Shôgun, Tokugawa Keiki. We give the above for what it may be worth.

Thursday, 22*nd*.

This morning, just before daybreak, while the *Nagoya Maru* was passing Uraga, she came into collision with a fishing boat. Of a crew of thirteen men in the boat one managed to get inside the paddle box of the steamer, where he remained until arrival in port, when he was taken out but little the worse for his unexpected trip. Captain Conner says he saw the boat passing astern after the accident and thinks it likely the remainder of the men were not injured.

There is a rumour current in Tokio to the effect that the *Nevada* left Kobe with twelve hundred men on board, whom it was intended to land at Tsurusaki in Bungo, as being the best point where troops could be disembarked and collected for the projected attack on the Satsuma insurgents, but that on her arrival it was found that the place was already in the possession of the Satsuma people, who have also, it is said, occupied the island of Amakusa.

It is reported that the Imperial troops expected to attack the body of Satsuma *samurai* who have entered Kumamoto, on the 20th, so that news is anxiously looked for.

A steamer has been sent down to Kagoshima to bring away the foreigners resident there, and also those who were on board the Mitsu Bishi steamer *Taihei Maru* at the time of her capture by the *samurai*.

A telegram from Kumamoto states that the fire which broke out in the barracks there commenced at 11.30 a.m. and was extinguished at 2 p.m. The buildings alone were damaged, the arms, ammunition and military stores having escaped destruction.

We are informed that the French Admiral has gone to Nagasaki to protect the interests of foreigners at that port, in the event of troubles arising out of the present attitude of Satsuma; and that Mr. Watanabi, a *Gon-daijô* of the *Gaimusho*, who was a passenger on board the *Saikio Maru*, has been sent to Nagasaki to make special arrangements for the safety of foreign residents, if necessary. As to the residents themselves, they seem to know or care nothing about the rebellion in Satsuma, and seem in no way to dread a disturbance in their own quiet little port, if we may judge from the fact that one of their two newspapers to hand this morning makes no mention whatever of the Satsuma rising or the impending war, while the *Cosmopolitan Press* contents itself with saying:—

"A company of infantry consisting of 163 men, were disembarked on Monday last from the *Hiroshima Maru*, they formed part of the garrison of Kokura and have been ordered here, as it was thought Nagasaki was insufficiently protected. The Kenrei, Kitashima Hidetomo landed at the same time, his return being earlier than was expected."

"We hear that the Imperial Telegraph is closed to Japanese and that more troops are expected in Nagasaki—this means something."

Original from UNIVERSITY OF CALIFORNIA

The *Hôchi Shimbun* says that when the Satsuma *samurai* were refused permission by the Kumamoto authorities to pass through that *ken*, they urged that their passage should not be hindered as Saigo himself was at the head of their forces.

Yesterday afternoon Captain Gordon of the British ship *Coulnakyle* lodged a complaint in the Consulate against five of his seamen, who refused duty. When brought before Mr. Wilkinson, the Acting Consul, the men said their reason for refusing to go to sea was the lamentable state of the forecastle in which they were forced to live. The place was continually wet, being leaky all over. The ship was, besides, unsafe on account of the precarious condition of the main-mast, which had hardly any support, two of the chain plates being broken and one cracked. The Captain said he was pressed for time and was willing to have the repairs in question seen to when the ship arrived in Kobe; at present he was ready for sea, and almost cleared. When the men were asked if they would return on board if these repairs were executed, some of them said they would not, whilst the others imagined there would be no peace on board after this affair. His Honour ordered a survey and all necessary improvement to be made in the forecastle and rigging; the men meanwhile to return to duty. Upon their still refusing to do so His Honour sent them to jail till this morning, when the surveyor will submit his report to the Court.

An order has been given for the *Kiorio Maru*, belonging to the Kaitakushi, to leave Hakodate immediately for Shinagawa, where she is now lying.

The *Chôya Shimbun* says that incendiarism is now a common occurrence in the province of Inshiu.

The *Hôchi Shimbun* gives us the following:—

The rebels of Satsuma have formed themselves into bodies, each numbering about two thousand men. One party has started for the province of Bungo, another to the island of Amakusa and another to Miyaji.

Since the morning of the 17th instant the city of Kiôto has been strictly guarded by troops from the Fushimi garrison.

Brigadier General Nodzu, commanding four battalions of troops, and Brigadier General Miyoshi, commanding five battalions, embarked at Kobe for Kiushiu on the 20th instant.

Paymasters Shimidzu and Kawaguchi proceeded to Kiushiu on the 20th instant, with money to cover the expenses of the expedition.

Since the 20th instant the *Okurasho* has been protected by a military guard.

The *Mainichi Shimbun* is responsible for the following:—

On the 16th instant some eight or nine men, having the appearance of robbers, entered the Imperial Palace gates at Kiôto armed with drawn swords, but were detected by some policemen who were on duty, and at once decamped. The city was greatly excited, and parties of military patrolled the city and environs. The *Mainichi*, however, cannot vouch for the truth of this statement.

Friday, 23rd.

We yesterday mentioned that the *Nagoya Maru*, when off Uraga yesterday morning, had come into collision with a fishing boat. We are now in possession of fuller particulars, which we hasten to give, to show that no blame can be attached to the steamer for the accident or what occurred subsequently. It appears that the look-out on board the *Nagoya Maru* saw the boat in question was in a dangerous position, and hailed her to get out of the way, but no notice was taken by the crew nor was the boat's course altered. Though the engines of the steamer were reversed a collision could not be avoided, by which the fishing boat lost part of her prow, which had the effect of carrying away her mast. The boat drifted astern after the collision, and those on board would give no answer to the repeated hails from the steamer, but got out their sweeps and sculled away as quickly as possible. After the steamer's arrival in port, a policeman on the hatoba observed a man landing there who had a cut on the forehead, and who stated, on being interrogated, the particulars of the collision as above, and further, that while the fishing boat drifted past the paddle-box of the steamer, he had jumped on to the floats, clambered up into the paddle-box, and thence on deck unknown to anyone on board. On arrival in port he sneaked away unnoticed, and it was only on being stopped on the hatoba by the policeman, and subsequently returned by him on board the *Nayoya Maru* that his tale might be verified, that these facts came to light.

The Director of Telegraphs has given orders that no messages in cipher may be sent to any place in Japan, but this prohibition does not apply to messages for other countries.

The body of a Chinaman was found yesterday evening floating in the Creek opposite to the Railway Station. The police took charge of the body.

The steamer *Cairnsmuir* left Hongkong for this port on the 21st instant.

As the possession of Kumamoto is a matter of vital importance, it is more than probable that the town and its immediate neighbourhood will become the principle theatre of the struggle between the Imperial forces and the opposing *samurai* of Satsuma. Every precaution is being taken by the Imperialists to protect the town from any surprise on the part of the rebels, and the garrison is being reinforced for this purpose. The strength of the garrison is stated at 10,000 infantry and artillery, and besides Lieut. General Nodzu is bringing up his force of three battalions of troops from Bungo, and Lieut. General Miyoshi is marching towards the same point with five battalions from Hiuga, while the *Kasuga Kan* and *Seiki Kan* are stationed off Sakura-jima, watching that no insurgent vessels leave Kagoshima harbour. On the other hand the telegrams which we publish below show, that not only have the Satsuma troops reached Kumamoto, but that an engagement has taken place there, the result of which is as yet unknown. It is said that the invading force of insurgents is under the command of Kirino, Sasawara and Fuchibé.

H. I. H. Arisugawa-no-Miya left Osaka on the 20th instant for the South, with the intention of making Fukuoka his head quarters. Troops continue to be despatched from Tôkiô as rapidly as possible, and the Railway officials have received orders to have trains in constant readiness for the conveyance of troops. It is said that Takenouchi, the Vice-Minister of War, was in the command of a battalion which has already left for Kobe. In the meantime troops from Utsunomiya have arrived to do garrison duty at Tôkiô.

The Empress and the Empress Dowager will remain at Kiôto with the Mikado for the present A telegraphic wire has been laid to the Imperial Palace, so that His Majesty can be in immediate communication with the capital and other important places. Native vessels are prohibited clearing out from Osaka, and will, we suppose, be compensated by the Government for the forced detention. Policemen are posted at all the stations on the Kiôto Railway to arrest all suspected persons.

The following items of news are from the *Hôchi Shimbun*:—

A telegram from Fukuoka on the 19th instant stated that the Satsuma men had advanced about one and half *ri* beyond Minamoto towards Kumamoto, and attempted a night attack at nine o'clock.

There are signs of about two thousand insurgents preparing for an attack on Nagasaki.

A telegram which was received at Tôkiô at 7 a.m. on the 21st instant states that a severe battle took place on the borders of the Kagoshima and Kumamoto *ken* on the previous day.

A telegram received from Nagasaki on the same day announces that on the previous night about fourteen Satsuma men, who attempted to land at Shigeki-ura near Nagasaki, were captured.

The following telegram was received at 1 p.m. on the 21st from Liutenant General Tani, commanding the Kumamoto garrison:—"The battle to commence now, further particulars later on."

Another telegram has been received asking that three men-of-war might be sent to Fukuoka in the province of Chikuzen, and yet another message yesterday stated that some disturbance was taking place at Fukuoka.

All the police constables in Kiushiu have been armed, and formed into soldiers of the line. A body of the insurgents is said to have advanced to about 3 *ri* from Kumamoto *Kencho*, in number over a thousand.

Large guns and small arms were sent on the 21st from Dôsanbashi, Tôkiô, to Kumamoto and Fukuoka. The thirteen cases of coin which were sent from the *Okurasho* to the Army Department on the 21st instant will also be forwarded to those two *ken*.

Saturday, 24th.

The M. M. Co.'s steamer *Tibre*, with French mails on board to the 14th January, left Hongkong yesterday evening, the 23rd instant, at 6 o'clock.

From the *Mainichi Shimbun*.

Mr. Kato, of the *Mainichi Shimbun*, was fined 15 *yen* on the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

23rd instant for an offence against the Libel-laws, in having made an unwarrantable statement about Mr. Goto Shôjiro and the *Horaisha*.

From the same.

Orders have been given to the Osaka Arsenal for one hundred field pieces and guns of position of various sorts for the Kumamoto garrison.

The Mitsu Bishi Company's steamer *Nagoya Maru* will be despatched for Shanghai on Saturday next, the 3rd proximo.

From the *Akébono Shimbun*.

The report that the head-quarters of the Commander-in-Chief will be at Fukuoka in Chikuzen is a mistake, as he will stay at Osaka. Yamagata and Kawamura have been appointed his advisers. Oyama, the Vice-Minister of War, has been appointed to the command of the Tôkiô garrison.

The *Chôya Shimbun* of yesterday published the following :—

A telegram from Nagasaki on the 21st instant states that a battle was fought (the place not given) on that day, and that the Imperial forces were victorious.

A report states that Kirino with his men were marching towards Kumamoto, Shimawara towards Mogimura in Higo, and Murata towards Bungo.

A telegram announces that the *Taihei Maru*, which was stated to have been captured at Kagoshima, arrived safely at Kobe on the evening of the 28th instant.

There is a rumour that the *Kenrei* of Kagoshima has notified other *Ken* in Kiushiu that Saigo is about to proceed at the head of an army to present a petition to the Emperor. This is very improbable.

All the household troops have been sent to Kiôto, the last detachment having left on the 21st instant.

On the 22nd instant a large quantity of powder from the magazines at Awoyama, Tôkiô, was shipped on board some of the vessels lying off Shinagawa for Kiushiu.

The *Tsukuba Kan*, now at Yokosuka, will to-day (23rd) be despatched to Fukuoka in Chikuzen under the command of Captain Matsumura.

Two battalions of troops from the Nagoya garrison were marched to Ôtsu, in the province of Omi, on the 19th instant.

On the arrival of the *Saikio Maru* at Kobe she was immediately despatched to Saga.

The following are from yesterday's *Hôchi Shimbun* :—

The head-quarters of the Government will be temporarily established at Kiôto, and all orders concerning the southern expedition will be given from that city.

Mr. Narahara, the *Karei* of the House of Shimadzu, who lately accompanied Mr. Okubo to Kiôto, and Mr. Shibuya, who was sent from Satsuma to Kiôto to vouch for the loyalty of Oyama, the *Kenrei*, have both been arrested on suspicion.

The Medical Staff of the Army Department have gone to Fukuoka *ken*, where a temporary hospital is to be established.

Some of the people of Satsuma living at Kiôto have been put under surveillance, while others have been committed to jail.

An order has been given to capture all the vessels belonging to Satsuma whenever they attempt to leave harbour.

We hear that the *Okurasho* has already paid out a million *yen* for the expenses of the southern campaign.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending February 17.

Total Amount of notes (dollars) received by us from the *Shihei-rio*		$1,200,000
On hand	783,130	
In circulation	416,870	
	1,200,000	
RESERVE FUND.		$0309,870.00
In dollars (coin) on hand	214,608.00	
In dollars (Foreign Bank notes)	14,292.00	
Deposited with Foreign Banks	80,970.00	
	$309,870.00	

Exorbitant as the prices paid for the lots of the "Bamboo Plantation" recently sold to the Chinese may seem to some, we hear some of the purchasers are making a good thing of the bargain The owner of two of the lots realized some $2000 shortly after they were knocked down to him, and negociations are now going on with the new buyer for the purchase of the land, and rumour states that he asks $4000 profit. We think, however, he may be satisfied with less than that.—*China Mail.*

THE PRESENT CRISIS.

ONCE more the baleful flame of civil war has broken out in this unquiet land. Satsuma is all ablaze with open rebellion, and hands are not wanting that will carry the fiery brands of sedition into neighbouring provinces, only too ready to kindle at the first touch. We before expressed our opinion that the Government had hitherto had to face no such serious difficulty as that now presented to them, and the events of the past week justify the conclusion. In an emergency like the present, no news, or only such items as the extreme caution of the Government allows to be published, may be taken to mean anything but good news, for it is only reasonable to suppose that if it believed the present rebellion to be capable of speedy repression, that it was a mere riotous proceeding on the part of a few of the more turbulent spirits of a haughty clan, and not a general movement which might involve its own destruction, it would give every publicity to the truth, and thus at once discourage from making similar demonstrations, or from swelling the ranks of the disaffected, those who, it too well knows, only wait an opportunity to join in an organised attempt at its overthrow.

Untrustworthy as must be the information derived from a few private sources, or from the rigorously guarded columns of the native Press, there can be little doubt that fighting has actually commenced. A fairly well authenticated and generally credited report states that an engagement has taken place between the Imperial troops and a body of the insurgents, somewhere between Kagoshima and the boundary of the Kumamoto *ken*, but the result is unknown, or at least is not made public.

We do not blame the action of the Government in placing restrictions on the publication of any news that it may please the native journals to invent and insert. It clearly recognises the fact of extreme disaffection existing among the *samurai* throughout the Empire, and knows full well that report, true or false, of a success on the part of the Satsuma insurgents, would be the signal for an outbreak that might convulse the land from one end to another.

In the issue, however, this week of a notification in the form of a hand-bill to most of the houses in Tôkiô, warning people against referring, even in common discourse, to the subject of the Satsuma rebellion, the Government has, we submit, overstepped the bounds of caution. Human thought is free and if Satsuma be a forbidden topic, the conversation will naturally turn on other matters, among which may probably be discussed the reasons which render it necessary to issue such an arbitrary regulation. The result of such discussion will certainly be a thorough comprehension of the weakness and insecurity that the Government indirectly avows by the adoption of so ultra cautious a measure. So insecure, apparently, does it consider its footing, that it fears lest a breath should start the avalanche which is threatening each moment to fall, and sweep all away in common ruin.

It is evident that, at last, the Government has fully awakened to the dangers which menace it, and that it will use all the means at its command,—and they are neither few nor contemptible,—to crush the efforts the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

samurai are making to regain in some degree their lost estate. But that it can have been the passive witness of acts of preparation which could have no possible meaning but that of persistent defiance of its authority, or ultimate effort for its overthrow, is inexplicable. Surely the signs of the coming of the present rupture have been visible enough. From time to time have appeared those slight fissures in the banks which restrained the dangerous 'sea of troubles,' arising from a sense of injuries, real and imaginary, from bursting in upon the land. It is easy to strengthen the weak points of such defences at the first warnings of danger, but if they be allowed to continue unheeded, little by little the waters undermine the dike, and through the widening gap rushes the tide of rebellion, often resistless, and never beaten back without sore loss and prolonged strife. As early as 1875, the Japanese press called the attention of the Government to the Schools at Kagoshima, and questioned the wisdom of permitting their institution. We quote from an article, a translation of which appeared in *the Weekly Mail* at that time.

"The maxims written upon the schools are as follows :—

"We continue on the same road and fulfil righteous-"ness : for this purpose we privately assemble here "and are willing to lay down our lives in this cause."

"Honour the Ruler and have compassion on the "people. These are the foundations of education, "and although it may cost labour and pains to esta-"blish them, we must not begrudge them in the dis-"charge of our duty."

"A man, (says the editor), who has recently re-"turned from Kagoshima informs us that the schools "and military training establishments are in a very "prosperous condition, and in Kagoshima there are "two such schools where 2,000 strong men are being 'trained ; and in every town there is a school. There "is one school called the reward-school, the scholars of "which are composed of officers either of the army or "men who fought in the last civil war, and there are "French instructors hired to teach them. The "schools in the towns and townships are all connected "with those of Kagoshima and there are 30,000 "lusty scholars in the province."

"Boyai says the maxims are very short and are "neither despotic nor democratic, but are as full of "tact as the orders of the commander-in-chief.."

"Takai says—"I cannot understand what is meant by "these labours and struggles. We are at peace now "and have no struggles. The maxims of great men "are hard to understand." "

Another writer ends his account of these schools by the wail. "But oh ! we cannot understand by what department of Government these schools are controlled."

It is certainly true that it is not always possible for a government to do that which it clearly sees ought to be done, but it is surely not wise to permit without protest, the establishment of an institution which may at any time provide the materials for the possible overthrow of the government under which it is allowed to flourish. In 1868 or '69, at a meeting convened in Tôkiô, certain influential men argued strongly in favour of Satsuma being compelled, by force if necessary, to conform to laws to which other *han* had to submit, or that otherwise she would oppose perpetual obstructions to the measures of the Imperial Government, and various writers have from time to time lamented that the Government should always make exception in favour of this clan, and take no notice of its defiant attitude. Certainly, except by a fiction, Satsuma has never been under the Japanese Government. Though loyal to the MIKADO it has never acknowledged the authority of his personal advisers, and we must confess that the utter disregard with which their measures have been received by the most powerful and independent province of Japan has to a certain extent been deserved.

The struggle now entered upon must, however, decide which is to be master in the country, the present Government or Satsuma. There ought to be no question as to the result. The Government has, comparatively, vast means at its command, steamers, the telegraph, abundant munitions of war, an army and a navy. It remains to be seen whether these seemingly overwhelming advantages may not become the elements of the destruction of the Government that has created them. Will the Army and Navy prove true when put to the test ? Will members of a clan, noted for its clannishness, assist in slaughtering and reducing to subjection their own clansmen ? When we know this, we know what the end must be. We are of opinion that the solution of these questions must depend on the action of SAIGO—if he withold his countenance and support, the insurgents had best at once throw down their arms and sue for mercy. If the report, that he leads the Satsuma army, be true, and what we can learn seems to warrant the belief, then has the Government cause for gravest anxiety. SAIGO's influence, and the prestige attaching to his name can accomplish what force of numbers can never bring about. It is only through the intervention of some able man that tranquillity can be restored. SAIGO once showed that he had both the power and the ability to control. Only a year ago it was stated in an article in one of the native papers, that there were fifty thousand men who declared themselves ready at any moment to lay down their lives in his cause, and that where he led, victory must follow. Well may the Emperor and his advisers send for him and ask him "Is it peace ?" for they cannot but recognise the truth of the maxim that Princes have ever need of the services of one or more great men of tried military valour to repress seditions in the beginning. "But let such Military Powers be "well reputed of, rather than factious and popular, "holding also good correspondence with the other "Great Men of the State ; or else the Remedy is worse "than the Disease."

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 18th February, 1877.

THE NEW BAIL LAW.

IN the New Bail Law promulgated in the early part of this month, a translation of which will be found in another column, the Japanese Government have afforded a fresh proof of the sincerity with which they adopt the civilisation and humanity of the West. Nothing, indeed, in the surprising history of the last decade, is more calculated to excite the admiration of all who follow with kindly sympathy, or philosophical interest, the progress of this country through a robust childhood towards a maturity which no people have hitherto had the fortune to reach save after centuries of alternate tyranny and anarchy, than the singular readiness with which the cruel and stupid criminal system of a few years back, has been abandoned and replaced by a code based upon the humane and enlightened principles now more or less universally recognized by the most advanced nations of Europe.

It is difficult to believe that only some ten years ago the punishment of death was inflicted for the most trivial offences, that crucifixion and burning were not uncommon modes of execution, and that the very notion of treating, not merely criminals, but even accused persons, with common humanity, was never dreamt of in a country, of which the existing penal code is probably superior, in most essential respects, to that of England previous to the reforms of Romilly. In her criminal legislation Japan has, in the space of ten years, achieved what no European country has accomplished, except within the interval that separates the termination of the middle ages from the beginning of this century; one gigantic stride seems to have brought her out of the darkness of mediæval cruelty into the almost full light of modern humanity. It may, no doubt, be urged, that the credit of this half moral, half political revolution, is due not to the people of Japan, who have in no very evident way demanded the changes by which they have so abundantly benefited, but to that not numerous section of the governing classes in whose hands all real power is concentrated. Without, however, enquiring where the initiative lay, it must be admitted that reforms, similar to what were bitterly opposed in England by almost the whole of the represented classes in the early part of the present century, have been accepted, and as far as we can judge by utterances of the Press, applauded by the whole body of the people of this country—surely no inconsiderable merit.

While, however, awarding to the Government what we believe to be a just meed of praise for this enlightened recognition of the principles of modern criminal legislation, we are not always able to concede an equal admiration to the mode in which those principles are sought to be carried into effect. A certain want of dexterity is too often perceptible in their Legislative Acts which cannot but be deplored, though it would, perhaps, be unfair to blame them for a lack of administrative ability which nothing but time and experience can enable them to attain. We are sure that the Japanese Government fully recognize this unavoidable but merely temporary deficiency on their part, and we know that they are making strenuous efforts to train and educate a body of public servants, who shall be adequate to the task of intelligently and efficiently advising upon and carrying out the details of a civil constitution framed in accordance with the political and social ideas of Western civilisation—efforts that cannot fail, we may confidently assert, if properly persevered in, of a satisfactory degree of success. Meanwhile we feel persuaded that fair criticism will not be regarded as an abuse of the exceptional position accorded to the foreign press in this country.

Reviewing then very briefly the Bail Law recently promulgated, we are struck at the outset by the absence of any definite provisions as to the mode in which the application for bail is to be made. This defect will probably be remedied by a supplementary law, in which it should also be stated more particularly, before what judge or judges the application should be laid. The accused ought also to be permitted to make the application either in person or by his legal adviser. In the next place, the wisdom of the second article of the law, by which a judge is allowed to set at liberty without security a person charged with any crime, however serious, unless so serious as to be punishable by hard labour for life, seems questionable, while, on the other hand, if this discretion is given to the judge in such cases, it certainly might be granted in the case of a person who had simply been convicted of some petty offence, perhaps a mere infringement of some police regulation, to whom the article in question does not extend the privilege.

Again the provision contained in the 5th article, that the amount of the security shall be determined in part by the wealth of the accused and his sureties, is open to remark. The accused person might be very poor, and in any case might purposely choose poor sureties; thus the security fee might be altogether insufficient to ensure the attendance of the accused upon summons for trial.

ARTICLE XI construed literally is hard upon the sureties. The wording ought to be 'when the sureties intentionally assist actively or passively the bailed person to escape, they shall be punished as jailors conniving at a prisoner's escape.'

ARTICLE XIII seems to permit a surety to withdraw at pleasure. This ought not to be allowed, and no surety should be permitted to withdraw except upon reasonable cause, and after application to a judge. Lastly, it is far from clear whether the sureties are to enter into some sort of bond, or whether they are to deposit a sum of money in court; if the latter, the law will be of hardly any avail to the majority of accused, very few of whom will have friends in a position to lose the use of any portion of their capital for an indefinite time. It would surely suffice to require the sureties to be land or householders, or engaged in some regular trade or employment, or to produce a certificate from the authorities of their ward or district, justifying their offer of bail. The above are the principal points on which we think exception may be taken to the new Law, the spirit of which is admirable, and the defects in which are chiefly formal, and capable of being easily remedied. We might add that the whole enactment might be more accurately and intelligibly expressed in about half the number of words.

SPIRIT OF THE JAPANESE PRESS.

The Bail Law.

("Hôchi Shimbun" 7th February.)

Notification No. 17.

The Bail Law, having now for the first time been compiled, is hereby publicly made known.

Iwakura Tomomi,
Udaijin.

9th February 1877.

Art. 1.—By bail is meant the release from custody granted to accused persons during the course of their trial, by allowing them to procure sureties, and by payment of security fee.

Art. 2.—Should a judge deem that there is no danger of the accused attempting to escape trial he may liberate him without security. This does not apply to those who, if convicted, would be sentenced to hard labor for life or severer punishment, or who have before been under sentence.

Art. 3.—The accused, or those who propose to become his surety, can always apply for bail, and the Judges must promptly decide whether such bail should or should not be granted, and they shall not defer their answer for more than five days unless there is special reason.

Art. 4.—Sureties, as a rule, must be two or more, but when the Judges deem that only one is necessary this rule may be disregarded.

Art. 5.—The Judges shall decide upon the amount of the security fee, which shall be settled according to the degree of the crime and the wealth of the accused and his sureties, and the fee shall be presented jointly by the accused and the sureties.

Art. 6.—The sureties shall be responsible for the appearance of the accused before the court on summons.

Art. 7.—During freedom on bail the residence of the accused shall be fixed by the Judge, and without just reason he shall not go out at large.

Art. 8.—Should the sureties have reason to believe that the accused will endeavour to escape or take measures to conceal his crime, they must immediately report the matter. In cases of emergency they may even arrest the accused themselves. In each case when the sureties withdraw their bail, their money will be returned, and the accused may then, if he can, find other sureties.

Art. 9.—When the accused refuses to appear on summons he shall be immediately arrested, another bail shall not be granted him, and he shall forfeit the security fee. Cases of severe illness and other unavoidable necessities are excepted.

Art. 10.—Whenever the accused, during his freedom on bail escapes, he shall be treated as one who has escaped from arrest or imprisonment.

Art. 11.—Whenever the accused escapes without the knowledge of the sureties, the security fee lodged by them shall be forfeited. But when sureties intentionally allow the accused to escape they shall be punished in the same way as prison keepers who connive at a prisoner's escape; the security fee shall also be forfeited.

Art. 12.—The following persons shall not be permitted to become sureties.

1.—Anyone concerned in the crime of the accused.

2.—Whoever has undergone punishment exceeding five years' hard labour.

3.—The aged, children, women and maimed.

Art. 13.—Where there is only one surety and he should withdraw or die, the accused may procure another in his place. When the case of the accused has been decided, the security fee shall be at once returned.

Art. 14.—Any Judge refusing to grant bail from motives of personal hatred toward the accused, shall be dealt with as if he had arrested an innocent person.

Art. 15.—In the event of an appeal being made to the *Daishin-In* against the judgment of the lower courts, the same regulations shall hold good.

The Commencement of the Satsuma Difficulty.

("Chôya Shimbun," 15th February.)

An ancient writer has well said "The first to act shall be the first to win," and especially true is this in warlike preparation. The ability of a government is shown by the wise measures that it takes to remove all causes for sedition, but more manifestly by the promptness with which it is able to subdue sedition when it suddenly uprears its head. In the event of rebellion breaking out, an able government will fall upon and settle the insurgents before they have had time to consummate their plan of action, and by displaying fitting vigour and promptitude, will deter other factions from combining with those who have set the authority of the state at defiance. These are the measures that an able Government always takes. But if the Government be ever in a state of indecision, wavering and hesitating, a small spark of rebellion may soon spread and become such a blaze that all efforts to extinguish it may be futile. In all countries and in all ages this has held true. A day's indecision may cause the overthrow of an organisation of a hundred years. Victory cannot be gained by hesitancy.

It is well known how promptly the Government dealt with the Saga and Hagi insurrections. The faction, who were urgent for a Corean expedition, attacked the Saga *Kencho*, and dispersed the troops of the garrison, but while the insurgents, exulting over their success, were consulting over the first steps to be taken, they learned that the Minister of Home Affairs had arrived at Hakata with a strong force of Imperial troops. This unexpected promptitude on the part of Government caused the rebels to lose heart. They were thunderstruck, and in alarm they broke and fled. No sooner had Mayebara collected his followers, than troops were posted by the Government at Hagi, and entirely cut him off from all outside communication. Thus was the outbreak quelled before disaffection had time to spread. Now in these cases, had the Government been slow to act, and allowed the insurgents even a week more to work out their plans, it is very doubtful whether the disaffection could have been confined to one spot. These instances clearly prove that in emergencies of this kind no time must be lost in coercing into obedience those who openly revolt against the Government. We see that dark clouds are rolling upon Satsuma. The capture of the Government ammunition took place on the 31st of last month, and although half a month has already passed, we cannot ascertain that any active measures have been taken against those concerned in the affair. Why does the Government delay? Is it that it has not yet actually ascertained whether the Satsuma *samurai* are in revolt against the Government, and therefore has sent no force against them? The only active measures yet taken are the sending of two men-of-war to Nagasaki, and a police force of a few hundred men to Kumamoto and Fukuoka. Certainly the present outbreak seems not one whit less alarming than those of Kumamoto and Hagi. Does the Government imagine that it can be suppressed by the Kumamoto garrison, aided by a few policemen? For own part we doubt it.

From what we can learn we believe that Mr. Kawamura, the Vice-Minister of the Navy, and Mr. Hayashi, the Vice-Minister of Home Affairs, went to Satsuma, and ascertained that the *samurai* have really risen open rebellion, and Mr. Okubo having gone to Kiôto, that the Government will give orders to commmence immediate hostilities.

Saigo and the Southern Rebellion.

("Hôchi Shimbun," 21st February.)

The Satsuma insurgents having shown openly their defiance of the Imperial Authority by sending an armed force into Kumamoto *ken*, an expedition has been ordered against them. We have been waiting for some time past for the Government to take this action, which we hoped it would do at the first symptoms of discontent. But it appears that the Government was willing to act leniently, and not wishing that the innocent should suffer with the guilty, were unwilling to resort to extreme measures. It had therefore been decided that Prince Arisugawa no Miya should proceed to Satsuma, and endeavour to reason the malcontents into obedience. But the attitude of the opponents of the Government becoming more threatening, it was judged advisable to coerce them by force, and consequently an armed expedition has been ordered against them with Arisugawa no Miya at its head.

Look with what promptitude our Government hastens to protect its subjects! We are utterly in the dark as to the reasons for the outbreak in Satsuma, or for what purpose they should make an irruption into Kumamoto *ken*. There can be no doubt, however, that having commenced their march they must be under the generalship of some leader, at whose command they are ready to advance or retreat. Who can this leader be? The people generally believe that it is Saigo. Now at the commencement it was understood that Saigo refused to give any countenance to the movement, and retiring, hid himself. If this be true, he cannot certainly be the leader. Saigo is a man so beloved by the nation, that the people even call him the foundation of the nation, and well does he deserve this laudation, and the honours he has won. Why, then, should anyone suspect that such a man could become a leader of rebellion, and disturber of the peace of a whole nation?

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Moreover, Saigo still holds the office of Commander-in-Chief under the present Government. Although living in retirement, the responsibilities of his position are unchanged, and it is clearly his duty to quell the insurrection, though it cost him his life. If he wished to forego those responsibitities he should have resigned his position under the Government, but as long as he retains his rank and pay, it is only reasonable that he should act as his position demands. Thus arises a doubt as to the truth of the statement that Saigo hid himself at the beginning of the present trouble. Saigo has always been esteemed a faithful and honoured servant of the Emperor. Would such a man hide himself at such a time from fear of risking his life? Or would he quietly sit down and see his *samurai* ravaging a neighbouring *ken* and not attempt to control them? So are we at our wits' ends to know to-day what Saigo is doing.

When at the first breaking out of the rebellion Saigo was asked by the *samurai* to put himself at their head, he is said to have replied: "You may commence if you will, but not before you have severed my head from my body." When we heard this we were full of admiration, but immediately after came the news that he had fled and hid himself. No, Saigo surely cannot be a man to say one thing and do another.

In any case the fact remains that Saigo retains his rank, but from some cause or another does nothing to stop the insurrection. Perhaps he has hidden himself only for a time, still retaining a loyal spirit, and that, when matters are more quiet, he intends to emerge from his retirement and declare himself.

We must then conclude that the rebels have no leader, and their army is like a body without a head and must quickly fall before the Imperial forces. It must not be forgotten that the spirit of discontent has for a long time been gathering in the south-east, ready to rise at any moment. The present affair is very different from the Kumamoto and Hagi affairs. It is the duty of the people, therefore, to zealously support the Government. In a few months how many insurrections have broken out! Does the Emperor stop at Kiôto that he may be on the spot to take command of the forces should occasion require? It depends on the manner in which the present crisis is met whether an end shall be put to these civil wars, and whether there shall be equality (?) among all people. We look with longing eyes to see the Imperial troops victorious.

REVIEW.*

A good deal has been already said and written about the origin of the Japanese raee. Kaempffer makes them out to be Assyrians, and traces their route from the Tower of Babel with as much minuteness as if he had himself been an eyewitness of their journey, while other writers have in turn identified them with the Chinese, the North-American Indians, the ancient Peruvians, and the lost tribes of Israel. A plausibly written article from the pen of Dr. Maget, of the French man-of-war *Cosmao*, which has been lately reproduced in two of the Yokohama journals, endeavours to prove that the Japanese are chiefly of Malay origin, and as he refers somewhat contemptuously to the theory of "the peopling of the Nipon Archipelago by emigrations which with too great complacency are fancied to have started now from China, now from Korea, now from Manchuria," he cannot complain if some of those who with more or less 'complacency' hold this view, at least in so far as Korea is concerned, should do their best to combat his arguments.

Dr. Maget believes that the Japanese are a cross between the Ainos and Malays, the former being the aboriginal occupants of the Japanese islands, and the latter a conquering race which arrived from the southward before the time of Jimmu Tennō, whom, with his followers, Dr. Maget supposes to have been of Malay extraction.

It is known from history that the Ainos once occupied a large part of what is now known as Japan, and there is perhaps an Aino element in the Japanese population, but it would be difficult to show that it has anything like the importance which Dr. Maget's theory would seem to assign to it. At the present time, the Japanese and Aino populations, wherever they come into contract, are like oil and water—there is no mixture, and the notices which we find in history of the former relations of the two races afford evidence that this state of things has existed for centuries. One well-known fact may be referred to amongst many others of similar import, viz., that the office of chastising the Ainos and keeping them within due limits eventually absorbed to itself all the other functions of the Government, and was the origin of the Shôgunate. Facts like this point not to such friendly relations between the two races as would lead to any general absorption of the one by the other, but would rather indicate a state of mutual hostility and repulsion such as may be observed in North America and New Zealand, where the aboriginal tribes are slowly but surely disappearing before the encroachments of the more civilized nations of European extraction.

Dr. Maget bases his arguments for the existence of a Malay element in the Japanese nation on the history and geography of Japan, on the manners and customs of its inhabitants, and also on their physiognomy and other physical characteristics.

His treatment of the historical facts bearing on the subject is extremely perplexing. He tells us that "the first expedition from Malaisia to Japan, or at least the first of of which Japanese history makes mention, landed in Kiusiu at an uncertain epoch, led by a chief called Taipé, who is thought to have last sailed from Formosa, and a little later, the arrival of a second expedition in the same island is mentioned. Now not only does the ancient Japanese history make no mention whatever of a Malay invasion, but Dr. Maget himself tells us a little further on that Japanese history did not begin till Jimmu Tennō's time, when if Dr. Maget is correct, the Malays were already long settled in Kiusiu. A key to this difficulty is however suggested by the name Taipé, which Dr. Maget gives to his Malay chieftain. If Shōjirō is a Japanese, Smith an Englishman and O'Brien an Irishman, surely Taipé can be nothing else but a Chinaman! And so it proves. On consulting Mr. Mayer's Chinese Manual, it appears that Wu Taipeh was born about 1290 B.C. (630 years before the accession of Jimmu Tennō). He was the eldest son of Tan Fu, the Duke of Chow. On his younger brother having been chosen as his father's heir, Taipeh retired with another brother to a wilderness south of the Yangtse, among the barbarous tribes called King man, where he founded a dominion. But is this Dr. Maget's Taipé? It is to be feared that it can be no other, for although Mr. Mayer's work contains no notice of it, there is a story given in some Chinese books of doubtful historical value, to the effect that Taipeh himself by one account, or his descendants according to another, emigrated to Hiuga in Japan, where he or they founded the Japanese nation. Can it be possible that Dr. Maget, being hard up for historical facts to support his Malay theory, allowed his "too complacent imagination" to convert the noble Chinaman Taipé into a Malay invader, and to bring him to Formosa, a place which he does not appear to have ever visited? Except ***both*** versions of Taipé's history are accepted as true, and ***both*** he and his descendants are supposed to have founded the Japanese race, there does not appear to be any foundation for the statement that Taipé's invasion was soon after followed by another.

When Dr. Maget comes to speak of the historical relations between Korea and Japan, his statements are not less bewildering. He informs us that the ancient relations between these two countries, which ceased after the invasion of Taikôsama, had above all a commercial and civilizing character, and at no epoch is any emigration or invasion from this country mentioned in history. These assertions are strangely in conflict with the ordinary Japanese records. The commercial and civilizing character of the Korean relations with Japan may be admitted, but so far from their having ceased after Taikôsama's invasion, Korean embassies continued to be despatched to Japan until the first half of the present century, other official relations were never entirely broken off, and the commerce between the two countries continued without interruption. As to the alleged absence from Japanese history of any mention of emigrations or invasions from Korea, all that can be said is that the old history is full of such notices, and that many of them are reproduced in the chapters on Korea by Dr. Hoffmann which are added to the French edition of Siebold's Japan, a work which Dr. Maget might have consulted with

* Dr. Maget and "The Origin of the Japanese Race."

Original from UNIVERSITY OF CALIFORNIA

advantage. The Koreans took part in the famous invasion of Japan by Kublai Khan, and before that event, beginning with the year 544 A. D., there are accounts preserved of no less than twelve piratical descents of Koreans, some of one or two ships, and others of fifty or a hundred. The important military port called Dazaifu in Chikuzen was established with the express object of repelling these descents. Several instances are also mentioned of Korean emigrants having settled in Japan in considerable numbers. One of these dates so far back as B.C. 27, and another was contemporaneous with Taikōsama's invasion. The descendants of the colonists last referred to occupy at the present time two villages near Kagoshima. They are potters by trade, and have preserved the recollection of their nationality, and even of their language. These facts are of course no proof of an invasion or immigration on a large scale, which must have taken place, if at all, before the dawn of Japanese history, but they show whither the stream of population has always tended since a very early period, and the descents of Koreans in Japan bear an obvious analogy to the Danish descents on the coasts of England after that country had been already occupied by a race akin to themselves. The building of the great wall of China in the third century B.C. as a protection against the fierce tribes inhabiting the country immediately to the north and west of Korea and known in European history as the Huns, is a fact which suggests similar inferences.

If Japanese history is to be relied upon, no other country had one-tenth part so constant and intimate relations, peaceful or the reverse, with Japan, as Korea. Until quite a late period, the Malays do not seem to have been even known to the Japanese, except under the vague designation of "*Namban*", a term which would comprise many other races, and which was, in fact, afterwards applied to the Portuguese and Spaniards. The only piratical descents by Namban which have been recorded in Japanese history belong to the three years 997, 998 and 999 A. D. They are represented to have landed on an island on the coast of Kiushiu, where thirty of them were taken and put to death by the Dazaifu troops. It is true that Dr. Hoffmann mentions another descent of Namban in 1020, but as it is not noticed in the ordinary Japanese histories, there is perhaps an error here, and at any rate it cannot have been of much importance. These Namban may have been Malay, and in spite of the difference between the Japanese chronology and Dr. Maget's, it seems probable that it is this descent which is referred to by him in the following terms. "It was probably much later that that invasion set out from Malaisia consisting of men from a more distant country than China, which according to tradition burst upon Japan (in the year 848 of our era) in such numbers and so well armed, led by a chief or Rôjô, whom it required more than nine years to overcome, and some being still left eighteen years after their arrival." The Japanese accounts, however, say nothing of their numbers or their weapons, or of its requiring nine years to subdue them.

Before quitting the ground of history, it may be well to notice one or two points in the old legendary lore of Japan which may perhaps be thought to have a bearing on the present subject. Legends are frequently nothing more than history more or less disguised, and it is sometimes possible to make a likely guess at the historical fact which underlies an obviously mythical narrative. It is thought, for instance, that the legend of the descent from heaven of Jimmu Tennō's ancestors in the province of Hiuga may represent the fact of an invasion from abroad having landed there, and that from the geographical position of Hiuga an invasion from China is most probable. Without expressing any opinion as to the probability of this explanation, it may be replied that the hypothesis of a landing in Hiuga is by no means inconsistent with the theory of a Korean origin of the Japanese. Besides there were no doubt repeated landings in different places, and if the descent from Heaven of Jimmu Tennō's ancestors in Hiuga represents a foreign landing there, a similar explanation must be applied to the story of the descent of the gods to Idzumo, a province lying opposite to the Korean coast, and to the legend of the "*Ama no ukihashi*," or 'floating bridge of heaven,' which is said to have been used by the gods on their visits to Japan. Tradition places this bridge near Miyadzu in Tango, the first good harbour on the north coast to the eastward of the Strait of Shimonoseki.

Dr. Maget's arguments from geography have much more to recommend them than his proofs from history. There is no little force in his observations on the effect of the Kuro Shiwo and of the south-westerly monsoon in facilitating the approach of invaders or emigrants from that quarter, and the chain of islands which extends with little interruption from Japan to Java is certainly a consideration not to be overlooked. But nature seems to have provided these facilities in vain in so far as the Malays are concerned. If the doubtful and solitary instance of the Namban mentioned above is excepted, what authentic case is there of Malays ever having reached the shores of Japan in their own vessels? Dr. Maget mentions but two cases of castaways from the southward, and in neither does he say that the crews were of Malay race. If now we turn to Korea, we see a strait of little more than ninety miles in width with the large island of Tsushima in the middle, provided plentifully with excellent harbours. The mountains of Tsushima can be seen in clear weather from the Korean coast, and a vessel leaving Korea for Tsushima or Tsushima for Japan in the morning with a fair wind, may count on making a port before nightfall, an immense advantage in the infancy of navigation. It has been seen that these geographical conditions have produced their natural results in the close relations which have existed between the two countries. Against Dr. Maget's two cases of castaways from the south may be set Siebold's testimony that "the storms from the northeast which are so common in Japan during the spring, cast on her shores almost every year Korean fishing or coasting craft." In fact cases of this kind are so common that the two Governments found it necessary to come to an understanding regarding them, and the breach of this agreement was one of the subjects of complaint against the Koreans by the Japanese before the conclusion of the late treaty. In 1867 as many as forty Koreans were at Nagasaki waiting for an opportunity of returning to their own country, and several Korean boats have been driven to Japan during the present winter.

Dr. Maget's observations on the similarities in manners and customs of the Japanese and Malays are too general greatly to advance the solution of the question, but this is a field of enquiry which may be expected one day to throw much light on the subject of races. At present, however, our knowledge is too imperfect to allow such an investigation to be prosecuted with much chance of success. In Japan, for instance, an erudition such as probably no European at present possesses would be necessary to avoid confusion between native Japanese customs and those borrowed from China, and to distinguish between customs of recent origin, and those which may be supposed to have descended to the Japanese from ancestors common to them with other races. Without some knowledge of this kind, a comparison of the manners and customs of the Japanese with those of other races, is entirely useless. Dr. Maget, for instance, adduces the Japanese *mage*, or topknot, as a proof of the Malay origin of the Japanese, but this fashion is only 200 or 300 years old in Japan, and can therefore have no connection with any similar Malay custom. Cock-fighting was probably introduced from China, and the custom of *harakiri*, which is compared to the Malay *amuk*, is no doubt another form of the custom which is described by Dr. Maget, under the name *yashiro*, as having been borrowed from the Ainos by their conquerors. The proper name of this custom is not *yashiro* which means a Shintô Shrine, but *junshi* or *oibara*, and it did not consist in sacrificing the retainers of the deceased to his *manes*, but was a sort of Suttee, or self-immolation in grief for the departed or in honour of his memory. This custom is not altogether unknown even at present, an instance of it having occurred a few years ago. Dr. Maget's account of its abolition is characteristic. He says that it was not abolished until some years before Christ on the occasion of the death of an empress, at the suggestion of an artist, or *fasi*, named Nomi no Sukune, who was allowed to substitute figures of baked clay for the human victims. Buddhism, which was then flourishing in full vigour, had doubtless

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

already prepared the way by its pacific doctrines for this work of humanity. The Japanese story should be compared with this. It runs somewhat as follows:—In the reign of Suinin Tennō there were in Japan two men of great strength, one in Yamato named Tayema no Kuyehaya, the other in Idzumo named Nomi no Sukune. The Mikado sent for them and made them wrestle before him, when Nomi no Sukune broke his antagonist's ribs, and stamping on his loins, killed him. As a reward for his victory, he received the grant of land previously enjoyed by his opponent and was taken into the Imperial service. It was at the suggestion of this humane individual that the Mikado, on the death of his consort A.D. 3 (not before Christ as Dr. Maget has it), prohibited the custom of *junshi*, and sending for 100 potters from Idzumo caused them to make figures of men and horses in baked clay which were set up round the tomb as substitutes for living victims. The Mikado had already on a previous occasion expressed his horror of the custom, so that it is unnecessary to give Nomi no Sukune any very great credit for his humane suggestion. The clay figures were made under the superintendence of Sukune, who therefore received from the Mikado the surname of *Hasi*, or 'Potter.' He is still remembered by the people as the first wrestler in Japan. Dr. Maget's statement that Buddhism was flourishing in Japan before the Christian era betrays a strange ignorance of Japanese history in a writer on the origin of the Japanese race. Buddhism was not introduced into Japan till A.D. 552, and it can not be said to have been flourishing until considerably later.

The most conclusive evidence of the origin of the Japanese race, viz. the evidence of language, has been passed over by Dr. Maget in almost complete silence. The Japanese race from Yezo to Loochoo speak a uniform language with little more variety of dialect than may be found among the English speaking population of the British islands, and this language is now fully admitted to belong to what is known as the Altaic and Turanian family, of which the principal branches are Turkish, Mongol, Manchu and Korean. Of the last-named tongue scarcely anything was known until lately, but a short grammar of Korean published some time ago in the "Histoire de l'Eglise de Korée" affords evidence which goes far to prove, that of all the languages of the Altaic family, Korean is the one which has the closest affinity with Japanese. In both languages the nouns are indeclinable, the cases being marked by separate particles, the adjective has a conjugation resembling that of the verb, and there are distinct forms for this part of speech when placed before the noun and when equivalent to the adjective combined with the substantive verb. In neither language are there any relative pronouns, and the want is supplied in the same way in both, viz., by the use of attributive or qualifying instead of relative clauses. The mode of conjugation presents a general resemblance, and the syntax is almost identical, the order of words being precisely the same in each, and the rule by which when nouns, adjectives or verbs are coördinated in the same sentence, only the last of the series takes the distinctive case-sign or termination, holding good in Korean as well as in Japanese.

The Malay language, on the other hand, presents very different characteristics from those of any of the Altaic family. There is no trace in it of that elaborate system by which the order of words in a sentence is regulated in all of them, and it has rules of construction of its own which proceed on quite different principles. The conjugation of the verb is entirely dissimilar, and a preference is shown for prefixes, which are repugnant to the genius of all the Altaic tongues.

The Aino language is very imperfectly known to us, but it is pretty well ascertained that it has no close relationship with Japanese, and is more akin to the languages spoken by the tribes inhabiting the most northerly parts of the Asiatic Continent.

The fact that the Japanese nation speaks a language closely allied to Korean is tolerably conclusive evidence that the main element in the population must be a kindred race to the present Koreans. It is true that the minority of a population has often imposed its language on the majority, as may be seen in the case of most of the Roman conquests, but in an invasion of Japan from Korea all the conditions are wanting which could bring about such a result. The civilization of the early colonists of Japan was of a low grade, and history shows that it was not until many centuries after their immigration that anything like an organized system of Government for the whole country was established. It must therefore have been by the sheer force of numbers that their language has become the language of the entire population of Japan. Indeed the probability is that any non-Mongol element in the Japanese race is utterly insignificant. Like the Israelites in Palestine, the Japanese invaders probably preferred to extirpate or drive out the former inhabitants of the country rather than to absorb them amongst themselves, and it is no doubt this same process of which we can trace the continuation in historical times in the gradual expulsion of the Ainos from the main island of Japan.

There remain to be considered such arguments as are to be drawn from a comparison of the physical type of the Japanese with that of other races. Here, as a medical man, Dr. Maget is on his own ground, and his observations on the physical characteristics of the Ainos and Japanese are of great interest, and form by far the most valuable part of his essay. The detailed comparison, however, which he enables us to make of these races, rather strengthens the impression of an ordinary observer that the two types are essentially different, and indeed Dr. Maget himself seems to be in some degree aware of this. Other competent observers have denied that any Aino type is to be discovered among the Japanese population.

Dr. Maget does not attempt to disprove what has hitherto been considered the central fact respecting the physical type of the Japanese race, viz., that it is unmistakeably Mongol. Gutzlaff, writing in 1833, says that the Japanese are "stamped with the true features of the Tartars," and this opinion has been repeatedly confirmed by subsequent observers. The Prussian expedition to Japan of 1860 found that 'the Japanese most resemble the Mongolian race in the form of the skull." Indeed, the resemblance is so obvious that it at once strikes the eye on comparing drawings of individuals of the two races, and more accurate means of comparison confirm this impression. It may be objected that the Koreans, to whom the Japanese are believed to be most nearly related, are taller than the Japanese, and that many of them have a more Chinese cast of face. But it should be remembered that most Koreans seen in this country are fishermen, a class which even in Japan is distinguished for stature, and that in historical times the Korean nation has received a considerable infusion of a Chinese element. The Korean Embassy, however, which lately visited Japan, averaged but little above the ordinary stature of Japanese, and those who have seen two Koreans from the north-eastern province of that country who lately came to Yedo from Vladivostock, will have observed that in Japanese dress they are in no way distinguishable from Japanese.

In the southern provinces of Japan a certain admixture may be observed of what looks very like the Malay type of countenance. Until confirmed by more accurate and systematic observation, resemblances of this kind are apt to be deceptive. Portuguese have frequently been mistaken for Japanese, but there is no reason to suppose that there is any affinity between these two races. It is, however, quite possible that a real Malay element does exist in the Japanese population. History is neutral on this point, geographical considerations tell rather against such a supposition, and language only indicates that the Malay element must have been a comparatively inconsiderable one. The question therefore may as yet be fairly considered open, and presents an inviting field for research. Unfortunately such an investigation requires what it is feared is a rare combination, viz. a competent acquaintance with the manners, customs, language, and history of both Malaisia and Japan, and we may have long to wait before any satisfactory solution of this question is arrived at.

The conclusions which it is sought to establish by the considerations adduced above are briefly as follows:—

1.—The Japanese are of Mongolian origin, and are probably more nearly akin to the Koreans than to any other existing race. They arrived in Japan at some unknown period before the beginning of Japanese history,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and probably started from the southern and eastern coasts of Korea, landing at various points along the Japanese coast from Hizen to Echizen.

2.—The Aino element in the Japanese population, if it exists, is so small as to be imperceptible.

3.—A Malay-looking type is observable in the southern provinces of Japan. It remains to be proved whether or not this represents an immigration of Malays at some remote period. Such an element, if proved to exist, cannot have been a preponderating one.

MR. NATHAN J. NEWWITTER AND THE KOBE COMMUNITY.

(From an Occasional Correspondent.)

Your readers may be amused, if not otherwise interested, in reading an account of the proceedings consequent on Mr. Nathan J. Newwitter's late impertinent attempt to intrude upon the Mikado. Naturally indignant at his unauthorized assumption to address His Imperial Majesty in their name, the members of the Municipal Council called on him immediately to convene an Extraordinary Meeting of the body to receive what explanation he had to give—which was accordingly done, and the meeting assembled on the 14th instant. Mr. Nathan J. Newwitter explained that he had presented the address with the sanction and authority of the *Gon Rei* of the *Ken*, Morioka Masadzumi, and further said that he had in so doing, only anticipated, he imagined, the wishes of the Council and Community.

This was not considered satisfactory, inasmuch as Mr. Annesley, H. B. M. Consul, told the meeting that he had been informed by the Governor that Mr. Nathan J. Newwitter's statement was not strictly within the bounds of correctness. Mr. Nathan J. retorted by saying that his word was just as good as that of Mr. Annesley or the Governor; and an elected number of the Board, seconded by a Consul, offered thereupon a resolution that Mr. Nathan J. should resign the chair. This the Chairman refused to put to the meeting, on the ground that the extraordinary meeting was called only to receive his explanation, that it had received his explanation, and that no action upon it could then be taken. The resolution had accordingly to be held over to take its regular place in the business of the next ordinary meeting of the Council, on the 17th instant, and an eligible opportunity was thus afforded to Mr. Nathan J. to retire, in the interval, gracefully into private life, and resign the chair before the resolution was put, of which I should imagine he now regrets he did not avail himself; for verily, the last state of this man is worse than the first. At the ordinary meeting of the 17th I was present, and so were a very large number of the residents at Kobé, including all the principal merchants and leading men in society; and I venture to state that never, in all our experience in the East, was such a painful exhibition made of himself by a man whose position gives him, under most circumstances, a right to respect, as was made on this occasion by Mr. Nathan J. Newwitter. After the usual reading of minutes, the business of the Meeting was opened by the Chairman calling for the Finance Committee's Report for the past year. This having been postponed by a vote with only one dissentient, the Chairman proposed to read some correspondence, which was postponed in the same way; as also were other Committee's Reports, the Meeting evidently insisting on coming to the real question before the meeting, Mr. Rasch's Resolution that Mr. Nathan J. Newwitter be requested to resign the chair.

This point having been reached, the Resolution, as given in the *Hiogo News* of the 17th instant, was read by Mr. Rasch and seconded by Mr. Duplaquet, and Mr. Rasch called on Mr. Annesley to make a statement which he was given to understand had been entrusted to him to make on behalf of the Governor. Mr. Nathan J. Newwitter here interrupted the speaker by declaring that he would not put this Resolution, as being out of order from its disrespect to himself as chairman. However, after a good deal of animated discussion, he put to the meeting the question whether the statement of the Governor should be read. This was answered unanimously in the affirmative and Mr. Annesley then read a letter from the Governor, in reply to one from himself, in which he had asked whether it was true that Mr. Nathan J.'s address had been presented to the Mikado, with his sanction and authority. The Governor's letter was exceedingly clear on both points, that neither Mr. Nathan J. nor his address had been presented, and that, so far from the attempt having been made with his sanction and authority, it was done in direct opposition to his expressed wish, as he had taken a good deal of trouble to make Mr. Nathan J, understand that no such address was wanted, or could be received. He went on to explain that Mr. Nathan J., having failed to appear in the Hall of Audience, when some of the other Consuls were presented to the Mikado by their Ministers, had subsequently turned up in a sudden and unexpected manner among the waiters at the back of his chair, while seated at tiffin with the Mikado, and had pressed upon his acceptance the valuable address which he so pined to present to the Son of Heaven. He had declined the document again and again, until—to get rid of him—he, as he says in his letter, "good-naturedly passed it *secretly* to an official of the Court of Ceremonies." And what that official did with it, deponent knoweth not—probably it assisted in warming the Imperial Bath.

The letter having been read, Mr. Nathan J. objected to its being put on the minutes, on the ground that having been translated in the English Consulate, it was probably not carefully rendered, and that the Governor ought to have attended the Council himself, or to have sent his own translation of his letter. He then proceeded to deny the Governor's statements, and the discussion again became animated, the large audience of outsiders being with some difficulty restrained from joining in it.

But Mr. Nathan J. had not yet sufficiently distinguished himself. Mr. Rasch having again asked that his Resolution should be put to the meeting—the President, interrupting him, said that he had a matter to bring to the notice of the Council in the accounts of the year 1875. He then gave particulars of a small bill for $29.70, for certain charges for preparing the Municipal Hall for a ball given in the name of Mrs. Annesley, on the occasion of Sir Harry Parkes' visit to Kobe in May of that year:—so much for carpenters for planing the floor, coolies carrying chairs, 2 lbs. of tin tacks and half-a-pound of tenpenny nails, etc. This item in the Municipal accounts he claimed should have been paid by Mr. Annesley, and Mr. Nathan J. averred that it had been presented to him for payment by the Municipal Superintendent, and refused: whereupon it had been paid out of the public purse. As the speaker was one of the Auditors who had passed, and signed, the whole accounts of 1875 as correct; it appeared odd,—to say the least of it—that he should have referred to it on the occasion:—so odd, indeed, to many of those present, that I, for a minute, was in doubt whether Mr. Nathan J. would have left the room by means of the door. Of course the necessary explanation was given immediately by the other Auditor, who stated that the Ball was really a semi-Municipal affair, and that the bill in question had never been seen by Mr. Annesley, which the Municipal Superintendent and Mr. Annesley both confirmed. This incident closed the meeting abruptly, for the three elected Members of the Council immediately left their seats, stating that they would not sit at the Board so long as Mr. Newwitter remained in the chair, and Mr. Newwitter clinging to that piece of furniture, announced the meeting adjourned.

You will find a fuller report of the proceedings in the next number of the *Hiogo News*.

It is hardly necessary to say that, amongst all nationalities there is only one opinion upon Mr. Nathan J.'s conduct. A letter was immediately sent in to the Committee of the Club requesting it to take the needful steps, but those interested in that pleasant little society will be glad to hear that resignation, in this case, anticipated expulsion. What action the Board of Consuls will take is at present unknown; a meeting will take place on the 22nd instant to determine. What action the U. S. Consul-General or Minister will take, you will soon, we all hope, be able to inform us.

I have to close this letter hurriedly: but no other subject seems to interest people here at present—and we have no news from the seat of war.

JAPANESE TALES.

"*GATA GATA, GUDSU GUDSU, CHIRIN CHIRIN, SAC SAC,*"
OR
HOW FOUR WICKED LITTLE BOYS SERVED A REVEREND PRIEST.

In the pleasant precinct of Asakusa, where the sun shines brightest the whole year round, in all the broad city of Yedo; where the perennial crowd of sightseers and worshippers wear their happiest faces and their best attire, and the knots of pretty maids aglow with health, and resplendent in many colours, shed such a lustre upon the shifting scene as they mingle here and there together, then separate, and meet again, that the crowd seems to be always changing colour as it moves—there lived, many years ago, a learned priest named Tsuda. Great was said to be his piety and profound his knowledge of his craft. And well it might be, for many a friend and neighbour had often times remarked that, long after other folks had blown their lights out and gone to bed, Tsuda's lamp was usually unextinguished, and signs of Tsuda's self being up and doing very evident. Rigorous were said to be his fasts, and so severe his penances, that the wonder was not only how he contrived to stand the discipline at all, but how in truth he looked so well upon it. Nature is kind to such as use her well, however, and don't outrage her, and so it was, perhaps, that for all his midnight vigils, Tsuda's body waxed not lean, nor did his eye grow dim nor pale his cheek, nor his nose, either, for the matter of that, for to say truth it was of so brilliant a ruby tint that it almost made one's eyes water to behold it. A jolly red nose it was, as ever was seen,—a fast colour warranted not to fade or change in the washing.

He was a rare old fellow, to be sure, was Tsuda, with his glistening bullet head, and his well shaved face which multiplied its area by a double chin, as if there couldn't be too much of a good thing, and a person—if the possibility of seeing one's toes without the aid of a looking glass he insisted upon as a criterion of reasonable leanness—decidedly inclined to corpulence. For it could hardly be averred, with the smallest probability of its ever being believed, that his reverence could, by the most superhuman effort, see over a certain rotundity below his girdle, and thereby catch even the most transitory glimpse of the useful appendages in question, without the friendly assistance of the mirror aforesaid. A merry twinkle, too, in his coal black eye—ever at issue with the portly and pompous gait which he assumed in virtue of the dignity of his position—accorded not inaptly with his other characteristics.

His obesity was indeed wonderful, to say the least of it, in a man who so constantly denied himself all but the bare necessities of life, as was said—by himself, and his rubicund nose almost an affliction to so abstemious a person as Tsuda, inasmuch as it afforded to certain ill-natured and censorious fellows a peg to hang scoffs and ribald jokes upon. And it might have gone hard, it most be confessed, with Tsudas reputation, were it not that everybody who knew anything at all, was well aware of the usefulness of wine as a detergent for wood and brass work and lacquered vessels, otherwise indeed the quantities of good old *saké* which found their way in to the temple might have been turned to account with truth, by those whose delight it was to touch their noses at sight of Tsuda, and wink to one another, and throw back their silly heads and make believe to swallow down copious draughts, and smack their lips afterwards, and rub their stomachs, as of they found the liquor greatly to their taste. It is lucky, however, that in such cases it often happens that circumstances not immediately appertaining to the individual suspected are the best witnesses in his favour. And so it was in this case, for if any testimony were wanting to the frugality of his household, no unprejudiced person had need to go beyond that presented by the acolytes who waited on him and did odd duties about the temple, as became four little shavelings who hoped to be priests themselves some day. For four bonier and more utterly miserable little manikins it would be difficult to find in a day's journey anywhere. Their leanness was indeed extraordinary and a comfort and edification no doubt to those who loved to fast by proxy. And yet it was curious too, for Tsuda vowed—and who could know so well as he—that he spared no expense upon them, but fed them plentifully—except on fast days. Under such circumstances there was only one way left by which it could be accounted for. It must have been a judgment upon the little rascals for setting agoing so improbable as story, as that every day was a fast day and, that their master only gave to four, what would but indifferently suffice for one.

A full stomach promoteth contentment, and contentment predisposeth to repose—sounds so like a proverb that it must be true, and if true, these wicked little boys belied themselves, for four more voracious little sleepers never laid their heads on pillows. It chanced, however, that one night, for some reason or other, one of them found he could not close an eye—perhaps he had overeaten himself at supper and had a nightmare for his pains, or had grumbled more than usual that day against his good master and was troubled in his conscience in consequence—for twist and turn as he would he could not get a wink of sleep, but was forced to spend his time in listening to the rats behind the woodwork, and waiting for the daylight. Several hours had passed in this way and it must have been past midnight, when he was startled from a reverie by hearing noises of a most peculiar character proceeding from the chamber where his master spent his time in study when—he was not sleeping. First there came a sliding sound like *gata gata gata*; then, after an interval, a splashing and gurgling like *gudzu gudzu*; then after a considerable pause a bubbling, for all the world like *chirin chirin*; and finally a most extraordinary sound like, *sac sac sac sac*, which strange to say made his mouth to water in quite a remarkable and unaccountable way. It need hardly be said that the sun had no sooner called them from their beds when the other three knew all about these noises of the previous night, and all four had made up their minds to lie awake and listen, and if the noises made themselves again apparent on the night following, to apply an eye apiece to four holes which the wicked little monsters had previously prepared in the good man's paper door, and so find out all about them. Nor were they destined to be disappointed, for hardly had the great bell tolled the midnight hour when the rumble of *gata gata* was distinctly heard, and four wriggling little shaven pates, crawling on their hands and bony knees, might have been seen hurrying along the matted corridor towards their master's room.

Strange must have been the sight which met their eager gaze, and interesting, withal, for it was full two hours before they left their spyholes, and sought again their padded quilts and wooden pillows; and stranger yet than all, the effect it seemed to have upon their conduct and demeanour next day.

For Tsuda had hardly left his chamber when the four little starvelings, more gaunt and hollow-eyed than ever, from want of sleep, no doubt—and possibly excitement—advanced to meet their smiling master in a body and craved leave to speak to him. "We beg a favor of you," said the eldest of them, "and hope you won't refuse us. We are dissatisfied with the names our parents gave us and would fain change them, with your permission." "Oh! if that's all"—replied his reverence, whose brow had clouded up a little at first and nose assumed a fierier tint than usual, like a piece of smouldering charcoal suddenly exposed to a draught of air, but expanded and cooled down when the speech was ended,—"if that's all I haven't the ghost of an objection." "Please Sir! will you call me *Gata*, then, for the future? said number one. And me *Gudzu*? And me *Chirin*? And me *Sac sac*?" said each of the little fellows in succession, with an eagerness that was so amusing that Tsuda was mightily tickled thereby, and was only stopped laughing—good easy going soul—by a cough which shook him so violently that he was obliged to swallow a cup of tea before he could regain his breath.

Ah! unsuspecting Tsuda. How often are we least concerned when it behoves us most to be upon our guard. Little did the good priest guess what lay in store for him, or he'd never have listened so good humouredly to this strange request. It must be said, however, that he was not long in finding out the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

bearing of it. For hardly had he that very night, having attired himself in easy garments and trimmed his glowing fire, essayed to open the door of a portentous closet in his room (which he kept carefully locked at all times, and which after the manner of some sliding doors moved so grudgingly in its groove that it grumbled *gata gata gata* as it was pushed,) than at the first sound of the gruff slide a loud "*hai*" was heard, and starveling Number One bounced into the room to know what he wanted. Bounced in so precipitately, indeed, that Tsuda had only time to pull to the closet door again, and drop upon his knees and affect an unconcerned manner as he made his appearance. "Did you call?" said the conspirator. "No," said his master, in a husky voice and in some confusion, for his heart beat fast and the sudden exertion told upon him. "No, go back to bed. I do not want you." "I beg your pardon, Sir," replied the wicked boy—quite innocently as it were—"but I fancied you shouted *Gata*."

Quiet being restored and the fire burning brightly, Tsuda picking up his heavy carcase, thought he'd essay to open the closet door once more, but he'd hardly laid his hand upon it when a loud "*hai*" was heard again and he was interrupted as before.

Now this was intolerable. The night was creeping towards the small hours, and Tsuda wanted his supper, but was unable to obtain it for this horrid boy, who, as often as he attempted to get at it, so surely intruded on him. What was to be done? Either he must go supperless to bed or share it with his unintentional tormentor. Like a wise man he chose the latter, and with his help prepared materials for a savoury mess But no sooner had they commenced to pour them into the pot which hung from the tripod over the fire, than at the first splash of *gudzu gudzu*, with a loud "*hai*," conspirator Number Two came running in and caught them in the act. There was no help for it now, so putting in a double quantity the three sat down to watch the boiling of it, and restrain their impatience as well as they each were able. Presently it commenced to simmer, and then to bubble, and then to boil, *chirin chirin*, in such good earnest, that the sound of it reached the ears of Number Three —in his position outside the door where the naughty boy was standing, instead of being in bed as a better boy would have been—and sent him into the middle of the room with so loud a "*hai*," that he startled the others and received quite a scolding from his master for his want of manners, which, if the delicious smell of the stew had not engaged all his attention, ought to have made him feel so abashed that he would never have been satisfied with himself without going down upon his two knees before his master and imploring forgiveness. As it was, however, he only fell upon his knees before—the pot, and did not even wait to be invited, but took his place quite as if it was a matter of course. But when the Mess being ready they all begun to sup it up, *Sac sac, sac sac*, and push it into their mouths with chop sticks and swallow it down with haste, poor little Number Four could contain himself no longer, but rushing in without saying "*hai*," or anything else, seized hold of a bowl and fell to with such vigour, that it was quite evident that he was afraid, from the start which the others had of him, that unless he made great haste to overtake them, he'd be left behind.

In such wise did these four wicked little boys deceive their worthy master and make him share his supper with them.

THE WIFE'S TRIUMPH.

(From a Japanese Play.)

Fiercer within my breast the battle grew:
Now sweet Ohana, gem of brightest ray,
Would lead me captive with a winning word;
Then your fond looks would fill my heart with pain
And your sad face bring sorrow to my dreams.
But, as the moon's reflection on the sea
Still keeps its place though mounting billows roll,
Your steadfast purpose lasted through the storm,
And I am drawn again to purer ways.
Stands a proud rock above a patient stream
That wanders wimpling through pine-scented glades
From fairy fountain on the purple hills.
No arrow shot from strongest archer's bow
Can pierce the cruel stone. With angry frown
He scorns the courting water of the stream,
And casts a careless glance upon her smiles.
But undismayed the gentle current flows,
Lifting her loving arms in close embrace,
And making summer sweeter with her song;
Till, inch by inch, the hard rock melts away;
The glad stream rushes through his inmost heart,
And laughs and claps her tiny hands for joy.
Henceforward, O my darling, there shall be
Unclouded skies and love that cannot change!

KAJIN.

Correspondence.

NOMI DAISUKI *vs.* J. W. SUTHERLAND.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 24th February, 1877.

DEAR SIR.—In consequence of a remark said to have been made by His Honour, which appeared in your issue of the 23rd instant, I write this letter hoping you will kindly publish it.

Mr. A. Jaffray made a remark to the Court at the conclusion of my evidence, which has thrown a doubt on my truthfulness, for that reason I wrote to him as follows:

Yokohama, 23rd February, 1877.

MR. A. JAFFRAY.

SIR,—At the conclusion of my evidence in yesterday's case, you made a remark to the Court, which at the time I did not perfectly hear, as I am somewhat deaf. The remark was to the effect that you would not accept my evidence as it was too conflicting or contradictory. You spoke as Foreman of the Jury, and I therefore write to you now to ask you to inform me by letter, how, or in what way my evidence has appeared to contradict itself, and warranted you to make that remark which reflects upon my veracity. I hope you will kindly answer this letter at your earliest convenience, and am,

Yours truly,

W. A. SMYTH.

The letter was returned opened and has remained unanswered. Soon afterwards I was informed by another juror, whom I visited with the same object in view, that Mr. Jaffray had spoken thus without his sanction, and he thought in rather a harsh manner.

I wish to make this matter public in order that the community (many of whom have known me for years) may not think that I have accepted the slur which Mr. Jaffray's remark has cast upon me. On the contrary I deny the imputation.

Had Mr. Jaffray seemed in doubt about any part of my evidence, he could easily have had the same explained by asking, without making such an uncalled-for remark.

I am, your obedient servant,

W. A. SMYTH.

The Union Bank of London and the London and County Bank have given notice to their customers that from and after the 31st of January no interest will be allowed on the balances of current accounts. The existing rules as to interest allowed on deposit accounts will remain unaltered.

It is understood that at the election of Governors of the Bank of England to be held in April next Mr. Edward Howley Palmer, the present Deputy-Governor, will be proposed as Governor, and Mr. John Willian Birch, of the firm of Mildred, Goyeneche, and Co., for many years a director of the Bank, as Deputy Governor.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Tuesday, 20th February, 1877.

HONGKONG AND SHANGHAI BANKING CORPORATION *v.* PETER GERHARD HANSEN.

Accused was charged with forging, uttering (and aiding and abetting in forging and uttering) with intent to defraud, a bank-note of the Hongkong and Shanghai Banking Corporation for $500, and with conspiring, with other persons, to forge and utter such bank note and thereby to defraud.

Mr Dickins appeared as solicitor for the prosecutors, who were also represented by Mr A. H. C. Haselwood, Accountant.

(Continued from 13th instant.)

George Washington Elmer, U.S. Deputy-Marshal, sworn:—I know prisoner. I was present at his arrest. He was arrested upon information given by Williams to General Van Buren. I got the warrant from Mr Bavier addressed to the Chief of Police. We went into Peter Clausen's and found him there. Prisoner admitted he was a Dane by birth but a British subject. The sergeant took him to the British Consulate. He was eventually given up to us and was put in the Consular goal. Prisoner said nothing about the charge because we did not tell him anything about it. Sergeant Loxton and I searched his house. We found 403 *rios* in Japanese money; a leather satchel and several other things in a little room that was locked. We found some dirty clothes, smelling strongly of chemicals. We found a bottle containing stufflike photographic liquid. We found a square piece of glass about a quarter of an inch thick, covered with a thick gummy substance. Sergent Loxton found a piece of paper which I discovered to be exactly like the paper of which the counterfeit notes are made. In the grate we found a lot of burned paper; also a sheet of similar paper in a tin box under the desk on the floor.

Yang Pow King, cautioned, stated:—I am a money changer at No. 136. (Witness' statements were translated by the *Saibansho* interpreter.) I remember the note for $500 being presented to me. When I first saw it, I thought it was not so plain as the other notes. The paper was stiff and I could not tell whether it was genuine or not. That is the note (produced). I asked the man who produced it what sort of money he wanted. He said Japanese. I was getting the money ready but was not quite sure if the note was right, so I ran down to the H. K. & S. Bank and showed it to the compradore. The compradore took it to a European clerk, then sent out for a policeman to watch me. I said the note had been presented by a foreigner. A foreigner belonging to the Bank came round with me to my place at No. 190, and found the foreigner there. The note had been taken to No. 190, the shop of a friend who brought it to me at No. 136. I told my friend not to let the man go. When the note was first brought to me I ran down to Japanese town, but not being able to change it there I went to the Bank. Then I went to No. 190, and told my friend to watch the foreigner. (A Chinaman in Court here cried out to witness. His Honour requested the usher to turn him out.) The Compradore and a clerk went with me to No. 190, and found the foreigner there. I sent for three Japanese policemen. The foreigners staid there for two hours and a half; finally they went away with the man who presented the note. (Witness now identified Williams in Court.) My friend's name is Chun Mow; he is present in Court.

His Honour, after examining and re-examining witness, informed Mr Dickins that on account of the many contradictions the evidence had better be struck out. Mr Dickins asked his Honour to take it for what it was worth. The main points were clear that the note had been presented and that witness saw it. His Honour said he would try to get it clear if possible, and continued to question witness. The evidence of the Chinaman who had been put out was now taken.

Wong Chun Mow, cautioned:—I am a money changer at No. 190. I remember a foreigner coming on the 6th instant to get a note for $500 changed I could not tell whether the note was good or not, so I took it to No. 136. That is like it (note shown). The manager of the Bank and a clerk came to No. 190, with the compradore and last witness. I got three Japanese policemen, who prevented the foreigner from leaving the house. I recognise Williams as that foreigner. He wanted change. I did not change it because I was not sure about it. I had not the note with me when I went to No. 136. I left it in the foreigner's hands. The manager of the Bank at last took Williams away.

Antoine Williams, recalled:—My real name is Hakenson. Bennett told me he had several notes; that was some days before he gave me one to change. I suspected but did not know it was a forged one. He told me once how the paper was made from which notes are manufactured. I was not to tell the men I met every day where all the money came from. He said he made the notes himself. He did not say who assisted him.

To prisoner:—Bennett told me he got the money from you to buy the apparatus. He said he made them alone.

Witness asked leave to state in contradiction to the evidence of last witness, that when the Chinaman left the shop he took the note with him, and did not leave it in witness's hands. Witness did not know whether the Chinaman changed it or not. He might have had a counterfeit before that.

George Hansen, recalled:—Antoine Bennett did give me five notes for $500 each to change. They were similar to these notes shown to me. That was on the 5th instant. He said it was Gerhard Hansen's money. I looked at one note. The number I do not remember, I was in Gerhard Hansen's house on the night that Bennett was arrested. I went there to inform him that Bennett and Williams were arrested. I went there because I knew that Bennett and Gerhard Hansen were good friends. I exchanged a note from Gerhard Hansen in Yokohama. It was not one of the five that Bennett gave me. I don't remember the number but it was for $500. It was between two and three o'clock in the afternoon that I went to the exchange shop in Yedo with one of these notes. I was not surprised when Bennett gave me the notes, because he said it was not his own money.

To prisoner:—I said that Bennett's servant sent me to your place about eleven o'clock at night. It was on the Monday I tried to change a note in Yedo; that was not the note you gave me, but the one Bennett gave me.

Adjourned till half past two o'clock.

When the court resumed in the afternoon Mr Dickins recalled

Antoine Bennett:—My real name is Harken Kirchoff. That is my handwriting (shown). That is the paper of which the notes were made. George Hansen asked me for the five notes. He knew that I had made them for I told him about it.

Mr Dickins said that this closed the evidence of this preliminary examination, and asked His Honour to commit prisoner on all the charges conveyed in it.

His Honour read over the charge against prisoner to him, and the evidence as reported.

When asked what he had to say in answer to the charge, prisoner replied that he reserved his defence.

His Honour said that considering all the evidence given he must commit prisoner for trial.

Wednesday, February 21st, 1877.

KONDO HIKOYEMON and HAKII SEIJIRO *v.* J. E. CARTER.

This was a claim for 360 *yen* money had and received by the defendant of the plaintiffs

Kondo Hikoyemon, cautioned, stated:—I live at Asakusa, Tôkiô. I am paint seller. On the 28th October last two Japanese in the employ of defendant, one the *banto* the other an interpreter named Kobayashi Hidetaro came to my place. The *banto's* name was Kawamura Hideharu. They were accompanied by a broker. These three came and said they would lend me money on the security of land. They said that defendant would furnish the money, the loan to be made either in the name of Kawamura or Kobayashi. These two represented themselves as being respectively the *banto* and interpreter of defendant. At this time also, Hakii Seijiro, a neighbour, was also in want of money. On learning that funds were available I conducted the three to Hakii Seijiro's house and it was there agreed that Hakii and I together should take a loan of $4000. This was a verbal contract but it was reduced to writing after two or three days. This is the contract (produced). It is dated November 2nd. Between the 28th October and 2nd November no special transactions took place. The arrangements that was made on the 28th was to bring 360 *yen* to Yokohama to show to Carter, so that he might be satisfied they were the proper parties to lend $4,000 to. On the 30th the three of us came to Yokohama and went to Carter's house on the hill. We went first to the hotel called Odawara-ya in Ishikawa Yashiki. Whilst there Kobayashi Hidetaro came to meet us, saying Carter wanted us to go to his house. The four of us accordingly proceeded to Carter's house and found him there. He said he was prepared to lend us $4,000 on the security of real property, as previously proposed. Carter at the same time also proposed to secure himself by our showing him 360 *yen*—three hundred in ready cash; a promissory note or bill for the remaining sixty. To this we agreed saying we would bring the money in a couple of days; and accordingly brought it on the 2nd November, and handed it over to Carter in his own house, five altogether being present. Carter gave me these two document (produced). Kobayashi Hikotaro gave me at the same time this receipt. I asked Kobayashi to translate for me the paper I received from Carter. On receiving the money Carter said to us "You go on to the station, I will go straight to the Bank at No. 62 and get the $4,000, join you at the station and proceed with you to Tôkiô." This interview ended about four o'clock. Three of us accordingly proceeded to the station whilst Carter and Kobayashi went to the Bank. We waited at the station for some time. Carter and Kobayashi came in *jinrikishas*, saying the Bank was shut and they could not get the money that day. They said they would bring the money to Tôkiô next day, and advised us to go on. We asked for the "show" money and we would not go without it. Carter asked us to return his house to talk it over. We did so. Carter urged us to let him keep the money for one night; he would certainly complete the contract in the morning. We asked him to draw up an agreement to that effect. This is the agreement (shown.) All the seals were put on in the presence of Carter.

Adjourned till 2 p.m.

On the Court resuming its sitting in the afternoon, Kondo Hikoyemon continued his statement as follows:—Seijiro and I thereupon returned to Tôkiô; the others remaining at Carter's. We were assured that Carter would bring up the money on the following morning. Next day, the 3rd November, we waited till 10 o'clock, but Carter not coming as promised I went down to Yokohama. On going to Carter's house the *monban* informed me Carter had gone to the races, so I returned to the hotel and waited till evening. I then went a second time; but Carter was again out. Whilst at the hotel afterwards, Hakii Seijiro came down from Tôkiô. Seijiro also went to the house but neither of us succeeded in seeing Carter that day. About eight in the morning on the 4th both of us went to see Carter; the *monban*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

told us his master was out. We went again about noon taking an interpreter named Shimidzu, and met Carter just coming into the house. Carter stopped on the pathway outside the house and we asked for a restoration of the bargain money seeing he had broken his contract. Carter replied that he could not have any dealings with us unless Kobushi Hidetaro and Murata Seiso were present To this we objected saying Kobayashi was Carter's own interpreter, and had affixed his seal to the documents in Carter's presence. Carter went into the house and shut the door in our faces, consequently we had had our errand for nothing. It was evening by this time and we asked the interpreter to write down the circumstances of the breach of contract, so that we could report it to No. 3 police station. From first to last there was no failure of contract on our part. We even went to the trouble of coming from long distances to have it completed. The breach of contract is on the part of defendant, Carter. We found it necessary to make a complaint of the matter at once. Carter has not returned the money, nor has he in any particular fulfilled his contract; on the contrary he has repeatedly broken it.

To Mr Carter:—You did not offer to fulfil your contract through Shimidsu.

To his Honour:—I know nothing of Kobayashi Hidetaro only that he is Mr Carter's interpreter. Kawamura represented himself as Carter's *banto*. Noticing that he was not present when I paid the money to Carter I asked where he was, and they told me he was the shop *banto* and it did not matter about him. I have seen neither of them since. About six or seven *cho* from my house lives a druggist, a friend of mine to whom I mentioned that I want money. I believe he told this to Murata Seiso. I think that was the origin of it. When the three came to my house it was the first time I had seen any one of them. I did not employ any interpreter.

Hakii Seijiro, cautioned, stated:—I live in Tôkiô. I am a brothel keeper. I endorse the statement of the previous witness; there are no mistakes in them.

John E. Carter, sworn, stated:—The first I knew of this business was when the four men came to me and asked for a loan of money on property worth about $10,000. They came two or three times before the settlement was made. About two or three days afterwards two of them came with another interpreter, and I told them through him I was ready to keep my contract. I asked them to bring all their papers down to me. I know that interpreter, Mr Shimidsu. I have seen neither of them since; nor did I hear of them till Mr Robertson sent me a letter saying they had made a complaint. I knew nothing of any of the four before this affair. I went to the Railway station with them intending to go to Yedo to see some other people. When we got there the interpreter said it was too late and we had better put it off till the next day. That was on the day the contract was made. They came to my place the same night. That is the contract (shown). I am ready to lend them $4,000 on that. There was nothing read over to me. What I wrote was translated into Japanese. The contract embodies fairly what passed between me and the Japanese.

His Honour said it would be advisable to get the three Japanese together and he would adjourn the case for that purpose.

Adjourned till Wednesday, the 28th instant.

Messrs. W. CURTIS, A. JAFFRAY, C. WIRGMAN, J. RICKETT AND F. BEATO.

Thursday, February 22nd, 1877.

(Continued from the 14th instant.)

NOMI DAISUKI *v.* J. W. SUTHERLAND.

Rehearing with a jury. Claim of *yen* 262.67, 8 *rin*, 2 *mon*, balance of account for goods sold. This case was heard on the 6th December, 1875, and was referred for accounts to Mr J. C. Hall. The referee filed his report on the 20th December, 1875. The plaintiff applied for a rehearing, which was granted.

His Honour read over to the Jury a translation of the delivery notes.

Funabashi Zenzaburo was recalled and asked to continue his evidence.

Mr Sutherland interrupted, asking his Honour to see if plaintiff had brought his original books. Those the plaintiff was now referring to appeared quite clean.

Witness said he had extracted all the items in connection with this affair, and had brought that compilation.

Mr Sutherland said it was very important that the original books should be shown. The book from which witness read at last hearing had no weights; he had written out all the weights expecting to be examined upon them to-day.

His Honour said witness could not give evidence from the new book, but must confine himself to the original.

Funabashi Zenzaburo continued:—From first to last whilst I was concerned in the business, the rate at which barley was sold was at $1.25 per bag of 15 *momme*: bran at 3 *bu* per bag of 3 *momme*. Subsequent to the interview at which Mr Wills interpreted, defendants made no trouble whatever whilst I had anything to do with it. I left plaintiffs' employment about the middle of June. As I stated before, with the exception of this slight misunderstanding, defendants never made any complaints. During the month of February I myself kept five horses for Sutherland, and, after they were in good condition, returned them to him. I never was paid a cent for it. I merely mention this as a proof of Sutherland's way of doing business. In this book are the weights of the goods as I brought them in. I have not the weights of the stuff as delivered to Sutherland and other parties, at first; from the end of April the weights are down to each entry. The perfect understanding between the parties kept me from writing down the weights so exactly. I do not remember why I put down the weight of the 12 bags delivered May 24th, and not before that. It is a long time ago. I made up the weight-notes I brought to-day from calculations of the number of bags and from the money. At first I was only acting out of compassion for Sutherland; and the business at first was of a friendly character and not carried on in the manner usual between merchant and customer. The quantities were put down in the house book when they were sent. They were entered in this other book, which was sent to Sutherland's and compared with the book kept by him. The stuff was weighed in the presence of both parties and the quantities taken delivery of were noted by Sutherland's servant, and by me when I saw there was none in dispute. When I did not go I sent some one else who followed my example. Sometimes I made the entries in the house book, sometimes my master, Daisuki, did. To the best of my knowledge the entries I made were correct. I think the book was always correct. Had any mistake been discovered it would have been corrected. I made the entries in Sutherland's pass-book. At first there was no such pass-book. There is a recapitulation of the transactions monthly. After the goods had been weighed at Sutherland's, sometimes Sutherland was present and the quantities delivered were told him and then written down. When he was not present Iyo acted for him, took notice of quantities written down, and when she saw they were all right said she would mention it to Sutherland, her master. Then afterwards I wrote it down in my own book. Sometimes when I did not go with the goods I went the following or the next day, and after inquiry wrote down the entries in my book. O-Iyo, the woman, gave me the information. The entries are kept on the same basis up till June, during the time I did the business. All these entries were made upon weighing. Had it been a regular business transaction the entries would have been more minute. The bags were not always of a regular size. They were all weighed and fifteen *momme* was called one bag. In every case the quantities were weighed. I could not buy them without weighing them. In no case was the barley or bran put into a measure. Five *to* including the bag make fifteen *momme*. That is a fact perfectly understood by everybody. The bag was sometimes over or under five *to* In every case the quantity is weighed, and fifteen *momme* is called a bag of five *to*. At the request of the *betto* of Sutherland's coach I began to supply stuff to other people in May. I did business with the *betto* at No. 119, and afterwards with the Lighthouse. This business was transacted on exactly the same basis as with Sutherland, *i.e.* 15 *momme* one bag, 1 *rio* 1 *bu*. A proof of that is to be seen in the book.

To defendant:—After three years I can hardly say when each particular entry was made. O-Iyo saw me make them; she did not weigh the stuff. Either Mr Sutherland or one of his *bettos* weighed it. I can't speak accurately as to the date of the conversation in which Mr Wills took part. It was some time after Mr Sutherland's clerk was changed.

The jury requested defendants to produce their books showing the entries of settlement as given in the pass-book, and the Court adjourned till 1.30 p.m.

The Court sat again in the afternoon and defendants produced their books as requested. Last witness, having been sent for his books, was not present. The evidence next taken was that of O-Iyo, a Japanese girl, who was cautioned:—

In January, 1874, Sutherland came to me saying he could get no fodder for his horses in Yokohama; would I persuade my master to buy fodder for him? At this time I was in Sutherland's house. I had been there from 1871. I went to Nomi Daisuke as a servant first. Sutherland was in Yedo, then, and and came saying he wanted my services very much. I said I could not go very well without my master's permission. I went over to Kanagawa to try to get fodder. Nomi Daisuke at first refused as it was not in his line; he afterwards consented to get the fodder, commiserating Mr Sutherland's distress. A bag of 15 *momme* was to be obtained for 1 *rio* 1 *bu*. That was barley. I explained the result of Nomi Daisuki's inquiries to Sutherland, and, he consenting to the terms, business was at once commenced. They said they could not afford to send it over to Yokohama every day, and Sutherland consented to send over the trap for it. When the carriage could not be sent, the fodder was conveyed by boat or cart. Accounts were twice fully settled. Smith then became Sutherland's clerk and he said it was dear buying in this way, and that there should be a deduction of tare. There was still some balance due to Nomi Daisuki, and this was not to be paid, he said, until this question of tare was decided. Nomi Daisuki was very displeased and threatened to stop supplies. He also said I should have to come back to service with them. I also expostulated with Sutherland. So they got Mr Wills, and Sutherland, Farmer and he went to Nomi Daisuki's in a carriage, and it was arranged then that things would go on as before; that supplies were to be continued on the old basis, and I was to remain with Sutherland. So bran and barley were supplied as before. I did not go with then to Nomi Daisuki's; the latter told me of the arrangement. I was not inclined to hear only the statement of one party, so I asked Sutherland about it, and he said that fodder was to be supplied in the usual way. When the barley and bran were brought to No. 61, it was always weighed, sometimes by Sutherland, or Farmer, or Smith. I was the intermediary between the parties and had to keep a strict account of the transactions between them. For this purpose a pass book was always kept in my room, and before any entries were made in it I was always particular to enquire if both parties agreed as to the quantities, asking Nomi Daisuki's people first how much they brought, then asking Sutherland how much he had received. After that first book was finished the other was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

begun. The payments made by Sutherland on account were also entered in my book. They were made in my room, and an account to date always written and receipts exchanged. On every occasion I acted as interpreter except at the time mentioned, and Sutherland's and Fumi's statements with regard to that interview agree. Sometimes the price fluctuated. At the first interview at which the settlement was arranged Sutherland said, "please don't try to make a profit off this, try to settle it as cheap as possible, and I will give you a quarter *bu* per bag commission." They answered they were pleased with his offer, but would only ask him to pay coolie expenses and carriage hire on the stuff. Nomi Daisuki did not want any commission. That was agreed to. The accounts were twice clean settled, but after that no settlement whatever was made. Daisuki's people came frequently to receive money, but they never got a clean settlement of accounts. At last in February, 1875, a very large sum of money was owing, 195 *rio*, 3 *bu* a half. After that they received 140 *yen*, some time in March, leaving a balance of 55 *rio*, 3 *bu* and a half. Bran was supplied after that up till the 10th April but subsequent to the 24th March no payments were made. At the end of the term (April 10th) the total amount owing was 262 *rio*, 2 *bu*, and some odd cents.

To Mr. Sutherland:—I can write a little. I did not write these entries myself; I caused them to be written.

Honobashi Zenzaburo, recalled:—This is the original book mentioned. There is no entry in it previous to February, 1874. After that all the entries have the weight duly appended. The number of bags and the weights are all there.

Iseda Kihei, cautioned:—I live at Shibo-mura. I do a miscellaneous business. About the end of June, 1874, I was requested by Nomi Daisuki to continue the business with No. 61 and other places which had hitherto been attended to by last witness. The quantity to be got at Shibo-mura was very small and I had often to go as far as Kanagawa and Tôkiô to get the requisite supplies. I continued the supply of fodder upon the basis agreed upon between Sutherland and Nomi Daisuki. It is customary to settle accounts twice a year, on July 15th and at the New Year. On the 15th July, I proceeded to Sutherland's place to square up accounts, and getting this pass-book which was kept in Iyo's room I compared accounts in Sutherland's room, but with whom I cannot remember. I think Sutherland was present. A Chinaman interpreted. After comparing accounts it was found there remained a balance of 116 *rio*, 1 *bu* and 19 *mon*. To this amount Sutherland fully assented, and paid 50 *yen* on account. I well remember counting over the money and finding one *yen* too many, and returning it to Sutherland. The balance he promised to pay in two or three days. I accordingly went on the 22nd July and on that occasion I received 30 *rio*. Sutherland sent for a further supply before paying any more, and on the 8th August I received a further instalment of 50 *yen*. Goods continued to be forwarded and payments were made on account from time to time. My statement is made up from the books kept at Nomi Daisuki's and Sutherland's. To the best of my knowledge there is no mistake in my statement.

To Mr Sutherland:—According to my book, 13 bags of barley were delivered on the 4th March. The book from which last witness read was that of purchases and sales. I have sometimes met Mr. Farmer in your office but he only said you were not in. On one occasion Smith gave me some money in the office. Previously to the trial last year I received this statement which showed that you had paid 164 *yen* too much: you gave it me. I tried to have this affair settle before it came into Court, through the good offices of Mr Wills. Of course under these circumstances no settlement could be arranged, so I filed my petition. The amount you allege in the answer to have paid too much is 59 *yen*. I do not know on what principle your books are kept. If it were a matter of a few *yen*, it might be put down as a difference of accounts.

To the Jury:—I believe that Sutherland and Wills were on very friendly terms. My reason for asking Mr Wills to come was on a previous occasion when a difficulty had arisen between the parties, a settlement had arrived through his friendly medium.

Funabashi Zenzaburo, recalled:—The eighteen bags mentioned in the entry of the 4th March were bought on that day, and sent to Sutherland. Thirty bags were sent on the 7th March.

Plaintiff had no other witness to call.

William Alexander Smyth sworn, stated:—I live at No. 122. I am a reporter in the *Japan Daily Herald* at present. In the month of April, 1874, I succeeded Mr Francis as book-keeper in the firm of Cobb & Co. I then first saw the woman Fumi and the *banto*, who came on different occasions to the premises of Cobb & Co. On making inquiries into the accounts of these people I asked them into the office about the end of April. I understood from them and my employers that there was to be a certain standard for the barley and bran. The accounts were duly examined into at the end of every month and the amounts of bags supplied and received corresponded. I often superintended the weighing of this stuff, and in May required the Japanese to show an account of what had been delivered in April. They could not bring an account after repeated inquiries. As far as I am able to say now an amount of 8 lbs. tare was to be deducted. In fact I myself had brought it before their notice in the month of May. On my inquiring why the plaintiffs were paid over the value of the fodder supplied, I was told that the woman, being a middle woman as it were, had to deposit a certain sum. There was no disturbance between the parties, everything went smoothly. Once, about the middle of the year, the woman Fumi made some remarks about the price and conceded to make a reduction because grain was cheap. Also at that time witness Isoda took the place of the older man. From him I also required an exact account of the previous accounts. He brought his books and upon the subject of price and number of bags we both agreed. But upon my telling the weights of these amounts and requiring him to show his weights, although I asked him on several occasions I could not get him to bring them. Neither did he seem anxious about the matter. In fact, all he seemed anxious for was a sum of 50 *yen* in advance. From that time till the end of the year accounts were regularly examined monthly. About February, 1875, the old woman Fumi said that although not being an accountant herself she believed that Cobb and Company owed her a large balance. I called on Isoda and explained to him that all the receipts agreeing, they were, I thought, about 40 or 50 *yen* overpaid. Shortly afterwards the old woman came—that must have been in March—and stated that the firm owed her 60 *yen* for fodder. I explained it could not possible, and read over to him our accounts. Also he compared his accounts with ours. During March plaintiffs constantly required a large amount of money which they claimed as due, and in April the late Mr Wills came first to Mr Sutherland and afterwards to Mr Farmer, representing to them that the woman or her party had come to him requesting him to act in the matter to settle it amicably. He did not know their claim exactly, but thought that if Cobb & Co. caused me to write out a statement of our account and confide it to him, he might then be able to satisfactorily settle the matter. To this Mr Farmer in my presence demurred, not liking to trust the matter to Mr Wills. I heard him say so. Afterwards both the partners instructed me to give Mr Wills an account. This was some days afterwards. At that time my time was fully occupied and I drew up an account in a rough form, which I thought would give Mr Wills an idea of how matters stood. After it reached his possession the case was not amicably settled. Mr Ness informed me that Mr Wills had given him that document to use it against the firm. After the plaintiffs had sued in Court I then drew up a correct account of Cobb & Co's dealings with the plaintiffs. I may mention the amount of bags always tallied on both sides; that I never could obtain the weights from plaintiffs; that up to February 1875, there had been no dispute or request for money said to be in arrear.

To Mr Sutherland:—After going through the books with Mr Hall at the former hearing, whenever there was a point in dispute, concessions were always made in favour of the Japanese. In this way some 43 *yen* were reduced from the accounts. At that time it was seen no weights were produced for the first six months, and an average was taken. I joined the firm of Cobb & Co. in January 1871. I have also bought bran in the firm of Kirby & Co in 1869, and always a deduction of 7 or 8 pounds was made for tare, not only with regard to bran and barley but other fodder—potatoes, for instance.

Witness here whispered something to Mr. Sutherland. His Honour ordered him to cease, saying witness had been so often in Court before he might know better.

After the foregoing evidence had been translated, plaintiff said no fodder had been supplied by Nomi Daisuki in 1871 Mr Smyth said that was very true, because the woman kept a sweet-potato shop then. Sutherland had noticed the girl in passing the house in the coach.

R. C. Brodhurst, sworn:—I was employed by James & Wilson. I bought bran in 1874 from 4 *bu* per picul to 2 *bu* and a half. Barley from 3 *bu* and a half to 4 *bu* and sometimes 5 *bu*. I was Manager of the Dray Company, and bought large quantities. I always bought by the picul with an allowance of from 7 to 8 pounds per picul.

Plaintiff here requested to re-examine Mr Smyth. His Honour asked the interpreter to say that the jury did not believe Mr Smyth.

Thomas Ah Hing.—I live at No. 61. I am carriage driver. I was present when the woman came and claimed her account. She claimed 60 *yen*. I interpreted.

Mr Sutherland said he had concluded his case and would leave it to his Honour and the Jury. The Jury thereupon retired and returned to give the following:—

VERDICT.

We find for the plaintiff in the sum claimed, $262.57.

IN THE DANISH CONSULAR GENERAL COURT.

Before ERNEST DE BAVIER Esq., *Acting Consul-General.*

Wednesday, February, 21st, 1877.

Messrs. E. KRAETZER and FREDERICK KREBS *Assessors.*

Harkon Kirckhoff, alias Antoine Bennett, was charged with forging and uttering notes of the Hongkong and Shanghai Banking Corporation.

Mr F. V. Dickins appeared on behalf of the prosecution and Mr Kirkwood was assigned by the Court as Counsel for the prisoner.

Prisoner pleaded not guilty.

Mr F. V. Dickins appeared to watch the case for the prosecution. Mr Montague Kirkwood was assigned by the Court as Counsel for the accused. Mr W. G. Van Oordt, occupied a seat on the bench. Mr A. Rosenstand acted as Clerk of the Court.

Sekiha Hekishi's depositions taken yesterday were read and confirmed. They established that deponent was a Japanese money changer resident at Tôkiô: that he did not know the accused; and that on the 6th instant a foreigner presented a note purporting to be one of the Hongkong and Shanghai Bank for $500, which deponent could not change.

The depositions of Sekimoto Tayu, female servant of Gerhard Hansen, taken yesterday by the Consul, were read and confirmed. Her evidence was to the effect that Bennett and Hansen were often together in the house of the former; that Bennett was occasionally engaged in operations with locked doors; and that the result was that his hands were dirty: that the room in which he worked was pervaded by a peculiar smell; and other facts tending to establish that he was engaged in photography.

To Mr. Kirkwood:—I last saw Bennett on the 3rd or 4th of February.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The depositions of Seitoshima, a Japanese woman, servant to Bennett, were next read. They were confirmatory of an intimacy between Bennett and Hansen, and established that the two had been frequently closeted together, and that they were occupied in some experiments or work which stained their hands with spots which would not wash out.

Mr. Home Cook's (Clerk in the Hongkong and Shanghai Bank) depositions were next read. They are to the same effect as the evidence already adduced by the Bank in the British Consular Court.

Williams' statement, taken on the 3rd instant, was read to and confirmed by him. He was then cross-examined through the Court by Mr. Kirkwood:

I have been with George Hansen and Bennett in the latter's house. I went for no purpose: just went and came away again. (At Mr. Dickins' request he was asked what he saw in the room he went to and where that room was. He replied that it was on the upper floor: there was only a writing desk in it.) I was not in that house the day before I was arrested. I do not remember if I was there the Sunday evening before. I have known Gerhard Hansen from seeing him in Clausen's house. I do not know where he lived and never asked. I had a long conversation with Bennett (alluded to in witness' deposition) on the subject of making money, about two months before the 6th instant. It took place in a boat between the French and English hatobas. Bennett told me that he had not the means to establish a photographic business; but Hansen had promised to find the money and so on, at the same time. I said in my statement that I only knew of the forgery two or three days before the notes were tried to be put into circulation. I meant that that was the first I heard of the project after the notes were made. This was in his house. Bennett always bore a good character on board ship. I was surprised when he told me that he contemplated forging notes, and said I did not believe it. When he asked me to change a note I did not object. I was to be rewarded for changing it; but no sum was agreed upon. I do not think I have ever been in George Hansen's room. I know him from the *Tennessee*. He lived with Bennett. I never talked about these notes with him. I never saw Gerard Hansen in George's room or Bennett's, nor have I seen the two Hansens walking together. I have been with Bennett and George Hansen walking in Japanese town; but we said nothing then of the notes. Bennett told me to try and change the notes at a Japanese and not a Chinese house. I was discharged from the *Nevada* on the 25th of last month, on the change of flag. I could not get a passage away because I had not been long enough in the service of the company.

Mr Kirkwood requested that the prisoner should be asked if he pleaded not guilty to all the charges brought against him. This was done, and the prisoner answered in the affirmative.

Mr Dickins pointed out that if the prisoner had, in the course of his examination in the instruction, admitted his guilt, his confession must stand, unless it appeared that he had fallen into error, or the admission had been forced from him in duresse. This position was admitted by the Court, which said it would decide what part of the evidence given by the accused himself was to stand, and what should be discarded.

At this stage of the proceedings the Court adjourned till 2 p.m.

On the resumption of proceedings the depositions of George Hansen were read to and confirmed by him. They gave in detail his connection with Bennett, and contained his admission of having received the notes from the prisoner, and his tearing up those which were in his possession when he heard of the prisoner's arrest.

To the Court:—I never had any conversation with Gerhard Hansen about the notes. I did not ask Bennett where he got them: he told me he made them himself. I was not promised any reward for passing notes. I told Gerhard Hansen about the arrest of Bennett and Williams because he was a friend of the prisoners. He asked me why they were arrested, and I said, "for passing a $500 forged note." I remained there about quarter of an hour. I had never been in Gerhard Hansen's house before. I first met Gerhard Hansen in Peter Clausen's. I bought distilled water for Bennett who supplied me with the money and bottles. I never did any service for Gerard Hansen. I went to Tôkiô to change the notes because Bennett told me to go, as he said I should get more money there. He told me that the Bank was closed after one o'clock. I did not know the notes were forged till my return from Tôkiô. I changed a $500 note for Gerhard Hansen on Saturday, the 3rd February, in Japanese town, near the Police Station. Gerhard Hansen was with me and told me to go into the shop and change it. I do not know whether it was good or not. I do not know why he should have asked me to change it. He stopped outside. I did not ask him why he did not go himself, nor did it strike me as strange. I had no suspicions of him. He gave me a dollar for changing the note. He told me to get Japanese paper money. I did so. He gave me the note outside the money-changer's. He called at my house and took me to the shop. I heard that he had money in the bank from Bennett, who told me that he, Hansen, had been long working in the gold mines and had plenty of money. I did not want to be paid for changing the note, and I did not know the notes were forged until Bennett told me so on my return from Tôkiô. When I heard that, I tore up those which remained in my possession. I told him that he had no business to do such a thing, and that he would get himself and others into trouble. I did not threaten to denounce him to the police.

To Mr Kirkwood (through the Court):—When I told Gerhard Hansen that Bennett and Williams had been arrested, he made no reply. In the interview, which lasted a quarter an hour, I told him about the conversation I had with Bennett. I do not remember that he said anything except that it was very curious. Bennett's servant told me the way to Hansen's house. I had not been there before; but I had seen Bennett going in there.

Yong Pow Chin, a money changer at No. 136, was examined and repeated part of the evidence he had given before the British Consul.

Peter Gerard hHansen's depositions taken at his first examination when he claimed British protection, were read over to him, as was a letter dated the 29th instant sent by him to the Danish Consul expressing his willingness to give any information in his power, and the depositions made by him on his subsequent examination. They state that he had money, that he lent some to Bennett for the purchase of photographic apparatus; that the latter borrowed one $500 note from him, and after many trials at length succeeded in getting photographic copies. They also detail his connection with Bennett, and while admitting knowledge of and complicity in the counterfeiting, insist that he withdrew from the association when Bennett announced his determination to try to change the eight notes manufactured. He admitted giving the note to George Hansen which the latter changed; but this was, he said, a good note, being the original from which the counterfeits were copied.

The witness was asked whether he would endorse his statement as read. He replied that he could not give any answer before he had consulted his legal adviser.

Mr Dickins pointed out that any consultation with his lawyer could only concern any future evidence he would have to give, and could not affect depositions already given.

The witness still declining to endorse his depositions at present, the case was adjourned until to-morrow, the 22nd inst, at 10 a.m. in order to give the witness an opportunity to consult his lawyer in the interim.

Thursday, February, 22nd, 1877.

The proceedings were adjourned yesterday to allow Peter Gerhard Hansen, who is committed for trial at H. B. M.'s Court, the opportunity of consulting his legal adviser, as he persistently declined to endorse his depositions until he had done so.

On the Court resuming this morning Mr Bavier asked Peter Gerhard Hansen if he were ready to confirm the statements he had already made.

The witness said he wished to make a statement, and permission being granted, he made some remarks to the effect that he had entered on the business of photography innocently; that he was not prepared to endorse the depositions.

His Honour asked the witness if he had not said what was written down in the depositions which he had signed. He said he had made his statement; that he had nothing further to say; and positively declined to endorse his depositions.

In consequence of this refusal on the part of the witness, the U.S. Consul-General, Gen. T.B. van Buren, was requested to give evidence, and he stated that he was present in the Court when the confession of Peter Gerhard Hansen was made. He heard His Honour read the letter purporting to be signed by the prisoner, asking permission to make this confession. He also heard Hansen asked whether he had written that letter. He stated that he had. He was then asked if he was ready to make his statement and replied that he was. In order to have his statement taken down rapidly and correctly, he, General van Buren, volunteered to do it himself, and did take it down word for word as made by Hansen; and after it was finished he read it to him distinctly and slowly. He, Hansen, made one or two corrections and then signed it. His statements were made with very great deliberation and coolness. Before commencing to make them he stated that his only hesitation in making them was that he feared that the English Consul might be offended at his not making them first in the English Court.

His Honour asked the witness if he was ready to answer any questions, to which he replied that he declined to say anything further or to answer any questions.

The evidence of Clausen was then taken, and he deposed:—I know Bennett and Gerhard Hansen and Williams. They used to come to my house and take their meals. Bennett came to my place after he left the *Tennessee* and asked if he could stay there, and I told him "yes, if he paid for his board." He was always very steady and never drank to excess. All these men usually came together to take their meals. Several time I asked Gerhard Hansen what he was doing in Yokohama, and he at last got angry and told me to mind my own business. After Bennett had finished his meals he usually went away alone, but sometimes went with Gerhard Hansen. Hansen has never paid for Bennett's board; and they all owe me money yet. It is about two months ago since Bennett came to me to board. He did not pay me when he came, but a fortnight before he was arrested he gave me $15, and that is all I have received from him. I did not know what he was doing, but he said that he was a photographer; and he also mentioned his intention of starting a photographic establishment, but I told him that I did not think it would pay as there were so many Japanese engaged in the business. I knew nothing whatever of the transaction between Bennett and Hansen; but when he lived at No. 83 I went once or twice to his house. I only knew that Bennett was working for a Chinaman from his own statements.

The depositions of the prisoner, which had been taken at three previous examinations, were then read to him. They were of a similar character to his statements made in the British Court, though the circumstances in connection with the forgery and with the prisoner's previous life were more lengthily particularised. He acknowledged that he was not a good photographer, and that was the reason why he took so long to perform the operation, his ex-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

perience in photography ending when he was fifteen years of age, as he then went to sea.

The Court asked the prisoner why it was that he had painted the back of the $500 note if he was only experimenting in photography He replied that he was poor and had to do something for a living. Hansen, he said, gave him the $15 which he paid to Peter Clausen. He also stated that that the $60 he had received from Hansen were for his own private use.

Mr. Dickins wanted to suggest a couple of questions, but Mr. Kirkwood objected, and remarked that the prisoner's case was hard enough against him without any suggestions being made by Mr. Dickins.

The Court informed Mr. Dickins that if he wanted to ask any questions he would have to conform to the rules of the of the Court and put them in writing.

The prisoner was asked if he had anything further to say, and replied that he had not, except that the notes he gave to Williams and George Hansen they had asked him for. He acknowledged that he used photographic paper at first, but Hansen objected to it as it was shiny, and so he got some ordinary writing paper; and the reason he he made the notes the same size as the original $500 note, was because Gerhard Hansen told him to; and he also stated that he never photographed anything except the bank notes in that house.

The prisoner's Counsel put in a piece of a newspaper, on the margin of which was some writing, which the prisoner stated had been written by Gerhard Hansen and given to him. The purport of this document was, that if Bennett would say at his trial that Hansen knew nothing about the bank notes, he would give him 350 dollars. The prisoner said that this document was given to him last Sunday by Hansen, through the cell window. He heard a knocking at the wall, and then saw Hansen's hand protruding through the window, when he presented that note. He, Bennett, then wrote on a slip of paper refusing to agree to the request of Hansen. Hansen then wrote back again and wanted him to return the first paper, which the prisoner refused to accede to. On his Honour asking where Hansen got the paper from to write on, the prisoner stated that it was part of a newspaper *(Police Gazette)* brought for the prisoners in the gaol to read on Sundays. Hansen's and the prisoner's cells were close together, and it was on account of their proximity that the two were able to carry on the correspondence with each other.

At this stage, the proceedings were adjourned till 2 p.m.

On the Court resuming this afternoon, the prisoner was further interrogated respecting the correspondence which took place between him and Gerhard Hansen on Sunday. He informed the Court that Hansen gave him the *Police Gazette* to read when they were sweeping their cells.

His Honour said that during the recess at 12 o'clock he had visited the gaol, and it was evident from the position of the two cells that a paper could be passed from one to the other. He also remarked, for the benefit of the reporters of the local press, that he had been assured by the gaoler that no such papers as the *Police Gazette* were permitted to be circulated among the prisoners in the gaol.

David Small, gaoler, stated that it was on Saturday or Sunday last that Gerhard Hansen had been removed to the cell next to Bennett's, and he thought that a paper might easily be passed from one to the other. He further stated that he had found the *Police Gazette* in Hansen's cell. It was in consequence of other cells not being ready that the two men had been put so close together. He had kept strict watch over both the prisoners and was certain they had had no conversations with each other during the time they were exercising. No Yokohama papers were allowed to the prisoners.

Mr. Kirkwood rose and thanked the Court for the very patient and impartial hearing that had been given to the prisoner. He then addressed the Court on behalf of the prisoner at some length. He maintained that the prisoner had not been proved guilty of committing the crime of forgery; and that he was evidently the tool of Gerhard Hansen, who had used him to execute his own designs, and there was no doubt but what the prisoner had acted as ninety-nine men out of a hundred would have done under similar circumstances. He came to this country with the full determination of earning a honest livelihood, and had been drawn into the toils of Gerhard Hansen's net. The learned gentleman reviewed the evidence for the prosecution, and argued that it was not sufficient to convict the prisoner upon. The witnesses were nearly all accomplices, and, according to English law, the evidence of an accomplice was worthless unless corroborated as to material facts; and such evidence if found to be defective in one point only, was sufficient to render, the whole of his testimony valueless. The learned Counsel quoted authorities on this point, and then called attention to discrepancies in the evidence of Williams and George Hansen. As for the testimony of Gerhard Hansen, it was evident that it was only a trumped up story, one word of which was not worthy of credence. He compared it with that of Gerhard Hansen in the Court. He, Mr Kirkwood, believed that the prisoner's statement was the simple unvarnished truth, and was in reality the only evidence against him, and that was not sufficient to convict him of the crime of forgery. The learned gentleman concluded his remarks by asking the Court to acquit the prisoner; but if the Court could not do that he hoped that the punishment would be the lightest the Danish law would permit.

Mr. Dickins rose to address the Court for the prosecution, but His Honour ruled that according to Danish law it was not allowable.

The Court than retired to consider their verdict, and in about a quarter of an hour returned, when His Honour, addressing the prisoner, said: "We have come to the conclusion to reserve our judgment. However, you will be imprisoned, and your imprisonment will date from to-day."

The Court then rose.

IN THE KANAGAWA SAIBANSHO

Before Asaina Kansui, Esq., Vice-President.

Monday, February 19th, 1877.

Shinne and Francke *v.* Omiya Esuki.

This was an action to compel defendant to take immediate delivery, as per contract, of 300 dozen comforters sold by plaintiffs; value $1,500. Defendant admitted the contract, but did not wish to take delivery for nine months.

This case was set down for hearing at 10 o'clock, and both parties (Mr Francke representing plaintiffs) were in attendance punctually at that hour. His Honour took his seat on the bench at twenty minutes past eleven.

At the request of the Court Mr Francke produced the written contract. With regard to this claim he had nothing to say except that on former occasions he had permitted defendant several months in which to take delivery of goods bought by him, but the time demanded in the present instance was altogether out of the question.

Defendant when asked what he had to say against the claim, pleaded hard times and small trade, and again asked for allowance of time till September for the fulfilment of this contract. He was willing to pay interest on the value of the goods.

In answer to this, Mr Francke said that defendant had promised so often to come to terms and had been so disagreeable, that he could not think of allowing him such a time. A month and a half had been wasted already,

His Honour informed defendant that he must take delivery at once. Defendant said he was a little short of money at present, an could not take delivery for at least 50 days.

His Honour requested plaintiff to attend at 10 o'clock this morning, when judgment ordering defendant to take delivery will be given.

IN THE TOKIO SAIBANSHO.

Monday, 19th Feb., 1877.

Before Mr. Yamamoto, Judge.

F. Escombe & Co. *versus* Ito Shimbei.

Claim for $6,025.37.

Mr. F. A. Cope represented the plaintiffs, defendant being brought up for examination by order of the Court.

The evidence taken at a former hearing in the Tsukidji *Saibansho* was produced, and defendant admitted his indebtedness, but said that being at present confined in jail on a charge preferred against him by a foreign firm in Yokohama, he was unable to make any proposition as to payment. During a somewhat lengthy examination defendant admitted that he had purchased goods from the plaintiffs to the extent of about $8,500, which goods were to be used in the construction of buildings at Echigai and Sakura for the *Ikugunsho*, and that he had received payment in full for all such goods, but as he had many claims against him, he had only paid 2,500 *rios* to the plaintiffs and used the balance to satisfy other creditors, including a payment of 3,800 *rios* to the firm at whose suit he is now in jail. He further stated that as the plaintiff had possession of his stamp (*In*) he was unable to carry on any business transactions, and that the plaintiffs had previously agreed to allow the payment of above sum to extend over a period of three years from June, 1875. Mr. Cope stated that no attempt at payment or compromise had been made, and he requested the Court to give orders which he might rely would be complied with. The Court stated that the personal property of Ito Shimbei had been examined into, but that at present he had nothing, and his only resort was to become bankrupt unless he could propose any terms of payment. Mr Cope suggested that an order be made to pay $1,000 in twelve months, and balance by instalments to be hereafter agreed on. Defendant would not comply with this, but, provided all prosecution was withheld for the term of two years, he would enter into a bond to pay the full amount claimed after the lapse of a further period of five years, i.e. in February 1884. Also that upon signing the bond his stamp should be returned to him. To this arrangement Mr. Cope was opposed and pressed for a judgment from the Court.

His Honour said that as the defendant had at present no means, the course suggested by the defendant would be the best to adopt, and that the Court would communicate with Her Britannic Majesty's Consul. Meanwhile if Mr. Cope, on behalf of the plaintiffs, would accept this, and would draw up a bond to the above effect and forward it to the Court at Tōkiō, together with the stamp of Ito Shimbei, the Court would obtain the defendant's signature and record a verdict as agreed upon.

Hints to Housekeepers.—I dont know why we should insist on having all the pieces of procelain or earthenware on our table—at breakfast, dinner, or supper—alike. Why have everything in sets? We already allow ourselves some freedom at dessert and at tea; why not, ladies, make a heroic strike for freedom the table round? There never were "sets" known till modern manufactures began to take a trade view of life in all its phases. Of course there must be harmony, but harmony does not mean uniformity. And if the general color of our service is blue, or red, or yellow, a bit of either of the other colors may come in with the one, and no harm done. Now and then at sales, on the breaking up of old households, pieces of old Worcester, or Wedgwood, or Spode, or Devonshire, may be met with, and if they are in good condition—neither nicked, nor chipped, nor cracked—they should be bought, always provided they are pretty, and they will make a good foundation to work upon. It does not do, however, in china, any more than in pictures, to go by names. Go by what is pretty, or rich, or effective, and if on turning up your tea-cup or its saucer you should find a famous potter's name written on it, thank the gods that they made you poetical, and gave you a pair of eyes of your own for what is pretty.

THE TOMB OF AGAMEMNON.

(The Mail.)

Dr. Schliemann, writing under date Mycenæ, November 25, continues his account of his extraordinary excavations.—

"My excavations have yesterday and to-day had the honour of being visited by His Majesty the Emperor Dom Pedro II. of Brazil. Coming from Corinth, His Majesty went directly up to the Acropolis, and remained for two hours in my excavations, which he attentively examined and re-examined. The immense double parallel circle of white slabs, within which are the three straight lines of tombstones, and particularly the four sculptured ones, seemed to be of paramount interest to him, and he requested me to send him photographs of them to Cairo. The great gate, with its curious threshold, the large Cyclopean house, the three Cyclopean water conduits, and all the other monuments of prehistoric times, seemed also to be of very great interest to His Majesty, who, in visiting with me the eastern part of the Acropolis, examined there, in its north-east angle, the well-preserved ogivelike passage, which passes under a right angle through the 16ft. 8in. thick Cyclopean wall. This ogivelike passage is perfectly like those of Tiryns, but difficult to be discovered, being hidden by the accumulation of rubbish, by a tree, and by some stones; it was discovered by my engineer, Mr. Drosinos, in making the plan of the Acropolis; it had never come under the notice of any traveller. His Majesty went thence to the Treasury of Atreus, where dinner was served. This meal, in the midst of the mysterious, nearly 40 centuries old underground building, seemed to please His Majesty exceedingly. He afterwards examined with deepest interest, in the village of Charvati, the large collection of prehistoric Mycenæan antiquities produced by my excavations, and particularly admired the enormous mass of differently-shaped Juno-idols, the incisions, and the sculptures. His Majesty went thence to Argos and Nauplion, called here again to-day to see once more the Mycenæan Museum and the excavations, and returned hence by Corinth and Calamaki to Athens.

"After the departure of His Majesty I ascended the very steep Mount Agios Elias, 2,500ft. high, which is situated immediately north of the Acropolis and crowned by an open chapel of the Prophet Elias. The summit forms a very small triangle, the eastern side of which is 35ft., the two other sides, which converge due west, 100ft. long. But, in spite of these small dimensions, the summit is surrounded by Cyclopean walls, which are on an average 4ft. 2in. thick, and 3ft. to 6½ft. high; but masses of stones, which are lying alongside of them, can leave no doubt that they have once been much higher. The entrance, which is on the eastern side, is followed by a short passage; in the large stone which forms the threshold of the door is still visible the hole in which the lower hinge turned. At 16ft. to 53ft. lower are, on all the three sides by which the summit is accessible, 133ft. to 266ft. long and 5ft. thick Cyclopean walls, which are still now on an average 10ft. high, and appear to have been once much higher. Between the stones of all those walls I have been able to collect a large number of fragments of hand-made light-green vases with black ornaments, which I consider as old as the walls of Tiryns and Mycenæ, because in the former place I found them on and near the virgin soil, in the latter only on the natural rock, in the recesses of the gate passage, and in the tombs. I conclude from this that the fortifications on Mount Agios Elias must be contemporaneous with the walls of both cities, and may, perhaps, claim even a still higher antiquity. The question now naturally arises, for what purpose all these fortifications have been built. The mount being so high and steep, and the summit so exceedingly small and full of abrupt or pointed rocks, between which it is even difficult to move, it can never have been inhabited by men, the more so as there is no water. Therefore, the only explanation I venture to give of the origin of those Cyclopean walls is that there must have existed on the summit a small temple of great sanctity and immense importance, and probably we find in the present cultus on the summit the name of the deity who was venerated there in antiquity. There is now in the south-east corner, in the only even and level place of the summit, a very small, open shrine, only 23ft. long and 10ft. broad, dedicated to the prophet Elias, and the inhabitants of the surrounding villages are in the habit of going there on pilgrimage in times of great drought to invoke the prophet to give rain. Thus it appears that the very spot has in antiquity been occupied by a sanctuary of the Sun-god, who had a celebrated cultus there, and who has given way to the prophet Elias, with hardly any change in the name or in the pronunciation, the Sun-god having been originaly called Ηελιος, pronounced Eelios.

"The four sculptured tombstones having been removed to the village of Charvati, in order to be sent to Athens, I excavated the site of them and found to my joy that I had been altogether mistaken, regarding the nature of the soil below them, for what I had taken to be the virgin soil was, indeed, natural earth, but it had been brought there from another place. I first excavated the site of the three tombstones with the bas-reliefs representing the warriors, and found there a 21½ft. long and 10½ft. broad quadrangular tomb cut out in the slope of the rock. At a depth of 3ft. 3in. below the place where the tombstones had stood I found a curious sort of a monument, consisting of two long and narrow slabs lying the one upon the other, and at their south end a smaller slab in an oblique position, as if it were to serve as a pillow. The latter stone had a border, and evidently derived from another monument, to which the other two slabs may likewise have belonged. Most probably there has once been on this tomb a large monument, ornamented with the three sculptured tombstones which now marked its site. In digging further down I found from time to time a small quantity of black ashes, and in it, very frequently, some curious objects, either a bone button covered with a beautifully-engraved golden blade, or an imitation of a gazelle-horn of bone, with one flat side, showing two holes, by which the object must have been attached to something else, or other ornaments of bone or small gold leaf. I collected in this way, besides many other curious objects, 12 buttons covered with gold blades, one of them as large as a five-franc piece; the ornaments are either spiral lines, or that curious cross with the marks of four nails which so frequently occurs on the whorls in Ilium, and which I believe to be the symbol of the holy fire. All the buttons are in the form of our shirt buttons, but of large size. The earth was intermixed with numerous fragments of hand-made lustrous black, red, and light-green pottery, with black spiral lines. Particularly interesting are the large lustrous black goblets, with a hollow foot and horizontal flutings in the middle; further, the light green or yellow ones, with most fantastical black ornamentation; the larger vases of a light red dead colour, with dark-red circles, or with two protruding female breasts surrounded by circles of small black strokes. Having dug down to a depth of 10½ft., I was stopped by heavy rain, which turned the soft earth in the tomb to mud, and I therefore took out the unsculptured tombs of the second line, of which the one is 5ft., the other 5 1-3ft. long. In excavating around them I found another 11ft. broad and 21ft. long tomb, cut into the rock. It was entirely filled with unmixed natural earth, which had been brought there from another place. In a depth of 15ft. below the level of the rock, or of 25ft. below the former surface of the ground, I reached a layer of small stones, below which I found, at a distance of 3ft. from each other, the calcined remains of three bodies, which were only separated from the ground by another layer of small stones, and had evidently been burned simultaneously in the very same place where they lay; the masses of ashes of the clothes which had covered them and of the wood which had consumed them, and further, the colour of the stones themselves can leave no doubt in this respect. With every one of the three bodies I found five diadems of gold, each 19½ inches long, and in the midst 4 inches broad, but terminating at both extremities in a point. I further found with two of the bodies 10 (five with each) golden crosses in the form of laurel leafs; with the third body were only four of them; each of the crosses is 7½ inches long; the breadth of the leaves is 1 2-3d inch. As well the diadems as the leafs of the crosses show a splendid ornamentation of impressed circles or spiral lines. I also found there many curious objects of a glazy unknown composition; their form is difficult to describe; all are perforated, and have evidently served as ornaments of the dead. I further found there a number of small knives of obsidian, many fragments of a gilded silver vase, of which only the upper part was well conserved; a rustic bronze knife, a silver cup with one handle, four perforated pieces of necklace (two of stone and two of a composition), two horned Juno idols; and, finally, many fragments of beautiful hand made pottery, among which was part of a vase with two tubular holes on either side for suspension with a string. There are also fragments of terra-cotta tripods, which are of rare occurrence here, nearly all the vases having a flat bottom. At the bottom of the sepulchre all the four walls were lined by a 5ft. high and 1ft. 8in. thick wall of stones, which showed unmistakable marks of the three funeral piles. Evidently, the pyres had not been large and had been merely intended to consume the flesh of the bodies, because the bones, and even the skulls, had been preserved; but the latter had suffered so much from the moisture that none of them could be taken out entire."

"Encouraged by the success obtained in the second tomb, I took out the two large unsculptured tombstones due south of it; one of them is 6ft. 4in. long and 4ft. broad; the other 4ft. 10in. long and 4ft. 4in. broad. They were extremely well fastened by square blocks, so that they could not be got out without great efforts. These tombstones stood precisely 13ft. 4in. below the surface as I found it when I began the excavations. Two feet below the two tombstones, and thus 15ft. 4in. below the former surface, I found two large slabs in the form of memorials, lying horizontally, and in the depth of 5ft. I brought to light three more slabs, the one lying, the other two standing. The soil consisted of black earth, intermixed with fragments of hand-made pottery and masses of small knives of obsidian. Besides a small number of Juno idols, I found there a solid piece of ivory, one inch high and broad, in the form of a beehive, having in the lower flat side a tubuler hole for a suspension with a thread; on the convex or globular side is an incised cross embellished with five gold pins, each of which has a small hole in the centre of its head; further, a 3in. long piece of wood with beautifully carved spiral lines, and two other pieces of wood in the form of spear-heads. In digging further down I found that, at a distance of 33ft. from the east side of the circular double parallel row of large slabs, the rock suddenly slopes for a space of 30ft. in length and width, under an angle of 50deg.; the perpendicular height of the slope is 16½ft.; further to the west, the rock forms a 30ft. long and broad platform, with two sepulchres, of which I shall first describe the smaller one, because, at a height of 16½ft. above it, stood the aforesaid two tombstones. This sepulchre is 16ft. 8in. long and 10ft. broad, and it is cut on the west side 2ft. 4in., on the south side, 3ft. 4in., on the east side 7ft., and on the north side 5ft. deep into the rock. These different depths find their explanation in the slope and unevenness of the rock, because the bottom of the tomb is, of course, perfectly horizontal. At about 9ft. above this tomb, I discovered close to it, on the slope of the rock in a depth of 21ft. below the former surface, a number of skeletons of men, which had evidently not been burnt, but were so much destroyed by the moisture that none of the skulls could be taken out entire; the only objects I found with them were knives of obsidian and five very nice hand-made vases, two of which are of plain light yellow, the three other of light green colour with rude black ornaments. To the north of the tomb in question I brought to light two overhanging rocks, below which, at a depth of 22ft. below the surface, many Juno idols were founded; also a very curious sort of a bronze dagger, consisting of

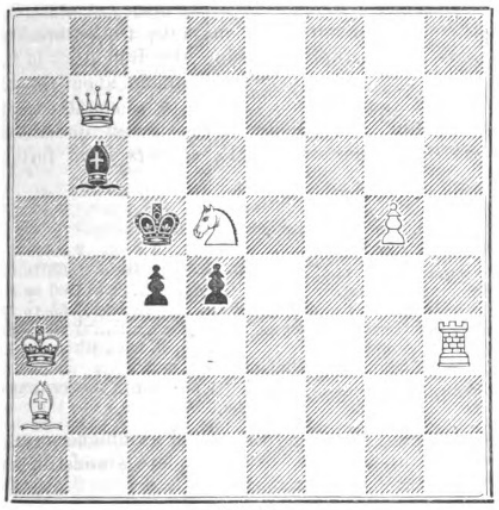
Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

two seperate two-edged blades, which had been soldered together in the midst, so that the four edges are separated from each other by one quarter of an inch; both blades are 10in., the whole dagger is 13in. long, and the handle has evidently been inlaid with wood or bone, which has been fastened by three small nails. As I considered one of the overhanging rocks particularly dangerous, I did all I could to keep my workmen aloof from it; however, two of them always returned there; but seeing that the rock had a crack which widened, I literally dragged the two men out, when all at once the rock fell and we were all three knocked down by its splinters, but none of us were injured. The four walls of the tomb which now occupies us were lined with pieces of schist of irregular size, which were joined with clay, and formed a 5ft. high and 3½ft. broad slanting wall. I found in this mausoleum the mortal remains of three ladies, which, like the former tomb, were covered with a layer of pebble stones and reposed on another layer of similar stones, on which the funeral piles had been dressed; this last layer of stone lay on the bottom of the tomb, which was 30ft. below the surface of the mount. Precisely as in the former tomb, all the three bodies had been burnt simultaneously, but separately, and at equal distances from each other. This was proved as well by the evident marks of the fire on the pebble stones below and around every one of the bodies, as by the marks of the fire and smoke on the walls to right and left, and by the masses of wood ashes which lay on and around the corpses. The bodies were literally overwhelmed with jewels, all of which bore evident signs of the fire and smoke to which they had been exposed on the funeral piles.

As the different jewels were distributed nearly in equal proportions among the three ladies, I think it superfluous to state here the objects found with each of them, and will give only a register of what I collected on the three bodies conjointly:—12 golden crowns; 10 golden diadems, in two of which is still preserved part of the skull; one gigantic golden crown, 2ft. 1in. long and 11in. broad, with 30 large leaves—this crown gives us, perhaps, a specimen of an Homeric στεμμα; 250 round gold leaves; two large, splendidly-ornamented golden vases; one large, splendidly-ornamented golden goblet; three small, splendidly-ornamented golden vessels; two large, splendidly-ornamented golden breast ornaments, in form of wreaths or garlands; two flat pieces of gold, representing houses with towers, on each of which a pigeon is sitting; six golden butterflies for suspension; seven flat pieces of gold, representing two lions standing on their hind legs opposite each other; 11 flat pieces of gold, representing two swans standing opposite each other; one woman of gold, holding one pigeon; two women of gold, with long gowns; four lions of gold; one cross of gold; ten golden earrings, with pendants; six golden earrings without pendants; one ear-pendant of a precious red stone, on which are incised two warriors fighting together; 12 plain ear-pendants; three perforated, quadrangular pieces of gold, which evidently belonged to a necklace—the one shows Hercules killing the Nemæan lion, the second represents merely a lion, and the third shows two warriors fighting together with lances (though in a very archaic style—all these engravings are masterly execution); one perforated precious red stone, with an incision representing a stag turning his head; one long necklace of amber; ten flat pieces of gold, representing scarabees, which are, however, altogether different from those of ancient Egypt; seven small golden wheels with four spokes, which form a cross; nine flat pieces of gold, representing poppies; six large and very curious golden ornaments, almost in form of earrings, which have probably served to hold together hairlocks or tresses; 16 most curious golden pieces of a necklace, each of which is composed of a one-inch long tube, on either side of which are three or four small disks, each of these is composed of 12 circles of filigrane work; one enormous golden breast pin, (πορπη), representing a woman stretching out her arms to the right and left, on her head is a large crown, with three flowers; two sceptres of silver, with handles formed by beautiful balls of rock-crystal; one silver vase; four large kettles (λεβητες) of bronze; four bronze boxes, each 9in. long, 6½in. broad, and open on one of the two small sides. All these boxes had been filled with wood, which had become charred on the funeral pile, and had been fastened in the boxes with long bronze nails, which still now exist. It is impossible to explain the existence in the tomb of these curious boxes filled with wood. Was it, perhaps, sandal-wood to perfume the tomb while the funeral pile was burning? But if so, why put it into the boxes and fasten it with nails? There was found in this tomb some hand-made pottery, with beautiful painted ornaments. I will here only mention a can with one handle, which shows, on a light yellow dead ground, six leaves and eight circles painted with dark-red colour. It would be altogether a vain attempt on my part to try to convey to the reader only a faint idea of the splendid ornamentation of all the above jewels of gold. Nowhere can I discover a space as large as a quarter of an inch which is not ornamented. There are a thousand different sorts of spiral or circular ornamentation.

"Encouraged by my success, I resolved upon excavating the whole remaing space within the great parallel circle of slabs, and my attention was particularly directed to the spot immediately west of the last excavated sepulchre, although the site was marked by no tombstone. But, in variance with the colour of the soil elsewhere, I found here only black earth, which—already in a depth of 15ft.—was intermixed with nothing else than hand-made pottery, which showed that the site had not been disturbed since a high antiquity, and increased my hopes of making there an interesting discovery. At a depth of 20ft. below the former surface of the mount I struck an almost circular cyclopean masonry, with a large round opening in form of a well; it was 4ft. high, and measured 7ft. from north to south and 5¼ft. from east to west. I at once recognized in this curious monument a primitive altar for funeral rites, and was strengthened in this belief by two 2ft. 9in. long and 1ft. 6in. broad slabs, in the form of tombstones, and a short column, which lay in a horizontal position below the altar, and which, in my opinion, must have once been erected on the spot to mark the site of a sepulchre. Fragments of beautiful hand-made pottery and knives of obsidian continued to be the only objects of human industry I met with. At last, in a depth of 26½ft., and at a distance of only 4ft. 7in. from the last described tomb, I found a 24ft. long, 18½ft. broad sepulchre, which had been cut on its west side 6ft., on the north side 10ft., on the south side 8ft., and on the east side 6½ft. deep into the rock, and its bottom is 33ft. below the former surface of the mount. It deserves particular notice that the above funeral altar marked precisely the centre of this tomb, and thus there can be no doubt that it had been erected in honour of those whose mortal remains reposed in it.

"Along all the four sides of this tomb's bottom was, on a foundation of large common stones, a 7ft. 8in. high slanting wall of large pieces of schist, of irregular form, which had been joined with clay; this wall protruded 4ft., and thus diminished considerably the size of the sepulchre. As in the two other tombs, the tomb was covered with a layer of pebblestones on which, in about equal distannce from each other, lay the bodies of five men; three of them were lying with the head to the east and the feet to the west; the two others were lying with the head to the north and the feet to the south. The bodies had evidently been burnt on the very spot on which each rested; this was shown as well by the masses of the ashes on and around each corpse as by the marks of the fire on the pebblestones and on the wall of schist. The five bodies were literally overloaded with jewels, all of which as in the other tombs—show unequivocal marks of the funeral piles. Here as well as in the other sepulchres I have noticed that, for a reason unknown to me, the burnt bodies with their golden ornaments had been covered with a 3in. to 4in. thick layer of clay, and on this rested the second layer of pebblestones. Until about 1ft. above this upper layer of pebblestones the work of the excavation is not difficult to me, for I have merely to direct my workmen to dig here or there. But from that point we—Mrs. Schliemann and I—have to do the work ourselves; the task so exceedingly difficult and painful, particularly in the present rainy weather, for we cannot dig otherwise than on our knees and cutting with our knives the earth and stones carefully away, so as not to injure or let escape any of the gold ornaments. Beginning the excavation of the lower strata of this tomb from the south side, I at once struck five large bronze vessels (λεβητες), in one of which were exactly 100 very large and smaller buttons of bone covered with blades of gold, on which are engraved beautiful spiral ornaments, or the symbolic sign of the holy fire. Close to the same vessel I found a cowhead of bronze, plated with silver; the mouth is gilded: it has on its front a splendidly ornamented golden sun, of 2 1-5in. in diameter, and on its head two long golden horns; in the middle of the head is a hole, which may have served for flowers. There can be no doubt that this head was intended to represent the goddess Hera (Juno), the patron deity of Mycenæ. In further excavating from east to west I struck a heap of more than 20 bronze swords and many lances; most of the former had had wooden sheaths and handles inlaid with wood, of which plenty of remnants could been seen. All along and in the heap of swords I found a large quantity of splendidly ornamented round blades of gold, with remnants of flat round pieces of bone, which had once, in uninterrupted series, adorned both sides of the swordsheaths; the smallest at the opposite extremity, the wooden handles of the swords had likewise been ormented with richly ingraved large round blades; the remaining space had been studded with gold pins, and large gold nails can be seen in the large alabaster or wooden handle buttons of the swords. On and arround the swords and the remnants of the sheaths could be seen a great deal of fine gold dust, which can leave no doubt that the handles and sheaths had also been gilded. Some of the lance shafts seemed to be well conserved, but they crumbled away when exposed to the air. Unfortunately, the skulls of the five bodies were in such a state of decomposition that none of them could be saved; three of them—the two which were turned to the north and one of those turned to the east—had the head covered with large massive golden masks, in one of these has remained a large part of the skull it covered. All the three masks are made with marvellous art, and one fancies one can see there all the hairs of the eyebrows and whiskers. Each mask shows so widely different a physiognomy from the others, and so altogether different from the ideal types of the statues of gods and heroes, that there can be no doubt that every one of them faithfully represents the likeness of the deceased hero whose face it covered. Were it not so, all the masks would show the very same ideal type. One of the masks shows a small mouth, a long nose, large eyes, and a large head; another a very large mouth, nose, and head; the third a small head, mouth, and nose. In the former the greater part of the skull of the deceased is preserved."



A MISCONCEPTION.—An amusing misunderstanding was the cause of Mr Haweis' church in Westmoreland Street, Portland Place, London, being crammed to overflowing on Sunday night. He had given out on the previous day the subject of his sermon for that evening, and was understood to say it would be the "Sanitary Aspects of Hell." Nothing more was needed to attract churchgoers; but meanwhile the story had reached the rev. gentleman's ears, and on mounting the pulpit he said, before anything else—"I fear some misconception has got abroad as to the subject of my discourse this evening, the result of which has been to incommode very considerably the regular attendants at this church. I am understood to have given notice of a sermon on the 'Sanitary Aspects of Hell.' I know nothing about hell. What I wish to speak to you about are the 'Sanitary Aspects of Health.'"

And White surrendered.

(a) The youngest practitioner will perceive that if White had taken the Kt he must have lost his Bishop and a Pawn in return.

REUTER'S TELEGRAMS.

[Supplied to the "China Mail."]

THE EASTERN QUESTION.

London, 12th February.

All negociations for peace are at present suspended; Lords Beaconsfield and Salisbury both firmly protest against any coercion being used towards Turkey.

The Chinese Embassy attended the opening of Parliament.

Obituary.—James Merry.

London, 8th February.

DISMISSAL OF THE GRAND VIZIER OF TURKEY.

The Sultan has dismissed the Grand Vizier Midhat Pasha from his post, and has appointed Edhen Pasha to succeed him.

OPENING OF PARLIAMENT.—THE QUEEN'S SPEECH.

Parliament was opened by Her Majesty the Queen in person.

In her Speech from the Throne, Her Majesty said throughout the sittings of the Conference at Constantinople England's object had been to maintain the peace of Europe, and obtain the better Government of the Provinces without infringing on the integrity of Turkey.

While regretting that the proposals of the Great Powers were rejected by the Porte, the Speech expresses hopes that an honourable peace may be concluded.

The Speech also refers to the assumption of the title of Empress, the Indian famine, and the administration of the Colonies.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—General dulness continues to prevail in our market; the outbreak of an insurrection, combined with a great scarcity of Mexican Dollars, are further increasing the difficulties in the Import trade, which is already in a sufficiently bad position. There are general complaints made about the extreme slowness in the clearances of old contracts, Of *Yarns* only 16/24 have been saleable to a small extent; prices are again lower. For *Shirtings* there was a slight enquiry, but offers being at the lowest quotations, most of them did not lead to business. *T. Cloths* and *White Shirtings* are neglected; *Velvets* have further declined, but of *Drills* some small sales are reported.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.35 to $1.65	60 to 64 reed 40 yds	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.50 to 2.20	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.65 to 0 87½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.50 to 2 30	Black Velvets		7.00 to 8 00
9 lbs.	38½ ,,	44 in.	,,	1.90 to 2 40	English Drills 15 lbs.	40 yds,	30 in. 2.55 to 2 65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1 55	Taffachelass	12 yds,	48 in. 1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No 16 to 24	per picul...	$28 00 to 32.00	No. 38 to 42 ...per picul... $35.00 to 38.00
No. 28 to 32	per picul...	$30.50 to 34.00	Reverse Twist 16-24 ,, ...

Woollens.—The alarming news which has reached us from the South of the actual commencement of hostilities between the Government troops and the rebels, has brought business to a complete standstill, and quotations, therefore, are entirely nominal.

Plain Orleans	40—42 yds.	32 in.	4 75 to 6.75	Figured Mousseline de Laine	30 yds.	30 in.	0 25 to 0.30
Figured Orleans	29—30 yds.	31 in.	4 25 to 5.25	Multicolored ,,	30 yds.	30 in.	0.30 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.24 to 0.31	Presidents	54 in.	to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in.	to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union	54 in.	to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0 39 to 0.45
Plain Mousseline de Laine	—30 yds.	30 in.	0.16 to 0.18				

Sugar.—There has been a further advance with an active demand. At the close *Formosa* kinds are slightly weak, but white kinds strong.

Sugar:—Takao in bag	per picul...	$4.30	China No. 4 Kook-fah	per picul...	$5 60 to $6.10
,, in basket	,,	$4.10	,, No. 5 Kong-fun	,,	$4 90 to $5.50
Taiwanfoo in bag	,,	$4.15	,, No. 6 E-pak	,,	$4.40 to $4.80
do. in basket	,,	$4.00	Swatow Brown	,,	$3.50
China No. 1 Ping-fah	,,	$7.60 to $7.80	Daitong	,,	$3.70
,, No. 2 Ching-pak	,,	$6.90 to $7.40	Japan Rice	,,	$2.05 to $2.27½
,, No. 3 Ke-pak	,,	$6.20 to $6.80	Kerosene Oil	,,	$4 50 nominal.

Kerosene Oil is nominally quoted at $4.50, with a very quiet market.

EXPORTS.

Silk.—The price quoted by a telegram dated 19th instant for good No. 2 Hanks was fr. 75. Whether it has fallen so much lower as is now currently reported or not, there remains the fact that the value of Silk at home is declining fast. If, as we believe it to be the case, this decline chiefly comes from consumption having disappointed the hopes of the manufacturing trade, its cause is a very deep seated one indeed.

During the past week transactions have been so small and prices so irregular, that, on the understanding that they are quite nominal, we have to leave our last quotations unchanged.

Settlements since the 9th instant are 150 bales of Hanks, 50 of Filatures and 50 of Oshius, leaving a stock of about 1,900 bales.

Hanks.—Best	No. 1 and 2	$760 to $780
,, Good	No. 2	$720 to $750
,, Medium	No. 2½	$680 to $710
,, Common	No. 3	$630 to $660
,, Inferior	No. 4 and 5	$570 to $600
Oshiu.—Best		$690 to $710
,, Medium to Good		$650 to $680
Hamatski 1 and 2		$500 to $520
,, 3 and 4		$460 to $480
Kakeda.—Best		$780 to $800
,, Medium to Good		$720 to $760
Filature Silk		$820 to $965

Tea.—Rather more business has been done in Tea during the past week, holders being more prepared to meet buyers' ideas, and prices have consequently ruled easier. Settlements amount to 1,000 piculs, comprising in most part Teas from $22 downwards. Arrivals have been very limited, and stocks to hand almost nominal.

The sailing vessel *Coulnakyle* with a large proportion of her cargo on board, had despatch from this for Kobe, to fill up there, on the 23rd instant, the rate of freight being £2.12 6.

To-day's quotations close as under, the market decidedly weak and prices nearly nominal.

Common	$8.00 to 11.00	Fine	$23 to $27
Good Common	12.00 to 14 00	Finest	Nominal.
Medium	15 00 to 17.00	Choice	Nominal.
Good Medium	18.00 to 21.00		

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained pretty steady throughout the past week, notwithstanding the advices received of lower rates in China. The demand for Bank Bills is almost nil, and there is but little Private Paper offering.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 2½d.	On Shanghai—Bank sight	74
,, Bank Bills on demand	4s 1⅞d.	,, Private 10 days sight	75
,, Private 6 months' sight	4s. 2⅞d. @ 2¾d.	On New York—Bank Bills on demand	99
On Paris—Bank Sight	5.17½	,, 30 days sight Private	101¼
,, Bank 6 months' sight	5.27½	On San Francisco—Bank Bills on demand	99¼
,, Private 6 ms. sight	5.34	,, 30 days sight Private	102
On Hongkong—Bank sight	par.	Kinsatz	419
,, Private 10 days' sight	1% dis.	Gold Yen	411

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 187i, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At Dai Chiuji, Tôkiô, on the 26th of February, the wife of Dr. ANDERSON, of a daughter.

Notes of the Week.

In the continued absence of any reliable news from the South, it is useless to enter into speculations as to what may or may not have transpired, news of victory on the side of the Imperialists, or of successes on the part of the insurgents, being alike vague and unauthentic. It seems tolerably certain that no battle, deserving the name, has yet been contested ; the fighting so far having been limited to a few skirmishes, utterly unimportant in detail and result. The past week has, however, dispelled all doubts as to the leaders of the revolt. The man whose courage and abilities restored the present Government to its full powers, the man tried in a hundred fights, the man hitherto honoured by the people as the embodiment of patriotism, loyalty and unselfishness, Saigo Kichinosuke, stands forth its declared head. Well may the Government recognise that it has no ordinary enemy to deal with. The bravest men in Japan, directed by a leader whom they reverence, and whose life's record proves him to be a man worthy to command the bravest, have had recourse to arms to endeavour to bring about by force what all remonstrances have failed to effect. It can be no common cause, no petty grievance, that can have induced such a man to turn against a Government of which he was once the chief support. He knows full well that he has staked all on the issue. Honour, for if he fail he will be adjudged a traitor ; wealth and titles, once bestowed on him by a grateful Government ; probably life itself. The merits of his cause must be discussed when we know with more certainty the reasons that have urged him to so desperate a venture. As he was once the man most trusted, so now is he become the man most feared by those few who constitute a personal Government, but by the mass of people he still remains the man best beloved.

In view of the grave interest which centres in Saigo at the present crisis, we place before our readers a short sketch of the principal events of his life, for the particulars of which we are indebted to the kindness of a Japanese friend.

Saigo Takamori, better known by more common name of Kichinosuke, is about fifty years of age, and comes of a good family of the *samurai* of Satsuma. He is a man endowed with far more than ordinary abilities, his personal appearance also bearing evidence to the superiority of his intellect. His younger days were spent mostly in and around Hiôgo, and in Yedo, where he completed his studies, and where he first made the acquaintance of Katsu-awa, the ex-minister of the Navy.

During the years of Kaiyei (1848-53.) while in Kiôto, he formed a friendship with a priest of the temple called Hôshô-In, at Kiyomidzu, by the name of Gessho, who like Saigo was an ardent upholder of the *Kinnô* (literally, duty towards the Emperor) cause, and who was a favourite of Konoye, a *kuge* of high rank.

In the autumn of 1858, Saigo was induced, against his judgment, to make a journey to Mito, as the bearer of a message from Konoye, delivered to him through Gessho, to the *Daimio* of that province, who was confined in his Yashiki by the Bakufu (government of the Shôgun). The Imperial Court had expressed a desire that the *Daimio* of Mito should be appointed one of the advisers of the Bakufu, as he was known to be a staunch upholder of the Kinnô cause, and the message that Saigo carried was an official notice of the desired appointment. But he failed to carry out his mission as he had expected, and came to Yedo. After remaining there a short time he returned to Kiôto, where he resided with Gessho, Umiyeda and Yechiji, all adherents of the Emperor's cause, and with whom he consulted as to the best steps to be taken for the overthrow of the Shôgunate.

In the mean time the Bakufu had commenced a rigorous persecution of all partisans of the Kinnô cause. Saigo and his friends were especially the objects of its hatred, but for some time no severe measures were taken against them, probably through a wholesome fear of the Satsuma party. At length, however, Gessho was threatened, and his life being in great danger, by the advice of Konoye he escaped in a *kago* to Osaka, closely pursued by the officers of the Bakufu. Saigo and Umiyeda together managed to protect his flight, and to get him safely into hiding at Osaka. Saigo then went back to Kiôto, but after a short stay, finding that Gessho's life was still threatened, he hastily returned to Osaka and induced Gessho to attempt flight into Satsuma. Accordingly, accompanied by Umiyeda, they procured a junk and set sail for the South. They were chased by their enemies, and narrowly eluding pursuit, arrived at Shimonoseki. Leaving Gessho behind, Saigo proceeded to Satsuma to procure a hiding place. Gessho, however, was compelled to fly and came to Fukuoka in Chikuzen, and after many narrow escapes, by the assistance of a certain *samurai*, named Hirano, managed to make his way to Satsuma where he took refuge in a temple. In the meantime Saigo was urging the Satsuma authorities to afford protection to Gessho, but owing probably to fear of the Bakufu, assistance was refused. Meanwhile the Bakufu authorities were endeavouring to procure spies at Fukuoka, who would undertake to go to Kagoshima, and capture Gessho.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

On the 15th October, in the dead of night Saigo came to the temple where Gessho had taken refuge, and found him and Hirano sleeping. He silently roused them, and Gessho at once comprehended, from the anxiety visible in his friend's countenance, the imminence of his danger and the necessity for immediate flight. Taking with them the priest's servant Insuke, they entered a junk and set sail to the east. The boat was amply provided with food and *sake*, and a feast was prepared and partaken of. Suddenly, without a word, Saigo rose, and embracing Gessho, plunged with him into the sea, and disappeared. After a few moments they re-appeared on the surface, and were at once siezed by the bewildered occupants of the junk and dragged on board. Both were found to be senseless. Saigo, a robust, powerful man, after a time revived, but all efforts to restore life to Gessho were in vain. Saigo's motive for this action has been accounted for in various ways, but the most probable solution is that despairing of saving his friend, he resolved to perish with him.

Saigo now changed his name to Kikuchi Genjo, but the Satsuma authorities dreading the vengeance of the Bakufu for permitting the escape of its intended victim, banished him to Oshima, where he again changed his name, taking that of Oshima-San-yemon in consequence of his having three times visited this place of banishment. In spite of the bodily hardships that he had to endure during the years of exile spent on this island, he continued to cultivate his mind, and never wavered in his firm resolve to overthrow the Shôgunate, and restore the Mikado to legitimate power.

In 1863, when the struggle between the Imperial Court and the Bakufu grew more open and bitter, Shimadzu, Lord of Satsuma, pardoned Saigo, and recalling him placed him at the head of the administration of affairs in his province. In 1865, when the Bakufu and the Chôshiu clan were in open warfare, Saigo arranged an alliance offensive and defensive between this clan and his own. In 1867, he attended the great meeting at Kiôto, and profoundly impressed the assembly by the truth and shrewdness of his counsels. In 1868 he was appointed adviser to the Commander-in-Chief of the Imperial forces.

When the Mikako's troops advanced as far as Shinagawa, in the final struggle with the Shôgun, Katsu-awa, in an interview with Saigo, begged him to cease hostilities, as Keiki, the irresolute and effeminate head of the Bakufu, was willing to surrender. This was at midnight, and Saigo straightway asked to be furnished with a proof of submission. Katsu-awa said that on the following day the castle at Yedo should be surrendered. Saigo at once replied, "If to-morrow, why not to night? There is no need to wait." The terms were made and the castle was given up.

After this Saigo accompanied Arisugawa, the present Commander of the Imperial forces, to Echigo in an expedition against a number of rebels, who had not yet thrown down their arms. After subduing these, Saigo was ordered to reduce to submission the retainers of the Shôgun's cause who had made their way to Yezo, which he undertook to do in thirty days, and he accomplished the task, giving proof of excellent judgment, and great valour. For this the Government at once wished to appoint him to the office of *Sangi*, but he declined the distinction and returned home.

On the 2nd July, the Mikado acknowledged his services in the following terms:—

"You have been the strongest upholder of my cause, and you have for years been zealously endeavouring to secure my restoration. Owing to your skill as Military Commander, in obtaining possession of Yedo Castle, in gaining the victories of Echigo, and by your diligence in all affairs connected with my service, you have gained for me the peace I to-day enjoy. I honour your actions, and as a reward therefor, decree to you an income of two thousand *koku* of rice per year."

This Saigo likewise declined to accept, but on the Mikado's ordering him to receive it he complied.

In 1871 Saigo was recalled by the Emperor, and elevated to the office of *Sangi* with the rank of *Jussami*. In May, 1873, he was appointed General of the Imperial Army, still retaining the office of *Sangi*. In October of the same year arose the Corean question, which led to a disagreement between Saigo and some of the other members of the Cabinet, unfortunately resulting in Saigo's withdrawal and return to Satsuma. Since that time the Government has made frequent overtures to him, and the Emperor has more than once ordered the return of the man most influential in effecting his restoration, and whose firm devotion to the throne he re-established still, we thoroughly believe, remains unchanged. But from dislike to some of those who surround the Sovereign, and who, he has reason to suppose seek to advance their personal power, instead of labouring for the dignity and welfare of the Empire at large, he has remained in retirement, devoting his time to the direction of a system of "Private Schools," or as we now know, Military Academies, established by him, and supported to some extent by the pension decreed to him by the Mikado as a reward for his faithful services.

We particularly invite the attention of our readers to the translation of a very remarkable document, written and addressed by Kirino, one of the present heads of the Satsuma insurgents, to a friend in Yedo two years ago, and which will be found elsewhere in our columns. It most clearly interprets the convictions which induced Saigo to keep in retirement since he left Yedo, and the ruling motives which have swayed the conduct of himself and his friends during that time. The correspondent who forwards it to the *Nichi Nichi Shimbun*, Akidzuki Shinkichi, formerly a *samurai* of Aidzu, remarks with truth that the argument is sound, but thinks that it is based upon the writer's personal interests. His future actions alone can verify or refute this charge. At present we are too much in the dark to be able to pronounce judgment on Kirino or his colleagues, and are not yet prepared to denounce as arch-traitors those whom time may prove to be true patriots.

A telegram has been received from Mr. Aoki, the Japanese Minister at Berlin, to the effect that Japan has been admitted into the Postal union. Mr. Bryan has been at Washington, and has had nothing to do with the arrangement made in Europe, having been entirely occupied in endeavouring to organize a Postal Convention in America, but hitherto without success, owing to the political complications which at present absorb all public attention.

The extract that we give elsewhere forms part of an address delivered by Mr. John Bright on the 2nd of January before the Rochdale Workmen's Club, at the Town Hall of Rochdale. In the course of the address Mr. Bright drew attention to the changes which the condition of the working man has undergone during the last forty years, and to the causes that have produced those changes. The remarks embody the soundest principles of political economy, and show the enormous superiority of the working of Free Trade over that corruptive fallacy called Protection. We trust none of our readers will be frightened at the length of the extract. Long as it is, it does not contain a dry sentence, and the English is so pure, and the language so uninvolved, that we trust the native papers may be able to translate it, and convey to their readers its full significance.

We understand that the agreement between the Machigaisho and the Gas Committee for lighting the streets of the settlement has at length been prepared, and in a few days will be circulated among the residents for signature. The amount required, even though cut down to the lowest figure, exceeds that promised by the community by about ten per cent., so that it is incumbent on the residents to increase their subscriptions so as to cover this deficiency. It should be remembered that the object of making an assessment was that each householder should fairly bear his *pro rata* share of the cost, and it behoves each one to honestly bear the burden of his share and assist in rescuing this settlement from a state of absolute darkness which is a matter of surprise and ridicule to all visitors, and a disgrace to any energetic community. The wording

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of the present agreement is almost similar to that of the former one, excepting that it is now provided that, owing to the reduced payment to the Gas Company, they shall be authorized "to extinguish the lamps during such portion of the night when the moon is shining or should shine, relighting them again as necessary, but such hours not to exceed the equivalent of seven whole nights in the month." Failing to raise by subscription the sum required for a continuous lighting of the lamps for every night in each month, we must consider that this is the best arrangement that could have been made, and trust that nothing will again occur to interrupt this necessary lighting of our streets.

Now that the lighting of our streets is to a certain extent settled, the question of watering them during the approaching summer claims our attention. The prospect of a renewal of our suffering of last year is anything but pleasant to look forward to, and if due allowance be made for the time occupied in perfecting any arrangement for the public good, steps should at once be taken to ensure such degree of comfort during the hot weather as is afforded by well watered and comparatively cool streets.

The Return of the Foreign Commerce and Trade of the Empire of Japan for the Half Fiscal Year ended December 31st, 1876, which is published by order of the Inspector-General of Customs has just been handed to us. The following table shows the total value of foreign and domestic productions imported into and exported from each of the various foreign countries.

		Declared Valued. Gold Yen. Sen.
Great Britain	Exports	6,076,028 01.8
	Imports	6,434,991 92.7
British Possessions:—Hongkong & Singapore	Exports	1,113,608 88.5
	Imports	1,693,731 07.5
China	Exports	1,366,917 93.2
	Imports	2,536,401 55.6
United States of America	Exports	3,422,861 04.4
	Imports	534,882 29.2
France	Exports	6,549,377 54.8
	Imports	1,473,420 40.8
Italy	Exports	1,655,332 12.0
	Imports	13,819 31.4
Germany	Exports	10,229 50.0
	Imports	182,712 07.8
All other Countries	Exports	51,551 07.1
	Imports	281,012 06.5

The total value of Exports is .. .. *yen* 20,461,783
do. of Imports is .. .. „ 14,150,970

Showing excess of Exports over Imports 7,310,812

This is a result widely different from that of usual returns and one of which the country may well be proud.

The Treasure imported has amounted to *yen* 6,886,183
do. exported .. .. „ 3,434,343

Excess of import.. .. 3,451,840

It would appear that for this period, at least, there has been no drain of Japanese treasure from the country, but it must be borne in mind that this is attributable to the exceptional result of the silk export, which has amounted to nearly fifteen millions of *yen*, including eggs and cocoons. The manner in which the Return has been prepared, and the form in which it is presented are a great improvement upon former efforts, and reflect great credit on the compiler.

The training for the forthcoming meetings both of the Yokohama Race Club and the Racing Association, will commence on Monday next, when the course will doubtless present its usual attractions for early risers. Several changes have taken place in the sporting world during the past week, the two most worthy of notice being the sale of the Dr. Benter's (Y. R. C.) entire stable to Mr. Wm. Fairplay (Y. R. A.), while Mr. Sindbad (Y. R. A.) has become the fortunate proprietor of Mr. John Peel's (Y. R. C.) *Mc Tavish* and *Ta Phairshon*. We can only continue to deplore the fact that the racing community of this place is still divided. The programme of the Racing Association is already published, and that of the Yokohama Race Club is promised in a few days, but we trust that for the sake of pony owners themselves, and more especially for that portion of the community who look forward to the race meetings as an enjoyable holiday, it is not yet too late to arrange all matters of disagreement between the two Clubs, so that an amalgamation may take place, and the forthcoming Spring Meeting afford the prospect of such good racing as can by no means be expected if the present unfortunate division is persisted in. On the merits and demerits of the points in dispute we do not care to hold forth again. As Sheridan says, "The quarrel is a very pretty quarrel as it stands; we should only spoil it by trying to explain it." Concessions will doubtless be required on either side, but we sincerely hope that no rancorous feeling will be allowed to stand in the way of such concessions as must tend to the benefit of racing men and the enjoyment of the general public.

A dramatic performance will be given at the Gaiety Theatre on Tuesday, the 13th instant, in aid of the widows and orphans of the sufferers by the late civil war in Spain, which will have a great and novel attraction for Yokohama theatre goers, as the cause of charity has enlisted the assistance of several lady amateurs, who will then make their first appearance on the stage. The pieces to be represented are Tom Taylor's comedietta *To oblige Benson*, and Maddison Morton's comic drama *From Village to Court*, both favourite pieces, and which, from what we hear of the progress of the rehearsals, will be well put on the stage. There can be little doubt that a bumper house will reward—as deservedly it should—the efforts of these ladies for their courage and kindness in thus coming forward to relieve suffering and distress.

From the "Japan Mail Daily Advertiser."

Monday, 26th.

The *Genkai Maru* came down from Shinagawa yesterday afternoon with horses on board, and after taking in a quantity of ammunition, left during the night for the south, it is believed.

Major General Kuroda, and Lieut. General Oyama left for Kobe by the *Genkai Maru* last night.

The *Nagoya Maru* leaves to-day for the South, with one battalion of garrison troops, and several hundred policemen.

From the *Chôya Shimbun.*

On the 22nd instant the insurgents surrounded the castle of Kumamoto and made an attack upon the south-western portion, but were repulsed, leaving thirty-two of their number killed. They then attacked the castle on the east, but were again repulsed with a loss of three men. On the afternoon of the same day a party of insurgents, numbering about three hundred, engaged the Imperial forces at Uyeki, but before the engagement was decided the troops set fire to the village, and were preparing to advance. The above news comes from Saga.

Further accounts say there is no disturbance at Saga, but that an engagement had taken place at Uyeki on the afternoon of the 23rd which resulted in the defeat of the Imperial troops, who set fire to the village, and reteated to Takase. Six or seven were wounded but none killed.

From the *Mainichi Shimbun.*

We hear that Arisugawa no Miya left Kiyoto (for Osaka?) on the 24th instant. It is said that some two hundred Satsuma *samurai* are in Hiogo *ken*, and that troops are continually on the look out to capture them.

From the *Hôchi Shimbun.*

A telegram of the 23rd states that at 5 a.m. on that day an advance was made against the insurgents at Kumamoto, but it appeared they had fled, as none could be found.

It is said that the *Samurai* of Aidzu wishing to avenge the wrongs they have received from Satsuma, are consulting on the advisability of joining the Imperial army. About three hundred Owari *samurai* have already been admitted into the army.

From the same.

A telegram dated 3.30 p.m. on the 23rd instant states that the Imperial forces set fire to the city of Fukuoka, and then advanced against the insurgents, who were defeated with considerable loss. The regular troops had some wounded but none killed.

From the same.

The following is the order given by His Majesty the Mikado to Prince Arisugawa no Miya:—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"I hereby appoint you to the post of Commander-in-Chief of my Army in the expedition against the rebels of Kagoshima *ken*, and I impower you to promote, degrade, reward and punish the officers and men of both Army and Navy. You are therefore to show your ability by quick and zealous suppression of the rebellion, and by restoration of tranquillity."

I hereby make the above order of the Emperor known.

SANJÔ SANEYOSHI,
Prime Minister.

19th February, 1877.

Tuesday, 27th.

It is commonly reported in Tôkiô that Saigo lately waited upon the Mikado at Kiôto and presented a petition embodying eleven demands, each of which were categorically refused, whereupon he retired again to Satsuma. It is further said that Itagaki also had an audience as delegate from Tosa, (in which county, as well as the other three forming in all the province of Shikoku, he is supposed to be all powerful) but for what purpose is not known. Itagaki, it will be remembered, resigned office with Shimadzu at the time of the Chôshiu troubles, and was mentioned by the latter in terms of great esteem in the protest which he then presented to the Emperor. The leaders of the rebellion are supposed to number four, the most powerful of whom are Saigo and Narahara (whose arrest has been lately reported), old adversaries in politics, be it said, the former having been in favor of the complete destruction of the Bakufu in the late revolution, and the latter advocating simply reform. It is rumoured, also, that although generally agreed as to the necessity of overturning the present Government, these leaders are divided into parties, one of which declares for a butchery of such as disagree with it and the other represents those who are in favour of obtaining their ends by pacific means.

The *Nagoya Maru* yesterday evening took away about 2,000 soldiers for the South. No passage was permitted to ordinary travellers.

From the *Osaka Nippo*.

The *samurai* of Saga are showing a disposition to aid the Satsuma rebels.

From the *Hôchi Shimbun*.

Takeda, the Vice-Minister of Education, has, it is said, been appointed Japanese Minister in China.

To-day (26th) 300 police constables are going to Kiôto by the Mitsu Bishi Company's steamer. Mr. Kawaji, the Superintendent of the police, started for that city on the 25th instant.

Yamagata, the Minister of War, went to Shimonoseki in the *Meiji Maru* on the 23rd instant from Kobe.

We glean the following from the *Akebono Shimbun* :—

The *Momiji Maru*, a sailing vessel belonging to Satsuma, has been captured off Higo by the *Riujio Kan*.

To-day (the 26th) two battalions of the Tôkiô garrison are to start for Kobe under Lieut. General Oyama, by the Mitsu Bishi Co.'s steamer *Nagoya Maru*.

A party of Satsuma *samurai* have arrived at a place called Yamaka, about seven *ri* from Kumamoto, having come from the province of Hiuga by way of Bungo.

The insurgents are said to have found Kumamoto too well garrisoned, and have gone toward the provinces of Chikuzen and Chikugo, about three hundred having already entered Yanagawa.

The Imperial troops in Kiushiu, including the Kumamoto garrison, comprise ten battalions of infantry, two battalions of artillery, and two battalions of police constables who have been turned into soldiers of the line. It is expected that all these united will shortly advance into Satsuma.

Lieut. General Kodzu, with two battalions of infantry and one battalion of artillery, has arrived at Sedaka in Chikugo. Lieut. General Miyoshi has arrived at Kurumé in the same province with three battalions of troops. An engagement is expected to take place to-day or to-morrow.

Major General Saigo (the younger) will act as Minister of War at Tôkiô during the absence of Yamagata.

From the *Chôya Shimbun*.

We hear that some of the Imperial forces landed at Taniyama, near Kogoshima, and then took up their quarters at Ono-no-hara.

From the same.

As there were reports that the Kagoshima insurgents had arrived in vessels at the shores of Buzen, the troops stationed at Toyotsu were sent to capture them.

From the same.

The *Hodzui Maru*, *Geiyo Maru* and *Kôyo Maru* of Satsuma were captured by the vessels of the Imperial Navy at Nagasaki.

From the same.

A report has arrived to the effect that the *samurai* of Akidzuki are attempting to cause a disturbance.

From the *Nichi Nichi Shimbun*.

A telegram was received from Kiôto last evening to the effect that Saigo, Kirino, and Sadowara have been deprived of their rank and titles.

From the same.

A notification to the following effect was issued by Iwakura *Udaijin* on the 20th instant to the various Government offices : "The Departments are not to exceed in their expenditure the sum settled as their annual allowance on the 10th of January last, for the term of six years, commencing in July of the present year."

Wednesday, 28th.

The *Fiery Cross* cannot come up to the usual anchorage on account of having 14 tons of powder on board which must be discharged at once.

It would appear from the following news which is published in this morning's *Mainichi Shimbun*, that the Government have not given up all hopes of settling the Satsuma difficulty by peaceful negociations.

A telegram from Kiôto, dated the 26th instant, runs as follows :—To-day His Majesty himself appointed Yanagawa and Hanabusa as a special Envoys to convey a message to the house of Shimadzu.

The *Rioji Kan* and *Seike Kan*, having on board Lieut.-Generals Yamada and Ito and Colonel Jinrei, three battalions of infantry and 500 Police constables started for Kagoshima, with the special object of trying to obtain possession of the Government magazines, small arms factory, etc.

From the *Mainichi Shimbun*.

A telegram received from Kiôto at 11.35 p.m. on the 26th announces :—During the forenoon of to-day the Imperial forces stationed at Taguse advanced and gained a great victory at Takase (Sedaka in Chikuzen ?). The insurgents fled, leaving their dead and wounded. The Imperialists seized plenty of the insurgents' ammunition.

A telegram despatched from Saga at 10.15 a.m. on the 27th states :—At 6 a.m. yesterday the troops advanced from Hasamamura, and the insurgents fled to Konohamachi. At 1 p. m. fighting ceased. Some of the insurgents are captured.

A novel mode of robbery has been successfully carried out in Tôkiô in two instances. A little after midnight on the 24th instant some rascal, dressed as a policeman, proceeded in a boat to Nakanobashi, near Shinbashi, where he landed and, it is now suspected, set fire to a house, for on an alarm being given by the inmates he made himself very busy in saving the household goods. No strict watch was kept on his proceedings, as confidence was placed in the uniform he wore, so that during the confusion he was able to transfer many of the salved articles to his boat and scull away. Nothing has been seen of him since. A similar case occurred at Asakusa four nights previously.

The following items are published by the *Hôchi Shimbun* :—A telegram despatched from Kurumé, near Kumamoto, at 5 p.m. on the 25th instant, states that the insurgents have retreated as far as Uyeki ; the Imperial forces had been advancing since that morning, but there is yet no news of a battle having taken place. Another telegram from Minaminoseki at 1.10 p.m. on the 26th instant states that engagements have daily taken place in the neighbourhood of Kumamoto, but always in favour of the Imperial troops. The Imperial forces fought with great valour at Uyeki and Sabara, but retreated to Minaminoseki, and having joined with other Imperial forces who were at Yamaka advanced again several *ri*, but no more engagements had taken place. The troops under Lieut. Generals Nodzu and Miyoshi arrived on the evening of the 25th at Minaminoseki, and were expected, with the troops of Kumamoto garrison, to fall in with the insurgents the next day.

The 500 police constables who left Yokohama in the *Saikio Maru* on the 21st instant with the intention of going to Tsurusaki have landed at Kokura instead, and if circumstances demand they will be sent to Kumamoto.

Police inspector Watanagi with seven hundred police constables has entered Kumamoto.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Saigo with his men has advanced as far as Kawajiri (about 2 *ri* from Kumamoto).

Lieut. General Miura advanced with a division of troops towards Hakata in Chikuzen.

The Satsuma insurgents are all dressed in white flannel shirts and drawers, they therefore move with ease, *but are very likely cold.*

The Imperial men-of-war at Nagasaki have captured some more Satsuma vessels. The men-of-war on the Higo coast are rendering assistance to the troops.

The *Hôshô Kan, Geiyo Maru, Namba Maru* and *Kinka Maru* are all guarding the coast of Higo, while the *Seiki Kan* is stationed between Nagasaki and Mogiura.

The *Meiji Maru* and the *Gembu Maru* are to proceed to Kagoshima.

Yamagata, the Minister of War, arrived at Fukuoka at 5 p.m. on the 21th instant.

H. I. H. Arisugawa no Miya, the Commander-in-Chief, with his adviser Kawamura, the Vice-Minister of Marine, started from Kobe at 8 p.m. on the 24th instant for Hakata in Buzen.

On the morning of the 26th instant the *Nisshin Kan*, and on the evening of the same day the *Asama Kan*, left Yokosuka for Shimonoseki.

Three more Satsuma steamers were captured by vessels of the Imperial Navy. Of them, the *Nomo*, was destroyed by fire, the *Maiyedzuru* had her machinery taken out of her, and the *Geiyô* was taken to Nagasaki. The above has been reported by telegram.

The *Kiorio Maru*, belonging to the *Kaitakushi* Department, has arrived, and is to guard Yedo bay, being stationed in the neighbourhood of Shinagawa.

More than nine hundred thousand *yen* have been paid out by the Army Department from the 17th to the 24th instant.

The *Chôya Shimbun* of yesterday gives us the following:—

A party of insurgents are said to have advanced as far as Bappu in the province of Bungo.

Kido has gone to Chôshiu, so as to prevent any disturbances breaking out there. The Department of the Imperial Household will from to-day be protected by two companies of the Imperial Guards.

It has been notified that whenever any one looks suspiciously like a rebel, he is to be arrested, brought to the police station and there examined.

[The above is a most indefinite order, and may lead some perfectly innocent persons who unfortunately do not happen to be good looking into undeserved trouble.—Ed. *J. M. D. A.*]

The following is published by the *Nichi Nichi Shimbun*, which is a semi-official organ, and would indicate that the Satsuma *samurai* have only the intention, if successful in their rebellion, of trying to upset the present ministry. If the orders given are strictly complied with, the insurgents are likely to secure a large amount of sympathy for their cause.

"The following order is said to have been given to the Satsuma *samurai* by their leaders.

1st.—They are not to touch anything which belongs to the Government.

2nd.—They are not to kill any of the Government officials.

3rd.—They are not to act in any way so as to cause distress to the people."

SECOND NATIONAL BANK.

Statement for the week ending 24th February, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	897,345	
In circulation	302,655	
	1,200,000

Yokohama	863	2,719	1,172	4,754
Total	863	3,585	3,116	7,564

Thursday, 1st.

There is a rumour current in Tôkiô that a letter has been sent to Katsu-awa, formerly Minister of Marine and always a great friend of Saigo's, by either Kirino or Shinowara, stating that the necessity of reform has frequently been urged by the Satsuma men on Okubo and other Government officials, but that no attention was ever paid to their advice. To bring about these needed reforms they have had resort to arms, and if in the end successful, desire to call in Katsu-awa's aid to establish a new Ministry. We give this merely as a rumour, though it is even stated that a copy of this letter has been seen. There seems to be a very general impression in the capital that the Imperial forces were beaten in the engagements with the insurgents on the 27th ultimo, and this impression gains ground because no news of the result is officially announced.

The German barque *Christine* will leave to-morrow for Shinagawa, there to load rice for Australia.

From the *Hôchi Shimbun* we take the following items :—

A telegram from Minami-no-seki at 10 p.m. on the 26th instant was to the following effect:—Three engagements took place near the Takase river to-day. The Imperial forces were entirely victorious. Fighting commenced this morning early. The Imperial forces are preparing for an attack to-morrow.

We hear that the *Daijô-kuan* is very busy, and a notification is is said to have been issued to be effect that business would be carried on even on Sundays and other holidays.

It is said that temporary branches of the Departments of Finance and Home Affairs are to be established at Kiôto.

Yamagata, the military adviser to the Commander-in-Chief of the Imperial forces, telegraphed from Fukuoka at 7 p.m. on the 27th instant that Nodzu and Miyoshi had united their forces for an advance upon Uyeki, Yamaka, and Takase.

Reports having arrived that the rebels were preparing for an attack upon Kurume, four companies of infantry had been sent to check them.

A telegram despatched from Nagasaki at 3.45 p.m. on the 27th instant says that the Imperial forces have been victorious at Takase, but reinforcements have been sent for on account of the extent of country they have to occupy.

We hear that the engagements which took place between the Imperial forces and the rebels at Yamaka and Kanohamachi on the 27th instant were very sharp but indecisive.

From the *Chôya Shimbun.*

We hear that Mayeda, the former *daimio* of Kaga, is raising a force among the *samurai* of Kaga, and will himself lead them against the Satsuma insurgents.

From the same.

Another attack was made upon the Kumamoto garrison on the 27th. When the Imperial troops advanced to repel their assailants the insurgents threw away their arms and fled, but this was considered by the Imperialists as some stratagem on the part of the rebels.

From the *Osaka Nippo.*

It is reported that some *samurai* of Inshu broke into the residence of the Governor of Okayama *ken* (Bizen) on the night of the 16th instant, but retired without having done any damage upon finding that the Governor, who would appear to have been apprised during the day of the intended attack, had escaped, leaving only a few female servants in the house.

Friday, 2nd.

The Governor of Miyagi *ken* has notified to the people that troops have been called out merely to prevent any breach of the peace taking place, and they must not be alarmed thereby and foolishly imagine that war has has broken out in the *ken*.

A fire broke out at Ota last night about half-past eleven, which destroyed upwards of eighty houses. The Japanese Police engines were in attendance, but no water was procurable, and the fire was only extinguished by pulling down houses which were in danger.

A telegraphic wire has been laid to Minaminoseki for military purposes.

We take the following from the *Hôchi Shimbun* :—

The Commander of the Kumamoto garrison is Lieut. General Tani, who has under him Major Kabayama and Captain Kodama. The garrison force comprises three battalions of infantry, two companies of artillery with a battery of twelve field-pieces, and a detachment of engineers—in all over 3,000 men. Further re-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

inforcements have been sent from Fukuoka and Kokura, some to Kumamoto itself, and others to join the forces at Takase and Minami-no-seki.

Saigo has advanced as far as Kawajiri. He advocates a thorough reform in Government, and is determined at present to establish a provisional Government in his own province.

The officials of Kagoshima *Kencho* are working at their offices as usual.

Shibuya Hikosuké of Satsuma, who was lately arrested at Kiôto on suspicion, was released after examination, but subsequently, when seaching amongst his luggage for the certificate of identity which was required of him, he by mistake exposed some thirty or forty thousand *yen* in paper money which he had in a box. Not being able to satisfactorily account for being in possession of so large a sum of money, he was re-arrested, and now awaits further judicial examination.

The Kumamoto *Kencho* and *Saibansho* have been removed to Mifune, a small village about 3 *ri* from Kumamoto.

Lieut. General Nodzu with the 1st division of the Imperial Army has arrived at Minami-no-seki, together with the 2nd division under Lieut. General Miyoshi, while Lieut. General Miura, commanding the 3rd division, has reached Hakata.

From the *Akébono Shimbun.*

A branch of the Naval Department has been established at Kobe for specially dealing with affairs concerning the Satsuma expedition.

The *Chôya Shimbun* publishes the following :—

We hear that Môri, the former *Daimio* of Chôshiu, together with Yamagata, Vice-Minister of War, are to lead a number of Chôshiu *samurai* against the insurgents in Kiushiu.

On the 27th instant 85,500 *yen* were handed over to the Army Department by the *Okurasho*.

Captain Watanabe has started from Tôkiô on urgent business for Echigo, Dewa, and Sendai.

The Chinese Government is said to have asked the Japanese Government for permission to employ Soyejima, the former Minister of Foreign Affairs, at a salary of 800 dollars per month.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kurumé on the 26th instant at 3 p.m. announces that the Imperialists were on that day attacked by the insurgents and a severe engagement took place. The Imperial Guards had arrived on the scene and another engagement was imminent.

Hitherto complaints made at Police Stations were not attended to on holidays, but enquiry into such cases was deferred until the following day. The Bureau of Police now notifies that all cases are to be attended to promptly, except on the occasion of special holidays.

Saturday, 3rd.

There has been an alteration made in the date of departure of the O. & O. Co's. steamer *Oceanic*, she being now advertised to leave about the 11th instant.

Some disturbance in Shonai is reported, about one thousand disaffected *samurai* and farmers having risen against the authorities, but troops have been called out and it is supposed that order will speedily be restored.

It is reported that troops are to be stationed at the mountain pass of Usui in Joshu, and also at Hakone, thus guarding the principal roads to the capital from the south. All travellers will have to submit to strict examination.

From the *Mainichi Shimbun*

At the engagement at Takase river on the 27th instant Shinowara is said to have been wounded. Mr. Ôyama the governor of Kagoshima *ken*, is said to have been deprived of his rank and office.

From the *Hôchi Shimbun.*

A telegram despatched from Kiôto at 4.40 a.m. on the 1st instant, states that the Imperialists were completely successful in the engagement of the 28th ultimo, put the rebels to flight and captured several of them.

The *Hôchi Shimbun* gives the following particulars of the Private School of Satsuma :—

A solemn oath was required from the *samurai* on their first entering that they would be faithful to their party even unto death. On joining the School a copy of the rules was subscribed to by each novice in his own blood. One of these rules forbade the students travelling more than twenty five *ri* from the School without special permission. Athletic exercises were made into the country in order to test the endurance of the students. From 9 a.m. to 10 a.m. every day all of them studied Chinese literature, and devoted the rest of the day to the discussion of politics and drill. Up to the end of last year there were 20,000 students in the School and it is expected that this number has been largely increased since the troubles in Satsuma commenced. The funds of the School were n a flourishing condition. All the local officials were appointed from this School.

From the *Akébono Shimbun* we take the following:—

Already more than two millions of *yen* have been spent by the *Okurasho* upon the Satsuma expedition, while the rebels have only obtained of possession three hundred thousand *yen* of the *Kencho* money.

The Imperial army in Kiushiu comprises seventeen and a half battalions of troops.

The insurgents broke down all the telegraph wires which had been laid between Minami-no seki and Kumamoto, but the line between Minami-no-seki and Takase has been repaired.

The number of insurgents about Kumamoto has greatly fallen off. It is believed that they have found the place better protected than they expected, and have consequently drawn off to make an advance on places likely to be more easily taken, or else have been sent to Takase and Yamaka to swell the rebel force opposing the advance of the Imperial troops in that quarter.

The *samurai* under Shinohara are the finest troops the Satsuma clan possesses, and have better withstood the attacks of the Imperialists than any others.

It is estimated that the rebels possess in all only from twelve to thirteen thousand stand of arms.

On the morning of the 27th instant fighting occurred on the banks of the Hazama river, the insurgents being finally driven across the river in disorder and taking refuge in the neighbouring hills. The Imperialists retired to the village of Funakusa.

From the *Nichi Nichi Shimbun.*

A telegram from Kiôto which arrived at Tôkiô at 10.25 a.m. on the 1st instant, announces that the rebels advanced to Takase on the night of the 27th ultimo, but the Imperial forces repulsed them as far as Terada.

On the 28th at 6 p.m., at the Inada ferry the Imperial forces had their outposts stationed, who were attacked by the insurgents. The Imperial forces fired about 30 rounds from their field pieces and about 30 of the insurgents were killed.

REVIEW OF THE JAPAN SILK TRADE FROM 1874 TO 1877.

GENERAL reviews of trade may, in one respect at least, be compared to universal exhibitions. Until time has allowed some noticeable change to be accomplished in industry and commerce, they are apt to degenerate into tiresome repetitions. We shall therefore make no apology to our readers for having since 1874* confined ourselves within the narrow limit of weekly and fortnightly market reports. But now, after the lapse of thirty eventful months, we may undertake to show that Japan silks, both in themselves and in their relation to the general silk trade, present some new and noteworthy features. The division of our subject is self indicated, for we have before us two distinct periods; one is marked by an extraordinary fall, the other by a no less extraordinary rise in prices. Trade during the first was uninterfered with by politics; in the course of the second, the ruin of its fair prospects was in a great measure caused by the sudden reopening of the Eastern Question. As regards the treatment of the matter in hand, we had some hesitation; knowing how difficult it is to give even an approximate idea of the general profits or losses in trade, we were inclined to confine ourselves to a record of the doings of this market, and let our readers draw their own conclusions from our statement of cost. But such a record would have been intolerably dry and barren. The purchase of silk after all is only a means to an end, and the end being but seldom a mere commission business, what really concerns us in the operations of foreign merchants in Japan is the sale, in other words their success or their failure. We have therefore, for the reasons given, and under the reserves expressed in our last review, adhered to the method which seems to us more instructive, and in juxta-position to the price at which silk was bought here, we place the price at which it was selling in Europe at the same time. In fact, the telegraph now allows an almost daily comparison of the one with the other.

As we wish our statistics to be taken for neither more nor less than they are really worth, we must give the uninitiated a few words of explanation. Our prices are derived from public quotations, which both here and at home are in most cases the work of special Committees. Here, the Committee is composed of buyers, and its quotations when they err will err on the side of higher prices; at home, the Committee men, whether they represent the buying or the selling interest, will rather err on the opposite side. Thus, both here and at home quotations are the result of a sort of compromise, but a compromise worked out within very narrow limits. Under these circumstances our figures representing the highest and the lowest prices have a sufficient claim to be taken as matter of fact. For our average prices we must make a distinction; they result, as regards this market, from a bi-monthly calculation of quantities, qualities, prices and exchanges, and they have an accuracy which we cannot claim for our average prices in London and Lyons, where operations are not only so much more complex and multiplied, but far less clearly recorded.

I.

1874-1875. 1875-1876.

The tone which from beginning to end pervades the chronicle of these two seasons finds its best expression in the following words :—"The prices offered "by manufacturers are month after month lower; "holders being helpless are compelled to give way." Now, a glance at table *D.*, will show that following since 1872 an apparently irresistible downward course, the good Hanks No. 2, for instance, which in July 1874 fetched 20s. 6d., fr. 57, fell in March, 1876, to 15s., fr. 42. It was then that this fall—which may well be called portentous, if we remember that the same silk was worth 28s., fr. 78 in 1872, and 35s., fr. 28 in 1866,—was humorously ascribed to the law of gravitation. We trust, however, that the phenomena of the silk trade remain amenable to the more familiar laws of demand and supply, and will venture upon saying that that unfortunate condition of affairs was brought about, firstly, by an increase in the production of silk; secondly, by a deep change in the requirements of consumption; thirdly, by an increase of the direct export of Asiatic silks to the Continent, and a corresponding decrease in the stocks which used to be kept in London.

1stly: One important feature in the period under review is a marked decrease in the Silk-worm's disease. In 1875 a great step was made towards the regeneracy of the yellow and other European breeds. This result has been obtained by a more and more general application of the microscopical selection after PASTEUR's method. The equilibrium of production, which had hitherto had to be maintained by the importation of Japanese and other foreign seeds, was then to a large extent restored by the indigenous breeds. In Tuscany, and in the Cevennes for instance, silk growers using one-fourth less eggs than in the previous year, obtained in 1875 a crop of cocoons equal in quantity and superior in quality to that of 1874. Where the Japanese breeds were predominant, as in Spain, Lombardy, Venetia, Syria, La Drome and l'Ardèche, the result was precisely the reverse. An idea of the comparative fecundity of the several breeds may be gathered from the following figures; they show how many kilo. of live cocoons were yielded by an ounce of 25 grammes, or by one Japanese card, which, on an average, bears the same weight of eggs.

Yellow and other European breeds.	*Imported or reproduced Japanese breeds.*
1874.....France, 18 to 60	Kilo. 12 to 24
1874.....Italy, 16 to 40	„ 16 to 40
1875.....France, 20 to 50	„ 6 to 30
1875.....Italy, 25 to 50	„ 13 to 26

The best qualities of Japanese Silk-worms' Eggs are imported in Italy, which acconnts for their yield being so much better there than in France. On the other hand, France having in 1874 and 1875 placed more reliance in her own indigenous breeds, whilst Italy went on using by far the greatest part of the export from Japan, the average quality of cocoons was much better in France than in Italy, and the low prices offered by the silk reelers having induced many silk growers to reel their own cocoons,

there was, especially in Italy, a large production of those inferior silks called "Mazzami" or "Paquetailles." This circumstance must be noted as one of the causes which contributed to the depreciation of the Japanese Hanks.

Now, taking as a point of comparison the figure which is assumed to represent production before the invasion of the silk-worms' disease, it appears that the decrease in the European crop, which in 1873 was still 20 per cent., was only 7 per cent. in 1874, and 17 per cent. in 1875. It is recorded that in Piedmont the crop of 1874, had it not been at the last moment interfered with by inclement weather, would have been one of the most plentiful of this century. As regards the retrogression in 1875, it is attributed to the general predominance of the Japanese breeds in Italy. Production, as far as can be judged by exports, increased in China, whilst in this country it remained almost stationary.

2ndly: Before entering upon the subject of consumption we shall, as briefly as possible, compare the new with the old organisation of labour on the Continent, and its bearing on the silk trade. Until quite recently the silk industry of Lyons was conducted on the principle of the greatest possible division of labour. The manufacturer did neither reel, throw, dye nor weave silk. All the machinery, all the labour required for the execution of his orders he found outside ready to his call, and he paid it at so much per weight or measure. To the middlemen who solicited his patronage, all he had to supply was his own pattern and the raw material, which he seldom bought beyond his present requirements. His stocks of manufactured goods, when he had any to dispose of, he sold on the spot to the commissioners and purveyors of the retail trade. So simple was his establishment, so well calculated was it to reduce his risks to a minimum, that he could do what the master of an iron or cotton factory could not; he might strike or resume work almost at his pleasure, and against the rising exigencies of labour, as long as labour was divided against itself, he used that power freely and efficiently. Now, a fact upon which we need not dwell long, for it forms indeed a prominent feature in the history of our own time, is the growing strength of the organisation of labour against capital. Since 1830 every revolution, every popular rising in Europe, has added to that strength. Meanwhile, competition in trade was increasing and it was opposed by larger and larger associations of capital, which gradually led to the introduction of the factory system in the silk industry. There are now to be seen on the Continent factories, within the precincts of which the process of manufacturing is carried through all its stages in which silk comes in at one end in its cocoon state and goes out at the other as a perfect tissue. Such complete establishments, however,

are exceptional. As a rule, reeling, throwing and dyeing remain distinct and more or less independent branches of the silk industry. But in most cases, and especially for the production of plain black and coloured piece goods, manufacturers possess their own weaving looms, and the weaving of silk has to a large extent been removed into the country, where labour was at first much cheaper and more easily controlled than in the great industrial centres. During the war of 1870-1871 the working population having been dispersed and no new hands apprenticed, the factory system was for a time paralyzed, but soon recovered its efficiency.

One other effect of the war was a sudden, but steady increase in the consumption of woollens as an article of dress at the expense of silks. First prompted in France by a variety of causes which we shall not undertake to analyze, that change in the fashions became general, and after the lapse of six years it is still the bane of the silk trade. Among the reasons of its persistency is this: Dress-making is no longer the exclusive domain of humble sempstresses and "modistes"; it has been invaded by enterprising men who have made it a new industry. Well, a certain sum being given for the purchase of a dress, the less that is spent on the stuff, the more can be spared for the make, trimmings, etc. It follows that wool is strongly supported by the dressmakers, whose influence on the shaping of fashions is considerable.

The advantages and drawbacks of the factory system are well known. In prosperous times it gives the manufacturer a vast power of action; in hard times it reduces him to the alternative of overproducing or breaking up his establishment. Hemmed in on all sides after the war by the competition of wool, the silk manufacturer could only save his industry by a large production of cheap goods; but how could his goods be made cheaper? On the side of labour retrenchment was forbidden; now disciplined as an army, labour treats with capital as equal with equal. The manufacturer's difficulty was therefore to be solved at the expense of the raw material. And so it was.

After this preamble, the annexed tables and the brief summary of events which follows them will be better understood.

1874 *August.*—Consumption tends to revert to Chinas. Hanks No. 2, 20s. 6d., fr. 57.

September.—A public sale of 1,400 bales in London shows the weakness of Japans. Hanks No. 2, 19s. 6d. to 20s., fr. 56.

October.—General situation good, factories active, but no advance in the price of silk. Throwsters raise their prices. Italian raws being abundant are declining. The new Hanks found to be bad; they are threatened by the competition of "paquetailles." The future belongs to Chinas; 1,000 bales Tsatlee bought on speculation in Lyons.

November.—Unfavourable advices received from the English and American silk-goods markets. Consumption requires cheap fabrics. Chinas excepted, no silk is safe.

December.—Although factories continue working

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with all their power, silk is declining. Great fall in the price of Italian raws. Loud complaints of the quality of Hanks. Hanks No. 2, 18s. 6d., fr. 52.

1875, *January.*—Prices in general are firmer. Kakedas, fine Oshius and Hamatski in good demand. In London 2,000 bales are sold without reserve ; well supported Chinas fetch the current rates, but Japans prove very weak ; some inferior parcels are sold as low as 15s. and 12s. It appears that manufactured goods are produced in excess of the demand ; they do not sell well. Hanks No. 2, 18s. 6d., fr. 52.

February.—Chinas command nearly one-half of the present consumption. Throwsters refuse to work Hanks ; Oshius being cleaner and better winders are in good demand.

March.—At the approach of the crop holders are anxious to clear stocks. Italian raws declining fast. Hanks No. 2, 18s. to 18s. 6d., fr. 50 to 51.

April.—The crop is going on well. All fine sized silks are declining. Hanks No. 2, 17s., fr. 48.

May and June.—The position of the full sized silks is so strong that it shall be affected neither by a good European crop nor by an increased import from China. They keep most of the mills working to the exclusion of secondary fine sized silks. All fine raws have been neglected by speculation during this season. Hanks No. 2, 16s. to 17s., fr. 47.

July.—Among silk reelers very few succeed in securing contracts for their products ; they will have to dispose of it in the open market. No speculation in raw silk—37,000 bales have been received from China in two months. Bad grain crop in Europe, commercial crisis in the United States. What consumption at large requires is cheap fabrics. Chinas remain in favour ; European classic raws are little wanted ; the demand is for middling and even inferior descriptions. Manufacturers absolutely rule prices in the raw silk market. Hanks No. 2, 16s. to 16s. 9d., fr. 47.

August.—Silk peice goods sell badly. The quality of the new Hanks is better than last year and their low price begins to attract the attention of manufacturers. Fine Oshius in good demand. Hanks No. 2, 16s. 3d., fr. 46.

September.—Large production of cheap colored piece goods ; black silks neglected. No speculation in raw silk. Hanks No. 2, 16s., fr. 45.

October.—Great demand for China trams. With the exception of the Tomiokas, Japanese filatures cannot stand the competition of Italian raws. The middling Oshius are driven off the market by the Tsatlees No. 4.

November and December.—The London and New York markets are overstocked. At the prices which raw silks have now reached, further concessions are considered to be impossible ; groups of holders are formed in order to make a stand against the exigencies of manufacturers. Hanks No. 2, 15s. to 15s. 9d., fr. 44.

1876, *January.*—The resistance of the silk trade has only had a temporary success ; manufacturers' offers are unacceptable ; the market comes to a dead lock. In Lyons an important firm has to suspend payments.

February and March.—The production of silk fabrics is decidedly in excess of consumption. Plain coloured goods being now neglected Chinas are weaker. An attempt is made to bring black silks into fashion again ; hence middling raws are out of favour and the demand for superior raws and throwns is revived. In China and Japan the low rates of exchange induced by the fall in the value of silver have caused the importers of foreign goods to make their remittances in silk instead of bills, and their shipments have been freely offered on arrival. The new silk crop is not far off ; prices give way. Hanks No. 2, 15s., fr. 42.

From the *Moniteur des Soies'* retrospects of the years 1874 and 1875 we gather the following general remarks :—Encouraged after the crop of 1874 by the abundance and cheapness of the raw material, and by the returning of a certain class of silk fabrics into fashion, the manufacturers of all Europe have enormously increased their production. Large stocks of goods have been maintained in London and New York which are the great marts for commision and transit. But prices have grievously suffered from overstocking. In the composition of dresses, which hitherto were nearly all wool, silk has now a larger share. The demand for current silk-stuffs, especially in the United States, has been considered as the harbinger of a complete and early return of fashion to silks. Meanwhile black silks, that all important staple, have been neglected ; so have been, with the exception of velvet, the richer and costlier fabrics. In fact, the great consumption has been that of middling plain coloured silks, costing from fr. 6 to 9 per metre. Compared with that of previous years the price of silk fabrics has not fallen in proportion with the decline in the price of the raw material, which in 1875 was 10 to 20 per cent. cheaper according to descriptions than in 1874 ; but this is owing to silk being now much less loaded in the dye (chargée) than before. In this respect, the quality of manufactured goods, which, especially in the case of black silks was so much complained of, has decidedly improved

The increase in the export of silk goods from the continent is not to be taken for an increase in actual sales, because manufacturers who produce too much will often take upon themselves the risk of consigning to London or New York. The production of Lyons alone in 1874 is estimated at 550 millions of francs (22 millions sterling). In consequence of the lower price of silk the amount for 1875 is less ; but the quantity of goods manufactured has been greater.

England remains the best outlet of the French trade; the export from Lyons to London has doubled since the year 1863.

The returns of the American Consulate in Lyons show an export to New York of

50 millions francs in 1873.
57 „ „ in 1874.
62 „ „ in 1875.

Protected against foreign importation by a duty of 60 per cent., the silk industry of the United States is making remarkable progress. Several of its products are competing successfully against similar European articles. Contraband is of course active under such a protective regime, and through the dishonesty or inefficiency of the Customs' officers, all honest importers, American as well as foreign, have incurred serious losses.

It is well known that the conditioning houses are those establishments where the weight of raw and thrown silk is determined upon a universally admitted scientific principle, and officially registered. As owing to the multiplicity of transactions the same bale may be weighed more than once, the returns of the conditioning houses are to be taken as the measure not of actual consumption but of general transactions.

General movement of the European conditioning houses:—

1873,... ... ... 10,199,031 kilo.
1874,... ... ... 11,494,474 „
1875.... ... ... 13,369,117 „

The comparative importance of their operations was as follows:

1874.		1875.
50.70 per cent.	France.....	53.17 per cent.
5,18 „	Germany.....	4.65 „
6.24 „	Switzerland...	6.52 „
0.89 „	Austria.....	0.76 „
36.12 „	Italy	34.23 „
0.87 „	England	0.67 „

The increase* in 1875, as compared with 1874, was as follows for each of these countries:

For France ... ... 22 per cent.
„ Germany... ... 4½ „
„ Switzerland ... 21 „
„ Italy ... ... 10 „

It must be born in mind that the vast transactions in Asiatic silks which take place in London do not appear in the returns of the conditioning house; they are recorded as follows in those of the warehouses:—

Total deliveries for the year 1873...55,072 bales.
„ „ 1874...53,400 „
„ „ 1875...53,220 „

And now, before this imposing array of millions, let us pause an instant to see what has been for our Japan silk trade the reward of so much toil, risk and deferred hope. Loss in 1874-75. Loss again—or at best scanty commissions in 1875-76 for most of those who had sold their stocks before the memorable 13th of April 1876.†

3rd.—It will have been noticed that during the two seasons under review silk reelers in Italy as well as in France were unable to sell the product of their filatures by contract as they generally did before; and also that the action of capitalists in the silk market was not only very feeble, but almost entirely confined to China silks. We shall not undertake to determine all the causes which deprived silk of their support; but some of those causes at least are to us clearly discernible. The production of silk all over the world has long been and still is, in a state of transition. We have seen how successful after a long series of disastrous years was the European crop of 1874. Its progress was checked in 1875; still, in the same year the import of silkworms' eggs from Japan was not only limited to 727,000 cards, against 1,300,000 in 1874, but was the smallest on record since 1865. This was a symptom of very ambiguous meaning; it could be interpreted as a sign either of increasing faith in the European breeds, or increasing distrust of the Japanese breeds; probably it meant both. However, after so many disappointments, no one could predict the time when the European crops, would be again what they were before the invasion of the silk-worms' disease.

In China, the export of silk, which had reached 85,000 bales in 1857, had fallen after the rebellions of 1859-1861 to 30 or 35,000 bales. It had, indeed, increased to 57,600 for 1873-74; but at what rate was it year after year to resume its former importance? This, again, was a matter of deep uncertainty.

Table C will show the growing increase of the direct export of Japan silks to the Continent.

TABLE C.

1875—1876	4,878	8,362	108	243	13,591
1st July to 31st Dec. 1876	9,066	8,342	62	715	18,185

Let the reader turn to the tables of export from China, he will there also find a large increase in the same direction. For instance, the shipments from Shanghai alone were

	To England.	*To France.*
1874-75.....	27,870 Bales.	24,211 Bales.
1875-76.....	19,676 „	25,660 „

When England possessed an almost complete control over the Asiatic silks, the returns of her warehouses offered a clear view of imports, of deliveries, of sold and unsold stocks, and those returns were so far a guide for the capitalist. But on the Continent, the

* Here our figures are at variance with those of the *Moniteur des Soies* of 18th March 1876.

† As these few lines contain the pith and marrow of our whole report, we should say that we only penned them after having made sure that they embodied the general impression of the trade.

(1) Until 1864-1865 when in addition to the line of P & O. steamers already existing the service of the Messageries Imperiales was fairly established between Yokohama and Hongkong, large shipments to Europe used to be made through Shanghai. Since 1871 shipments to other countries are to be understood for the most part of shipments to Italy.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

system of warehouses is still in its infancy, stocks are scattered and hidden in nooks and corners, and transactions are very imperfectly recorded. So if we put together the transitional state of production, the decadence of statistics and the uncertain prospects of consumption induced by the wool mania, it will not be wondered at that speculators ceased to look upon silk as a safe investment. But the increased import of Asiatic silks to the continent had one other effect; it diverted from its old channels a large proportion of the capital by the means of which the continental legitimate silk trade used to support the European silks.

Now to conclude: Whilst industrial labour was armed to the teeth, agricultural labour was left unprotected and speculation deserted the field. Silk thus standing almost defenceless was not only beaten, but utterly routed by manufacturers who were under the stern necessity of straining every nerve to save their industry. And affairs came to that pass, that the price at which silk sold in March 1876 was a price at which it can no longer be produced in Europe.

(To be continued.)

SPIRIT OF THE JAPANESE PRESS.

The Duty of a Patriot, by Kirino.

(Nichi Nichi Shimbun, 27th February.)

Some one once said to me, "A government must not be judged by outward show, neither can an administration be carried on solely by the enactment of laws."—A government which possesses 'outward show' only, is like a doll; while an administration carried on by laws alone is like a woman's work. Nay, worse than that; for though the government may cover itself with gold leaf and silk, it does not equal in appearance a wooden doll, while if the securing of trifling revenues is the only aim of the administration in enacting laws, women are better suited to carry it on than men. What reason is there then to fret about the want of men or money in the country?

When I glance at the Government, it seems to me that the important duty of protecting the nation is placed in the hands of men worse than dolls. And yet these are the men—men weaker than women—to whom the administration is entrusted, and who betray such foolish anxiety about the scarcity of men and money. Their very appearance disgusts me, but the reasons for their existing in the Government are not far to seek, for when the heads of the State are merely dolls or women it is only natural that they should employ worthless beings to serve them.

An ancient Chinese writer has said, "When an inferior imitates his superior, he always tries to exceed him." When the Government is what it is, what can we expect the people to be. When trouble was likely to occur between this country and China arising out of the Formosan question, a number of *samurai* from different provinces requested permission from the Government to lead the Japanese troops against China. Could anything be more ridiculous? What opinion did those men hold regarding their present rulers? They are the enemies of the whole nation, and denounce those who would come to its assistance as disloyal to the cause of the Emperor, and as having no object but to bring cruel suffering upon the people.

But what are the men who are always announcing themselves patriots? From their professions one might be led to imagine that they are really what they proclaim themselves, and that their only aim is the good of their country. But let us penetrate their real feelings, and we shall find they are men whose only object is the promotion of private interests, caring not a jot for the welfare of the nation.

For a good example of a patriot, look at Washington. When the Americans were suffering from the oppression of the English, he did not proceed to lead them on to take immediate measures to throw off the yoke, by telling them he was burning to avenge their wrongs. On the contrary, he kept aloof, biding his time, waiting for the opportunity to arise when his assistance would be required. It came; and when the war broke out, Washington was found at the head of the forces. These forces were neither well disciplined nor experienced in military tactics. They were composed mostly of farmers who were ignorant of war. But yet, wherever Washington and his men went, the English veteran troops laid down their arms before them. To all appearance the Americans were in every way inferior to the English, and there appeared not the least reason why they should always be victorious. It was because they were true patriots, who patiently awaited their opportunity, and when it came knew how to make the most of it. Seeing that their revolt was a matter of necessity, they shrank not from it, but did their duty on the instant.

When the affairs of a country have become hopelessly entangled, and murmuring voices of discontent are heard throughout the land, then the true patriot recognises that his time for action has arrived. But such a man never waits to consider whether his cause will be triumphant or not, acting only after having assured himself of ultimate success. Victories and defeats are foreseen only by the Almighty, and thus when a man's conscience impels him to go and fight for the cause of his country, he must do his duty regardless of the result to himself. When his cause is just, numbers flock to his support and victory at last crowns his efforts.

When we carefully examine those who are always proclaiming themselves true patriots, we find that they are nothing but miserable pretenders. They are loud in call for reforms! reforms! but when their country actually needs their services, they carefully avoid encountering any danger, and go and hide themselves. The object of such men is to gain power only to use it for the oppression of the people. Their conversation is always concerning the Government, and they speak only in such manner as may suit the times. But it may happen that evil befalls them, and becoming suspected, they have much ado to keep their heads on their shoulders.

No! when a tyrannical Government prevails true patriots should all retire to their homes, and there, nourishing their brains, keep silent about their patriotism. We know that caterpillars contract their bodies in order to advance, and the eagle silently watches before it spreads its sure wings and pounces upon its prey.

Imagine a man who says, "My father was killed by such and such an one; I cannot forgive the murderer; I must avenge my father's death. I cannot live in the same world with such a man; I will have his life, even though I have to seek it in the depths of hell." Then, drawing his sword, he goes howling through the street. Can such a man ever avenge his father's death? Never! Such societies as the *Rioshi-sha* of Tosa have ever been to me most hateful, seeking to attract members by boasting of patriotic motives. Men who would be attracted by this are useless to any cause.

When a man sincerely desires to devote his life to the good of his country he should remain quiet, calmly watching events, and carefully considering if there be any necessity for him to take any active part therein. He should on no account be hasty, and interrupt the Government in the performance of its duties. It is against all reason that men should wilfully interfere in the administration of a Government which is doing its duty. Men who are always trumpeting their patriotism are like unto those who go around in the streets with drawn swords to avenge a father's death; counterfeiters of patriotism, obstructors of Government; in my eyes deplorable, ridiculous, hateful. It may be said that they aid in forming societies that are intended to be of service to the country in times of necessity. Of what use can societies be, founded by such men?

Distance has no effect on the ardour of patriotism. When a true lover of his country sees that the time for action has come, he knows full well that the same motives by which he is swayed and the same objects which he has in view, will animate those who think with him, no matter how great the distance that separates them, and that they will join cause with him, and aid him in his efforts for the common good. When his plans are determined, and his motives fixed, there is no need for him to run hither and thither, asking what is going on, and chattering upon the condition of the times. No! he will, while passing his time among the treasures of nature, away from the busy world, keep his mind in contemplation of the actions of the illustrious men of the past, and perfect himself in study of the art of war, in readiness to proffer his services at any time, when the necessities of the country may require them. Should the people continue in a state of peace and prosperity, or should the once heard cries of discontent become changed into voices of general satisfaction and joy, then there will be no need for us who hold these views to emerge

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from our seclusion. What happiness to believe that we should never be called upon to come forth into action! With what contentment would we pass our lives in this retirement! But we fear that the time is at hand which demands our services.

It was once said to me, "How can you sit there quietly, doing nothing, when there is so much sufferiug around you? You were born a man, why not act as one?"

I replied "It grieves me no little to see so many suffering under tyranny; but my rule of life makes duty the first law, pity the next. When I act from a sense of duty, I can, without the least fear, plunge into fire or water, but were I to act otherwise than duty dictates, I should be shamed, and the greater my success, the greater my disgrace."

If we look at our country we see everywhere prevailing no little discontent. We try not to notice it, for if we were to interfere at present with the actions of the Government, it would be an act of unwarranted disobedience, and the people would distrust us as disturbers of the peace of the nation. But though remaining in peaceful seclusion, we must always remember our duty, and if occasion calls us we must be ready to come forth

This is the feeling which exists among all true patriots, but those who put on the mask of duty in order to get some Government office are—well—unworthy of remark.

In the year Jimmu Tennô 2535 (1875).

NOTIFICATION No. 5, FROM THE IMPERIAL RESIDENCE (AT KIÔTO.)

(From the *Nichi Nichi Shimbun* of March 2nd.)

To *Shi, Fu and Ken.*

The following are the grounds upon which His Majesty has decreed the chastisement of the rebels of the Kagoshima *ken* :—

On the night of the 31st of January last, a large number of rebels broks suddenly into the powder magazine at Kagoshima, belonging to the War Department, and seized a large quantity of rifles and cartridges which were stored there. On the nights of the 2nd and 3rd of February, they again broke into the same place, maltreated and insulted the officials in charge, and carried off not only firearms and ammunition, but everything else contained in the magazine. They also took possession of a dock at the same place belonging to the Naval Department, and changed the descriptive board set up at the gate. They also on the 8th February stopped the mail steamer *Taihei Maru*, while anchored at Kagoshima on her return from Loochoo, and detained the officers who were on board. The Government hearing that large bands of armed men had assembled and were roaming about everywhere, and that matters were in a grave condition, sent Kawamura, Vice-Minister of Marine, and Hayashi, Junior Vice-Minister of the Home Department, in the *Takao Maru* to Kagoshima to ascertain the actual state of affairs. On arriving there these two officials sent two of their subordinate officers on shore as messengers to the *Ken* officials. These men were at once arrested by the rebels, and not only so, but a number of boats containing men armed with rifles approached the *Takao Maru*, and were apparently on the point of attacking her when she sailed from Kagoshima, and having anchored at a neighbouring part of the coast, an interview was held with the *Kenrei* Oyama, from whom the state of affairs was enquired. Oyama stated that after seizing the ammunition as above described, the rebels suddenly arrested a number of police who had then returned to their *Ken* and were living there. They had examined these men and taken their evidence, and had sought a pretext for insurrection in unfounded statements with which they excited the people's mind, and assembled together a band of brigands. On becoming aware of these overt acts of rebellion, the two officials at once returned to Kiôto and made their report to the Emperor, who after further enquiry ordered that due measures should be taken. Finally, on the 15th February, Saigo Takamori, Kirino Toshiaki and Shinowara Kunimoto, on the pretext of asking questions of the Government, made an irruption into the Kumamoto *Ken* at the head of a body of rebels, armed with warlike weapons in contempt of the laws of this Empire, and to the injury of the national peace. His Majesty, deeply indignant at these acts of open violence has, in the exercise of his legal authority, decreed the chastisement of the rebels.

Take good heed of these reasons, and explain them in a friendly way to the people under your jurisdiction, so that they may not be led away by lies and idle rumours. You should also pay strict attention to the maintenance of order in your jurisdiction.

(Signed) SANJÔ SANEYOSHI,
Daijôdaijin.

25th February, 1877.

LITTLE DINNERS.

"La table est le seul endroit où l'on ne s'ennuie jamais pendant la premiere heure.

An aphorism of Brillat Savarin's? Sir, you are quite right; it is. I am not going to deny to whom I am indebted for this and several others that I shall find occasion to use before I have finished my discourse; maxims which ought to be written in letters of gold and hung up in every dining room in the kingdom.

But wasn't the man a cook?

Yes Madam, in precisely the same way that Praxiteles was a stone mason, and Reubens an oil and colour-man.

But I know he wrote a cookery book, for Mrs. Beeton gives a receipt for making an omelette—

Yes Madam, I remember perfectly; it is a translation from my Ruskin of cookery; an omelette au Thon, if I recollect, and a most delicious—

Really Sir, the receipts of a cookery book do not afford the most interesting topic of conversation for the drawing room.

Now, really Madam, as Puff says "I think that is one of the most ungrateful remarks I ever heard in my life." His cookery book, as you call it, is the only book I know of that explains the real intentions of cooking and eating, the philosopher's stone which transmutes to gold, the most unpromising materials. One of the most elegantly, and at the same time vigorously written works in the French language; a work approached in grace of style by few of the finest prose-writers of France, a work—

I thought Sir, we were going to converse on the æsthetics of dining, and you favour me with a lecture on kitchen literature.

Ah! my dear Madam, I see that you too are a victim to the very evil which, in laying my views before you, I would, most respecfully, endeavour to remedy. Madam, you are suffering from dinners. You have, since early morn, been wearied with the coming responsibility of sixteen guests. For three mortal hours you have sat at your table doing your best to entertain those sixteen persons, who gradually drooped during the second hour, and passed the third mostly in dabbling in their finger glasses, or furtively yawning in them under pretence of moistening their lips. Your cannot tell of what you partook, and what you have taken has neither soothed nor nourished you. Hence discomfort of mind and body, and—pardon me—a little petulance of temper, the invariable result of improperly administered and consequently imperfectly digested food—Nay, my dear Madam, I beseech you frown not, and make no mental resolve to ask me no more to partake of your gracious and always most generously dispensed hospitality. I would not for worlds be misunderstood. Banish me not I pray. I know that your enjoyment is found in the enjoyment of your guests. Permit we then to point out how I think your aim may be better attained, while your labours are lessened.

Ah! you smile at what you are pleased to call an old bachelor's crotchets. Well! well! perhaps they are, but they can do no harm, if you only smile at and forgive them, and perchance there may be found in them a grain of sense that shall warrant their utterance.

Now, as all the guests have gone, if you will allow me to join your husband in a cigar we can chat the matter over. At a friend's house, the other day, I picked up a little book published I think two years ago, on Aristology, or the Art of Dining. It is termed the "Gentleman's Table Guide." Yes, Madam, your indignation is no doubt just, and, as you say, it is for a set of selfish bachelors that it has been written. The author may probably have studied Colnet's *L'art de diner en ville*, where he says

> O mes amis! fuyez, fuyez le mariage,
> C'est un état fort triste, et peu fait pour le sage;
> Que de troubles secrets, que de soins, que d'ennui,
> Sombre tyran des cœurs, il entraine apres lui!

But be that as it may, he has foreseen that this accusation of selfishness might be brought against him, and himself says "Ladies are very apt to suppose that men enjoy "themselves the most when they are not present. They "are in a great measure right,"—one moment my dear Madam, I beseech you annihilate me not—"but for a wrong "reason. It is not that men prefer their own to a mixture "of female society, but that females delight in a number of "observances, and in forms &c., &c., and upon a certain

Original from UNIVERSITY OF CALIFORNIA

"display and undeviating order which conspire to destroy "that enjoyment which they seem to think they are debar- "red from. The fault is their own. If they will study my "doctrines * * * they will soon find a difference "in their favour." There, you see, he actually asks you all to put yourselves in the way of becoming converts to his views, thus enabling you to take away the reproach of selfishness that you always fling at us much abused and sincerely-to-be-pitied bachelors.

He goes on "In their management of dinners let them "think only of what contributes to real enjoyment. Such "a system will afford them plenty of scope for the display "of their taste in realities, instead of in vanities, which "have no charms for men in the article of conviviality." Now it is, I submit with all deference, that very "undeviating order" which is the essence of boredom, and which converts what should be a truly festive board into a social penance. Ask yourself, ask your friends how they receive an invitation to a regulation dinner. Does it bring the light of gladness to your eyes as you look forward to the feast? Does your heart beat rapturously at the thought of the coming banquet? No, you search round for an excuse to exercise the privilege of staying at home, or if you are compelled to go, you do so under protest, vowing, and in all sincerity, that you hate dinner parties. And no wonder! I too hate dinner parties, as commonly understood, and generally inflicted. Like the author of this little book "I shudder when I think how often I have been doomed to only a solemn mockery of enjoy- ment; how often I have sat in durance stately to go through the ceremony of dinner, the essence of which is to be without ceremony, and how often in this land of liberty I have felt myself a slave." I know what the whole routine will be directly I get my daintily penned invitation. I see it all like the repetition of a wearying dream. Number of guests, twelve to sixteen. The frightful blank between arrival and dinner, only to be filled up by a superficial interest in the album—oh those albums!—or by some equally transparent fiction. The long dinner table with the huge centre of greenery, which probably hides entirely from me the only faces that I am anxious to see, or cuts off all power of communication from the people I most enjoy listening to, or convers- ing with. The ten inevitable courses and the four inevitable wines. Conversation, with its feverish bursts and deadly pauses. The sputters of wit and the dead blanks of utter inanity. In fact the dreariness, the weariness, the joy- lessness, the unprofitableness, which the conventional dinner party entails is melancholy to contemplate. It neither blesseth those that give nor those that receive. I am not complimentary to your dinners? No Madam, nor to my own, for I too have followed in the beaten track. *Mais nous allons changer tout cela*, or at least we will try, and for this reason it is that I have brought this small work to your notice, and if I succeed in inducing you to invite me to four little dinners next month, instead of to one large one, I shall consider that I have not laboured in vain.

It is true that there are occasions when a certain amount of display is not only justifiable, but necessary. But it is when the display attempted is incommensurate with the means employed that vexation of spirit occurs. "State without the machinery of state is of all states the worst." You Madam, have not only the warm heart that renders it necessary for your own happiness that you should contribute to that of your friends by your generous hospitality, but you have all the adequate paraphernalia at your disposal. You then are the one clearly appointed as the leader of a revolution against a despotism that custom has imposed on the long suffering social world. Style? Try after style by all means, but let it be the style which your own unerring taste shall dictate; head a crusade that will achieve a victory over that same dull style which is the bane of present day aristology. Follow out Thacke- ray's suggestion of establishing an Anti-entrée and Anti- dessert Movement, and become the benefactress at once of dinner givers and dinner eaters.

My definition of a good dinner? Well it depends on the occasion. The famous beefsteak pudding made by Miss Pinch led to a result which a more ambitious entertainment might have failed to produce. There it was, and being there nothing else would have done as well. The return banquet at John Westlock's chambers, "salmon, lamb, peas, innocent young potatoes, a cool salad, sliced cucumber, a tender duckling and a tart" must have made the day a red letter one in the lives of the party who sat down to it. Do you re- remember where Thackeray, in the character of Brown's uncle, writes to his nephew of the little dinner given by a dear and faithful lady, whom he and his friends had not met for years? "She remembered the dishes that we "used to like ever so long ago, and she had every man's "favorite dish for him. Rodgers used to have a passion for "herrings—there they were; the lawyer who has an enor- "mous appetite, had a shoulder of mutton and onion sauce; "mine did not come till the second course—it was baked "plum pudding—I was affected when I saw it, Sir—I "choked almost when I ate it."

No Madam, I did not intend to assume the office of *chef*, and give you various *menus*, with rare receipts for recherché dishes. I would not so far forget my position as to presume to hint at what you should have for dinner. Your own perfect knowledge of housekeeping, supplemented by the instructions of the late lamented Mrs. Beeton (now become the patron saint of the kitchen and store room, having been canonized under the name of Santa Padêlla), and careful reading of the examples appended to the little book I have brought to your notice, will give you such knowledge as I cannot im- part. My aim has been a broader, and I trust a more worthy one; the decrease of costly and formal entertainments, the increase of easy hospitality in the shape of simple dinners, the reducing of expenditure by the abandonment of op- pressive show, the augmenting of enjoyment by the adop- tion of unencumbered forms. I want you carefully to read Aristology—not the receipts. Also study, if you can borrow it, an old work called "The Original," and you will then arrive at the knowledge of the theory to which I would I might cause your conversion.

You don't believe that I know what a good dinner means?

My dear Sir, you have been asleep, the whole time that your wife and I have been talking, and you wake up in a bad temper. Well, I will say no more, but in the words of the author of this modest little book, "I cannot help thinking that if Parliament were to "grant me £10,000 a year, on trust to entertain a series of "worthy persons, it would promote trade and increase the "revenue more than any hugger-mugger measure ever "devised."

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

The Annual General Meeting of the Yokohama Gene- ral Chamber of Commerce took place yesterday afternoon, the following members being present: Messrs. Winstan- ley (Chairman), Wilkin (Vice-Chairman), Evers, Vouille- mont, Dodds, Willcox, Braun, Mollison, Keswick, E. de Bavier, J. Rickett, Jr., Grosser, Dunlop, Barlow and Milsom.

The Chairman opened the meeting by stating the na- ture of the business before them. Mr. Dinsdale, the Secretary, then read over the minutes of the last meeting, and these were approved.

The Chairman said the present meeting should have been held during January, but owing to the circumstan- ces of the premises of the Chamber having been lately destroyed by fire, with which all were acquainted, this was the earliest opportunity available. Many of the books of the Chamber had been burned, though the most important papers had been saved. The property had been insured for $1,500, which sum the Insurance Agents had paid, and all endeavours were now being made to have the destroyed property replaced.

The Secretary now read the following report and state- ment of accounts for the past year:—

Report of the Yokohama General Chamber of Commerce, for the year 1876.

In presenting the Annual Report to the Members, the Committee have to say that few matters of importance have been brought before them during the past year. Various subjects have been under discussion, some of which, as will be seen by the report, will probably have to be again considered by the incoming Committee.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Accounts.—These show that the Chamber does little more than pay its way, and the balance in hand on the 31st December last, of $224.98, is less than at the corresponding period of 1875 by about $145, the deficiency being attributable to the increased cost of telegrams, and diminution in the revenue. The issue of circulars again shows a considerable falling off, having decreased to the extent of about 3,000 copies in the twelvemonth, the total sale having been 22,115 against 25,227 in 1875, representing a considerable loss of income to the Chamber.

Telegrams.—These still appear to give general satisfaction, and considering the many fluctuations that have taken place in silk, the information given may be taken as having been fairly reliable.

Drawbacks.—It is to be regretted that it seems impossible to make any further move at present towards obtaining this desirable concession, and during the year it has appeared to the Committee of no advantage to again press the attention of the Ministers to the matter.

Hatoba Accommodation.—This subject has received much attention from the Committee during the last twelve months, and the urgent need of the improvements promised in March 1875 has again been brought to the notice of the authorities. The superintendent of Customs has stated that the improvements will be at once carried out, but so far there is no sign of any work being commenced.

Storage of Kerosene.—The godown at Nakamura has been largely availed of, but it is only quite recently that the regulations for the Government have been agreed upon, and it now only remains for them to be generally adopted by the Foreign Ministers, for the storage of Kerosene thus to be rendered compulsory.

"Cathaya" Case.—It will be remembered that in an action brought against the vessel for damage to cargo, the plaintiffs were nonsuited on the ground that being only holders of a Bill of Lading "without value paid" they were not the proper parties to bring an action. As the decision seemed full of interest to the mercantile community, the Committee decided to print a pamphlet embodying the chief facts of the case, and send it to the principal Chambers of Commerce both in Europe and the East, with a view of eliciting some information as to the custom usually adhered to in other ports under similar circumstances. The replies did not throw much light upon the questions submitted for notice. The answers received show a considerable difference of opinion, and are open to the inspection of members.

Protest against a Passport Regulation of the Japanese Government.—In the early part of the year the Japanese Government issued a Notification levying a tax upon natives travelling in foreign vessels, against which the agents of the steamship companies protested. The Committee supported this protest, and in addressing the Ministers of the different Treaty Powers, pointed out that the Notification must be considered an infraction, if not of the actual letter, certainly of the spirit of the Treaties. At last the tax, though not altogether withdrawn, was reduced. The fact, however, of foreign vessels being placed at a disadvantage with native ones is still patent, but the withdrawal of the P. & O. steamers from the Shanghai line, has led to the question being for the present abandoned.

Limits of the Port.—The Committee feeling that some definition of the limits of the port was desirable, addressed the Board of Consuls on the subject, but from the reply received it appears the Consuls were scarcely agreed upon the desirability of any port limits being fixed, and the Committee therefore, for the present, have not pursued the matter further.

Pilotage Regulations.—This subject was receiving the attention of the Committee at the time the Japanese Goverment Notification was issued, and it was felt that no steps could be taken by the Chamber until the working of the Japanese Regulations had been tried.

Trade statistics for 1876 show a notable increase in the value of exports, owing to the considerably larger business in Silk, coupled with very much higher prices. Tea, on the other hand, shows a reduction both in quantity and value. Yokohama has also shared in the export of Rice from Japan, but though the trade has given employment to foreign vessels, it is as yet by no means a general one. The export actually from this port is comparatively insignificant, as the bulk is shipped at Shinagawa, and the Chamber has found difficulty in obtaining reliable information.

ARTHUR WINSTANLEY,
Chairman.

Yokohama, 2 March, 1877.

YOKOHAMA GENERAL CHAMBER OF COMMERCE.

Statement of Receipts and Expenditure for the Year 1876.

RECEIPTS.

Balance from last account			$ 375.29

	$6,250.49

Examined and found correct, 22nd February, 1877.

E. G. VOUILLEMONT, JOHN THURBURN. } Auditors.

E. & O. E.

Yokohama, 1st January, 1877.

G. K. DINSDALE,
Secretary.

Mr. Mollison proposed their adoption, which Mr. Keswick seconded. Carried.

The Chairman remarked that since the report had been written, a letter had been received covering a plan of the proposed additional covered sheds on the hatoba. These had been agitated for during the past two or three years.

Upon being put to the ballot the following gentlemen were found to be elected a Committee for the current year:—Messrs. Winstanley, (Chairman) Wilkin, (Vice-Chairman) Barlow, Milsom, Van der Pot, Evers, D'Iffanger, de Bavier and Dodds, with Messrs. Vouillemont and Thurburn, Auditors.

The Chairman then spoke with regard to the omission of several of the articles mentioned in the London telegrams. This had been proposed at a former meeting, when, after some discussion, during which the Chairman had given his opinion that the Committee should be empowered to make these alterations during the year, if necessary, it was decided to leave the telegram as it was. The articles in question were tobacco, vegetable wax, Japanese copper, camphor and rice. The quotations for copper were most difficult to obtain, and even then were scarcely reliable.

Mr. Wilkin said he thought few if any of the members were much interested in these articles, and he imagined a substitution of bar silver quotations instead of copper would be desirable and of more interest.

Mr. Mollison said that if it were a question of expense only, the telegram was quite sufficient as it was. The members were scarcely interested in these special articles, but the questions were of general interest.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Mr. Vouillemont then proposed, and Mr. Dodds seconded, that the telegram remain as at present, with the exception of a substitution of bar silver quotations for copper. Carried.

The Chairman next mentioned that all the books of the Chamber having been burned, it would perhaps be desirable to ask the members to make suggestions for the improvement of the library. Many books or papers might come under the notice of individual members, which would be interesting to the Chamber generally, and he requested them to inform the Committee of any such.

Mr. Wilkin said he had a matter of great importance to bring before the meeting. He spoke of the present state of the currency here. During the last six months of the year 1876 from fifteen to twenty millions of dollars were paid by foreigners to Japanese for produce. These dollars, however, did not go further than Benten-dori, to be returned forcedly for imports. The dollars never passed beyond Yokohama and did not circulate in the interior. Mr. Wilkin advocated the adoption of a currency which would circulate further than Yokohama and be accepted as legal tender in China. He thought the Japanese *yen* might be adopted, if a regular supply and standard quality were guaranteed. Mr. Wilkin put the following abstract proposal before the meeting:—"It is desirable that there should be in this port a silver currency among foreign merchants which will circulate in the interior of the country, and shall be at the same time accepted as legal tender in China." Mr. Keswick seconded the proposal.

Mr. Braun, speaking of the unexpected nature of the proposal, voted an adjournment of this question, which Mr. Mollison seconded, and the Chairman said that by adjourning the question a much fuller meeting might be assembled. Mr. Wilkin said that in his experience adjourned meetings were always failures. Mr. Braun then suggested that a meeting should be called within a month from date. Mr. Wilkin pressed to have the day mentioned, but the necessity of this was not seen by the meeting. Mr. Dunlop thought it a matter for a special Committee. After some further discussion, Mr. Braun's proposal was put and carried.

Mr. Wilkin then made some remarks upon the inconvenience experienced by so many here on account of the frequency and duration of the Bank holidays. He thought the bankers went ahead of necessity, and though no one grudged them their recreation, yet some limit should be set. The holidays appeared each year to become more frequent, and each time longer. At any rate, when they lasted four days, Mr. Wilkin suggested that it would be desirable to have the Banks open for half-a-day, so that people could get rid of paper the value of which they could not tell, and draw money if necessary.

The Chairman also spoke on the subject, and this concluding the business, the meeting dispersed.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of this Society was held on Wednesday, the 28th ultimo in the Society's room, Kai Sei Gakko, Tôkiô, Sir Harry S. Parkes, the President, in the Chair. After the usual reading of the minutes the Recording Secretary announced that at the previous Council Meeting the following gentlemen were duly elected members of the Society:—Professor Josiah Conder of the Imperial College of Engineering, Mr. W. D. Cox of the Japanese Agricultural Department, Mr. G. C. Pearson of Yokohama, and Mr. B. W. Dwars of Osaka.

The Corresponding Secretary read a letter from the German Asiatic Society to the effect that, owing to a change in its constitution, it was now in a position to return the invitation given by this Society to its members. The German Asiatic Society therefore now cordially invited the members of this Society to attend its ordinary meetings. The Library Committee reported the receipt of several useful periodicals, as well as some Japanese flint arrow-heads, which were presented to the Museum by Herr von Siebold.

The President now called on Mr. Longford to read his paper on "A summary of the Japanese Penal Code."

Mr. Longford said that owing to the length of his paper he should be necessitated to select such portions as he thought would best give the Society an idea of the nature of the summary.

The President invited discussion on the paper. He regretted that time did not permit Mr. Longford to read more of it, as he had only been able to give the meeting his analysis of three of the thirteen chapters into which the two codes are divided. These portions, however, sufficiently attested the interest attaching to the subject and the labour which Mr. Longford had devoted to it.

Professor Grigsby, who was lately engaged in the same work as Mr. Longford and knew well the labour it entailed, thought that the society was much indebted to Mr. Longford, and, after asking information on some points, he interested the meeting by reading literal translations of some of the laws in the codes referred to.

Mr. J. C. Hall thought that a contrast of the Japanese penal code with the criminal law of England, or any of the western nations, was not so instructive as a comparison that might be drawn between it and some of the archaic codes known to us, say that of the Anglo-Saxons, in which many of the same peculiarities, the recognition of social and official ranks, the money commutations and assessments varying according to the circumstances of the case and the rank of the offender, the penal enforcement of moral duties, and the consideration shown to the authority of the heads of families, were nearly as prominent as in the Japanese code. Many of the enactments mentioned in the summary, just read, and by the preceding speaker, struck us with a sense of the ludicrous, but in reality there was nothing absurd in them whatever, they were well adapted to the stage of social development of the people for whom they were made. It would be a profound mistake to imagine that in point of social development the Japanese were on a level with the nations of the West. In this country the family is still the political unit, not the individual; and the comminution of the social groups has proceeded but a small way. In many villages the descent of all the inhabitants from a common ancestor is still a living tradition, and up till the recent sweeping decree by which the tenure of land throughout the Empire was altered, the institution of ownership and tillage in common, with the shifting of severalties and all its other incidents, so ingeniously traced among the primitive Aryan communities by the researches of Sir Henry Maine, was conspicuous and open to observation. How compact was the family organization, how great the authority of the head of the household would be seen by a reference to the division of the code headed *ko-kon ritsu*, or domestic law. What were the original customs of the Japanese people, and how far they differed from those of China would be a question exceedingly difficult to determine; but it is certain that in form and substance the Japanese penal code was a transcript of that of China. It would, however, be a mistake to suppose that the introduction of this body of penal law into this country was of so late a date as the Ming period. No doubt, both the Ming and the Tsing codes were, as had been stated, largely made use of by the commission of learned and able men who drew up the first of the two existing codes; but so early as the eighth century the bulk of the same set of rules had been adopted from the code of the Tang dynasty, to which in form and arrangement, the existing Japanese code was most closely allied.

Professor W. E. Ayrton asked for information on some points, and said that, as regards the whipping in court to which Mr. Longford had referred, no better evidence of its existence could be adduced than the prominent position which he had observed was given to the cat-of-nine tails at every petty magistrate's table. At the same time he thought from remarks made to him by the court officials that they were fully alive to the degradation accompanying the extraction of evidence by torture, but that they considered, and in this Mr. Ayrton agreed with them, that in a country like Japan, where perjury had not been made a most serious crime, it would be very difficult to carry on justice if this fear of torture were to be suddenly removed. He had observed on visiting the convict settlement at Tsukuda-jima (a small island at the mouth of the Ogawa) the appearance of happiness and freedom possessed by the prisoners. This island, which was formerly used by the Shôgun as a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

place of security in which to seclude those whom he deemed troublesome, had, under the new code of laws, been turned into an exact copy of the English convict settlements. Here each man worked at his own trade, and in addition to receiving, on his leaving the prison, a portion of the money so earned, was allowed, unless sentenced for life, to go out to work for hire in the city of Tôkiô. The work-yards at Tsukuda-jima were very slightly palisaded, and this, combined with the small distance from the mainland, made escaping apparently very easy. The restraint was, however, a moral one, for a convict re-caught after a second attempt to escape was punished by death. A great contrast to Tsukida-jima was the central jail "Shu-goku." Here were observed prisoners awaiting trial for months, and sometimes, as in the case of political offenders, for years, crowded together in strong wooden barred cages, and allowed no exercise except in a passage just outside their cages. The desirability of some sort of Habeas Corpus Act, the existence of which had, he believed, not been referred to by Mr. Longford, was here rendered apparent. At the same time a Government like the Japanese having, of course, in the administration of justice, to deal with difficulties quite unknown to foreigners, could hardly be expected to have a system more free than that possessed by some European countries. The office of executioner, Mr. Ayrton was also told, was hereditary and that the test of this functionary's skill, if doubt existed, was his ability to cut a dead body in two with one blow across the loins. Also that no prisoner was executed until he had first confessed his crime, and unless he were sufficiently spirited to support himself unassisted while his head was being cut off.

Mr. Longford stated in reply to Professor Ayrton, that not only was no barrister allowed to assist a criminal at his trial, but no person whatsoever was allowed to be present in court except the jailer in whose charge the prisoner was, and a witness while actually giving his evidence. The trial always commenced with an examination of the prisoner himself, and, if this examination resulted in the extortion of an admission of guilt from him, he might be condemned, but if it did not, witnesses were called and examined and, if the evidence adduced by them were sufficient to establish the fact of the prisoner's guilt, he might then be condemned in despite of any assertions of innocence on his part. Formerly of course his sealed confession was absolutely necessary, but during the course of last year the law which made it so was annulled. The officer by whom the examination was conducted was not, as Mr. Ayrton supposed, a judge, but an inquisitor, whose only duty was to ascertain the whole facts of the case either from the prisoner or the witnesses, and having done so, to embody them in a clear and concise statement of the case which he laid before the judge. The latter then pronounced the verdict and sentence on the strength of this statement, without, as a rule, himself ever having seen the prisoner at all. In the trial of civil cases, on the other hand, Japanese courts were as open as English, and the parties were not only allowed the assistance of barristers, but their appearance without such was strongly discouraged by the judicial officials. As to Professor Ayrton's remarks on the convict depôt at Tsukuda-jima, he could endorse from personal observation all that that gentleman had said as to the clean, healthy, and well-cared for appearance that the convicts presented, and the admirable system of management by which their labour was utilized to the benefit both of the Government and the convicts themselves. The other prison described by Professor Ayrton he had also visited, and had found it to be much as that gentleman described, but it was only used for criminals awaiting trial, and though instances had no doubt occurred in which they had been detained for a long time, they were very isolated. With regard to the remarks made by Professor Grigsby, he had only to point out an error which that gentleman had committed in stating that no discretionary power was vested in the Japanese judges, in the matter of the amount of punishment to be inflicted on criminals brought before them. Professor Grigsby based this remark upon his knowledge of the two penal codes, neither of which, it was quite true, contained any provision by which a discretionary power of this kind was given to the judges. The punishment to be inflicted for every offence is distinctly stated in the law applicable to it, and a judge was, until recently, bound to sentence a criminal to the punishment thus provided for any offence of which he might be convicted, no matter how extenuating might have been the attendant circumstances. However, by a Government notification issued in the latter part of the year 1874, the power was conferred on the judges of making certain mitigations in the statute punishments, whenever on due consideration it appeared to them that the crime had been committed under circumstances which made the offender deserving of clemency, such, for example, as those of temptation or provocation, and this power is now very freely made use of. A very glaring instance of the injustice that might arise from the want of such a power was afforded shortly before the issue of that notification, by the sentence passed on a Chinaman in the employment of a foreign firm at Yokohama, who in a moment of ill temper kicked a Japanese coolie and unintentionally cause his death. For doing so he was properly convicted of the offence styled "killing in an affray," which includes all cases where death is caused by a blow deliberately given, whether in an affray or otherwise, but without any intention of causing death, and sentenced to the penalty provided for it in the codes—namely penal servitude for life. This punishment was out of all proportion to the gravity of the offence, but it was perfectly legal, and no remission or mitigation could therefore be made in it. The notification was, however, issued shortly afterwards, and the recurrence of a like injustice thus prevented for the future.

The President remarked that no one who was acquainted with the state of law in Japan prior to the establishment of the Mikado's Government, could fail to see that the advance made by that Government in criminal legislation was very great, and was highly creditable to them. The existing codes were doubtless based upon the Chinese law, but they contained considerable improvements upon that law, and were much more merciful and humane. Many of the principles of Chinese law were still retained, and the endeavour made to attach a fixed punishment to every conceivable offence, or to every degree of crime was the cause of an amount of rigidity both in the Japanese law and in the practice founded on it, which was not in consonance with our ideas. But he was not prepared to say that this code, as far as it went, was unsuited to the Japanese people in their present condition, and in endeavouring to improve the laws the Government had not to engage in abstract law-making, but had to consider what would best meet the state and wants of the people. Improvements in law-making must be gradual in order to be durable, and it would seldom answer for one nation to copy off hand the codes of other nations who were differently situated. That, as far as he understood, had not been done in the codes which were now being discussed. The domestic law, which although differing widely from our own system as previous speakers had pointed out, was probably one of the branches of the existing Japanese code which could not be lightly abandoned. The administration of the law which had been treated of in the section on Imprisonment and Judgment offered another wide field for consideration, and showed that an efficient judicial system did not rest only upon the laws themselves, but also on the manner in which the laws were applied. It was evident that the Japanese criminal judges discharged their functions in a very different way to those of our own courts; the mode in which testimony was taken, the exclusion of counsel and of the public from the court was entirely opposed to our practice, and so also was the singular method of not leaving the decision of the case to the judicial officer who conducted the trial, but to another judge or functionary at a distance, apparently of higher rank, who had to decide upon the statement or summary of the evidence drawn up by the examining officer, and not upon the evidence itself. The latter would naturally endeavour to furnish his superior with a clear connected story, which would not, of course, be evidence at all according to our ideas. As Mr. Longford had pointed out, the functions of the officer conducting the trial appeared to be rather those of an inquisitor than a judge, as far at least as we understand the duties of a judge. The mode of taking testimony was another

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

very important subject, and the fact that torture had not yet been entirely eliminated from Japanese procedure, pointed to the difficulties which surround that subject. He thought the Society would not be able to do justice to Mr. Longford's paper, on the important topic of which it treated, until it had been fully read, or, as he would suggest, until it had been printed and was in the hands of members. After this had been done, the discussion could be continued at another meeting, if the Society so desired.

The Meeting approved of this suggestion, and the proceedings terminated.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S WILKINSON, Esq, *Acting Law Secretary.*

Wednesday, February 28th, 1877.

(*Continued from 21st instant.*)

KONDO HIKOYEMON AND HAKII SEIJIRO *versus* J. E. CARTER.

The claim of the plaintiffs is for $360.

The hearing of this case was adjourned on Wednesday last, His Honour considering the production of certain witnesses, the whereabouts of whom nothing was apparently known, to be very essential, and requested both plaintiffs and defendant to use their best endeavours to find them out and bring them before the Court this morning. On the Court assembling His Honour asked the plaintiffs if they had been successful in finding out the three men referred to, and they replied that, notwithstanding their efforts, they had been unsuccessful in their search. Information had been lodged at the police stations and the police had issued a circular enquiring about them. The defendant also stated that he knew nothing of the missing witnesses.

His Honour said it was very important that these men should be found, and he would adjourn the case for a fortnight so that he might himself communicate with the authorities, and if the men should happen to be discovered before the 14th the circumstance should be reported at once.

Adjourned till the 14th of March.

IN THE DANISH CONSULAR GENERAL COURT.

Before ERNEST DE BAVIER, Esq., *Acting Consul-General.*

Messrs. E. KRAETZER and FREDERICK KREBS, ASSESSORS.

Thursday, March 1st, 1877.

The following sentence was passed this afternoon upon Hakon Kirchhoff, *alias* Antoine Bennett, one of the men implicated in forging a $500 note on the Hongkong and Shanghai Banking Corporation.

JUDGMENT.

Considering that you, Hakon Kirchhoff, calling yourself Antoine Bennett, have lent assistance for the counterfeiting of several notes of the Hongkong and Shanghai Banking Corporation of Yokohama of the denomination of $500 each, that, though not uttering the notes yourself, you have allowed others to do so with your knowledge: considering, however, as extenuating circumstances that though you become aware of the fraud soon after you commenced to counterfeit the notes, you had not the intention to defraud when you first began the work: considering further that you were not the originator of the crime, not having had the first idea of it; that the necessary funds and instruments to effect it have been furnished to you by a third person; that you would have derived no direct benefit by the fraud, as the proceeds of it were to go to a third person, the Court, taking into consideration Sec. 271, Chap. 27, of the Criminal Code of Denmark, which reads as follows:

"The punishment prescribed in Sec. 267—270 may, however, if the forged Document, from its palpable errors, has been less dangerous, be reduced according to circumstances by one half," finds you, Hakon Kirchhoff, guilty under paragraph 269, Chap. 29, of the said code, and sentences you to one year's imprisonment with hard labour of the first degree, beginning from the 22nd of February, this being the shortest term of imprisonment provided by that section.

(Signed) ERNEST DE BAVIER.
Danish Consul-General.
E. KRAETZER.
FREDERICK KREBS.

IN THE KANAGAWA SAIBANSHO.

Before ASANIA KANSUI, Esq., Vice-President.

Tuesday, February 27th, 1877

VAN OORDT & Co. *v.* TAKAKE FUSAJIRO.

Plaintiffs had contracted with defendant to supply him with such quantities of cloves as they could import during January last. When 20 piculs arrived from Java, defendant refused to take delivery, saying he had not intended to buy more than 5 piculs. The cloves were valued at $1,100, or $70 per picul.

Mr Reynders appeared for plaintiffs and said he had nothing further to add to the statement of their case, but could only ask the Court to judge the matter fairly and compel defendant to complete the contract. Mr Reynders produced the original contract. One had been made before this, but the cloves could not then be obtained at Singapore, so the present one was effected, within two or three days after the arrival of the intelligence from Singapore. Usually an answer to a telegram to Singapore can be obtained within two or three days. When the former contract was cancelled, Mr Reynders supposed defendant had not asked Mr Van Oordt for the written contract. Otherwise he could not explain how it happened to be still in plaintiffs' possession. Plaintiffs have on hand 2,000 catties of cloves now. That was the quantity which arrived during January. They had no cloves when the contract was made in December. Plaintiffs denied any verbal agreement with defendant. Defendant was notified through the *banto* of the arrival of the cloves. They arrived by the P. & O. mail steamship, and now lie in plaintiffs' godown. The books of the P. & O. Company could prove the date of the arrival were the fact disputed.

Defendant stated that the first contract, which stipulated the arrival of no more than 500 catties, had not yet been completed.

Mr Reynders said that if the first one had not been completed the second contract would not have been entered upon.

The Court said that as the dispute was with regard to the quantity of the cloves, and as defendant alleged that a verbal agreement was made with Mr Van Oordt in the presence of the *banto*, defendant requested to have the evidence of the *banto* taken. The Court would also request to have such of plaintiffs' books produced which referred to the contract.

Mr Reynders said he could have no objections to this. With regard to the absence of any mention of quantity in the contract, defendant understood perfectly well that no certain quantity could be safely reckoned on. Sometimes only a few pounds could be obtained. There could be no doubt with regard to the contract, because defendant admitted the document already in the hands of the Court as his own writing. Perhaps as no bargain money was asked, defendant did not receive a copy of the contract.

The Court here adjourned till March 2nd, at 10 a.m. Plaintiffs to produce their the books containing any mention of this contract.

Wednesday, February 28th, 1877.

C. BRAUN *v.* KAJIRO SHOKIDO.

This was an action to compel defendant to take delivery of shirtings sold to him, valued at over $6,000.

Mr Dickins appeared for plaintiff, who was also present in person.

The Court informed Mr Dickins that defendant had not yet appeared though they had been waiting for him till twenty minutes past eleven.

Mr Dickins said that he would like to give some of the details of the case. There were two distinct petitions the natures of which must not be confused, the first being with regard to nine pound shirtings, the second, seven pound shirtings. Mr Dickins further remarked that Mr Braun represented a very large and influential firm, Messrs. Reiss and Co. and was personally unwilling to appear in Court, but owing to the many recent instances of Japanese breaking contracts of late, he thought it better to prosecute in the present case.

Mr Braun stated, through Mr Dickins, as follows to the Court:—I was willing to deliver the shirtings on that contract by the 20th October last year. On the 28th September, 1,800 pieces of nine pound shirtings arrived by the *Tanais*. The quality and marks were the same as mentioned in the contract. On the same day arrived 4,000 pieces of shirtings by the *Hiroshima-maru* and on the 10th October there arrived 4,400 pieces of same shirtings by the *Glenearn*. Thus the statement in the defendant's answer that some part of the shirtings mentioned in the contract did not arrive within the appointed time is untrue, because on the 10th October, ten days before the end of the appointed time, there had arrived 19,200 pieces to meet the contract for 5,000 pieces. The arrival of these goods by these vessels on the above dates can be proved by the Custom House entries, of which I have copies with me. These are they (produced). They are made by a Custom House officer. During the month of September and October defendant came very frequently to our office, and knew that the goods had arrived and were ready for delivery at any moment, and have been so ever since. The defendant took delivery of 1,000 pieces on the 13th October; of 700 pieces on the 16th October; of 500 pieces on the 27th October; of 250 pieces on the 30th October and of 250 pieces on the 2nd November. Since that time he has taken delivery of no more, but until his answer was put in he never in any way contested the fact of the contract being properly carried out by us, and of the shirtings being ready for delivery within the appointed time. Thus the answer of the defendant is insufficient, in that it does not state the correct times at which the goods were taken delivery of under the contract. Then, the goods having arrived on the 10th of October, the defendant ought, by the contract, to have taken delivery before the 30th October, and his taking delivery of 250 pieces on the 2nd November is a clear proof that he admitted the contract to have been carried out properly by us. Another proof is that on the 23rd December he paid us $500 on account of the contract. And lastly up to the time of the answer the defendant was frequently requested to take delivery and never objected that the contract had been broken on our part in any way, but simply asked for time to be given to him, the defendant. Therefore I ask the Court to order the defendant to take delivery of the goods at once at the price mentioned in the contract and pay in addition the sum of $150 for interest, insurance and godown expenses, loss of time and loss of market. If you wish to question me or want further proof, I shall be happy to give such evidence as I can.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Defendant's representative here made his appearance five minutes past noon and was severely reprimanded for his want of punctuality. Mr Dickins was informed that defendant would be punished in the manner usual in such cases, his answers being vague and not to the point when asked what excuse he had to make.

Mr Van de Polder then read over a translation of the above deposition to defendant, who was requested to state his objections thereto.

Defendant said that he had made a contract with plaintiffs on the 20th September for shirtings which were to arrive in 30 days, that is to say before October 2 st. Twenty days after that were to be allowed for taking delivery. He was informed of the arrival of a portion of the goods about the 10th October. Some one came from No. 30 and told defendant. Defendant's representative (the speak r) was not present.

Mr Dickins here inquired how witness could know anything about it if he had not been present.

Witness said that everything which occurred in the office was told to him. It was about the 10th or 11th October.

His Honour informed Mr Dickins that defendant would not admit that such a quantity of shirtings had arrived by October 10th, and plaintiffs would have to bring all the proof they could in support of this statement.

Mr Dickins replied that hardly a better proof than the Customs' papers already produced could be given. Plaintiffs' books could, of course, be shown. The Custom House declaration had been copied by an officer, and it could be certified if necessary.

The Court here adjourned till Saturday, the 3rd March at 10 o'clock.

Friday, February 2nd, 1877.

Van Oordt & Co. v. Takake Fusajiro.

Plaintiffs had contracted with defendant to supply him with such quantities of cloves as they could import during January last. When 20 piculs arrived from Java, defendant refused to take delivery, saying he had not intended to buy more than 5 piculs. The clover were valued at $1,000, or $70 per picul.

Mr Reynders produced a copy of the contract, together with the office contract copy-book. This book did not, however, contain a copy of the contract in question, but showed that in every case the bargain money was mentioned. Mr Reynders said no contract was given to defendant because there was no bargain money. The only contract plaintiffs placed value upon were the Japanese ones, signed by the Japanese contractors. The entries in the books were merely receipts for bargain money. If the Japanese do not ask for a contract they do not get one; each looks to his own interest.

His Honour said when such an engagement was entered into between two parties, documents showing the terms should be exchanged. Such was the custom.

Mr Reynders said it was not the custom when there was no bargain money in question. It was the same with regard to the first contract, to which Mr Reynders requested leave to refer. He also produced a book showing the arrival of the cloves per *Diomed* and *Malacca*. Mr Reynders then explained to the evident satisfaction of the Court the mode of book-keeping followed by the firm. A memorandum of the date was made over the invoice when the Japanese took delivery; not before.

His Honour asked "according to foreign rules how many books do foreign commercial firms keep?" Mr Reynders replied "as many as they choose."

Mr Reynders said the first contract was not entered in the Consignment book because the goods did not arrive. He requested the Court to hear the evidence of the *banto*, who would make the whole case clear.

The *banto* then gave his evidence. It was not translated.

Defendant asked how it was that plaintiffs did not mention any quantity in the contract when they knew it to be 20 piculs?

Mr Reynders replied that this was a ridiculous misunderstanding on the part of the defendant, who knew perfectly well the quantity was only known on the arrived of the cloves.

His Honour asked, if this was so, how could the quantity be found written in the books?

Mr Reynders again said the quantity was of course known when the 20 piculs came to hand. Defendant promised to take whatever could be imported during January; even 100 piculs, if they could be obtained.

Judgment reserved.

A memorial from the Poles is about to be presented to the Ambassadors at Constantinople, praying them to urge upon the Russian Government to grant to Poland the same constitutional rights as it proposes for the Christian subjects of Turkey.

The Greek Government has conveyed to the British Ambassador at Constantinople its desire to follow the policy indicated by England with regard to Turkey.

An engine driver was found asleep on the railway near Tranmere. He was supected of being drunk, but he proved by evidence that he was sober and had fallen asleep through fatigue, having been employed continuously for 34 hours. He was discharged by the magistrates.

MR. BRIGHT AT ROCHDALE

Extract from a speech made at the Rochdale Workmen's Club.

(The Times.)

Many people in this country—I hope a diminishing number—think that because other countries do not allow us send our goods into their market free of duty, therefore we should not allow them to send their goods to this market free of duty. They think two bad things are better than one. (Laughter.) They remind me very much of what it would be if a man who got a sound box on one side of the head were to go about complaining that nobody gave him a sound box on the other. (Laughter.) Now we will go back to the year 1840. By that time there was great distress in this country. The duties upon goods coming into this country were almost beyond counting. I believe there were at least 1,200 articles on which by the law of England taxes were levied, upon the goods coming into Liverpool or London, or Hull or Glasgow, or any other of the ports of the kingdom. Everything was taxed and everying was limited and restricted. Even bread, the common food of the people, was taxed, perhaps more highly than anything else. Now, you may imagine—nay, you cannot imagine, but you will try to imagine—in what kind of fetters all our industry was chained at that time; and you may try to imagine, but now in this day you cannot imagine, what was the amount of pauperism, suffering, and abject misery which previously existed from time to time through the great body of the working classes in the United Kingdom. I shall only refer to two articles, and from them you may learn what was the state of things with regard to others. Up to the year 1846—and everybody who is 50 years of age ought to remember all about it—corn was in reality prohibited from coming to this country from abroad, until our own prices had risen so high by reason of a deficient harvest that people began to complain and starve, and then it was brought in at very high prices, in order in some degree to mitigate starvation and to make famine less unsafe. (Shame.) Now, what was the quantity of corn which came in last year, I mean to the end of last September? It was something perfectly astomishing. It is very difficult to make anybody understand what I am going to say, but you know what is meant in workhouse language by a "fifty-six," a weight which it takes a strong person to lift, and two of them take a very strong man to lift; two of these weights are 1 cwt. Well, last year, between September, 1875, and September, 1876, there came to the ports of this country for the consumption of the people of the United Kingdom 118 million cwts. of articles of food, which were mainly prohibited under the law as it existed up to 1846. Now, these are some of the particulars:—Wheat, 53,000,000 cwts.; flour, 6,000,000 cwts.; Indian corn, 35,000,000 cwts.; barley, 8,000,000 cwts.; oats, 11,000,000 cwts.; peas, 1,500,000 cwts.; altogether, 118,000,000 cwts., or 29,000,000 qrs. This is a quantity of which we can have no kind of conception. If we are told how far it is to the sun, we cannot form any notion of it. It does not want much argument to show that at the time markets were badly supplied and prices were high, people well off had their tables as well furnished as now. Their living never dwindled and became less; they were always well fed, plump in the cheeks, living many of them sufficiently, and most of them luxuriously. (Hear, hear.) The suffering was among the wages class. Misery most abject, a condition of starvation, all the consequences of this dreadful system, pressed with more and more weight as it came more and more to the very humblest and very poorest people. What was it all done for? It was done under the pretence that it was necessary for the protection of all our great agricultural interests. They did not so much care about the rents of landlords—because landlords had passed the law, and landlord's rent were the first consideration—as about the prosperity of the farmers in order that they might be able to pay good rent. Sometimes they ventured to speak about the agricultural labourers, although it was well known that the agricultural labourers, under the influence of that law, were in the most miserable condition of any of the various classes of labourers into which the working population of the country can be divided. Now, the law destroyed your trade. You could not receive things from abroad, and your foreign customers, therefore, could not buy from you; and while it raised the price of your food, it diminished the demand for your labour, and, as a matter of course, lessened the wages you received for your labour. Now, I venture to say here—one may say it 30 years after the event, one may now say things which would have been probably hurtful to the feelings of some of those who supported the law—that in my opinion there is not on the record of any people at any time, much less on any civilized and professedly Christian

people, so astonishing a crime against the security of the Government itself, against the public it was called upon the rule, as the Corn Law of 1815, passed by the Imperial Parliament of this country. (Cheers.) If you could turn back to a year of abundant harvests and low prices, like 1836, and then turn to the years 1840 and 1841, when the harvests had been bad and when food was dear, you would find three things that would appal you—first of all, that as the prices were rising the harvest having failed, pauperism throughout the whole of the country, among the manufacturing population, among the farm labourers, was constantly, steadily increasing, and you would find not only that, but that crime, and every kind of crime, was increasing just about at the same rate. It was in these times that Ebenezer Elliott, the Sheffield poet, the Corn Law rhymer, wrote his poems in scathing condemnation of this law. How many of you here that know about weavers employed in the cotton or woollen trade of this town have read the touching lines in which he refers to this question, where he is showing how the Corn Law is striking the weaver, blasting his prosperity and hopes and condemning him and his family to daily suffering: He said,—

"Bread-taxed weaver, all may see
"What that tax hath done for thee
"And thy children, vilely led,
"Singing hymns for shameful bread,
"Till the stones of every street
"Know their little naked feet."

And then, looking upon the growth of crime, the conspiracies that were constantly afloat, the insurrections which were looked towards by the people as a relief, he addresses the ancient monarchy of his country. He says,

"What shall bread-tax do for-thee,
"Venerable monarchy?
"Dreams of evil spare my sight,
"And let that horror rest in night."

He knew, everybody knew who comprehended the character and operation of that law, that if it should continue to afflict the people as it did through 30 years of its existence there was no institution in this country, not even its venerable monarchy, that could stand the strain that law would bring to bear upon it. But there was another fact shown by the figures of that time, and it was this, that not only pauperism increased and crime increased, but mortality increased. Strong men and woman were stricken down by it, but the aged and little children were its constant and most numerous victims, and I recollect in one of those fine speeches which the late Mr. Fox—I mean the Mr. Fox who for many years, as you recollect, and not long ago, was one of the representatives of the neighbouring town of Oldham,—I recollect an observation or a passage in a speech of Mr. Fox, spoken, I think, from the boards of Covent Garden Theatre at one of our great meetings,—he said, referring to the mortality among the people, when the harvest failed, and when foreign food was prohibited, "The Corn Law is a harvest to death as well as to the landowner, and Monopoly says to corruption, 'Thou are my brother." (Cheers.) Under the Goverment of Sir Robert Peel, in 1846, the law was repealed, and under a new law three years afterwards, in 1849, all the duties on these articles were taken off, except a shilling per quarter, which has been more recently abolished. While this happened there has been no fall of rents thoughout the kingdom. In point of fact, the prosperity of the country has been so increased that the rent throughout the country is now higher than it was when that Corn Law was in existence, and the farmers, who were always complaining during the existence of that law, have scarcely ever been heard to complain in the least since it was abolished. They complained for a year or two because they had been greatly frightened, but there has never been, I will say within the last 100 years, a period when the farmers of this country have made less complaints to the public or to Parliament than they have during the last 20 years, since the law for their protection was abolished. And what happened to the labourers? The wages of farm labourers have risen on the whole much more, I believe, than 50 per cent throughout the whole country, and in some counties and districts I believe the farm labourer at this moment is receiving double the wages he was when this law was in existence which these dreamers said was intended specially in this direction. We ought to learn from this what a grand thing it is to establish your laws upon a basis of freedom and justice. It blesses him who gives and him who takes. It has blessed all our manufacturing districts with a steadiness of employment and an abundance they never knew before, and it has blessed not less the very class who in their dark errors and blunders thought that they could benefit by that which was so injust, so cruel to the bulk of their countrymen. (Cheers.) Now we will just turn for a moment to the article of sugar. These are the great articles of consumption, and, therefore, I deal with them. The sugar which was supplied to the country throughout a period which ended a little after the Corn Law was abolished came mainly from the West Indies. A good deal came from the East Indies. But I will return now to the West Indian Colonies, Jamaica Barbadoes, Antigua, and many others. Now, a little before that time, between 40 and 50 years ago, the planters of the West Indies were in a very peculiar condition. In the first place, they cultivated the sugar cane by slave labour; therefore they stole the labour by which they grew their crops. No doubt they kept their negroes alive, barely, but they paid no wages—as we are accustomed to consider wages. But they were not satisfied with stealing the labour with which they grew their crops. But they asked the Parliament of this country to give them almost the exclusive use of the English market, so that they might sell their sugar here at a price much higher than they could get in any other markets of the world, and many of these planters being people of importance and influence in this country, and associated with our land proprietors, and our land proprietors being in the same boat with regard to free trade, of course it was only natural that they should be as kind to the West Indian planters as they had been to themselves at our expense. Thus in addition to a curse of a corn monopoly you had the curse, diminished but still a curse, of a monopoly of sugar. (Cheers.) What was the result? I will take the year 1846. In that year this country imported from abroad 4,000,000 cwt. of sugar, and it cost £9,000,000. Now what do we import. Last year (I mean the year ended in September) we imported 16,000,000 cwt.—that is, four times the quantity we imported in 1840. But what did it cost? It did not cost four times as much as in 1840, it did not cost half as much, but instead of costing £9,000,000 as the 4,000,000 cwts did, it cost £17,000,000. Now, if the sugar we imported last year had been imported at the same prices, the monopoly prices as in 1840—the 16,000,000 cwts. would have cost us £36,000,000 instead of the £17,000,000 which they actually do cost. (Cheers.) Well, you see, therefore, that the abolition of the protection upon sugar has just had the same effect that it had upon corn. The quantity imported has been enormously increased and the price has been to an extraordinary degree diminished, There are many ladies in this meeting who know, and I dare say there are a great many husbands who know, too, as well as their wives, that sugar has lately risen, within the last few months, but till then it has been about as cheap as flour. I recollect at a meeting held in Surrey during our agitation 30 years ago that a gentleman stood and made a speech. He was a stranger, but said he was well acquainted with sugar-growing in various parts of the world, and he said that "if you will abolish the duty sugar will be as cheap as turnips." (Laughter.) It has not, I believe, been as cheap as turnips, but it has been so cheap that it must have added a great deal to the comfort and the ease with which many other things, fruit especially, are made palatable, especially to children and families (laughter); but what has been the effect with regard to this sugar question on those people whos protection we took away? The colonies have been on the whole more prosperous since than they were before. We never have any petitions to Parliament now stating the distress the planters of the Colonies are in. Freedom has had just the same effect with regard to sugar that it had with regard to corn. (Hear, hear.) It has blessed us and our families in furnishing this great article of food at a moderate and reasonable price. I believe it has not been of the smallest evil to the bulk of the population of the sugar-growing colonies. (Hear, hear.) Now we have done with the question of imports. I must just ask you to look at the matter from another side. You know, all of you. that if 118,000,000cwt. of grain of one kind and another, and if 16,000,000cwt. of raw sugar, for I have not dealt with refined sugar, and there is a large quantity of that, if all these quantities came into this country—they are coming now from many parts all over the world—somebody must pay for them. You buy your sugar in the shop and the shopkeeper buys it from the wholesale dealer in London or Liverpool, and he brings it from abroad; and payment is made in the articles which industrious and intelligent workmen of England make and which find employment for you in all your mills and manufactories. What they make is sent out abroad to pay for those articles. What must necessarily be the result? That there must be an enormously increased demand for the labour of the workmen, and there has been that demand as you all know. (Hear.) I recollect the time very well when every Monday morning there could be seen from to 10 to 20 men or women coming to any factory in this neighborhood, and asking if there was a shop open for them, and waiting to be employed. That sort of thing has been

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

entirely changed. I wish that weaver were living now who, when beforea Parliamentary Commmittee of some 40 years ago, said he always noticed that if there were two men running after one master, wages always seemed as if they were inclined to go down; but when there were two masters running after one man, he always noticed that wages were inclined to go up. (Laughter.) That was a sensible weaver—an observant weaver. But there were many men in both Houses of Parliament 40 years ago who did not understand so very simple a proposition as that (laughter), and it took about seven years lecturing and preaching and working before we could get it into their—I will say their—very dull heads.

(Laughter and cheers.) But now if you look over the country, I think you will see, all of you—I imagine every man of you 50 years of age, and every woman of that age—will see that there has been a great improvement in the condition of what I call the wages class,—the class of persons who get their wages every week or fortnight for a week or fortnight's work. I will go back to 1840, and compare it with 1875. In those days bacon was not allowed to come in at all; now, by the 32 or 33 millions of people in the United Kingdom the consumption, not of home growth, but of bacon that is imported, is more than 8lb. weight per individual; that is from nothing at all. Of butter, it has increased from 1lb. to 5lb.; of cheese, from 1lb. to 5½lb.; of potatoes, from nothing to 16lb.; of rice, from 1lb. of tea, from 1½lb. to 4½lb.; of sugar, from 15lb. per head to 53lb. per head; of wheat flour, from 42lb. per head—and, I believe, the year 1840 was a year of considerable importation, because the prices were high—it has risen from 42lb. in 1840 to 197lb. per head in 1875. (Cheers.) Now, all this has been brought about without any violence, without ruining anybody. There is not a human being in England who has a loaf less or a pound of sugar less, or any of these thing less, by what has been done. There was no violence, no insurrection, no bloodshed, no disorder, but it was merely by the people becoming more intelligent, and Parliament more intelligent, and statesmen more intelligent (hear, hear), and by merely tearing up two or three foolish Acts of Parliament, and allowing people their natural freedom to buy and sell where they could buy and sell to the greatest advantage.

THE MINERAL WEALTH OF JAPAN.*

Hirado " " " "	63.160
Rest of Japan estimated at	74,933
Total	390,000

Analyses.—I add some assays and ultimate analyses of Japanese coals, made by me some years ago.‡ The specimens from Yesso either were carefully sampled from large quantities of coal, or were selected to represent the average quality of the different beds. The others were merely hand specimens, and the results are, therefore, less reliable.

PETROLEUM.

Petroleum is found in small quantities on the Island of Yesso; and more abundantly in numerous places on the northwest coast, and a few places on the south coast of the main island.

Geologically, petroleum seems to be confined to the clay rocks of of the Toshibetsu group. In Yesso, where certain oil regions were examined in the course of the Geological Survey, this is certainly the case‖; and the few deposits I have met with on the main island are also in the same group of rocks. According to Mr Lyman's reports,§ the oil regions of Yesso are quite insignificant and hardly worth working; which, indeed, seems to be the case in most of the oil regions of the country.

In Yesso, oil occuls at three places: at Yamakushinai, in the province of Iburi; and at Washinoki and Idzumisawa, in the province of Oshima.

At Idzumisawa, near the sea-shore, twelve and a half miles west of Hakodate, several shallow pits were dug through the alluvium, from the sides of which, in some places, a little oil was seen to ooze, probably delived from the clay rocks below. The oil-bearing bed here seems to be but ten feet thick; and the maximum daily yield of one of these wells was but about half a gallon of very thick, tarry oil, marking 11° Baumé. No deep wells have yet been sunk.

At Washinoki, also in Oshima province, but on the shore of Volcano Bay, similar shallow pits were dug in the gravel, some of which reached the clay rock; these wells yielded in some cases but a trace of oil, and in others half a gallon to one gallon per day: This oil was also thick, marking 15° Baumé. A pit, sixty or seventy feet deep (?), has been sunk through the soft clay rock in this vicinity, since the time of the survey; and a daily yield of fifty gallons of oil was obtained. The oil is also said to be much lighter than that found near the surface. The report, however, lacks confirmation, and it is possible that the yield has been somewhat exaggerated. Mr. Lyman reports two oil-bearing beds about two hundred feet apart, each ten feet or less in thickness.

At Yamakushinai, in Iburi province, also on the shore of Volcano Bay, and about twelve miles north of Washinoki, there is, according to Mr. Lyman, a bed of oil-bearing rock probably ninety feet thick, containing, however, but little oil. In one shallow pit a daily yield of about half a gallon of oil, marking 11° Baumé, was obtained, and, at several other places, mere traces of oil.

These results would seem to show that these clay rocks of Yesso, though extending over a large portion of the island, only locally contain oil; and even then not in sufficient quantity to warrant working, except on a very small scale, by simple and inexpensive methods of exploration.

The same series of rocks, which, in Yesso, contain the oil-bearing strata, are found on the west coast of Nippon, in the ken of Awomori and Akita, and seem to extent along this coast southward through Yamagata and Niigata ken, and then, in a belt across the island, southward through Nagano to Shidzuoka ken on the southeast coast. Oil, in greater or less quantity, is found everywhere in this belt; but, as in Yesso, only locally, and usually not in workable amounts.

The most important oil region in Japan, is that in the northern part of Niigata ken, producing more than nine-tenths of the total yield. From the catalogue of the Japanese Section, I take the following description of this region.¶

Oil was first discovered in this province 300 years ago, and it has always been counted among the seven wonders of Echigo, that a natural combustible gas, issuing from the ground in certain places, could be brought through bamboo pipes into the interior of houses and used for illuminating purposes. This gas is now utilized under the small stills used for refining the crude oil. Although the presence of oil has been known for a long time, the people of the country only began to use it 64 years ago. Since then no less than 508 wells have been sunk in the district, some of them 400 and even 600 deep. The daily produce of these wells amounts to 900 gallons of two kinds of oil: One variety is of a light color, specific gravity 0.800, and contain 8 per cent. of light oil, 52 per cent. of lamp oil, 28 per cent. of heavy oil, and 12 per cent. of residue. The other is darker, specified gravity 0.930, with only 9 per cent. of lamp oil, 58½ per cent. of heavy oil, and 32½ per cent. of residue. The better quality of oil is burned by the people in primitive lamps, and the darker oil is used to some extent by the fishermen on their torches. Some years ago a company was formed for establishing refineries, but it was unsuccessful; another has since been formed, and is likely to turn to advantage these natural resources of the country.

According to Mr. Plunkett, over eighty pits have been sunk near Kurakawa in this district, one of which produced twenty to twenty-five gallons of oil per day. During the last six months of 1874, the yield of the district was 137,185 gallons.

I am informed that Mr. Lyman has been engaged by the Government to survey their oil-field: and we must look to his report for further information.

Of the oil region in Nagano ken (Shinano), the Japanese catalogue says: "In Shinano, the daily produce of 39 wells amounts to 422 gallons, the greater part of which has a dark color and a specific gravity of 0.935, and only 10 per cent. of lamp oil. It is said that that after the earthquake 29 years ago, the oil springs were consi-

derably modified, both the yield and the locality of the springs being affected."

AMBER.

A fossil resin, resembling amber, occurs in small rounded masses in the coal and lignite of many localities in Japan. Near Kuji, in Kunohe kori of Iwade ken, such a fossil resin occurs; both in beds of lignite, and distributed through a soft greenish sandstone. This sandstone contains beds of conglomerate, and here and there thin laminæ of coal. The strata are nearly horizontal, dipping east about four degrees; and contain amber over an area of about two or three square miles.

The amber deposit is reached by vertical pits about fifty feet deep, at the bottom of which irregular workings follow the sandstone, which is mined and brought to the surface, where the resin is picked out or separated by washing. The pits are very badly ventilated, and neither lamps nor bamboo torches can be made to burn Strange to say, the miners work for hours in this atmosphere, and are troubled only by a slight headache. One miner obtains from twelve to fourteen pounds of amber per day; while the preliminary work of sinking the pit, requiring one hundred and fifty days' labor, costs but ten or twelve dollars.

The amber is of inferior quality, usually opaque or cloudy, and very much fissured. I could not learn to what use it is applied; but it is sent to Tôkiô, and is probably used for making ornaments. At the time of my visit, the miners had about a ton in stock awaiting order from Tôkiô. The field is nearly exhausted; but similar deposits are reported to occur in several other parts of Japan.

IRON.

Of the metallic minerals, the ores of iron are the most abundant. Nearly all the different ores are found in Japan, but magnetite and magnetic iron sand are the most important, being used almost to the exclusion of all others. Probably one-third, and perhaps one-half, of the iron made in Japan is produced from iron sand by a very interesting direct process, which I shall have occasion to describe at another time.

Iron Sand.—From an imperfect list of localities, compiled from various sources, I find that iron sand occurs in twenty-five of the thirty-five ken of the empire. According to the official list of mining permits, there were over four hundred different mines of iron sand worked in 1874. The volcanic and many of the metamorphic rocks contain magnetic iron in the crystals; and, in the disintegration of these rocks by the action of the sea, the heavier iron sand is separated and forms beds of greater or less thickness on the shore. The old alluvium, formed in a similar way. but now elevated above the sea in high terraces, contains similar beds, often buried below thick layers of sand and clay. Finally, in many places, the volcanic or metamorphic rock contains so large a proportion of magnetic iron that it is found profitable to mine it and separate the iron sand by crushing and washing.

As an example of the first class, we may take the beach deposits of iron sand in Yesso. The following notes are condensed from Mr. Lyman's description in his preliminary report.**

Magnetic iron sand is found on the sea beach near Yamakushinai, in Iburi province, on the shore of Volcano bay; and near Kobui, in Oshima province, on the eastern extremity of the peninsula east of Hakodate. Iron sand occurs in many other localities; but these are the only workable places yet found.

The deposit at Yamakushinai is perhaps ten miles long, and averages twenty yards in width, with a mean thickness of about six inches, making a total of about 120,000 tons of pure ore. The ore, previously washed, was used, some twelve years ago, in a forge in the vicinity, for the production of iron by the Japanese process; but it was found difficult to smelt on account of the presence of titanic sand.

The iron sand of Kobui is said to be more easily smelted and seems to be purer. The deposit is, however, very small; amounting, according to Mr. Lyman, to not more than 5,000 tons.

As an example of the occurrence of iron sand in the old alluvium, I will describe briefly the important deposits of Kunohe-kôri of Iwade ken, which I visited in the fall of 1874. The ore deposits occur on an extensive sloping terrace or table-land, composed of metamorphic rock, mica schists, quartzites, etc., one hundred and fifty to three hundred feet about the sea, and everywhere covered by beds of yellow sand and sandy clays forty to fifty feet thick. The ore is a dark red sandstone, with thirty to fifty per cent, of iron sand in thin laminæ, or distributed through the mass. It occurs locally on the surface of the metamorphic rock and under the alluvium, in beds one to three feet thick. This sandstone, which is quite friable, is easily crushed, and the magnetic sand separated by washing.

The surface of the table land is much cut up and eroded by small streams, and crossed in several places by deep valleys of larger rivers. The deposits of iron ore are in this way frequently uncovered, and secondary deposits are formed in the beds of the smaller steams. In many cases, however, the action of the streams merely removes so much of the overlying sand and clay, that the ore is found within twelve or fifteen feet of the surface.

Over the whole extent of this table-land, for a distance of fifteen to twenty miles north and south, and seven miles east and west, the ground has been explored by shallow pits. The productive beds being local and of limited extent, but a small proportion of these explorations have been successful. When, however, the miner is so fortunate as to strike such a bed of iron sand, he burrows horizontal drifts in all directions and follows the bed until it becomes too thin to work; extracting the ore without system save to get as much as possible without endangering his own safety.

M. Sevoz, in the *Annals des Mines*,†† gives an analysis of a Japanese iron ore which is interesting in this connection. The ore forms about two per cent. of a partly decomposed granite, from which it is extracted by washing. From the analysis this washed material is an impure magnetic sand, containing the proper proportion of ferrous and ferric oxides, six per cent. of titanic acid, twelve per cent. of silica, etc.

Magnetite.—The imperfect list of the places in which magnetite is found, compiled from various sources, develops the interesting fact that these localities lie in a belt extending from Iwade ken south and southwest to Sakai ken, a distance of more than three hundred and fifty miles. The northernmost place is in Hei-gôri in Iwade ken. Here there are mines, seven to thirteen miles from the coast, which supply certain recently erected government blast furnaces. South of this several localities are reported in Miyagi ken. Still southward, the next deposits, one of which was examined lately by an American engineer, are in Fukushima ken, where the ore is but five miles from the sea. Southwest, magnetite again occurs in Tochigi ken, and in several places in Gumma ken. At Nakakosaka in Gumma ken, not far from Tokio, an English engineer has recently erected a blast furnace. Still southwest, magnetite is reported to occur in the ken of Nagano, Gifu, and Sakai. Of these localities we know little or nothing, except that the ore of this southern end of the belt is reported to be of medium and inferior quality, as compared with that of the northern mines.

In addition to the above localities, magnetite of excellent quality is said to occur in Okayama ken, in the southwestern part of the main island.

From Mr. Plunkett's report, and additional details furnished by Mr. Godfrey, I condense the following description of the deposits of Hei-gôri in Iwade ken, where the Mining Office is building blast furnaces and preparing to produce iron on a large scale.

The principal iron mines are about thirteen miles from the coast, though deposits of ore have recently been found at half that distance. The magnetite occurs in vertical beds, twelve to fifteen feet thick, in a dark blue feldspathic diorite (quartzite or felsite?). The ores are rich and very pure, quite free from sulphur, and contain little or no titanium.

It is proposed to connect the mines, by a tramway eleven miles long, with the furnaces; and these with a harbor of Kameishi, two miles beyond, by a continuation of the same. The iron will be shipped to Yokohama or Nagasaki, and coal brought back as return freight. At present charcoal is used as fuel. Mr. Godfrey estimates the cost of producing iron here at nine dollars per ton; but this apparently does not include repairs, or interest on capital or sinking fund; while all the items, especially that of fuel, are placed very low.

At present the product is but 1 500 tons per year; this, however, will soon be largely increased. According to the catalogue of the Japanese section, 4 blast furnaces, calculated for a daily yield of 15—20 tons, and 12 puddling furnaces, with coke ovens etc., will shortly be erected here. The full plant of a large rolling mill, including rolls, steam hammers, etc., has been ordered from England, and is, according to M. Deby, even now on the way to Japan.

In Fukushima ken, Naraha kori, magnetite occurs in beds twelve, fifteen, and even twenty feet thick. The ore is rich and generally quite pure; but sometimes contains sulphur in the form of pyrites, in objectionable quantity.

** Kaitakushi Reports.

†† A d.m., Vol. VI., 1874, quoted by *American Chemist* Vol, VI p. 38.

Original from UNIVERSITY OF CALIFORNIA

At Nakakosaka, in Kamura Kôri, of Gumma ken, where Messrs. E. H. M. Gower and A. J. R. Waters, English Engineers, have erected a blast furnace, the magnetite occurs in beds eight to eighteen feet thick, dipping about twenty degrees and interstratified with a dark blue quarzite (or felsite?) The ore is apparently of good quality, but has not yet been analyzed. An almost inexhaustible supply can be obtained at small expense by quarrying. According to Mr. Gower, iron can be made here for nineteen dollars or less per ton. The fuel, charcoal, costs about two and a half times as much as at Hei-gôri. The mines and furnaces are quite near a navigable river, by which the product can be brought directly to Tôkiô or to Yokohama.

Other Ores of Iron.—According to Mr. Geerts,‡‡ specular iron ore is found only in Kagoshima ken; impure red hematite is more common, occurring in many places; limonite, massive and concretionary, and clay iron ore or kidney ore are also common and abundant. He gives a list of places, compiled from Japanese authorities, in which the ores are found; but says nothing of the extent or character of the deposits.

I have received many specimens of the ores, and of bog iron ore; the latter not mentioned by Geerts, but perhaps included under limonite. These ores are used to only a small extent for the production of iron.

(To be Continued.)

ARRIVAL OF THE FRENCH MAIL.

TELEGRAMS.

London, 9th Feb., 1877.—At the Debate on the address Lord Derby said that Peace depends upon whether the Czar decides he is under obligation to execute alone the decisions of the six Powers.

Lords Beaconsfield and Salisbury protest against any coercion being used with regard to Turkey.

Sir Stafford Northcote said as England wishes to act in unison with the Powers, the separate intervention of Russia or Austria would be suspicious.

Peace negotiations are suspended.

Obituary.—James Merry.

The conviction of Dr. Slade, the American Medium, has on appeal been quashed.

Constantinople, 30th Jan.—The statement that Midhat Pasha had issued a decree disarming the civil population of Turkey, is unfounded.

Paris, 30th Jan.—The National Assembly has voted £4,000 towards the distress in Pondicherry.

Constantinople, 31st Jan.—The British, German, and Italian Consuls advise Prince Nikita to make peace, if the Porte cedes territory.

Lisbon, 31st Jan.—The Burmese Embassy has arrived here.

Athens, 31st Jan.—General Ignatieff, the Russian Ambassador at Constantinople, has arrived here.

Constantinople, 1st Feb.—With reference to the peace negociations between the Porte and Prince Milan, who claims the complete evacuation of the Servian territory, Turkey states that she will require her troops to remain at Alexinatz as a guarantee that the conditions of peace will be fulfilled.

Prince Nikita has expressed his willingness to negotiate for peace, and desires to know the conditions.

A Christian Mustechar has been appointed in Bosnia. Other Christian Mustechars will also be appointed to the Western portion of Bulgaria, which will be formed into separate provinces.

REUTER'S TELEGRAMS.

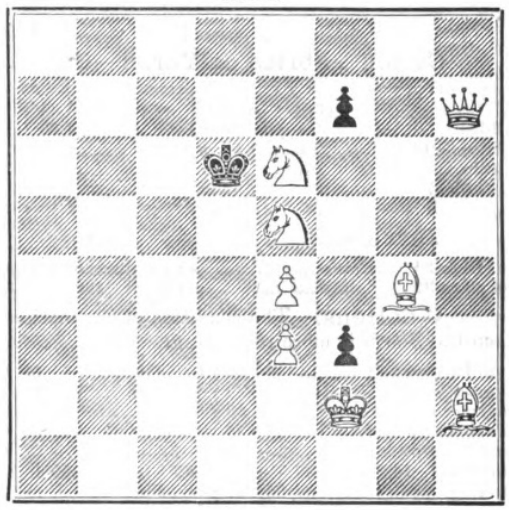
THE EASTERN QUESTION.

London, 26th January, 1877.

The Porte announces the intention of introducing of its own free will the reforms demanded by the Powers.

London, 15th February, 1877.—A Russian Army of 200,000 men with 720 guns is massed at Kichineff in readiness to cross the Danube and invade Bulgaria.

Sir W. Jervois the Governor of the Straits Settlements has been appointed to the Governorship of Australia.



‡‡ Transac. Asiat. Soc. of Japan Vol. III, part I, p. 6, et seq.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market continues generally very dull and quotations are nominal.

Grey Shirtings:—							
7 lbs.	38¼	yds.	39 in.	per pce.	$1.35	to	$1.65
8 lbs.	38¼	yds.	44 in.	,,	1.50	to	2.20
8 lbs. 4 to 8¼ lbs.	38¼	,,	39 in.	,,	1.50	to	2.30
9 lbs.	38¼	,,	44 in.	,,	1.90	to	2.40
T. Cloth 7lbs.	24	,,	32 in.	,,	1.40	to	1.55
,, 6lbs.	24	,,	32 in.	,,	1.10	to	1.25

White Shirtings:—							
60 to 64 reed	40	yds.	35 in.	per pce.	2.20	to	2.40
Turkey Reds	24	yds.	30 in.	2—3 lb. per lb.	0.65	to	0.87½
Black Velvets					7.00	to	8.00
English Drills	15	lbs.	40 yds,	30 in.	2.55	to	2.65
Taffachelass	12	yds,	48 in.		1.70	to	2.15

Yarns.—

No. 16 to 24				per picul	$28.00	to	32.00
No. 28 to 32				per picul	$30.00	to	34.00
No. 38 to 42				per picul	$35.00	to	38.00
Reverse Twist			16-24	,,			

Woollens.—The condition of our market remains unchanged since our last, although political news from the South is more reassuring.

Plain Orleans	40—42	yds.	32 in.	4.75	to	6.75
Figured Orleans	29—30	yds.	31 in.	4.25	to	5.25
Shimagoro	30	yds.	30 in.	4.00	to	5.25
Italian Cloth	—30	yds.	32 in.	0.24	to	0.31
Camlet Cords	29—30	yds.	32 in.	5.75	to	6.00
Camlets Asstd.	56—58	yds.	31 in.	16.50	to	17.50
Lastings, Japan	22—30	yds.	32 in.	12.00	to	13.00
Plain Mousseline de Laine	—30	yds.	30 in.	0.16	to	0.18

Figured Mousseline de Laine	30	yds.	30 in.	0.25	to	0.30
Multicolored ,,	30	yds.	30 in.	0.30	to	0.36
Cloth, all wool plain or fancy	48	in.	to 52 in.	0.80	to	1.20
Presidents	54	in.	to 56 in.	0.60	to	0.65
Pilots	54	in.	to 56 in.	0.45	to	0.55
Union	54	in.	to 56 in.	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.		per lb	0.39	to	0.45

Sugar.—There has been no change in prices, but a fair business has been done during the week, principally in *Formosa* kinds.

Sugar:—Takao in bag			per picul	$4.30			
,, in basket			,,	$4.10			
Taiwanfoo in bag			,,	$4.15			
do. in basket			,,	$4.00			
China No. 1 Ping-fah			,,	$7.60	to	$7.80
,, No. 2 Ching-pak			,,	$6.90	to	$7.40
,, No. 3 Ke-pak			,,	$6.20	to	$6.80

China No. 4 Kook-fah			per picul	$5.60	to	$6.10
,, No. 5 Kong-fun			,,	$4.90	to	$5.50
,, No. 6 E-pak			,,	$4.40	to	$4.80
Swatow Brown			,,	$3.50		
Daitong			,,	$3.70		
Japan Rice			,,	$2.05	to	$2.27½
Kerosene Oil			,,	$4.55		

Kerosene Oil.—Reduced stocks make holders firm at quotations.

EXPORTS.

Silk.—Our last fortnightly report, dated 27th ultimo, was to the following effect:—

Our last report was dated 10th instant. During the following week some business was doing at an advance of $20 for good Hanks and a decline of $20 to $30 for Oshius, when transactions were checked by a telegrams quoting fr. 78 for best Hanks. Since then the advices from Europe seem to indicate a disastrous crisis in the Silk manufacturing trade, and this market having been brought to an almost complete standstill our quotations must be taken as nominal.

Settlements are 150 bales of Hanks, 50 of filature and about as many of Oshiu sorts. The shipments of the fortnight are 225 bales, making the total export since 1st July 19,439 bales, against 10,815 last year for the corresponding period.

Stock 1,800 bales.

	At Exchange 4/3 in London.	*At Exchange 5.35 at 6 m.s. in Lyons.*
Hanks.—Extra No. 1	—	—
,, Best No. 1 & 2	$760 to 780	28/5 to 29/2 — 79 to 81
,, Good No. 2	$720 to 750	27/ to 28/1 — 75 to 77
,, Medium No. 2½	$680 to 710	25/7 to 26/8 — 71 to 74
,, C'mon. No 3	$630 to 660	23/10 to 24/11 — 66 to 69
,, Inferior No. 4 & 5	$570 to 600	21/9 to 22/9 — 60 to 63
Oshiu—Best	$690 to 710	26/ to 26/8 — 72 to 74
,, Medium to Good	$650 to 680	24/7 to 25/7 — 68 to 71

	At Exchange 4/3 in London.	*At Exchange 5.35 at 6 m.s. in Lyons.*
Hamateki No. 1 & 2	$500 to 520	19/3 to 20/ — 53 to 55
,, No. 3 & 4	$460 to 480	17/10 to 18/6 — 49 to 51
Kakeda—Extra	—	— —
,, Best	$780 to 800	29/2 to 29/10 — 81 to 83
,, Medium to Good	$720 to 760	27/ to 28/5 — 75 to 79
Mashita	—	— —
Filature Silks	$820 to 970	30/7 to 36/ — 85 to 99

Since the above was written arrivals have been 90 bales, and deliveries 175 piculs, but we find it impossible to state what the actual settlements have been. A few parcels of Hanks have been bought at $20 to $30 under previous quotations.

Tea.—Operations in this staple have been moderate during the closing week, settlements amounting to 810 piculs. The general tone of business calls for no special comment. Arrivals during the same period have been very light and stocks on the spot almost nominal.

We make no change in quotations, at which holders are willing to realize.

Common	$8.00	to	11.00
Good Common	12.00	to	14.00
Medium	15.00	to	17.00
Good Medium	18.00	to	21.00
Fine	$23	to	$27
Finest, Choice	Nominal.		

EXCHANGE AND BULLION.

Exchange.—Business continues very depressed, and rates remains much as last quoted.

REPORTS.

The *Fiery Cross* reports leaving London October 21st. Passed the Downs on the 23rd. and the Start 25th. Met with westerly and S. W. winds across the Bay of Biscay. Had no N. E. trades at all the S. W. monsoon prevailing. Crossed the Equator November 22nd in 24 degrees W. The S. E. trades were moderate and extended to 20 degrees South. Afterwards moderate northerly winds to the Cape, which was passed December 8th in 41 degrees 40 South. Ran the Easting down in 42 degrees, the winds generally moderate from the westward. Sighted St. Pauls 30th and made Sandalwood Island January 15th; were 11 days getting through the passage. Having reached Foul Island on the 26th, sighted the Loochoos 21st February, and made the Japan Coast on the 25th; came to anchor in Yokohama Bay on the evening of the 27th, being 128 days from London. During the passage spoke the following vessels:—British ship *Surkar*, London to Melbourne, Nov 27, Lat 14 degrees S. Long 29 degrees W.; 40 days out; British ship *Leicester*, Dec. 16, from London to New Zealand, 40 degrees South 11 degrees East; 55 days out, and the Mary Ann Wilson, in the Eastern passage, from Leith to Manila, 111 days out.

The *Cairnsmuir* reports: Had moderate winds up to the Japan coast; last night had to lie to outside of Cape Segami, on account of thick weather; took the Pilot on board this morning at 7 a.m.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At No. 90, Yokohama, on the 4th March, the wife of JOHN HARTLEY, of a son.

MARRIAGE.

On the 8th March, at H. B. M.'s Consulate and afterwards at Christ Church, by the Rev. E. W. Syle, D.D., assisted by the Rev. W. F. H. Garratt, M.A., FRANCIS AUGUSTUS, fifth son of the late A. L. COPE, Esq., of Peckham, Surrey, to THERESE ELIZABETH, only daughter of J. M. JAQUEMOT, Esq., of Yokohama.

Notes of the Week.

Since writing the following remarks, we have received direct from a Japanese friend in Kagoshima, the original documents containing the full confessions of the assassins employed to murder Saigo. Coming to us as they do, their authenticity is unquestioned, and their revelations most compromising. It is too late to translate and publish them in this week's issue, but we purpose giving them in full in our next. Among others is the confession of Nakahara Hisao which is almost the same as that published by the *Nichi Nichi Shimbun*. Reference to the original, however, enables us to supply the name omitted in the published confession, which is that of Kawaji *Dai-keishi*, the Chief Superintendent of Police in Tôkiô, and the documents show that he has acted under the orders of a superior, whose name is before us.

We are permitted to publish the following extract from a letter written by a gentleman who has had every opportunity of closely observing the circumstances connected with the present outbreak in Satsuma.

"There has been a great outpouring of men from Kagoshima. Fifteen thousand have left; the last batch on the 17th. (of February) They propose marching on Tôkiô. It was perfectly marvellous how the province sprang to arms. The story told to me is that a number of Satsuma men in the Tôkiô police had been sent down here for the purpose of assassinating the principal men in Satsuma—especially Saigo—and of setting fire to Kagoshima. The plot was discovered and fifty or sixty arrests were made. Some of the confessions were certainly startling. The men have been kept in closest custody, to be confronted with their employers in Yedo. It is generally thought that many of the Tôkiô soldiery will refuse to fight against Saigo. He is certainly a man of great ability in many ways."

It will be seen that the principal reason assigned by the Satsuma party for their present outbreak is the alleged discovery of a plot,—connived at by the Government—for the assassination of the man of all others most dear to them. It is asserted that a certain proof of the truth of this terrible accusation brought against the Administration, has been obtained by the arrest and full confession of the Police agents who were employed to carry out the scheme. One of these confessions has, strange to say, found its way into the columns of the *Nichi Nichi Shimbun*, and the publication of the rest of these extraordinary disclosures was promised on the following day, but it is significant that as yet nothing further has appeared. What follows is a translation of this confession.

"Nakahara Hisao, *Shô-Keibu*,* eldest son of Shôbei, *shizoku* of the district of Ishiu-in in the Kagoshima *ken*.

Arrested after search on the 3rd February, 1877. I was appointed *Shô-Keibu* on the 4th January, 1874. Towards the end of November of the same year,—I forget the exact day—I went to the house of————————, and after learning from him various matters concerning the different *ken*, he ended by telling me that there had been of late indications of disquiet in the Kagoshima *ken*, but said that as General Saigo was residing in the *ken*, he did not think there would be any disloyal and riotous proceedings; he added however, that in case a rising should break out, there was no help for it, but for me to confront Saigo and kill him. I submitted to his order, and subsequently—I do not recollect the exact day—I went to the house of Oyama Kansuke, a *shizoku* of the Kagoshima *ken*, and was told by him, that if Saigo originated any insurrectionary movement he must be killed. I kept these intentions secret, and on the 24th December, Sonoda Nagateru, Suyehiro Nawokata, *Chiu-Keibu*,† came to my house and informed me of their intention to apply for permission to return to their native districts, and of the many rumours in circulation respecting disturbances in the Kagoshima *ken*, Accordingly I expressed a wish to return with them, to which they consented, and left my house. On the following day, the 25th, I saw————————— for a moment at the Police office, and told him of my intention to apply for leave to return home, and asked him to use his good offices on my behalf. He replied that that was a good thing and urged me to show zeal in the service. In view of what had already passed, as above stated, my resolution became fixed. As I had already made a compact with Sonoda Nagateru to meet at his house, I went there at 3 p. m. and there were assembled there, Hirata Saishichi, Nomaguchi Kaneichi, Igakura Tamotsu, Oyama Tsunasuke, Sugai Seibi, Itani Chikatsune, Suyehiro Nawokata, Yamazaki Motoaki, Takazaki Chikaakira, Anraku Kanemichi, Tsuchimochi Takashi, and others. All present exchanged their views on the subject, and it was settled that we should, on our return, urge upon the members of the *Shi-Gakko*‡ from the various districts, and upon other people generally, the impropriety on the part of loyal subjects of exciting a war on no good pretext, and that we should dissuade both those who had already joined the *Shi-Gakko*, and those who were thinking of so doing from their hostile views. It was arranged that we should all meet on the afternoon of the following day, at an empty house formerly the residence of ————————————, and applications for

* *Sho-keibu* police corporal.
† *Chiu-keibu* police serjeant.
‡ *Shi Gakko* the private military schools.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

leave to return home were sent in, and at once granted. A council was then held at which all attended, and it was there resolved, as the main plan of action, that a division should be brought about amongst the members of the *Shi-Gakko*, that they should be won over to our side, and that the *Shi-Gakko* should be broken up; thus in the event of the rising taking place, Saigo was to be assassinated, and the fact at once telegraphed to Tôkiô; that then a combined attack should be made by the Navy and Army, and the members of the *Shi-Gakko* killed to a man. With regard to the task of despatching the telegraphic news, Sonoda and Nomaguchi, being natives of the districts on the borders of Higo, it was arranged that they were to hurry to Kumamoto garrison and that the telegram was to be sent from that place. With regard to the receipt and despatch of other information also, a cipher was agreed to be used in every case. After everything had been settled, the following day was fixed as the date of departure from Tôkiô. As it might excite the suspicion of other people if all were to leave in company, it was also settled that each should leave as soon as his preparations were made. The meeting then broke up and all returned to their own houses. On the 27th I left Tôkiô and proceeded as far as Yokohama, where I stayed the night. The following day, the 28th, I went on board of the *Genkai Maru* at 9 p.m. and left Yokohama, but the passage was very unfavourable, and the ship had to anchor at several places, and I only reached Kagoshima on the 11th January 1877. I remained on the spot going nowhere, but Suyehiro Takasaki and others came to see me. Before I had commenced any of the detective operations previously mentioned, the secret plot of assassination was discovered, and I was arrested. Now, in consequence of your examination I have confessed that by the order of ———————— I formed a plot to assassinate Saigo *Rikugun-Taishô*, and that I further laid a scheme to create dissension in the minds of the people, for which acts I am truly ashamed. The above statements which I have made are correct.

(Signed) NAKAHARA HISAO.

February 5th, 1877.

The remainder will be published to-morrow."

Now can this confession be true? We shrink from believing it, and yet the statement seems so straightforward, so substantiated by what we know of the circumstances attending the commencement of the revolt, that we cannot reject the story, as we would we could do, as either improbable or devoid of foundation. There is no doubt in our mind on one point, and that is that the existence of an organised plot to murder Saigo, and many others whose influence rendered them dangerous to the present Administration, is firmly believed in Satsuma, and that such belief is founded on the confessions above referred to. Many things which have hitherto appeared inexplicable become perfectly easy of comprehension when this belief is admitted. It was easy to understand that, excited by the recent confiscatory edict of the Government, and by the attempts at resistance in Kumamoto and elsewhere, the so-called 'students' of the Kagoshima military schools should have resisted the attempt of the Government to export gunpowder from Kagoshima. Any pretext would have been sufficient to elicit a protest. Equally easy of comprehension was the attempt by Saigo to restrain this ebullition of discontent. But what was unintelligible was Saigo's sudden change of front early in the past month, his acceptance of the command of an insurgent force, and the sudden conversion of the movement from what the Tôkiô Government was so careful to represent it to be—the impulsive action of head-strong youths—into a deliberate march of all the able-bodied men in Satsuma upon the capital. But admitting the discovery of a plot, whether real or pretended, for his assassination, Saigo's sudden defiance of the Government can readily be understood. Men are desperate in proportion to their apprehensions of danger. Nothing but extreme desperation could have induced a man like Saigo, a man of cool judgement, and with a perfect knowledge of the comparatively overwhelming resources of the Government against which he has arrayed himself, to undertake the leadership of the present movement; a movement fraught with the gravest consequences, and which if not successful in its efforts to bring about a change of *personnel* in the Administration, will result in the extinction of the prestige of the Satsuma clan. Believing his murder compassed by those who "wear their health but sickly in his life" and that a crisis had arrived in which all extremities are justifiable, no wonder that he has determined to confound treachery by brave and open showing, and has drawn the sword and thrown away the scabbard.

There are many minute confirmatory items which appear to have escaped the vigilance of the Government censorship of the native press, which go to support the belief in the existence of the plot. Saigo's application to be allowed to pass through Kumamoto to present a petition to the Emperor; negotiation in Kiôto with Satsuma men; the proclamation of the Satsuma army that their mission was not to kill officials; not to ill treat peasantry; that their movement was not directed against the person of the Emperor, but against certain members of the present Cabinet only. It is also not unworthy of remark that Saigo's degradation was unaccompanied by any expression of astonishment at his action, or regret at his disloyalty, and that the defection of the most prominent man in Japan from his allegiance to the Imperial Throne was treated with as much indifference as would have been the desertion of a corporal's guard. Remembering the manner in which Mayebara's rebellion was reprobated by the Government and official press, their silence on this more important matter cannot but invite suspicion. On the other hand, it is perfectly conceivable that, without actually countenancing so dastardly and infamous a scheme as the cold blooded assassination of a man, who had given his best years and his most devoted energies in its service, and to whose undaunted courage it owes its very existence, the Government should send agents into Satsuma, in order to sow dissension among the different influential members of the clan —perhaps even, to foment disturbance—so that excuses might be afforded to send forces there, nominally to preserve order, but actually to impose a check upon the dangerously increasing military power of the province. It is also conceivable that those to whom the selection of fitting agents was entrusted, may have imagined they were doing what would best relieve the Government from the principal source of its anxieties, when, on their own authority, they instructed their creatures to take Saigo's life. This appears to us the most probable, as well as the most charitable explanation of this dark plot, for we are loath to believe that assassination can be considered by a Government, so anxious to stand well in the eyes of the world as that of Japan, as a legitimate political argument. Be that as it may, there stands the charge. Should it be proved that it is but a baseless fabrication; a mere party cry to bring recruits to the Satsuma standard; a pretext for a riotous outbreak that has no objects but bloodshed, fire, and pillage; the overturn of law and order, change for change' sake, and selfish gratification of lust of power on the part of its leader, let him fall into the pit he has himself digged, and a righteous retribution be meted out to him and his accomplices. But if the charge be substantiated; if Saigo can truly say "none of these things move me, neither count I my life dear unto myself"; if, to benefit his own class without diminishing the welfare of any other; to induce improvements in the administration of justice, in the maxims of governing, in the political constitution of the state; to extend education, or in any way amend the social and moral condition of the people; if it be for these ends, and these alone, that he has laboured, and that now, in defence of his own life, and of the liberty of the nation, he is compelled to resort to force to bring about a change in an Administration which stands in the way of his aims, and basely seeks to murder him, then does he command our heartiest sympathy, and it must be the wish of all honest thinkers that success may crown his efforts, and that when the employers are confronted with their unwilling accusers, they may be utterly confounded, and meet with the reward due to their treachery and infamy.

Notwithstanding the fog of insipid and contradictory telegrams and "latest news" which obscures the doings at the seat of war, the position of affairs is simple enough to permit of its being comprehended at a glance when the wind rolls up a corner of the curtain for a moment. Briefly stated it may be summed up as follows. In the centre of two concentric circles stands the castle of Kumamoto garrisoned by Imperial troops, and besieged by rebels who are in turn surrounded by the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

forces of the Government. The besieged are said to have supplies and ammunition sufficient to last them for a month, and the fortress is supposed to be impregnable by assault. We may for the present therefore exclude the castle as a factor of much importance towards the results which time is like to bring about between the insurgents and the force by which they are hemmed in. The rebels, as being the smaller of the concentric circles, are undoubtedly in a stronger position than the troops behind them (whose line to be defended is wider and therefore weaker), and would accordingly, by concentrating their strength on any given point, most probably experience but little difficulty in bursting through the ranks of their opponents, if their plans required it. If, however, upon the other hand, the Government forces could be so disposed as to attack them in strength between their base of operations and themselves, their position would become most critical, in fact would hardly admit of any doubt being entertained as to their ultimate destruction. That the Government troops have not hitherto been able to effect so important a strategical manœuvre is owing to the mountainous nature of the country in their neighbourhood, and entrenched position which the rebels occupy. As long as the opposing parties occupy these relative positions it is evident that nothing very decisive can take place. In the mean time, however, the defenders of the castle remain unrelieved and subject to all the inconveniences of a siege. Should they be obliged to surrender before the inner circle is broken up, the rebels, independently of the material advantages which such a conquest will inevitably bring them, will probably count upon the prestige so acquired to attract to their side a number of the disaffected ones, whose prudence hitherto prevented them detaching themselves from the side of law and order.

It is said that amongst the *samurai* in Tôkiô much discontent prevails, and great anxiety is mainfested as to the final results of the civil strife in Satsuma. They fear that a victorious Government would have but little scruple in summarily abolishing their pensions, and think that the time has come for independent arbitration between the contending parties. Although such a measure, if adopted, would besides serving the interests of humanity in putting a stop to bloodshed, undoubtedly secure a fuller amount of consideration for the claims of everybody interested, it is yet much to be doubted whether any proposal of the sort would be accepted by Saigo. For if what is freely discussed amongst certain ex-members of the old Bakufu, and former companions in arms of his—who, however, we must confess, seem to us to belong to the school of "didn't we always say so" politicians—is to be believed, the present movement was started for no other purpose than to gratify his personal ambition. To that end alone they say he threw himself into the revolution which broke up the Shôgunate, and when he returned to his province disgusted and disappointed, with the same object in view, he retained those arms in the possession of his clan which he is now turning against the Government that he originally supported. That he has been for a long time engaged in secret preparations for such an emergency as the present is notorious, and that he has lately made extensive purchases in foreign markets of rifles, and other munitions of war, recent events have shown. Whether these signs and portents were known to the Government and read aright or not, we have no means of informing ourselves. Nor do we guarantee that those who profess to "have known it all along" were really as wise before, as they would seem to be after the fact became known.

We gather from the pages of the *Hôchi Shimbun* the following particulars of the life of Kirino, the second in command of the Satsuma army:—

Kirino Toshiaki, formerly called Nakamara Hanjiro, is a man of brave and desperate character. At the end of 1867 there was a band in Kiôto who called themselves *Shinsen Gumi*, who were under the command of Kondô Isami. This man had murdered a certain Ito Take-a-kira, the friend of Kirino, who, burning to avenge his comrade's death, got together a party of *samurai*, including a younger brother of Ito, and concealed them in the Satsuma *Yashiki* at Fushimi. His intention however, was not so much to take the life of Kondô, as to attack the *Shinsen Gumi* and some Aidzu troops who were in the Governor's palace at Fushimi. The *samurai* of various provinces who were living at Kiôto at that time, were expecting every moment that some trouble would arise, and sure enough the Tokugawa party commenced an attack on the Western *samurai* at Toba, and Kirino became the Chief Commander of the first battalion of Satsuma forces. He always led his men into battle with the greatest courage, and was victorious in every engagement. He was appointed Commander of the van of the troops who proceeded against the Northern rebels at the time of the restoration, and in his successful endeavours to bring Aidzu to submission, performed many actions of great daring. His fame becoming known, he received the rank of *Shô-go-i* and was advanced to the post of Lieutenant-General of the Imperial forces. Taking offence from some cause or other, he returned to Satsuma, and devoted himself to the military education of the *samurai* under Saigo.

The *Shinsen Gumi* (newly chosen band) was composed of a set of men, mostly *rônin*, who were employed by the late Shogun's Government as guardians of the peace. They were also frequently employed as escorts to foreigners, and in similar capacities.

During the past few days not a single item of fresh intelligence from the seat of war has appeared in the Japanese press. Verily, at the present crisis, the editor of a native paper must have a hard time of it. The Government sends him to prison, and fines him if he publishes any thing not strictly favourable to it. Threatening letters from its enemies bid him "mark his head with a star" if he publishes any thing inimical to their cause. "Heads I win, tails you lose."

With regard to the Return of the Foreign Commerce and Trade of the Empire of Japan, published by order of the Inspector General of Customs, which we reviewed in our columns last week, we regret to find that a careless mistake on our part has led to misunderstanding which has called forth remarks in the columns of two of our contemporaries. The sentence in which the error occurs is this:—"The following table shows the total value of foreign and domestic productions imported into and exported from each of the various foreign countries."

This should have been

"Productions imported from and exported to each of the various, etc."

It will be seen that the value of the imports from France is thus little more than one fifth of the value of those from England, and; "Scrutator's" remarks on that head were therefore justified.

We see that the proposed formation of a Volunteer Corps, for which the preliminary meeting was held on Wednesday last, has met with the expressed disapproval of the *Gonrei* of the Kanagawa *Ken*. We know full well that the gentlemen who have originated the project have no intention in any way of giving offence to the native authorities, but that on the other hand it has been their desire, as far as may lie in their power, to aid them in protecting life and property on the occurrence of fires, or on other urgent occasions. We feel sure that the difficulty has arisen from some slight misunderstanding of the intention of the movement, which can be readily explained, and that there is no cause for irritation on either side.

The M. M. Co.'s steamer *Tanais*, with French mails on board to January 26th, left Hongkong yesterday, Friday, the 9th instant, at 6 p.m.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the "Japan Mail Daily Advertiser."

Monday, 5th.

The following are from the *Hôchi Shimbun* :—

A telegram received at 7 p.m. on the 1st instant states that the rebels are in despair on account of the Imperialists' success in the action of the 28th instant. Since that date only a few skirmishes among the outposts have taken place. The Imperial forces will advance in a day or two.

Saigo bears about with him a flag with the words "New Government, with great benevolence" inscribed thereon, and is giving the people explanation of the above.

The rebels of Shônai (Yamagata *ken*) are armed with one thousand small arms, bamboo spears, and swords. The ground is covered with snow, and the troops which have been called out have blockaded all the roads leading out of the province, so that the rioters may not be able to escape.

A telegram from the battlefield (Takase) states that several engagements have taken place during the past few days, and that of them those of the 26th and 27th ultimo were most severe. On the first day the Imperialists were victorious, although Lieut.-General Miyoshi received a slight wound. On the 27th the Imperialists were not so successful at first, but afterwards they were completly so. On the Imperial side about two hundred were killed and wounded in these actions. No engagement has since taken place.

All the vessels which were conveying the ammunition, stores, etc., of the rebels have been captured by the Imperial men-of-war.

The *Chôya Shimbun* publishes the following :—

Lieut. General Ôyama arrived at Kobe on the 27th ultimo. On the same day he proceeded to Hakata, in Chikuzen, in the *Genkai Maru*. Kawaji, the Chief Inspector of Police, has also started for Buzen with a force of police.

The *Okurasho* sent through one of the banks on the 1st instant, three hundred thousand *yen* to Kiôto.

Large quantities of powder were yesterday sent from Tôkiô to Niigata, and this is very likely intended for the use of the troops sent to suppress the Shônai insurgents.

From the *Nichi Nichi Shimbun*.

We hear that Kuroda *Sangi*, Kawaji, the Chief Inspector of Police, and, Yasuda Vice-Secretary of the *Kaitakushi*, are to accompany Yanagiwara on his mission to Satsuma.

We also hear that Okuma, the Minister of Finance, will shortly start for Kiôto.

Tuesday, 6th.

Yesterday was ushered in with snow, sleet and a bitterly cold north wind, varied with a little thunder. At noon the sky was beautifully clear, but during the afternoon we had a succession of showers. However, at seven o'clock in the evening the weather cleared up and later on sheet lightening illumined the horizon. All these changes in the weather were followed at ten minutes after midnight by a very severe shock of earthquake.

We take the following from the *Chôya Shimbun* :—

A telegram from Kiôto at 7 a.m. on the 3rd instant states that on that day an engagement took place of Uyeki mura, which lasted from 10 a.m. to 3 p.m., when the insurgents, having exhausted their ammunition, retired.

A telegram from Fukuoka at 11 a.m. on the 3rd instant announces that the Imperialists were completely victorious at Takase. Murata Shimpachi, one of the commanders of the insurgents, was killed.

A telegram from Kiôto at 7 p.m. on the 3rd instant announces that at noon an engagement commenced at Takase which continued for an hour and the Imperial forces were victorious, but at 2 p.m. the Imperialists were attacked by another body of the insurgents from Uyeki and were forced to retire.

The following telegraphic news is from Minami-no-seki :—Kawajiri is established as the head-quarters of the insurgents, where they also have a hospital. Kumamoto is strongly garrisoned. For some days past the insurgents have not paid the wages of coolies in their service excepting those employed in removing the dead and wounded. The rebels are short of ammunition. Shinowara is in position at Takabashi; the forces under Kirino are at Konoha, Uyeki and Kawajiri, and Saigo is also at the latter place.

Another telegram from Nagasaki reports that at 7 a.m. on the 3rd instant a battle took at Yamaga. The Imperialists were completely successful and pursued the insurgents to Takase and thence to Konoha. At this latter place the Satsuma men made a stand but were finally routed and fled, and Konoha was fired by the Imperialists. At Tabaru an attack was also made on the insurgents who were again defeated, so that the Imperial troops continued their advance. In every engagement the rebels were beaten.

A telegram despatched from Osaka at 4 p.m. on the 4th instant states that the Imperialists attacked the insurgents on the 3rd, and fighting was resumed on the 4th. The Imperial troops have advanced from Takase as far as Tawara, and from Igura as far as Kichishigoi.

From the *Nichi Nichi Shimbun*.

We hear that the members of the House of Shimadzu have nothing to do with the present rebellion, but are trying to remain neutral, taking the side neither of the Government nor of the *samurai*. Saigo twice unsuccessfully endeavoured to obtain an interview with Shimadzu Saburo.

The vessels of the Imperial Navy are stationed as follows:—At Nagasaki the *Hosho, Seiki*, and *Dai-ni-Teibo Kan*; at Shimonoseki the *Asama, Tsukuba, Môshun* and *Nisshin Kan*; in the Bungo channel the *Adzuma Kan* and *Kaifu Maru*. The *Kasuga Kan* and *Takao Maru* are cruising between Shimonoseki and Kagoshima.

From the *Hôchi Shimbun*.

A veteran named Kawabate Iyemon, who is seventy two years of age, leads the van of the insurgents in every engagement.

Wednesday, 7th.

A THREATENING LETTER.

(*From the "Nichi Nichi Shimbun" of March 5th*, 1877.)

We yesterday received a letter addressed to the *Nichi Nichi Shimbun*, Owarichô, from some one who signs himself "In Earnest." We wondered what it could be, and on opening it found the document given below, with the request to forward it to the other newspapers. We were all mightily alarmed, and as none of us were born with more than one head, and had no spare ones in case of energency, we don't see how we are to keep on composing our articles if a "Sword of Justice" is to be always hanging over our heads. We therefore beg most humbly to protest against it. As our hands shake so much at the idea of a "Sword of Justice" hanging over us, we are utterly unable to make any reply to this document.

March, 3rd.

"To the *Nichi Nichi Shimbun*, to be circulated to the *Hôchi Shimbun, Akébono Shimbun, Yomiuri Shimbun*, etc., etc.

Since the commencement of the Kagoshima affair until to-day, you have in every issue published nothing but false statements, thereby deluding the people. This is contrary to the object of newspapers, and is a heinous crime. You had better mark you heads with a "star" and await the approach of the sword of justice. It will then be too late for repentance. You are hereby warned of the above.

* * * *

P.S.—If you have any answer to make to this, publish the original in your paper as a heading to your remarks. If you do not, be prepared for the consequences."

The roll of the proposed Volunteer Corps is in the hands of the Committee, who will be happy to receive the names of any residents who desire to join either as active or honorary members.

Elizabeth Scarfield was yesterday brought before H. S. Wilkinson, Esq., the Acting Law Secretary, charged with concealment of birth on board the *Annie W. Weston*, when on a voyage from Cardiff to this port. The prisoner pleaded guilty and was remanded until this morning at 10 o'clock.

The *Nichi Nichi Shimbun* of the 27th February said that Nakayama Chiuzayemon and fourteen other *shidzoku* of Kagoshima who were arrested last winter on the discovery of a plot laid by them to assassinate Okubo, Minister of the Home Department, were to be immediately sentenced to penal servitude.

The following items of news are from the *Hôchi Shimbun* :—

A telegram despatched from Osaka at 6.05 p.m. on the 14th instant states that the Imperialists captured a battery of two guns from the insurgents at Takase and that the former are advancing. Another telegram from Osaka at 6.35 p.m. on the same day announces that 500 *samurai* of Obi, and 200 of Nobeoka, both in the province of Hiuga, have joined the rebels, and it is feared that the number of such reinforcements will still further increase.

Telegrams continue daily to arrive announcing the continued success of the Imperialists, but we hear that the rebels have taken up

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a position on Gion-yama, commanding Kumamoto, whence they shell the garrison. The insurgents have made repeated attacks by the roads from Nagasaki and Yanagawa, but have always been vigorously met by the Imperialist troops of the garrison.

A flag is flying at the head-quarters of the insurgents at Kawajiri bearing the following inscription :—Commander-in-Chief of the Expedition to the East. President of the New Government, Saigo Kichinosuke.

From the *Chôya Shimbun*.

We hear that the *samurai* of Kumamoto and Saga have been ordered to hold themselves in readiness to take the field in case reinforcements are required.

From the *Akébono Shimbun*.

Since the 3rd instant Yamagata, the Minister, and Ôyama, the Vice-Minister of War, have taken the command of the troops in the field.

From the *Osaka Nippo*.

The three battalions of troops under the Commander-in-Chief Arisugawa-no-Miya, united with the Imperialists at Takase and Minaminoseki on the 1st instant.

From the *Mainichi Shimbun*.

A telegram from Osaka at 10.20 p.m. on the 5th instant announces that the Imperialists are continually victorious. During the engagement of the 3rd instant at Takase the fortifications on Inasa-yama were taken. On the 4th instant fighting commenced at dawn ; the Imperialists advanced toward Yamaga and have already taken Iwa-mura, and are advancing still further.

At 40 minutes after midnight on the 5th instant another telegram from Osaka arrived announcing that since the 3rd instant the Imperialists have been successful in every engagement. The village of Uyeki has been taken ; the rebel position on Kichijiyama has been stormed ; the Imperialists are advancing toward Ôkubo and Kôchi, and have reached Kumamoto.

We hear that a large number of insurgents have entered the province of Chikugo.

Thursday, 8th.

Elizabeth Scarfield surrendered to her recognizance yesterday morning, and the charge against her was further proceeded with in H. B. M.'s Provincial Court, before H. S. Wilkinson, Esq., Acting Law Secretary. The captain of the *Annie W. Weston* and his wife both gave their evidence, at the conclusion of which the Counsel for the accused objected to the jurisdiction of the Court, as be contended that the alleged offence, if committed at all, must have been committed on board a foreign ship on the high seas In consequence of this point having been raised the case was remanded until Saturday next, at 10 a.m.

The most important telegraphic news brought by the *Alaska* has already been anticipated by that received by French and English mails.

The Bluff Lot No. 218 was yesterday sold at Mr. Cope's auction for $400, Mr. A. Winstanley being the purchaser. Lots 63 and 66 were bought in at $1,500.

From the *Nichi Nichi Shimbun* we gather the following :—

In the engagement which took place on the 4th instant the Imperialists at Takase divided into two parties, one of which advanced by the Kôchi road and drove back the insurgents, who were beaten, to Takahashi. At this engagement the Imperial standard was captured, but Nodzu (? Lieut-General) on observing this success on the part of the rebels clapped spurs to his horse, boldly dashed in amongst the enemy, and after cutting down six of them retook the colours and restored them safely to his own side.

The *Tsuruga Maru*, belonging to Mitsu Bishi Company, returned on the 3rd instant from the South with a number of wounded soldiers.

A number of *samurai*, under the leadership of Takashima Rokozô, have been arrested at Kiôto, charged with having plotted to set that city on fire.

The *Chôya Shimbun* of yesterday gives us the following:—

It is stated that the *samurai* of Satsuma destroyed all the title deeds of land and the paper money current in the province, so that we can readily believe the report that they are consequently short of cash.

The following steps have been taken for the suppression of the disturbances in Yamagata *ken* (Shônai): On the 28th of last month twenty-eight horse loads of powder from the magazines of the Sogigamori district, and twenty police constables under sergeant Toyama, were sent to Yamagata *ken* from Miyagi *ken*. On the 1st instant two companies of troops under Captain Hara were also sent to that place from the Sendai garrison, and again on the 2nd another detachment of two companies.

We take the following from the *Hôchi Shimbun* :—

A telegram to the Army Department at 3 p.m. on the 6th instant stated that the Imperial forces had crossed the Takase river and dispersed the insurgents who were at Yamaga and Uyeki, and that Yamaga, Takase, and Uyeki are now in the hands of the Imperialists.

At 6.05 p. m. on the 6th instant a telegram from Kurume announced that some eight hundred farmers of Kumamoto *Ken* had taken up arms and risen against the local authorities, but it is not believed that they have espoused the Satsuma cause, but are merely agitating for a reduction of the taxes.

A telegram from Minaminoseke at 6.35 on the 6th instant says that the engagement at Yamaga was a very desperate one. The Imperialists are defending Hira-yama. No engagement has since taken place. Colonel Fukuwara is said to have been wounded, but not seriously.

Friday, 9th.

The *Akébono Shimbun* says :—

It is generally believed that it was not Saigo's intention as yet to break out into open warfare against the Government. Three days after the *samurai* had siezed the Government powder, Saigo came to the 'Private School' and warned them against the perpetration of any acts of violence. Kirino, however, who assumed command of the insurgents, showing Saigo the confessions which had been made by Nakahara, the chief of those who were in the plot to assassinate Saigo, told him that under the circumstances there could be no drawing back. "If you do not," he said, "unite yourself with us, we shall take your head first and commence afterwards." He still further urged Saigo by telling him that he had forgotten the rules he had established. It is possible that this referred to some arrangement made between himself and Kirino at the time that Saigo withdrew from the Government on the Corean question. But it was evidently not Saigo's wish at present to make any open rupture with the Government, and when he set out on the present Expedition he issued orders to the *samurai* to that effect, and stated that their violation would be visited with immediate punishment. It is presumed that his intention was either to advance only as far as the boundary of the province of Higo, thinking that his friends in the Government would then come forward and propose some terms of settlement, or to leave his men at Kumamoto and come on to the capital for the purpose of presenting a memorial to the Government. From some cause or other, however, hostilities commenced at Kumamoto.

This is an account given to us by one who has just returned from that *Ken*.

Saigo had frequently been warned of the danger he ran in giving such a thorough military training to the *samurai*, but he always replied that there was but one power that could reform the country, the power of arms.

From the *Mainichi Shimbun*.

A telegram which left Kurume at 1.30 a.m. on the 1st instant announces that a desperate struggle took place at Tawarazaka on the 6th instant. Two of the insurgents' batteries have been taken, but the third breast-work was so well defended that the Imperialists failed to carry it. The Imperialists renewed the attack on this battery on the 7th, but about 1 p.m. had to give up the attempt as hopeless.

The *Kasuga Kan* left Nagasaki on the 7th instant for Kagoshima. It is expected that the Mikado's Envoys were on board this vessel.

We take the following from the *Hôchi Shimbun* :—

Twenty thousand stand of breach-loaders with the requisite ammunition have arrived from Germany, which were ordered some time ago by Saigo, but of course the Government have prevented delivery being made.

A telegram despatched from Minamino-seki at 9 a.m. on the 6th instant states that Tawarazaka was taken by the Imperialists during the engagement of the 5th. On the 6th the Imperialists advanced to Uyeki, where there was some very sharp fighting. At Kichijigoi the action was indecisive, either side being unable to hold the position contested for. The Imperialists have constructed a battery at Yamaga.

A telegram on the 7th instant from the scene of the fighting in Higo states, that a memorandum found on the dead body of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

one of the insurgents gives the number of rebels killed and wounded up to the 3rd instant as 400.

Many merchant vessels on the Higo coast have been taken by the insurgents,

The *Chôya Shimbun* of yesterday publishes the following :—

A telegram from Kuroda, dated Fukuoka, the 6th instant, at 6.05 a.m., gives favourable accounts of the progress of the Imperialists, and says that Uyeki must shortly be taken by them, when communication will be established with the Kumamoto garrison.

His Majesty's special Envoys to Satsuma, escorted by a police force, arrived at Nagasaki on the 5th instant.

The *Tôkai Maru*, which arrived at Kobe on the 2nd instant, took eighty-seven wounded men to that port from the scene of the fighting in the South.

From the *Nichi Nichi Shimbun*.

There are eleven men-of-war in the southern seas fully supplied with provisions and coals for a three months' cruise.

From the *Mainichi Shimbun*.

The train which left Kobe at 1.30 p.m. on the 3rd instant conveyed some one hundred and fifty wounded to Osaka station, whence they would be sent to the hospital in that city.

Kawaji, the Chief Inspector of Police, has left the province of Hiuga *en route* for Kumamoto with a force of about 2,000 armed police.

We hear that it has been decided to increase the police force of the capital by enrolling 1,800 recruits.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 3rd March, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		$1,200,000
On hand	896,870	
In circulation	308,130	
	1,200,000	
Reserved Fund		303,130
In Foreign money :—		
In dollars	$173,065.00	
In Bank notes and cheques	2,000.00	
Deposited with Foreign Banks	55,065.00	
	230,130.00	
Do in native currency	73,000.00	
	$303,130.00	

Saturday, 10th.

The *Tôkio Maru* takes down reinforcements and a large quantity of ammunition for the Army in the South.

The O. & O. Company's steamer *Oceanic* will not leave for San Francisco until Tuesday, the 13th instant, at daylight.

From the *Mainichi Shimbun*.

It is intended to unite the forces under Lieut. Generals Nodzu-Miyoshi and Miura, and make a combined attack on the insurgents. There will then be twelve battalions of Imperial troops engaged, and it is confidently expected that the result will be decisive.

From the *Nichi Nichi Shimbun* :—

The Imperial forces which have advanced from Uyeki are now able to carry on communication with the troops garrisoned at Kumamoto. It is therefore to be expected that a general attack upon the insurgents will shortly be made.

Two more battalions of the troops of the Tôkiô garrison are to be despatched at the earliest convenience by steamer to Hakata, in the province of Chikuzen.

From the *Hôchi Shimbun*.

A letter received from Nagasaki states that the *samurai* of Saga, Fukuoka and the neighbouring *ken* show no disposition to join with the insurgents. Of the Higo *samurai* only the remnant of the *Jimpu* party have taken part in the rebellion, the other *samurai* of this province being peacefully disposed.

From the *Chôya Shimbun*.

As there is but a small Imperial force stationed at Hakata in the province of Chikuzen, the insurgents are, it is said, preparing for an attack upon that city.

One thousand six hundred recruits for the Tôkiô police force are expected from the Ibaraki and other *Ken*.

From the *Akébono Shimbun*.

Kuroda, *Sangi*, has been appointed to accompany the special Envoys of the Mikado to Satsuma, and authorized to deprive Governor Oyama of his title, and to demand the restitution of Sergeant Nakahara and others who have been imprisoned by the Satsuma *samurai*.

The estimated cost of the Satsuma Expedition was four million *yen*, but as the Government have already spent over two million it is to be feared that the cost originally estimated will be much exceeded.

A further hearing of the charge against Elizabeth Scarfield in H. B. M.'s Court took place this morning. Mr Bishop, referring to the objection raised by the Counsel for the defence, called Mr Connor, licensed pilot, who showed in his evidence the position of the *Annie W. Weston* on the morning in question. Mr Ness then said that though he still disputed the jurisdiction of the Court, yet in case the point should be decided against him, he would sum up the case for the defence; and proceeded to do so, briefly referring to the extenuating circumstances in the action with which the prisoner was charged. Mr Ness said that the feelings natural to a woman in the circumstances in which the accused had been placed were those of mingled fear and shame. Both of these had served in actuating the deed; the greater the respectability of the girl the greater the shame, and abuse and threats from her mistress, the captain's wife, occasioned the fear. This woman, by her own evidence, threatened the accused in such a manner that a confession was forced from her. The captain's wife declaimed against the enormity of the prisoner's fault, threatened to call in the captain and officers and then to leave her on a desert island, in fact so inhumanely harassed her feelings that a great fear of consequences was the result. The crime was not an offence against morality and although the law was apparently very strict, a reprimand would, in this case, fully satisfy its requirements. Mr Ness after speaking at some length, asked the Court to consider the circumstances of the case and be lenient. His Honour deferred his decision.

IMPERIAL GOVERNMENT RAILWAYS.

Whilst returning the salutes of H. B. M. S. *Modeste* and the French corvette *Atalante*, a sad accident occurred on Thursday morning, at Decima fort. When a few rounds had been fired a peculiar concussion was felt which to the ear of the acute denoted an accident. From enquiry we find that after discharging one of the guns, the sponging process was not properly applied. A new charge was at once inserted resulting in the immediate explosion of the gun, and sending two Japanese gunners hurriedly into eternity.—*Rising Sun.*

The adage says that "troubles never comes alone" and Japan at the present moment is verifying its truth. We hear that Loo Chiu has revolted, and declared for "dear mother China."—This is a most favorable opportunity for the expenditure of the surplus energy of the samurai, in nursing this docile people.—*Rising Sun.*

We believe we are correct in stating that there is no truth in a rumour which has lately obtained some currency to the effect that an influential foreign firm has bought, or is going to run, the China Merchants Navigation Co.'s steamers.—*Shanghai Courier.*

REVIEW OF THE JAPAN SILK TRADE FROM 1874 TO 1877.

(Continued from last week)

II.

From July to December, 1876.

BEFORE the invasion of the silk-worms' disease, which made its first appearance in 1849, the cost of silk, in the Cevennes for instance, could be calculated as follows :—With one ounce of eggs made by himself and costing him about fr. 2, the silk grower obtained 40 kilo of cocoons which he could sell at fr. 5 with a profit of fr. 1 per kilo. The yield being then 1 kilo of silk for 12 of cocoons, and the expense of reeling fr. 9, the nett cost was fr. 69. The market price being about fr. 75, the silk reeler might realise a profit of fr. 6 per kilo. This was the golden time of sericulture. Let us now come down to the year 1874 and mark the change wrought by the decrease in the yield of seed and cocoons, by heavier taxation and the increased price of leaves, wages, fuel, etc. From one ounce of "selectioned" yellow seed the silk grower obtains perhaps 35 kilo of very superior cocoons, which cost him fr. 6.40 per kilo, and he considers himself lucky if he can sell them without loss. The cost of one kilo of silk will thus be :—

13 kilo cocoons at fr. 6.40.....	fr. 83.20
Labour	fr. 15.00
	fr. 98.20

Or, let us suppose that the silk grower has put his trust in the imported Japanese seed and bought for fr. 5 a card which yields 18 kilo of green cocoons. The total expense of rearing will have been less than in the above case, but will amount to about fr. 175, giving a net cost of fr. 10 per kilo. Unfortunately the market price is only fr. 4.20. In this instance, the cost of one kilo of silk will be :—

17 kilo cocoons at fr. 4.20.....	fr. 71.40
Labour.....	fr. 15.00
	fr. 86.40

Now, turning to the prices paid in the course of 1874-75 for the product of the yellow and green cocoons, we find no higher quotation than fr. 97 for the former and fr. 86 for the latter.

In the fairs and markets held after the crop, the average price of "fresh" cocoons was :—

per kilo.	1873.	1874.	1875.
In France for Japanese breeds...	fr. 5.45	4.20	3.65
„ for Yellow „ ...	„ 6.55	5.30	5.05
In Italy for all sorts.....	„ 6.60	4.20	3.75

In Marseilles, the price of "dry" cocoons was of course regulated by the prospective value of silk. In March 1876, when the French yellow and the Italian green raws 10s. 12d. second order were quoted fr. 67 and fr. 54 respectively, these prices showed (on the same basis of cost as in 1874) a value of fr. 4 for yellow and fr. 2.30 for green cocoons. When the time of the crop had come, so deep, so widespread was the discouragement of the silk growers in Europe, that the total quantity of seed put to hatch in April and May was on the whole considerably reduced. By this initial cause the crop of 1876 was doomed to be a poor one. On the 13th of April, a sudden sharp frost occurred in the south of France. In most of the silk districts leaves and buds were destroyed ; in some there was a second growth in May ; very few were left uninjured. In Italy there was no frost, but the weather was cold and rainy throughout the season. In Lombardy the rain lasted fifty days. The consequence was that in many places the worms died from sheer famine ; almost everywhere they suffered from scanty, irregular or unwholesome alimentation. But the irregular course of that crop will be best illustrated by the prices paid for cocoons ; they ranged as follows :

In Italy.....for Superior.....	from fr.	2.00	to 6.65
„ ..... „ Middling.....	„ „	1.25	to 5.82
„ ..... „ Inferior.....	„ „	0.90	to 4.82
In France.. „ Japan breeds	„ „	4.25	to 5.00
„ ..... „ Yellow do.	„ „	5.40	to 6.25

And one further evidence adduced by this wide range of price was, that in Italy, where the Japanese breeds had been predominant, the quality of the cocoons was in general worse than in France. In Spain, and in the Levant, the unremunerative price of silk during the previous seasons had also the effect of reducing production.

We shall now resume our chronicle of the English and French markets.

1876. *April.*—The universal languor of trade, the enormous losses incurred in the financial world, and the unsettled state of affairs in Turkey are among the causes which account for the protracted inactivity of the silk markets. They are so depressed that the news of a severe frost in the south of France falls flatly upon them. Stocks, however, are known to be much reduced everywhere, and present prices are from 45 to 60 per cent. (according to descriptions) lower than the average for the period extending from 1866 to 1871. No. 2 Hanks 15s., fr. 42.

May.—The prospect of a bad crop counteracts the effect of the general uneasiness felt in the silk manufacturing trade. Many holders of European raws withdraw their stocks from the market. Manufacturers, having secured fresh supplies at an advance of fr. 3 to 5 for fine raws, wait for events. No. 2 Hanks 15s. 6d., fr. 43.

June.—The fashion for wool dresses still rules supreme in France ; elsewhere silk seems to regain favour. Great rise in the price of cocoons ; large contracts are made with the silk reelers for the product of their filatures. Throwsters and manufacturers secure large supplies of raws. Speculation reappears on the stage. Chinas, which have been heavy during the previous months, have a comparatively small share in the demand. No. 2 Hanks 17s., fr. 48.

July.—As day after day throws new light on the disastrous issue of the European crop, buyers after a short pause resume operations and speculation in silk becomes general. Capitalists, owing to the extraordinary abundance and cheapness of money and the scarcity of good securities, invest largely in silk. The rapidity of the rise in prices for all descriptions is without precedent. Manufacturers, notwithstanding the slow advance in the price of piece goods, are compelled to follow the current. No. 2 Hanks 22s., fr. 61.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

August.—Most holders being now indisposed to part with their stocks, orders are telegraphed to China and Japan, and shipments afloat are sold "to arrive," after which there is a lull at the beginning of the month. Some of the earliest investors are even anxious to realise, when the news of the very high rates paid in Yokohama and in Shanghai, and a further rise in the cocoons' market of Marseilles, imparts fresh vigour to speculation. No. 2 Hanks 28s., fr. 78.

September.—More active than ever, speculation finds recruits among all classes of people; stocks change hands at daily advancing rates; a speedy return to the prices of 1868-69 is boldly prophesied by the most sanguine.* Silk having now risen about 125 per cent. from the lowest point, large orders are given by the purveyors of the wholesale trade and, although the advance in the price of fabrics is far from adequate to the advance in the price of silk, manufacturers whose stocks of cheap raws and throwns are not yet exhausted can afford to take those orders. A good demand has sprung up for black silks and factories are working with their full power. Prices have continued to advance in China and Japan. In Yokohama Hanks No. 2 have reached $1,050, or 36s. 6d. and fr. 101, and settlements for the three first months of the season amount to 12,700 bales, against a total export of 13,591 bales for the twelve months of 1875-76. There are few complaints at home of the quality of Japans, but unfortunately at a time of extreme scarcity of fine sized raws, Hanks are found to be fuller in size than usual. Prices show much less buoyancy in London than in Lyons. No. 2 Hanks 33s. 6d., fr. 100.

October.—Attention has hitherto been diverted from the conflict between Turkey and her insurgent provinces; but now the apprehension of that conflict eventually involving Europe in a general war is growing to such a point, that towards the end of the month transactions in raw and manufactured silk are completely paralysed. Still, the prospects of general consumption are apparently improving, money is abundant, stocks of silk pass from the weak to stronger hands. Prices are almost nominal at previous rates.

November.—The news of an armistice between Turkey and Servia fails to restore confidence in the maintenance of peace in Europe. It begins to be felt that prices have been raised to dangerous heights. All speculation has ceased; holders are again brought face to face with manufacturers alone. Holders, as a body, are strong indeed, but towards the end of the month

* A series of letters adressed to the *Moniteur des Soies* by an "Abonné," affords a curious example of the infatuation of a certain set of people during that period.

some sales bring down quotations for No. 2 Hanks to 28s., fr. 78.

December.—Few transactions and great anarchy in prices at the beginning of the month. Some of the shipments of Japans sold "to arrive" are found to have been so hastily and badly sorted, that qualities do not answer to description, and they give rise to much litigation between buyers and sellers. Ardent polemics regarding the position of the silk trade; the failure of the European crop, the early closing of many filatures, the reduction of stocks at home, the paucity and alleged inferiority of stocks in the East, the prospects of the next crop are dilated upon with much exaggeration and adduced as evidence in support of prices. It is hoped that the conference of Constantinople will result in a peaceful settlement of the Eastern Question. Confidence is restored to a certain extent. Rescued by speculation from the hands of weak holders, European silk has risen fr. 10 towards the middle of December, and the year closes amid glad anticipations of an early improvement in prices. No. 2 Hanks, 28s. to 29s., fr. 82 to 84.

(To be Continued.)

SPIRIT OF THE JAPANESE PRESS.

THE *Taihei Maru* AT KAGOSHIMA.

("*Nichi Nichi Shimbun*" of 3th March.)

We have received the following account from a person who was on board the *Taihei Maru*.

This vessel arrived at Kagoshima from Loo-choo about 10 o'clock at night. She had cast anchor, and the engines had become silent, when a great noise and shouting was heard from the direction of the town of Kagoshima. Lanterns and torches could be seen carried hurriedly about, and a great disturbance seemed to be going on. The people on board the *Taihei Maru* thought it very strange, and were wondering if this could be a festival day with the Kagoshima people, when a number of boats suddenly put off to the *Taihei Maru*, to the no small amazement of those on board, for although at the open ports the small boats compete with each other in coming off to the mail steamers with *saké*, fish, etc. for sale, this seemed very strange at Kagoshima which is rarely visited by mail steamers.

When the boats reached the *Taihei Maru* it was seen that they contained fifty or sixty men armed with rifles, who came tramping up the ladder, and forced their way in a swarm all over the ship. Of course no one on board was prepared for anything of this kind. Everybody was much alarmed and wondered what was going to happen next. Some ran away, and others tumbled down in their flurry. Mr. Kinashi Seiichiro was on board, being on his way back from Loo-choo, his term of Government service having expired. He thought this very strange conduct, and stepped forward on the deck. The rebels seemed very much embarrassed, and were standing with outstretched arms, when Kinashi recognized among them a man whom he had known when in the War Department. He asked this man what it was all about, and after the usual compliments of 'It is an age since I have seen you, etc., they got to more familiar conversation, and it gradually came out that four or five days before there had been an attack on the Arsenal and Dock; that Saigo and Kirino, at the head of all the Kagoshima *shizoku*, had formed their plans and made their military preparations to set out on a campaign in a few days. At this juncture the *Taihei Maru* had arrived, and thinking that she was a man-of-war sent against them, they had themselves resolved to attack her by surprise. They had therefore got into several boats and come so far. They saw, however, from the appearance of the ship that she was not a man-of-war. They then talked over the matter together frankly, and the troops at last left, leaving about thirty men behind. That night they parted without anything particular having occurred.

JAPANESE TALES.

HOW *GATA GATA*, *GUDSU GUDSU*, *CHIRIN CHIRIN*, AND *SAC SAC* HAD THE TABLES TURNED UPON THEM BY THE REVEREND PRIEST WHOM THEY SO WICKEDLY "TOOK IN."

THAT impunity begets confidence, and familiarity breeds contempt, are two maxims which every schoolboy who has cleared the thorny brake of pothooks and hangers is certain sooner or later to have to commit to memory in neat round text, if his writing master knows his business and is worth his salt. And if poor old ill-used Tsuda did not know them before he was so evilly entreated by his acolytes, it must have been because he had paid no attention to his copy book, or perhaps because they used different headings in the old times when he was a boy, to those in vogue at the present day. No one is too old to learn, however, as he found to his cost, for his four precious little shaven pates had begun lately to take charge of his instruction, and although they had not as yet advanced beyond those proverbs aforesaid, so zealous did they show themselves in the discharge of their self-imposed duty, that Tsuda learned them off by heart in no time, and it was highly probable that his stock of knowledge in the same direction would in process of time be very much augmented. For things had changed between him and them since the memorable night on which they supped together; a bloodless revolution had occurred and resulted in changing a despotism into a republic. The irresponsible dictatorship was abolished for the present, and his very humble servants began to discourse to one another of the rights of man.

But if their manners had undergone a change, the alteration in their appearance was no less extraordinary. For by degrees they had became as sleek and fat as heretofore they had been angular and lean. Gata bid fair in time, if he went on at the present rate, to have a double chin. Gudsu's *obi* had to be let out an inch or two. Chirin had laid the foundation of a round, red nose. To be sure it had acquired only a delicate pink as yet,—like a pale blush rose, but many a Royal Raspberry had no better beginnings. And as for Sac-sac, his cheeks had grown so round and plump that the wonder was, not so much how he managed to shut his eyes for the tightness of his skin, as how he contrived to open his mouth, for the same.

Now how did all this come about? Tsuda slily laughed when the neighbours wondered, and said it was always so with those who took to their fasting kindly, and glanced complacently adown his own portly person. But there were some who refused to believe in Tsuda's explanation in spite of its convincing simplicity. Fellows who required to have their ears tickled with such silly jargon as proportion between effects and causes, and whose idle pates were filled with antiquated sayings, such as an empty sack cannot stand against a wall, and the like. Among such cross-grained persons it was whispered that old Father Tsuda's imps had got him, some way or other, in their power, and that to keep things quiet he allowed them to have pretty much their own way in everything. Not that such scandalous stories injured him one bit. Quite the contrary, in fact, for the men thought little or nothing about them, and the women—who were his chief supporters—lowered their voices when his name was mentioned, and spoke of him somewhat tenderly, as a good and ill-used man.

Notwithstanding all these opposite opinions, however, there was no gainsaying the fact that affairs were going on badly in the temple, for in addition to the careless and disrespectful manners which were obvious in the demeanour of the four young acolytes, it was also very evident that they were beginning to neglect the duties incidental to their calling. For why, otherwise, should the temple have gradually become so dingy. The wood and brass work never shone now-a-days as it did of old, notwithstanding that the amount of *saké* used in polishing it was not diminished of late, but in fact increased. The mats were seldom swept, and the oil in all the lamps was full of snuffs. Tsuda now and then remonstrated, but he might as well have read a lecture to the pigeons on the roof for cooing during prayers, for all his little villains minded.

Why! the poor old fellow might draw aside that creaking closet door as often as a liked, but never a "*hai*" did it

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

draw from Gata. He might splash in his savoury mess until it overflowed the pot and rolled about the room for all Gudsu cared. What did it matter to him, said Chirin, though his kettle bubbled over till it put out the fire. And as for little Sac-sac, his master might eat himself into an apoplexy before the smacking of his lips could have penetrated the layers of fat which lined his auricles and secured his attention.

By the way, he had left off locking up that mysterious closet lately, for the very cogent reason, that the remains of another key than the right one, found entangled in its broken wards, had spoiled the lock for further use. The playful boys said it must have been Tsuda himself who had done the damage,—when questioned by him on the subject—he had no doubt broken it by inserting the wrong key in a fit of abstraction, or when overpowered by—study. But, as Tsuda had but one key, and that was safe and sound in his pouch, he was entitled to hold a different opinion, perhaps, upon the matter. Signs were not wanting of late, however, to indicate that all this was becoming intolerable to Tsuda. It was high time they were thinking of mending their manners, these young scamps, or trouble was probably in store for them. For now-a-days an ominous cloud hung round the brow of Tsuda, at first a summer *cirrus* coming and going, as it were, but by slow degrees a *cumulo nimbus*, such as lowers round Fuji before a storm. Such was the state of affairs, when one fine morning as he was passing a neighbour's door on business of importance, the good woman of the house, whose husband had been lately belled and prayed by him into a better world, out of the goodness of her heart, or from gratitude, perhaps, for all the trouble he had taken upon that occasion, called the old priest over, and presented him with a parcel of cakes of a kind which he much esteemed, smelling deliciously and smoking hot off the fire.

Now, although his mouth watered and he longed to eat them then and there, yet, as the business he was on was of a pressing nature, and as, moreover, he had made a vow that very day not to touch one drop of drink nor a morsel of food between his eight o'clock breakfast and his noon-day meal, the good man was constrained to hurry back and deposit them in his closet, there to remain until circumstances permitted him to gratify his appetite.

As ill luck would have it, however, during his absence, which was a long one, his industrious apprentices having finished the cleaning of the temple, and their dinners, came in to put his room to rights. That their work that day had been long and heavy might have been gathered from their dull and stupid faces, and the yawnings with which they were affected. It is true that a superficial observer might have fancied from their looks that they had all been sleeping, but then he would perhaps have been ignorant how flushed the face gets from hanging down the head in scrubbing woodwork, and how apt the glare of brass is to make the eyes to water. However that might have been, they were so late in arranging Tsuda's room, that beyond peeping into the closet they unanimously decided that it was hardly worth the while doing more at the time. Except perhaps trying on his spectacles, and drawing a caricature or two with Tsudas favorite pencil upon his best note paper could be considered in the light of putting things to right.

That peep into the closet was, alas! a fatal one. For there, exposed to full view, lay the delicious cakes, exhaling that odour indescribable which appertaineth only to forbidden fruits. How dainty they looked—how wildly appetising. Gata touched one with his finger. Gudsu boldly took another up. Chirin smelled it and smiled, and impetuous Sac-sac broke a corner off and devoured it before you could wink your eye, as the saying is.

"It is superb!" mumbled Sac-sac. "Delicious!" cried Chirin, with his mouth full. "Good!" said Gudsu shortly, and "Ah!" was all Gata had time to say, for the hurry he was in to finish the cake he was eating and be the first to begin another.

Nothing like them surely had ever been made before. They ran bolt off with the whole five senses at once whether they were willing or not. They were surely bewitched, for once the poor boys commenced eating they could not leave off for the life of them. That is to say, as long as there was any more left to eat, which to say truth was not very long. For when Sac-sac, with his mouth full and a big bit in one hand, would have helped himself again with the other to be even with Gata who was quite one cake ahead of him, the consternation depicted on his countenance was so expressive, that it fully conveyed as plain as looks could say it, the startling intelligence to his fellow depredators, that there was not another left.

Here was a pretty state of affairs, such as in the excitement of eating, it had never occurred to them as likely to come to pass. The delicious flavour of these dainties had so engrossed all their attention whilst they lasted, that they had no time to think of anything else. But now that the supply was exhausted and the flavour beginning to leave their palates, reflection slowly resumed its sway, and struggling through the recollection of the sweets, warned them each and all that their outraged master would have to be faced with that *nimbus* round his brow. Many and ingenious were the expedients proposed by which it was hoped that the inevitable storm might be avoided, but none found special favour, until Gata, with a malicious eye to the piece which Sac-sac still held in his chubby hand, proposed that it should be confiscated for the common weal, and inserted cunningly between the lips of the stone image of Jisô which stood upon a tombstone in the graveyard behind the temple, in order to convince old Tsuda that it was he who was the thief.

This ingenious suggestion was received with acclamations and forthwith acted upon, Sac-sac being the only malcontent, and the wicked boys sat themselves down to their studies and to wait for what would follow—not, however, without inward misgivings, be it said.

Tsuda soon after this arrived, and his wrath can more easily be imagined than described, when, having had a whiff or two of tobacco, and a cup of hot water as a prelude to the treat he promised himself, he found his cherished dainties had disappeared.

His estimable attendants declared with one voice that they had distinctly seen Jisô-sama walk in as bold as brass and devour the missing cakes, and if he doubted their honour he had only to go out and have a look at him to be convinced.

On inspection sure enough Jisô's mouth was full of cake and one of his hands had signs of grease upon it.

What was to be done now become the question. Tsuda, of course, as became a worthy priest, believed the whole story, and although he exhibited a praiseworthy resentment against the idol, yet it was strange how viciously he regarded his innocent acolytes. In the cause of order and discipline, so strangely out of joint of late, it was advisable to take some steps, and in his not unnatural perplexity he bethought him of consulting a fortune-teller, a special crony, who lived not far away. So he girt his robe about him and off he hied, and as he went it was remembered afterwards that the expression of his face had so much altered, that his best friend might have passed him by for another man, and not be blamed for it either. For Fuji's hoary head had seldom carried such a thunder cloud as brooded on him now, nor had such lightenings often flashed around it as glittered from his eyes.

The fortune-teller, when consulted, recommended him to boil the idol and he would ascertain the truth, then pocketed his contribution and bowed him out.

A close observer might have noticed that having neared his house he hesitated for a moment, and then, turned back a little way and entering a certain shop made purchase of a stout bamboo, which he concealed beneath his robes and then sped home.

Behold them then all five, squatted round a monstrous boiler filled with water, in which sat Jisô stonily. With a never changing smile upon his stony contenance one stony hand raised up warningly and the other holding stiffly a *Kana-bo*, or jingling rod.

How long the water is in boiling and how dreary look the wretched boys. Their master preserves a solemn silence and never moves a muscle.

How the time hangs. For heaven's sake thrust in another armful of wood beneath the pot. Will nobody do something to break the intolerable silence?

Hark! wasn't that a noise from out the pot? It was. A bubble has struggled upward and burst upon the sur-

face. And now another rises, and another. What do they say? Hurrah! hurrah! It's *kutta kutta kutta*, (I have eaten it) as plain as ears can hear it. The little rogues look askance at Tsuda, but he heeds them not, nor moves nor seems to take his eyes from off the ground, but his right hand beneath his vestment, to judge from the working of the tendons round his wrist, seems to tighten upon something. The boys seem frightened and depressed, they know not why, and move uneasily in their places. *Kutta kutta* bubbles louder from the pot, but still it does not reassure them. And now the noise increases and bubbles have not time to break—but change their time and run together to a hiss and then—oh! horror—as the water boils more furiously it seems to say *kuwan kuwan*, (I did not eat it) and Tsuda at last is on his feet and his stout bamboo is raining such trenchant blows upon the heads of the wicked four, that they rush headlong from the temple never to return, and as the good priest comes back from chasing them it is plain them the storm upon his forehead is burst and over, for the *nimbus* has dispersed, and in its place is a bright red glow such as the setting sun sheds over Fuji when the winds and rain have ceased and the dread typhoon is past.

A SUMMARY OF THE JAPANESE PENAL CODES.

By Joseph H. Longford, Esq., H. B. M. Legation.

Read before the Asiatic Society of Japan, on the 28th February, 1877.

The Criminal Laws of Japan as they stand at present are comprised in two codes, respectively entitled the "Chief Points of the New Fundamental Laws" and "The Revised Fundamental and Supplementary Laws," both of which have been compiled and enacted since the Revolution. Under the Shôgunate the whole criminal jurisdiction of the country was nominally administered according to the laws contained in the two Chinese codes known as the Ming and Tsing, but as the several territorial magnates had from time to time modified and altered these codes at will, the mode of their administration differed in almost every province. The attention of the Mikado's Government was therefore early directed to the subject, a commission was appointed to enquire into it and to draw up a code that would be applicable to the whole Empire, and the result of their labours was the code which I have first mentioned and which was published in January 1871. It is simply a selection from the two Chinese codes of the laws which were considered to be most applicable to Japan, large modifications being, however, introduced into the amount and nature of the punishments prescribed in them for different offences. These punishments had been of the most cruel and rigorous severity; death was inflicted for almost trivial offences and no other method was known of punishing heinous crimes save by accompanying that death with tortures of the most painful description. The Commissioners who draw up the new code, however, recognizing that the true principle of punishment existed not in extreme and vindictive severity altogether disproportioned to the gravity of the offences, but in the certainty of the infliction of that punishment, entirely eliminated from the new code those barbarous modes of execution which had characterized the old, largely curtailed the crimes for which death was enjoined as the penalty, abolished merciless and excessive whippings, and for the majority of offences prescribed the punishment of imprisonment with corrective labour, or in other words penal servitude.

The second code which I have mentioned was notified by an Imperial Precept published in May 1873. By it many of the laws contained in the first were abrogated or amended, new ones which experience had shown to be necessary were added, and further proof given of the humane feelings by which the Government was actuated by the still further curtailment of the crimes punishable by death, and by the almost total abolition of corporal punishment. What I now purpose to lay before the Society is a summary compiled from these two codes of the Criminal Law of Japan as at present constituted, and I am induced to do so because I am not aware that this subject has as yet found a place among those that have from time to time been brought before the attention of the Society, and because it is one of interest, not only to the student, but in some degree also to every foreigner resident in this country.

The "Chief Points of the New Fundamental Laws" consist, in addition to a preface containing certain tables and preliminary matter, of five volumes subdivided into 192 sections, and the "Revised Fundamental and Supplementary Laws" are comprised in two volumes containing 318 consecutively numbered sections, there being as in the first code also some tables and Preliminary matter. These sections are again in both cases grouped into 13 chapters of different length, headed respectively :—

1.—General Laws.
2.—Domestic Law.
3.—Robbery and Theft.
4.—Homicide.
5.—Quarrelling and Fighting.
6.—Abusive Language.
7.—Indictments and Informations.
8.—Bribery and Corruption.
9.—Forgery and Fraud.
10.—Rape and Adultery.
11.—Miscellaneous Offences.
12.—Arrest.
13.—Judgment and Imprisonment.

The first chapter contains the laws describing the regulations under which the punishments specified in the remaining twelve chapters are to be inflicted. Every crime known to Japanese law, with the exception of such offences as are in contravention of the Press-Laws, Railway Regulations, etc., which are provided for in special statutes, is separately treated of in one or other of these twelve chapters, the circumstances which are to be taken into consideration in convicting a prisoner being minutely described, and the punishment which is to be inflicted on him on conviction precisely stated in each case, authority being, however, given to the judge to make certain mitigations in these punishments whenever he thinks the circumstances of the case call for the exercise of clemency.

I will now separately summarize these chapters in the order in which they occur.

Chapter I.
GENERAL LAWS.

The first and second volumes containing forty sections of the 'New Code,' and one hundred sections of the first volume of the Revised Code treat of the "General Laws." These may be divided into three classes devoted severally to—I. Punishments: II. Special cases in which the statute punishments are to be increased, mitigated, compounded by the payment of a fine, or altogether remitted according to the aggravating or extenuating circumstances of each case, and the rank, age and sex of the offender: III. Definitions of Legal terms that occur in the body of the codes, and Miscellaneous Provisions.

CLASS I,—PUNISHMENTS.

Revised Code, Sec. I-IV, There are twenty degrees of punishment—namely penal servitude for a period of 10, 20, 30, 40, 50, 60, 70, 80, 90 or 100 days, or for one of 1, 1½, 2, 2½, 3, 5, 7 or 10 years, or for life,—there being no intermediate period between that of 100 days and 1 year, or between that of 10 years and that for life—and death. An offender sentenced to a term of penal servitude is to be placed in the penitentiary or convict depôt of the district in which he has been tried and sentenced, and work suited to his age, physical condition, and acquirements is to be allotted to him, so that "by toil and "labour he may be gradually brought to "repent of his past misdeeds and be restored "to virtue." A certain portion of the value of all work done by him is to be placed to his credit in the prison books, and given to him on his discharge at the expiration of his sentence, in order to serve as a capital to enable him to gain an honest livelihood. The punishment of death may be inflicted either by hanging or decapitation, the latter form being considered the more severe, and accompanied in a few

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

instances where the crime is of a very heinous nature—such for example as that of parricide—by the disgraceful addition of exposure of the head after death. The body is always to be handed over to any relatives who may apply for it, but it must be buried without religious ceremony of any kind, and the headstone must contain nothing save the criminal's name and date of death. A government notice recording the punishment and the crime for which it has been inflicted is always to be erected, both in the district in which the criminal has been tried and executed, and in his native place.

Every crime treated of throughout the code is punishable by one of the of the above periods of penal servitude or by death, but there are certain cases in which the punishment of pillory—which consists of placing the offender in iron stocks in the prison yard—is to be substituted for one of the shorter periods of penal servitude, and there are others again in which the punishment of Imprisonment unaccompanied by hard labour—which is called a supplementary (lit. intercalary) punishment—is to be inflicted instead of that actually provided in the statute.

New Code, 'Supplementary Punishments,' Revised Code, Sec. 13.

Imprisonment without hard labour may, according to circumstances, be undergone either in the offender's own house, he being closely confined in one room and no communication of any kind allowed with outsiders nor any egress or ingress except on the part of domestics conveying daily necessaries, or else in the ordinary penitentiary of the district, in which case the offender is to be kept apart from other prisoners, allowed to wear his own clothing, and have his own food brought into the jail, as well as other privileges. This punishment, the periods of which are similar to those of penal servitude, is the one to which all persons of the rank of *samurai* are to be sentenced for crimes which are not considered of a very disgraceful nature, such as robbery, unlawful sexual intercourse, etc. *Samurai* who commit crimes of this latter class are to be considered unworthy of their rank, and are to be punished accordingly by being deprived of that rank and reduced to the level of commoners; and, if their crime be such that a commoner would for committing it have been liable to any punishment exceeding penal servitude for 1 year, they are, in addition to the degradation, to undergo the statute punishment. This distinction may be best explained by an example. A commoner, who is guilty of an ordinary assault, is punished, as will be seen hereafter, by penal servitude for 20 days; a *samurai*, this not being considered a very disgraceful crime, by imprisoment without hard labour for a like period. A commoner, again, who commits embezzlement of a sum not exceeding 20 yen is punished by penal servitude for 90 days; a *samurai* by degradation unaccompanied by any other penalty. If, however, the sum embezzled exceed 40 yen, both *samurai* and commoner are to be punished by penal servitude for one year or longer, according to the amount, the *samurai*, as in the first case, also undergoing degradation. There is no supplementary punishment of death, and in all cases therefore, excepting of course those in which the crime is of a very disgraceful nature, where death is provided in the law as the penalty for any offence, imprisonment for life is to be substituted if the offender be a *samurai*.

Revised Code, Sec. 11.

Noblemen and officials of the two higher grades are to be treated as *samurai*, with the addition that in their case, a full report is to be made to the Emperor, and His Majesty's will inquired before any proceedings are taken. When either a nobleman or *samurai* is degraded, any life pension or grant which he enjoys as a reward for previous services is to be confiscated, but an hereditary pension is to be continued to his legal heirs, and the degradation is not to extend to the latter.

Revised Code, Sec. 14.

CLASS II,—SPECIAL CASES.

The second class of the General Laws describes those cases in which a special routine is to be adopted on account of the rank of the offender, and also those in which the statute punishments are to be increased, mitigated, compounded by a fine, or altogether remitted on account of the circumstances incidental to the offence being aggravating or the reverse, or according to the age and sex of the offender.

OFFICIALS.*

New Code, "Private Offences of Officials" Revised Code, Sec. 13.

Officials of all grades committing any "private offence" or any wilful and deliberate offence during their period of office, or, if, though the offence be antecedent, the discovery be only made subsequent to their entering office, shall be punished by the infliction of a fine, calculated according to the following table, in lieu of the term of penal servitude that is provided in the statute applicable to the offence. Where, however, the offence is such as would render a commoner liable to a sentence of penal servitude for one or more years, officials are to be dealt with in the manner that has been already described as the one to be adopted in the case of *samurai*, their official brevets being confiscated where the samurai would have been degraded. The term "private offence" is the literal translation of that which is contained in the original. It includes all cases of criminality on the part of officials where the offender's liability to punishment does not arise from his official responsibility, and is opposed to the term "public offence" which was used to describe a class that has been recently abolished, in which the offence consisted either of a dereliction or violation of official duty. Examples of this latter class of offences were "Failure to make proper reports to the Emperor," "Destroying or injuring official documents," "Wilfully absenting ones-self from duty" "Failing to attend at the Palace on necessary occasions," etc., etc. The provisions in this law apply also to the parents, brothers, and children of a commoner holding office provided he be the head of the family.

Revised Code, Sec. 25.

* Persons in Government employment are either "Classed" or "Unclassed" officials. The Unclassed officials comprise only the copyists, servants, messengers and others employed in subordinate capacities in the public offices. Classed officials include all who are employed in responsible capacities and have a definite rank. They are divided into seventeen grades, numbered consecutively 1 to 17. All who belong to one of the first three grades receive their appointments direct from the Emperor and are therefore called "Officials of Imperial Appointment." All the Ministers and Vice-Ministers of the Public Departments, the Councillors of State, etc., come under this category. Those who belong to the fourth, fifth, sixth, or seventh grade receive their appointments from the Council of State and are therefore called "Officials of Government Appoint-

Clergy.

New Code, Beneficed Clergy. Revised Code, Sec. 26.

Beneficed clergy though by birth commoners are to be treated as *samurai*, and as *samurai* are degraded so they are to be unfrocked for peculiarly disgraceful crimes and for violations of clerical law. Unbeneficed clergy are to be treated as commoners.

Naval and Military Offenders.

Revised Code, Sec. 27.

Persons in the naval and military services are in all cases to be tried and punished by their own authorities, even for civil offences.

Magisterial and Police Officers.

New Code, Offences of Mag. and P. Officers, Sec. 29, Revised.

Magisterial and Police Officers accepting bribes, or appropriating any property that may come into their hands in the course of the discharge of their duty, are to be sentenced to a punishment two degrees heavier than that which is to be inflicted on any other person for an offence of similar description, even though the discovery of their guilt may be subsequent to their ceasing to hold office.

Indulgences to Commoners.

New Code, "Commoners on whom sentences are not to be carried out."

Commoners deserving of leniency on account of their having become implicated in a crime through mistake or inadvertency, or of their being of advanced or tender years, maimed or deformed *, or of the female sex, are to be allowed to commute the period of penal servitude to which they would have been otherwise liable by the payment of a fine, according to the following Table:—

TABLE.

Death	100.00 „	40.00 „

Revised Code, Sec. 30.

If a commoner sentenced to pay a fine of the first of the above classes is not able to do so on account of poverty, the ordinary punishment is to be inflicted with the exception that, if it be that of death, penal servitude for life is to be subsituted. In the case of those unable for a similar reason to pay fines of the second clases, half the ordinary punishment is to be inflicted if the full term do not exceed

Revised Code, Sec. 31.

100 days. If it does the term is to be mitigated five degrees. The indulgence of punishment by infliction of a fine calculated according to the second class in lieu of penal servitude is also to be extended to commoners who have aged, maimed or deformed parents, or grandparents with no other relative above 16 years of age on whom to depend for support save the offender. If the full period of the ordinary sentence would not have exceeded 100 days, the whole may be commuted in this way, but, in the case of more serious offences, the offender is to be put in pillory for three days and allowed to commute only the balance of the punishment. Pillory for three days is to be considered as equivalent to penal servitude for 100 days, and thus an offender coming under this category and guilty of an offence which would otherwise have rendered him liable to undergo penal servitude for one year, would be punished by three days pillory and a fine of 50 *sen*, the fine being increased by 3 *yen* for each additional period of one year that the greater magnitude of the offence would have involved. This indulgence is not to be allowed in the event of the repetition of an offence, nor in any offence involving capital punishment.

Revised Code, Sec. 35.

Revised Code, Sec. 38.

Female Offenders.

Women who commit offences which violate filial piety,† or who are guilty of theft, unlawful sexual intercourse, homicide or incendiarism, are in all cases to undergo the punishment prescribed by the several laws applicable to those offences, but all other offences may—unless an exception is specially made—be commutted by the payment of a fine calculated according to the above table. Women of the rank of samurai are to undergo imprisonment in their own houses instead of penal servitude, except the term exceed one year, when they are to be dealt with in the ordinary way.

Revised Code, Sec. 40.

Prisoners Committing Second Offences.**

New Code, New offences by convicts.

Persons, already in custody for a previous offence, who, before their sentence has been pronounced, are guilty of a second offence, shall only undergo the punishment due for the more serious of the two. If, however, the second offence is committed after the legal sentence has been pronounced in the case of the first and while the prisoner is undergoing punishment, additional penalties are to be imposed according to the following system. If the period of the first sentence do not exceed 100 days and the second offence committed before the expiration of the first also involves a sentence not exceeding that period, then the full term of both sentences must be undergone. If, however, the second offence involve a sentence of penal servitude for one or more years, then the balance of the first sentence shall be remitted and second take effect forthwith. If the period of the first sentence exceed one but not three years, the full legal punishment for any second offence shall be added to that of the first. The full period of both must, however, not exceed four years, unless that applicable to the second offence is of five or more years, in which case it is to be imposed in full and take effect forthwith, irrespective of the time the offender may have already been in prison on account of his first offence.

Revised Code, Sec. 41-44.

If the period of the first sentence be five or more years a second offence of an equally serious nature shall involve an addition of four years to the first. If, however, the second offence involve punishment for a period vary-

ment." The Secretaries, Acting Secretaries, Assistant Secretaries, and Acting Assistant Secretaries of the Public Departments, and Provincial officials of corresponding rank come under his category. Classed officials of any of the remaining ten grades receive their appointments from the head of the Public Department to which they are attached, and are therefore called "Officials of Departmental Appointment." They are entitled Attachés—an official of the eighth grade being an "Attaché of the first rank"—an "Official of the ninth grade an Attaché of the second Rank," etc.

* These terms are of constant occurrence throughout the Codes. A maimed person is one who is permanently crippled by one of the limbs, or the back bone being broken; a deformed person one who is suffering from any permanent and incurable disease or infirmity, such as leprosy, or who is permanently crippled by both of the legs or arms being broken, or who is blind of both eyes.

† Such as assaulting or using abusive language to parents, disobeying their lawful commands, &c.

** Frequent illustrations of the application of this law are afforded by the sentences passed on newspaper editors.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing from one to three years then only half this period is to be added to that of the first sentence, though if the legal period prescribed for the second offence do not exceed 100 days, it is to be added in full to that of the first. The time occupied by the trial of an offender for any offence committed during the period of his punishment is not to be computed as part of his first sentence, unless he may be finally acquitted of the second charge.

Aged and Youthful Offenders.

New Code, "Fines on Aged, Youthful and Decrepit Offenders." Revised Code, Sec. 45, 46, 48.

Persons of advanced or tender years—that is above seventy or under fifteen years of age—and also maimed and deformed persons are to be allowed to commute, by the payment of a fine according to the table already given, any punishment to which they may render themselves liable except that of death, and in the case of maimed persons those prescribed for rape or violent robbery.

Persons above eighty or under ten years of age or deformed persons, shall not be liable to punishment for any offences of which they may be guilty other than those of theft or wounding, and they are to be allowed to commute the usual penalties for these crimes by the payment of fines according to the table. Persons above ninety or under seven years of age are not to be held responsible for any offences whatsoever that they may commit, even if it be that of murder, but any person who may be convicted of having instigated them to the commission of an offence shall suffer the full legal punishment for it, just as though he himself had actually committed it.

Persons of the first of the above three classes repeating an offence, for the first commission of which they have already been allowed to commute their punishment by the payment of a fine, shall have the same indulgence again extended to them, unless the offence be one, a repetition of which involves an increase of severity in the degree of punishment. In this case they shall only be permitted to commute the additional degree of severity, and the balance of the legal punishment shall be inflicted as though on an ordinary person committing the crime for the first time. A third commission of an offence shall render them liable to the punishment that an ordinary person would have suffered for a second. All the above indulgences are to be allowed to persons who, though neither of advanced years nor maimed or deformed at the time they may have committed a crime, become so before its discovery or before the expiration of their sentences, and also to those who though, of tender years at the time of the commission of an offence, have advanced to manhood before its discovery.

New Code. "Offenders not yet old or decrepit."

Principal and Accessory.

An all important principle in Japanese law and one applied to all cases except where special exception is made, is the distinction of Principal and Accessory that is to be drawn between the parties to the commission of an offence. The Principal is he who originates the idea of committing an offence, and he is to suffer the full punishment prescribed in the law applicable to it. The Accessory is he who joins with the Principal in carrying out the crime suggested by the latter, and he is to suffer punishment one degree less in severity than that prescribed by law, and this remission is to be made even though the accessory may have been equally or more active than the principal in the actual commission of the offence. A further remission of one degree of severity is to be allowed where an accessory afterwards gives information of the crime, even though such information may have been consequent on his learning that it was about to become divulged from other sources. In the cases of offences other than theft, bribery whether for a lawful or an unlawful object, fighting and quarrelling, homicide and wounding, where the parties to the offence are all members of one household, the head of the house shall alone be punished, unless he be over 80 years of age or maimed or deformed, in which case the punishment shall fall on the head of the house next in succession, or, unless the head be a female, in which case the senior male member of the household shall also undergo punishment. Where different laws are applicable to one offence committed by two or more persons, both principal and accessory shall be punished according to the laws that may be severally applicable to their individual cases. For example, if a man procure a stranger to join with him in striking his elder brother, the former shall be punished as Principal in the offence of assaulting Family Seniors by the penalties contained in the law of Assaults on Relatives,—the latter as Accessory in the offence of assaulting ordinary persons.* Again, if a stranger procure a member of a family to join with him in stealing the family property, the former shall be punished as being the principal in a robbery, the latter as accessory in the crime of wasting the family property, the law on which is contained in the chapter entitled "Domestic Law."

New Code, "Accumulated Remissions of Punishments." New Code, "Principal and Accessory." Revised Code, Sec. 71.

Offenders who Voluntarily Confess their Crimes.

New Code, "Voluntary Confessions."

A criminal, who, before his crime has been discovered and while his name is as yet unknown to the authorities, voluntarily confesses it either himself or through another person duly deputed by him for the purpose, or of whose crime information is given to the authorities by a person within the degree of relationship that would have justified the latter in concealing it, shall be pardoned. If, however, such voluntary confession or information be either imperfect or inaccurate, the criminal shall be held to be guilty of, and shall be punished for as much of his crime as may have been inaccurately or imperfectly stated; for example, a criminal who, having stolen 100 *yen*, makes a voluntary confession of his crime but represents the amount as having been only 60 *yen*, shall be punished for the amount which he failed to declare—*i. e.* for 40 *yen*. If the imperfection or inaccuracy be so serious as to involve capital punishment, a remission of one degree of severity shall be made in the sentence. Should the confession or information have been consequent only on the offender learning that information of his crime was about to be given to the authorities from another source, or that a warrant had been issued for his apprehension, remissions of two and one degrees respectively in severity only shall be allowed to him and not a full pardon. The letter remission shall not be granted to the offender, if a noble or samurai, but if the offence were of a desgraceful nature he shall be spared the degradation that would have otherwise attended it. Restoration of stolen property by a thief to the owner before the fact of the theft has been discovered shall be treated in the same light as voluntary confession. None of these indulgences shall be allowed in the cases of offences against the person, or of injury to property which cannot be replaced, or repaired, or in that of unlawful sexual intercourse, or a repetition of the same offence; and in

Revised Code, Sec. 59.

Revised Code, Sec. 67.

* The term ordinary is used to denote cases where is no official connection or tie of blood relationships between the parties.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

all cases stolen or otherwise dishonestly acquired property must be restored in full, otherwise a voluntary confession will only entail a remission of two degrees in the severity of the sentence instead of a pardon. If, however, a portion of such property be restored, pardon shall be granted for this portion, and punishment mitigated two degrees inflicted for the balance only. Runaways from prison voluntarily surrendering themselves shall have the additional punishment for prison breaking which would otherwise have been inflicted on them remitted, but their original sentences are not to be affected.

Revised Code, Sec. 64.

Revised Code, Sec. 61.

(To be continued.)

THE VOLUNTEER MOVEMENT.

A public meeting was held yesterday evening at half past five at the Grand Hotel, for the purpose of considering the advisability of forming a Volunteer Corps in this port. The meeting was more numerously attended than is usually the case with public meetings in this place—upwards of ninety residents being present. On the proposal of General Van Buren, which Dr. Eldrige seconded, Mr. Keswick was voted into the chair. Mr. Hay was requested to act as Honorary Secretary.

The Chairman stated that there was a very general feeling among residents here that a Volunteer Corps ought to be formed, and this meeting had been convened for the purpose of taking the preliminary steps for so doing. Some, indeed, thought that the movement was useless, but he himself considered that it was far from being so, and he had no doubt that his opinion would be supported by the majority of those present. A Corps once formed would be ready to protect the settlement in any time of danger, and it was impossible to say that a time might not come when a regularly organised force would be of the greatest service. The present crisis shows that troubles may arise in this country, and although the foreign community of Yokohama is in no danger, still there could be no harm in being prepared for any emergency. The Volunteers would also form an excellent salvage corps, and the fires that have so frequently occurred in this settlement have fully demonstrated the necessity for such a corps, not only to save goods from the flames but to suppress the pilfering which invariably occurs to so alarming an extent. Most men indulged in a walk or other exercise when their business for the day was over, and he imagined there could be no difficulty in getting them to devote some portion of this period of leisure to the necessary drilling which would be required of them. Almost nine-tenths of the men resident here, of all nationalities, have borne arms in some capacity or another, and many have seen active service, so that, therefore, the organization of a Corps could present no insuperable difficulties; no great expense need be incurred, and the local authorities might even look favourably upon the movement, so that assistance in the shape of a grant of arms might be given by them, especially as the would see that the Corps would be useful in maintaining public order when necessary. He had nothing further to remark, but called upon any gentleman present to favour the meeting with an expression of opinion on the subject.

General Van Buren said he had little to add to what the Chairman had already said,—there could be no doubt of the desirability of forming a Corps, such as had been for long in existence at Shanghai, and he therefore thought the sense of the meeting should at once be taken, for which reason he begged to propose the following resolution:—

"That in the opinion of this meeting a volunteer force should be at once formed, composed of all nationalities who like to take a part in it."

This was seconded by Mr. Geoghegan, and on being put to the meeting was carried by acclamation.

The Chairman said there were doubtless many residents who could not take an active part in the movement, and he would therefore propose:—

"That the Corps should consist both of active and honorary members, the amount of subscription for each to be hereafter settled by the Committee."

Seconded by Dr. Eldridge and carried unanimously.

General Van Buren then said that Mr Brewer had taken an active part in the Shanghai Volunteer Corps, and he would therefore call upon him to give the meeting the benefit of his experience.

Mr Brewer, in response, said that he had had the pleasure of commanding a Volunteer Corps in Shanghai, where, indeed, they had several branches of the service. He strongly recommended the organization of a Corps here, but thought that infantry alone would fully meet the requirements of the settlement. He should at any time be happy to give any assistance which might be required of him.

Mr Bishop proposed and Mr A. Winstanley seconded that a Committee of seven should be chosen to take preliminary steps for the formation of a Corps, and report proceedings at a future meeting. The following gentlemen were then nominated as a Committee and duly elected:—General Van Buren, Messrs. Keswick, Brewer, Kraetzer, Zappe, Eldridge and Geoghegan.

The Chairman said that a roll of active and honorary members was ready for signature, but it would be understood that until definite arrangements were made, subscribers would not be specially bound to any course of action, but the list would enable the Committee to ascertain what prospective support they might rely on.

The meeting then broke up, the roll in question having been signed by 46 gentlemen before they left the room.

A JAPANESE SONG OF THE TIMES.

Now darkness is breaking asunder,
And feverish life hurries fast,
We wake every day to some wonder
Unknown in the shadowy past.

We study at school and at college
All sciences under the sun;
For swiftly and surely by knowledge
Earth's triumphs and treasures are won.

We travel with easiest motion
Asleep in a smooth-gliding car;
While steam pulses over the ocean,
And lightning brings news from afar.

From custom to custom man ranges;
But softly, my sweet little dove,
I'll whisper the one that ne'er changes,
The famous old fashion of—Love.

KAJIN.

Correspondence.

BANK HOLIDAYS.

To the Editor of the "Japan Weekly Mail."

Yokohama, 9th March, 1877.

Dear Sir,—I read with much pleasure the very able and exhaustive report of the Yokohama Chamber of Commerce which appeared in your last issue, and the discussion that took place at the General Meeting.

All the subjects treated of are extremely interesting, but that introduced by the Vice Chairman deserves to be specially noticed.

Mr. Wilkin intimated that the old lady of Water Street and her attendant cronies have been disporting themselves a little too freely on every occasion where the slightest pretext for a holiday could be devised. The worthy dame is said to be always willing to lay down her knitting, put her spectacles in her pocket, and trip it as merrily as the youngest.

Now I venture to ask if there is any man so dead to all the finer feelings of humanity as to grudge occasional holidays to the dear old gossip who is ever ready to fill his pockets with gold and silver—when requested to do so by anyone who has money at his credit.

Besides it must be remembered, that although office hours are nominally from ten to three, they have a telescopic tendency to become drawn out. I myself have often encountered the hard worked bank employés wending their dejected way homewards in the dead of night, while they referred in reproachful accents to bills of lading that had kept them for many hours in an atmosphere perfumed by the fragrant efforts of the Yokohama Gas Company. Whenever I draw my humble remittances, I see the delicate beings sheltered like choice exotics in glass houses, and as I watch their pale faces and wasted frames a thrill of horror runs through me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

when I reflect that that exalted body, the Chamber of Commerce, threatens to abridge the already too narrow liberty of these unfortunate young men. We all know the effect upon Jack of all work and no play.

In the great scheme of Comte the world is to be governed by a committee of bankers, and surely the community of Yokohama may safely leave the limits of holiday-making to be fixed by the four distinguished men who, if we were living a hundred years hence instead of now, would probably be wielding despotic power over every soul in the settlement.

Rather would I suggest that the Chamber of Commerce, after it has made a move towards the desirable concession of drawbacks, seen some signs of the hatoba work being commenced, induced the Foreign ministers to adopt the Government regulations with regard to the storage of kerosene, elicited some trustworthy opinions with reference to the *Cathaya* case, examined the question of the tax upon natives travelling in foreign vessels, fixed the limits of the port, taken some steps in the matter of rules for pilots, and obtained a little reliable information with regard to the monopoly of the export of rice, should spend the heel-tap of its energy in arranging a general Saturday half-holiday for this overworked community, which seems to regard Mammon as the only deity worthy of earnest worship.

I understand that a great obstacle in the way of this holiday is caused by the Insurance Agents, who think it necessary to keep open till late in the afternoon. If these gentlemen took the same interest in clerks as they do in chimneys, there would be no chance of the proposal ending in smoke.

Your obedient servant,

A DULL BOY.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S Wilkinson, Esq., *Acting Law Secretary.*

Tuesday, March 6th, 1877.

Yokoyama Zensuke *v.* Malcolm, Willcox & Co.

Plaintiff claimed a return of $150 bargain money paid to defendant on account of a contract for 300 pieces velvet which the plaintiff did not receive. Defendants sued plaintiff in the *Saibansho* for not taking delivery, and during the hearing defendants admitted that the goods were not according to sample.

Mr Temple Willlcox appeared for defendan's.

Plaintiff stated:—I entered into a contract with defendants through an employé for 300 pieces of velvets; the contract was in writing. (Japanese contract produced) On the 23rd October the goods arrived and I went to Yokohama to see about them. My employé went; I did not. I speak of Yoshimatsŭ as myself. He returned without the goods. On the 28th he brought a sample of the goods which arrived by the *Martaban*. I did not think the sample quite right, and sent Yoshimatsŭ back to tell defendant that the contract must be considered as broken. Defendants would not admit that, so I went myself to speak to them, on the 7th November. Mr Willcox was busy that day and put it off till the following morning. He was busy again, but I saw him at last in the afternoon. Three persons, two in my own behalf and one for defendants met to examine the goods. They decided that the goods were different from the sample. I therefore refused to take delivery. I was going to complain to the *Kencho* but learned that defendant had commenced a suit in the *Saibansho*. The Judge there decided in my favour and I had not to take delivery. When the decision was given I told them I had paid $150 bargain money and asked how I was to get it. I was told to ask defendants for it and if they would not pay, to complain in this Consulate. Defendants said they had incurred great loss in the business and would not return it. I then applied to this Consulate through the *Kencho*.

Mr Willcox said he would have great difficulty in cross-examining this witness who was not the man with whom he had made the contract.

Plaintiff to defendant:—Yoshimatsŭ, my servant, made the contract. That is signed by Yoshimatsŭ (Japanese paper produced by defendant.) It is a memorandum of $2 50 interest for six days on the price of 150 pieces velvet, and receipt for one piece as sample. I had previously sold the goods to another party and the sample was taken then in order to show this purchaser and see if he objected to the quality. This required six days and therefore I asked for this postponement. I gave Yoshimatsŭ no instructions about paying interest; he did that on his own account. I do not say that because I agreed to pay cart hire on the goods from the hatoba to your godown I thereby admitted that the goods were mine. Velvets of the first quality were $9.50; next quality $9, and some went as low as $8 a piece. These velvets were about the $9 quality. About the time of the contract they were a little cheaper, but no transactions were occurring then. I certainly did not send my *banto* to make concessions with you on the 8th November. The velvets were not of the right quality and I would not have them at any price. In 500 pieces of velvet there may be slight differences in weight and quality, but in this case I showed the sample to many people and their opinions all being that the difference was so glaring, that a total violation of contract was constituted. I myself saw both shipments, but the sample I showed my friends was from the *Martaban*. I heard Mr Walter say during the examination that there was a difference between the sample and the goods.

To the Court:—They differed both in colour and texture. The weight was not looked to. The velvets had some a green and others a gray shade instead of black. Black is black; and when black velvets are sold, black velvets must be given. I have a copy of the translation of Mr Walter's survey given me by the *Saibansho*. If the price of velvets had gone up, even then I would not have accepted these without complaint. Takeda Jinshichi of Tôkiô purchased these velvets from me. He did not buy any black velvets after that. Yoshimatsŭ is now in the country about 40 *ri* from here in Shimosa, and has said nothing about his return. His father is dead. The return journey would occupy about four days.

Adjourned till Tuesday, the 20th instant.

IN THE U. S. CONSULAR-GENERAL COURT,

Before General T. B. Van Buren, Consul-General.

Monday, March 5th, 1877.

Albert John Wallesdorff, ordinary seaman on board the U. S. sloop *Alert*, was charged with being drunk on Sunday evening, creating a disturbance and damaging property in the saloon kept by Nakai Neyasuke, near the Railway bridge, Benten.

Shimo Hiroshi, a Japanese constable, stated that he was on duty on Sunday evening, when a Japanese woman from the above named saloon, came asking him to arrest a foreigner who had drawn a knife and was creating great disturbance in her house. Witness went into the saloon and found prisoner there. He had been throwing bottles of liqueur about and had smashed a spittoon. Witness was afraid to grapple with him alone, and called for assistance. The inspector present in Court came, and by their united efforts they succeed in capturing prisoner and took him to the station. The inspector took the knife from him. He was not making much noise then.

Nakai Neyasuki cautioned:—I am the owner of the saloon. Prisoner came about eight o'clock and first drank a large and then a small bottle of beer. Prisoner them commenced to play in a rough manner with the girls, whom he frightened out of the house. Prisoner wanted to know why they had gone, and the servant told him. He struck the boys and then drew his knife. That is the knife (produced by sergeant Loxton). The servant escaped, and prisoner then seized me by the breast and threatened to cut me. When I succeeded in getting free from him, prisoner took up a spittoon and threw it after me, smashing several bottles of liqueur. He then went outside and broke a door all to pieces. My wife ran for the police, and when the house was empty prisoner came back, but went again next door, to the house kept by Hatsu. Two bottles of liqueur and one of port wine are worth $1.75; the spittoon 20 cents; the door $1.00; and the cigars which were spoilt by the liqueur, about 25 bundles, $4.25.

Prisoner did not remember much about it. He had come on shore about one o'clock, and had drunk beer at the Spring Valley Brewery before he went to Japanese town.

Sentence to one week in goal with a fine of $10. If the fine be not paid at the end of the week, 30 day's additional imprisonment

Z. P. Maruya & Co. *v.* J. D. Carroll & Co.

Plaintiffs refused to take delivery of 36 casks of bleaching powder and 3 casks of caustic soda, arrived from London per British ship *Cathaya* for which defendants were agents. The goods were damaged, and plaintiff sued for damages to the amount of $1,260 for the bleaching powder and $87.50 for the soda, in all $1,347.50.

Mosuke Shimidzu appeared as attorney for plaintiffs, Mr Spooner for defendants.

Mr Shimidzu stated that this claim was for damages to cargo per ship *Cathaya*. The ship arrived about 25th November, 1875. Plaintiffs received notice from the Chartered Mercantile Bank of her arrival, and was requested by them to pay the balance of account, $1,725.40, which plaintiffs paid, and received Bill of Lading and Invoice. On the 4th December plaintiffs went to No. 16 and paid freight amounting to £95. On the 24th plaintiffs sent to the ship and took delivery of 53 packages of caustic soda and 12 packages of medicine. Three of the soda were in bad condition, and 35 casks bleaching powder could not be taken delivery of at that time because it was stowed in the lower hold under other cargo. The captain told plaintiffs to return in a few days. After a few days plaintiffs inquired at defendants' place when they could get the rest of their goods. On the same day they sent to the ship and found 53 packages of bleaching powder ready, but in bad condition, and therefore refused to take delivery. Plaintiffs claimed damages for the 53 casks of bleaching powder and 3 casks of soda.

His Honour here said that supposing plaintiffs could prove all this to be true, still defendants denied their responsibility because they were only agents of the ship. Plaintiffs could not sue J. D. Carroll & Co, unless as agents of the owner. They must prove that defendants were and are agents of the owner.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Plaintiffs said that defendants had in part admitted their responsibility by paying for damage done to two packages of soda, and Mr Shimidzu introduced a letter as evidence, dated January 15th, 1875, signed J. D Carroll & Co., as agents for the *Cathaya*, addressed to plaintiffs. (Mr Spooner admitted the letter.) This letter admitted a liability for the damages to 2 casks soda but denied any liability for the damages to the remainder of plaintiffs' goods. Mr Shimidzu called

Maruya Zenoske who stated :—The goods in question arrived on the 30th November, 1875. I received notice from the Chartered Mercantile Bank and went there and paid $1,725.40, and received the Bill of Lading and Invoice. I went to defendants' place on the 4th December and paid feight, £95. I sent to the *Cathaya* on the 14th December, and received 42 casks of soda and 12 packages of medicine. I went several times on board after that and found the bleaching powder damaged. The damage was evidently caused by carelessness and bad stowage. The casks were all broken and the contents spoilt. I had dealt in this article several times before. Exposure to the air will damage this soda. I went to No. 16 on the 15th January and demanded payment for damages to the goods as described. I saw Mr Spooner and he told me he would pay for damage to 2 casks of soda; all the rest he refused to pay for.

His Honour reminded plaintiff that defendants ceased to be agents of the ship after she left Yokohama. It was useless going on with the case unless it could be shown by plaintiffs that defendants were the proper persons to be sued. Defendants denied this, and to show on what grounds, his Honour called

Frank C. Spooner, who was sworn and stated .—I am a member of defendants firm. We were agents for the *Cathaya*, which belongs to Thomas Hoblay of Carnarvon, in Wales. The *Cathaya* left on the 17th January, 1876. We were agents for the ship whilst the was here. We were appointed by letters from the agents of Mr Hoblay in London, introducing us to the captain. I have not those letters with me. We were appoint d agents to receive inward cargo and collect freights and act generaly for the ship. For this we were to get commission. We got no outward cargo. We collected freights and settled with the owner in full. The accounts were made up before the ship left. We are not general agents for the owner of the ship *Cathaya* now, and our agency ceased when she left port. We have no monies belonging to the owner of that ship on hand now and are not empowered to act for him in any way. This letter (referred to above) was given to plaintiffs under these circumstances: Plaintiff's representative came to our office and I by the advice of the Captain, acknowledged the claim for the two casks. He was then told, expressly, that the ship was about to leave and he must present his claim at once.

His Honour said it was very clear that plaintiffs could not sue defendants.

Plaintiffs' only course was to sue the owner at home, but as it was, the Court had no jurisdiction in the matter.

Complaint dismissed.

Tuesday, March 6th, 1877.

Charles Summers, Andrew Jannesen, Robert Scott, Thomas Thomsen, Charles Sunclare, Frank Mantrel, John Manning, A Theodore and W. Schramm, seaman on board the American ship *Annie W. Weston*, were charged by Capt. Winsor with refusal of duty without any just cause or provocation.

H. O. Winsor, sworn stated :—I am master of the *Annie W Weston*. I came to Yokohama from Cadiff where I shipped my crew. The men have now served about six months. I have had little trouble on the voyage, except growls about steering, &c. Some of the men have done their duty, some have not. Yesterday morning, the 5th instant, I was in my cabin when the 1st officer came to me and said I must come and order the men to come on deck to duty, as they refused to do so. I went and asked them what was the matter. John Manning said "We want to see the Consul." I said "Men, now look at it in a right light, I will be honest and fair with you. I've no objections to your seeing the Consul and advancing one third the money due to you, but you can have no more liberty. You can't go on shore whenever you like." John Manning said "We want clothes." I said "This thing has been made up; I have treated you well. You have discharged the cargo and there has been nothing till now. Will you return to duty. It is blowing stormy and a boat can't get off to the ship." They refused to come out, saying "We want to see the Consul." The ship was in danger and no one to take care of her besides the pursers and two mates. Some were in their berths, some on their chests. I said they could could not go in such weather, but they refused to do duty. I threw a lot of water into their bunks. This is the only time they have refused duty They cried that they had been abused. The first officer heard all this and I called his attention to it.

Cross-examined by Manning :—I never said I was Captain in the Navy. I never made such a remark—Captain in the Navy! I did not say that after putting you in goal I would take you on board in irons and then shoot you and pitch your overboard. I was not tried in San Francisco for abusing men on board former ships of mine. I am not under bond to keep the peace nor ever was.

To Frank Mantrel :—You asked me last Saturday morning for leave to go on shore. I refused you leave.

To Summers :—I did not go to the forecastle door yesterday with a belaying pin and cry for you to come out.

To the Court :—About the belaying pin, I went to the forecastle and saw Mantrel catch at something like a pistol, so I took the belaying pin to defend myself.

To another :—I did remark that the whole lot of you might go on shore and live for all I cared.

Adjourned till 10 a.m. this morning.

Wednesday, March 7th, 1877.

The hearing of this case was resumed from yesterday.

Henry J. Dunn, sworn :—I am first officer of the *Annie W. Weston*. I was on the ship the day before yesterday when the men refused to do duty. It was about half past ten o'clock, and had been blowing and snowing all the morning; and, fearing that the snow would freeze, I went forward and called the men out of the forecastle to clear the snow away. It was blowing hard at the time. I got no answer. A boy only came out. I saw the others were not coming, and I went again. Frank Martell then spoke and said he wanted to see the Consul. Several others then said that they also wanted to see the Consul. Finding they would not come out, I went aft and reported the affair to the Captain. The Captain then went forward, and told the men it was blowing a gale of wind and asked them to come out. They positively refused until they could get permission to see the Consul. Common reason should have brought them out. The Captain told them they could not go now but as soon as the weather cleared they could go. The Captain then said, "I'll throw snow and slush in the forecastle if you won't come out, and I'll make it uncomfortable." Both the Captain and myself flung in some snow by shovels and buckets. The men said they would make us pay for doing this. One of them said that the snow would cost the Captain more than a dollar a bucket; that he had more friends in the United States than the Captain had. After this the Captain expostulated with them for not coming out, but the talk did not amount to much. The Captain then went aft and left them. I forgot to mention that, after a few buckets of snow had been thrown in, one of the men, who has a reputation for using a knife, started for his berth, and the Captain said "If you go to do anything to me I'll shoot you." The boy and myself cleared the snow off the deck because there was no one else to do it. I know no cause for this refusal of duty, except that it was that the Captain refused to allow them to go on shore the second time. All but Frank had had leave on shore. I do not know whether he asked to go on shore. The men have been treated as well on that ship as any ship I have ever been in. They had plenty to eat and very few extra watches; and the general practice was to give them an afternoon watch below. I have never heard any complaints made by the men. They have never complained of being abused; neither have they been abused. None of them have ever been struck with the exception of one man who took a knife to the second mate. Some of the men have done their duty and others have not.

To Frank Martell:—I did not say that you were a frivolous character. I never saw you take a knife to any one in the ship. While you were laid up there was some trouble in the forecastle between Tom and John. I was writing and heard John running aft say that he would kill the——. John got a belaying pin and was going back to the forecastle. The Captain said, "What is the matter?" John said "That fellow was going to knife him." The Captain thought it was Tom and dragged him out, but as soon as Tom said it was not him, he let him go. John then said "It is Frank." I remember once when you were putting a seizing on a rope you got saucy and the Captain, standing twenty feet away, took up a belaying pin and threatened to throw it at you. I did not see the Captain put is hand to your throat and threaten to throw you overboard.

To Thomas Thomsen:—I did not see the second mate strike you with a belaying pin. I was standing at the bridge on the starboard side, and heard the second mate say he would knock the sauce out of you The second mate had a belaying pin in his hand and you had a knife in your hand, and threatened to cut him if he touched you. The second mate then beat you with the belaying pin, which was a small wooden one. I saw you had two eyes blacked; and I told you that if a man drew a knife on me I would cripple him. One time you were in the main top, and when you came down you were saucy and I gave you a slap across the face. You started to draw a knife on me and I told you I would cripple you if you did so. I saw the blood running down your face after the second mate had struck you.

To Robert Schott.—The Captain did not offer me fifty dollars out of his own pocket to leave the ship.

To John Manning.—When I called you out of the forecastle, you did not answer me at first. The second time Frank said he wanted to see the Consul, and John said, "we all want to see the Consul." I said you were all pretty brave not to come out. The Captain did say that you could not see the Consul, but did not say he had been to see the Consul and made it right with him. The Captain did not say in my hearing that the Consul would not listen to sailors as they told lies. You did not say that the Consul was a gentleman and would listen to you.

His Honour now addressed a few kind remarks to the men; and, while condemning the action they had taken in refusing to do duty, told them that if they would return on board he would allow them to make any complaints and would hear them patiently. But if they refused to return to duty he should be compelled to punish them.

The men with the exception of a Frenchman who did not understand His Honour's remarks, elected to go on board.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq, Vice-President.

March 3rd, 1877.

C. BRAUN *v.* KAJIRO SHOKIDO.

This was an action to compel defendant to take delivofery shirtings sold to him, valued at over $6,000.

Mr Dickins appeared for plaintiff, who was also present in person. Mr Dickins remarked that the Japanese who appeared as defendant's

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

banto and gave evidence as such at last sitting, had been discovered to be no employé of defendant. Indeed he had never been seen in the office, and Mr Dickins requested the Court to discover who he was and by what authority he had so represented himself to the Court, and upon what information he had given evidence. Mr Dickins said his reason for this was that he wished the Court not to listen to the evidence of persons who had not been personally cognisant of the matter.

Witness replied that he had been in defendant's employ for two years, and had defendant's authority to appear in Court. Defendant was sick.

Mr Dickins then produced the Customs entries, now duly certified, showing the date of the arrival of the shirtings by the *Tanais* and *Glenearn*. In the Japanese translation of the application the weight was not mentioned. The Japanese know the shirtings by thebreadth, though both breadth and weight are mentioned on the English side. They were nine pound shirtings. Mr Dickins also produced the Bill of lading and invoices for the 10,800 pieces shipped in London per *Indus* and arrived in Yokohama, after two transhipments, per *Tanais*. The same documents for the quantities which arrived by *Hiroshima-maru* and *Glenearn* were also shown, in addition to the godown order book. This latter, showed indubitably the different deliveries to defendant. Mr Dickins requested the Court to compare with the delivery notes of the quantities mentioned at last sitting. These were found to coincide. Defendant had said that these deliveries related to other contracts; this was an untruth, Mr Dickins said, for plaintiffs had no other contract with defendant at that time.

Mr Dickins then called Ah Yen, plaintiff's compradore, to prove that defendant paid $500 on account of this contract. Ah Yen produced his book showing this item. Defendant had received a receipt for the amount and should show it. It was on account of 9 and 7 pound shirtings, the only contracts then existing between plaintiff and defendant.

Defendant denied any remembrance of having paid $500; he had no receipt for it.

Ah Yen gave the evidence through the Chinese interpreter and said he had paid defendant's *banto* the sum in question, in the presence of another Chinaman. Ah Yen did not know the *banto's* name.

The other Chinaman was now sent for; and in the meanwhile plaintiff's Japanese *banto* gave his evidence. Witness said that during September and October, before the 20th October, he had informed defendant many times that the shirtings had arrived. Defendant visited plaintiff's office very frequently. Defendant always said he was too busy then and would come for the goods tomorrow or the next day. Witness had even gone to defendant's place to tell him. Mr Braun often reminded witness to tell defendant of the goods' arrival. Defendant told witness, after the expiry of the term, that he did not object to the contract in any way but wanted more time.

Mr Dickins asked the Court to enquire of defendant, and get a definite answer, "yes" or "no," if he denied that the goods arrived before the expiry of the term of the contract.

Defendant replied that he was of the impression that the goods did not arrive in time, because plaintiff's people always told him when he went that they had not come. The speaker did not go personally; another man, now present, went.

Yamada Chiuske, in the employ of defendant, said he often went to No. 30, generally to purchase goods for his master. Witness made the contract in question. He took as much of the goods as arrived within the terms of the contract, but the shirtings did not all arrive. So witness had been told when he went to No. 30. He went two or three times. He went after the 10th October two or three times. Once on the 8th he went, and Riske, the banto, told him the goods had not arrived. Not a single piece had arrived then. On the 11th October, Riske came from No. 30 to say the first portion of 1,700 pieces had arrived.

Mr Dickins asked if, as all the documents in the hands of the Court, the Customs' papers, etc., showed clearly that all the goods and more arrived before the 10th October, defendant denied the fact?

Defendant said such quantities of goods may have arrived, but they were not his.

Mr Dickins asked how defendant knew these goods were not for him.

Defendant said he knew because Riske came on the 11th October and told him 1,700 pieces were to hand. Defendant had no other proof.

Mr Dickins.—Supposing Reiss & Co had sufficient shirtings to meet defendant's and all other contracts, what reason, does defendant think, could they have in saying they had not enough?

After much circumlocution, defendant was at last forced to admit that he knew of no reason.

Mr Dickins stated that on the 20th October there were about 19,000 pieces of shirtings in plaintiff's godown to meet defendant's, and no other persons, contract. This could be proved on the godown book, if necessary. And further that, if plaintiff had 19,000 pieces of shirtings in the godown on the 20th October, was there any reason, that defendant knows of, why they should have told him there was not enough?

Defendant, after repeated questioning could not be brought to give an answer to this. He evaded it in every possible manner, going into all sorts of unnecessary details.

Mr Dickins said it was difficult to bring them to an issue, and pressed upon the Judge to get an answer to this all-important question.

His Honour repeated the question several times, but defendant would not answer, and Mr Dickins at last gave it up in despair, and then asked if defendant denied positively that plaintiff had enough shirtings to meet the contract.

Defendant said he did not know.

Mr Dickins begged to explain that the business of the plaintiff is to sell shirtings, 9 lbs. shirtings amongst others, and make contracts of sale very frequently with Japanese merchants, and of the goods which arrived in September and October last year, after fulfilling all other contracts, there was left nearly twice as many shirting as were necessary to fulfil defendant's contract. Thus there could be no reason whatever for the plaintiff to state at any time that he had not enough shirtings to fulfil the contract. These shirtings arrive by thousands every month.

Mr. Dickins to defendant:—Has not the price of 9 lb. shirtings fallen from September till the filing of this petition?

Defendant said that as he had not bought such goods since then he did not know.

Mr Dickins asked if it was not his duty, as a merchant, to know the price of the foreign importations. Defendant said it was not.

Mr Dickins:—Has not the price of shirtings fallen 50 cents per piece? Defendant did not know. Mr Dickins begged to inform the Court that such a fall had occurred.

Defendant did not deny having taken delivery of a quantity on the 27th October and 2nd November. Riske had informed him of the arrival of another 1,000 pieces. Defendant did not intend to take delivery of these on account of their late arrival, but someone offered to take them and so defendant got them from No. 30. Sometimes contracts were never fulfilled because the goods did not arrive, and in this case defendant did not complain because he thought it not unusual. He did not remember paying $500 on the 23rd December, and could not tell why plaintiff should have entered receipt for such a sum in their books.

Ah Chee, the Chinaman who had been sent for, now arrived and said he was in the employ of Reiss & Co. He saw the money paid over to the Compradore and recognised the Japanese now in Court.

Mr. Dickins said he could prove, if necessary, from the quantities received in and delivered from the godown, that a large surplus remained in October, more than sufficient to meet defendant's demand. At present he had nothing further to bring forward.

His Honour requested Mr Dickins to bring the books bearing upon the question, and though at present his Honour thought further proof unnecessary, it might save unnecessary delay in future sittings.

Court adjourned till 7th instant at 10 a. m.

Wednesday, March 7th, 1877.

The claim of the plaintiff is for $6,000, value of some pieces of shirtings sold to the defendant and which he failed to take delivery of.

The hearing of this case was resumed from Saturday the 3rd. instant.

Mr Dickins said he had brought all the information he had promised, amongst other things a list of the different purchasers of shirtings besides defendant during September, October and November. Plaintiff's were opposed to having these particulars published and to evade this Mr Dickins continued to speak in French, which was translated into Japanese. Mr Dickins enumerated the different deliveries from the godown, and the list above mentioned, proving the exactness of the latter by reference to the delivery took. He proved that just after the time of the contract in question, the price of 9 pound shirtings decreased about 60 cents per piece. Several manifests of ships by which other quantities of these goods arrived were also put in. From the balance of shirtings proved to be on hand after every other contract had been completed, it was shown that Reiss & Co. had far more than sufficient to meet that of defendant. Mr Dickins begged the Court to take the list of the Japanese with whom Reiss & Co. had dealings privately; both to keep it from defendant who was a rival in the trade and to save it from publication.

Defendant asked plaintiff to state how many pieces arrived up till the 20th Ocoober which he considered the limit day of his contract.

Mr Braun said that that information had been given before. About 19,200 pieces were to hand before the 10th October, and 10,500 were delivered before that date, leaving a balance of 8,700 pieces ready for delivery. It was then defendant should have taken delivery, within 20 days. From the 10th to the 20th October 3,000 pieces more were delivered, leaving 5,700 pieces to meet defendants' contract for 5,000 pieces. Up till the 10th November shirtings arrived daily, and on that date about 12,000 pieces were ready, over and above all that had been delivered on other contracts.

Defendant asked about the 13,000 pieces of shirtings which had been delivered to other purchasers, and demanded to see the list.

Mr. Dickins produced the list and the proofs of its validity, but again pressed upon the Judge the impropriety of showing to defendant the business of his competitors. Plaintiffs personally were indifferent as to its publication, but it might harm and displease the Japanese.

His Honour, refraining from mentioning names, read over to defendant the above particulars of the deliveries.

Defendant said it was his opinion that the shirtings were delivered at once on arrival, and plaintiffs had no balance on hand. Defendant named a Japanese to whom 11,000 pieces had been sold. He did not know the mark, nor the weight, nor any other particulars.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr Dickins said that over 11,000 pieces of shirtings of many different marks and weights had been delivered to the merchant in question, but it was absurd to bring up such information in that manner. The merchant should be called to give his evidence in person.

His Honour informed Mr Dickins that defendant requested an adjournment till the 12th instant, when he would produce the evidence of several merchants who had had dealing with plaintiffs, and so prove that the quantities he named had really been delivered by them.

Adjourned till 12th instant, at 10 o'clock.

REUTER'S TELEGRAMS.

LONDON, 24th February.

DEPARTURE OF THE GOVERNOR OF HONGKONG.

Mr. Pope Hennessy left England for Hongkong by the P. & O. Mail of the 16th February.

SUBSIDY TO THE P. M. S. S. CO.

Congress has voted a subsidy of $500,000 for the Mails between the United States and China and Japan carried by the Pacific Mail Steam-ship Company.

HONGKONG AND THE POSTAL UNION.

The Official announcement of Hongkong having joined the Postal Union has been published.

ARRIVAL OF THE AMERICAN MAIL.

London, January 30.—The *Daily Telegraph's* special from Pera says: Turkey wishes to have Mr. Cave as Financial Administrator. England's intentions are unknown, but it is understood she will not nominate a financier for Turkey until peace is definitely established.

Rome, January 30th.—The Pope will protest against the Clerical Abuses Act of the Italian Chamber of Deputies, in an Encyclical which will probably be published at the Consistory in March.

Paris, January 30th.—The bust of Auber was unveiled with great ceremony yesterday, over the grave of the composer in Père la Chaise.

The Ultramontane organ *Union Catolica*, admits that the Pope has kept his bed for two days, and does not deny that he had more than one attack of senile epilepsy.

A special from Madeira announces that Lieutenant Young, of the Livingstone mission to Africa, is coming to England. He reports that the mission has had a great effect upon the slave trade. Only three slaves were sent to the coast in 1876, although the traffic had previously amounted to many thousands annually.

30th January.

A Belgium Royal decree has been issued, prohibiting the importation into Belgium of horned cattle and sheep from Germany, England, Russia, Austria and Turkey.

The British Council has issued further stringent orders against the importation into Great Britain from Germany and Belgium, of cattle, hay, hides, horns, fat, hoofs and fresh meats.

The French Government has dismissed several Mayors for attending masses in memory of Napoleon, and has decided to treat severely all officials participating in Bonapartist demonstrations.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

London, 16th Feb.—The reply of England to the Russian Circular will depend on the course of events. Before expressing its view, the British Government wishes to know the views of the Powers.

Mr. Gathorne Hardy in replying to Mr. Gladstone's speech said that England was not free from the obligations imposed by the Treaties of 1856 and 1871. It would be unjust if Turkey were left out in the cold but saddled with the obligations of those treaties; if Turkey was bound the rest of Europe was bound. The treaty imposes no duty to go to war for Turkey but to respect the independence and integrity of the Empire. He strongly protested against the sword being drawn to coerce.

Allahabad, 29th Jan.—The Cabul Envoy arrived at Peshawur on the morning of the 27th, and was met at the Frontier by the Cantonment Magistrate, and escorted by a guard of honour; he paid a visit to Sir Lewis Pelley at noon. Sir Lewis returned the visit, accompanied by Dr. Bellew, at 4. The Envoy is being hospitably entertained by the Government in a large house within the Cantonment. The visits already exchanged have been most cordial, and the *Pioneer* thinks this is a proof that evidently friendly relations still exist between the Ameer and the British Government.

London, 4th Feb.—Numerous public meetings have been held throughout the Kingdom to discuss the Eastern question, preparatory to the re-opening of Parliament on the 8th. The manner in which Lord Salisbury conducted negotiations with the Porte at the Conference is generally approved. The Liberal party censures the policy of Lords Beaconsfield and Derby in the earlier stage of the question; it is not, however, expected that any attempt will be made to overthrow the present Government as such a course would be unpopular and unlikely to succeed.

St. Petersburg, 4th Feb.—A circular from the Russian Government has appeared, stating that Russia, being desirous of maintaining accord in Europe on the Turkish question, asks, before taking any decision in the matter, what course the Powers represented at the Conference intend pursuing, in view of the demands made upon the Porte having been rejected.

Washington, 4th Feb.—In a message from President Grant to the Congress it is recommended that an issue be authorised of 150 million dollars in bonds, bearing interest at 4 per cent, in exchange for Greenbacks.

Constantinople, 5th Feb.—Midhat Pasha has been dismissed, and Edhem Pasha, late Turkish Ambassador at Berlin and Turkish delegate at the Conference has been appointed his successor.

A circular from the Turkish Government has been published, stating that the Porte intends vigorously upholding the integrity of the whole Ottoman Empire, and will contest the right of others to interfere in her internal affairs.

Constantinople, 7th Feb.—An Imperial decree, appointing Edhem Pasha to be Grand Vizier, confirms the new constitution and announces that some further reforms will be made.

The Turkish Ministers have been changed. Edhem Pasha belongs to the old Turkish party. Midhat Pasha the dismissed Vizier, was accused of conspiracy to reinstate the ex-Sultan, Murad. He was at once summoned to the palace and instantly conveyed on board a steamer.

St Petersburg, 7th Feb.—The Grand Duke Nicholas has entirely recovered from his recent severe illness.

London, 8th Feb.—The Queen opened parliament today in person. Her Majesty in her speech from the throne, after detailing the history of the Conference, said: —"My object throughout has been to maintain the peace of Europe and obtain better Government for the disturbed provinces without infringing the independence or integrity of Turkey. I regret that the proposals for reforms made to the Porte were not accepted, but the result of the Conference shows that general agreement exists among the European Powers, which cannot fail to have material effect upon the condition of the Government in Turkey. I am in hopes that the armistice may yet lead to peace, honorable alike to Turkey and the Principalities. I have throughout acted cordially with my allies with whom, and other Powers, my relations continue friendly. My assumption of the tide of 'Empress,' at Delhi, has been welcomed by the chiefs and people of India with professions of affection and loyalty most grateful to my feelings. I deeply regret the famine, not less serious than that of 1873, which has overspread a large portion of the Bombay and Madras Presidencies, and I am confident that every resource will be employed to arrest its progress, and obtain experience to prevent recurrence of the same, and to mitigate the sufferings arising therefrom. The prosperity and progress of my Colonial Empire remains unchecked, and I trust that the measures I have taken will prevent any serious evil arising from from proceedings in Transvaal State."

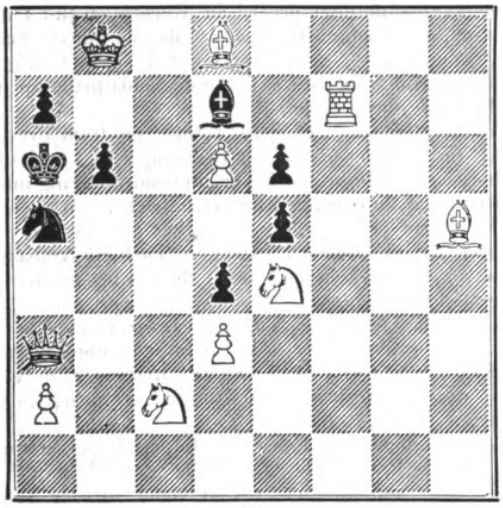
The Speech concludes by enumerating various measures to be brought forward during the session, which are of local interest only.

Constantinople, 8th Feb.—It is doubted whether there is any truth respecting the charge of conspiracy brought against the Midhat. Some attribute his fall to Russian intrigue, but an official statement says that Midhat acted contrary to the spirit of the New Constitution, and attack-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ed the prerogatives of the Sultan. Great uncertainty prevails respecting the consequence of Midhat's fall.

London, 8th Feb.—The Chinese Embassy presented their credentials to the Queen at Buckingham Palace yesterday.



London; 9th Feb.—In the debate, last night, which followed the address in the House of Commons, in answer to the Queen's speech, Lord Derby said that the maintenance of peace depended upon the decision of the Czar, who may decide that Russia is under obligation to execute alone, the decision of the six Great Powers.

Lord Beaconsfied and Lord Salisbury protested against Turkey being coerced in any way.

PRIZE PROBLEM.

By J. G. Campbell.

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of J. G. Campbell's problem of last week.

White.	Black.
1.—B. to K. Kt.'s sq.	1.—P. takes Kt.
2.—Q. to Q. R.'s 7th.	2.—K. takes Kt.
3.—Q. mates.	
	if 1.—K. takes Kt.
2.—Q. takes P.	
and mates next move.	

Correct answers received from C. B., Yokohama, W. B. M. and W.H.S., Tôkiô.

We insert another of Mr. Campbell's clever problems.

A lively Game played by Mr. Max Lange against Mr. D. Sickel.

(Muzio Gambit.)

White (Mr. L.)	Black (Mr. S.)	White (Mr. L.)	Black (Mr. S.)
1. P to K 4th	P to K 4th	14. Q to K R 5th (ch)	K to Kt 2nd
2. P to K B 4th	P takes P	15. Kt to Q 5th	Q to K sq
3. K Kt to K B 3rd	P to K Kt 4th	16. K R to K Kt 5th (ch)	K to R sq

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The general dulness prevailing at the time of forwarding our last report has given way to an improved feeling, caused by a better enquiry from dealers. The reasons for this reaction may be found in a slight recovery of the native currency, and perhaps by better reports from the interior. For 16/24 *Yarns* there is a moderate demand at improving rates. In *Shirtings* some transactions at slightly better prices are reported. For *T. Cloths* and *Velvets* there is more enquiry, but other articles continue dull.

Grey Shirtings:—					
7 lbs.	38½ yds.	39 in.	per pce.	$1.35	to $1.65
8 lbs.	38½ yds.	44 in.	,,	1.50	to 2.20
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.52½	to 2.30
9 lbs.	38½ ,,	44 in.	,,	1.90	to 2 40
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45	to 1 60
,, 6lbs.	24 ,,	32 in.	,,	1.10	to 1.25

White Shirtings:—					
60 to 64 reed	40 yds.	35 in.	per pce.	2.20	to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	0.60	to 0.87½
Black Velvets				7.25	to 8.25
English Drills	15 lbs.	40 yds,	30 in.	2.55	to 2.65
Taffachelass	12 yds,	48 in.		1.70	to 2.15

Yarns.—

No. 16 to 24	per picul	$28 50	to 32.00
No. 28 to 32	per picul	$30.00	to 34.00
No. 38 to 42	per picul	$33.00	to 38.00
Reverse Twist 16-24	,,		

Woollens.—There is a slightly better feeling in our market notwithstanding the continuance of the rebellion in the South; prices remain nominally the same as we do not hear of transactions having taken place, but holders seem to be firmer in their demands.

Plain Orleans	40—42 yds.	32 in.	4 75	to 6.75
Figured Orleans	29—30 yds.	31 in.	4.25	to 5.25
Shimagoro	30 yds.	30 in.	4.00	to 5.25
Italian Cloth	—30 yds.	32 in.	0.24	to 0.31
Camlet Cords	29—30 yds.	32 in.	5.75	to 6.00
Camlets Asstd.	56—58 yds.	31 in.	16 50	to 17.50
Lastings, Japan	22—30 yds.	32 in.	12.00	to 13.00
Plain Mousseline de Laine	—30 yds.	30 in.	0.16	to 0.18
Figured Mousseline de Laine	30 yds.	30 in.	0.25	to 0.30
Multicolored ,,	30 yds.	30 in.	0.30	to 0.36
Cloth, all wool plain or fancy	48 in. to 52 in.		0.80	to 1.20
Presidents	54 in. to 56 in.		0.60	to 0.65
Pilots	54 in. to 56 in.		0.45	to 0.55
Union	54 in. to 56 in.		0.60	to 0.75
Blankets, scarlet & green	6 to 8 lbs.	per lb	0.39	to 0.45

Sugar.—There is no change to note in White Sugars and *Formosa* sorts, and few transactions to report. There has been a decline in the price of *Daitong* owing to large arrivals.

Sugar:—Takao in bag	per picul	$4.30		
,, in basket	,,	$4.10		
Taiwanfoo in bag	,,	$4.15		
do. in basket	,,	$4.00		
China No 1 Ping-fah	,,	$7.60	to $7.80	
,, No. 2 Ching-pak	,,	$6.90	to $7.40	
,, No. 3 Ke-pak	,,	$6.20	to $6.80	
China No. 4 Kook-fah	per picul	$5.60	to $6.10	
,, No. 5 Kong-fun	,,	$4 90	to $5.50	
,, No. 6 E-pak	,,	$4.40	to $4.80	
Swatow Brown	,,	$3.50		
Daitong	,,	$3.55		
Japan Rice	,,	$2.00	to $2.20	
Kerosene Oil	,,	$4.45		

Kerosene Oil.—There has been more enquiry at $4.45 per case, but holders are firm for higher rates.

EXPORTS.

Silk.—The news of a peaceful settlement of the Eastern Question which reached this port at the beginning of this month has not been confirmed, and the latest telegrams report a further decline in prices at home. Our market has accordingly remained much depressed and prices have receded $20 to $30.

Since the 27th ulto. settlements are 100 bales of Hanks and 75 of other sorts, including the delivery of Filature Silks contracted for at the beginning of the season. The shipments are 128 bales, making the total export since 1st July 19,567 bales, against 11,341 last year for the corresponding period.

Total arrivals since the beginning of the season now amount to 23,000 bales, out of which about 1,500 have been withdrawn from this market for native consumption, and the present stock is estimated at 1,800 bales.

	At Exchange 4/8 in London.	*At Exchange 5.35 at 6 m.s. in Lyons.*
Hanks.—Extra No. 1	—	—
,, Best No. 1 & 2	$740 to 760	27/8 to 28/5	77 to 79

Kakeda—Extra	—	—	—
,, Best	$750 to 780	28/1 to 29/2	78 to 80
,, Medium to Good	$680 to 730	25/7 to 27/4	71 to 76
Mashta	—	—	—
Echizen	$420 to 450	16/5 to 17/6	45 to 48
Filature Silks nominal	$800 to 930	29/10 to 34/6	83 to 96

Tea.—Business still continues to be restricted and unimportant, holders being anxious, apparently, to clear out stocks preparatory to entering into engagements for the approaching New Season. Settlements for the past week amount to 900 piculs, making a total since the departure of last American mail of 1,800 piculs, and arrivals have been so light that stocks in Yokohama are quite nominal.

We can venture no opinion as to the prospects of the coming crop beyond saying that so far the weather has been favourable, and it is not very likely that the young leaf will have been injured by premature development.

It is predicted that the pickings of high grades of Teas will be limited, and reasonably so, as not only was the current season's production short, but the result of it proved satisfactory neither to growers nor purchasers here.

Prices given below must be considered as entirely nominal.

The total export from all Japan to the United States markets, it is now pretty well assured, will not exceed 22¼ to 22½ million pounds.

Common	$8.00	to 11.00	
Good Common	12.00	to 14 00	
Medium	15 00	to 17.00	
Good Medium	18.00	to 21.00	
Fine	$23	to $27	
Finest	Nominal.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

In accordance with the intention we expressed in our last week's issue, we herewith publish in full the translation of the confessions made by the spies, who claim to have been entrusted with the mission that had for its chief object the assassination of Saigo, and who were fortunately arrested before they could take any steps to accomplish their dastardly work. We have thought it well to-republish the avowal of Nakahara Hisao, so that the various statements may be readily compared.

The confession of Nomura Tsuna, eldest son of Nomura Kôsui, a *shidzoku*, residing at No. 10, second *shôku* (smaller district) of the first *daiku* (larger district) of Kagoshima *ken*.

The Miyazaki *gakkô* (school) being abolished with Miyazaki *ken*,* I, in company with nine other students of the above school left that place for Tôkiô on the 5th December, 1876, in order to endeavour to procure some employment. On my arrival in Tôkiô on the 28th December, I heard various disquieting rumours relative to the state of affairs in Kagoshima, and thinking it might be for the good of the country, I wrote a letter to Minister Ôkubo to the following effect. "Those in the highest positions have probably heard trustworthy statements of the condition of affairs in Kagoshima *ken*. But as I deem this to be a matter of importance which should not be overlooked, and as the floating rumours differ materially from the actual state of affairs in that *ken*, although myself unacquainted with the minute particulars, I shall be pleased to wait upon you, if such should be your Excellency's wish, and inform you of such facts as have come to my knowledge."

I received a reply requesting me to call upon Mr. Ôkubo on the 3rd January. I went on the day appointed and he asked me as to the state of affairs in Kagoshima *ken*. I said that at one time great disquietude had prevailed among the *shidzoku*, but that at the end of November they had commenced to calm down, and that at the time of my departure they were perfectly quiet. The people generally however were saying that a great blow would fall on the Government as soon as any mismanagement took place in the administration. I was then asked my opinion as to the future movements in Kagoshima, and what I thought would be the best mode of settling matters. I replied that it was impossible for me to answer these questions. I was then informed that the Private School in Kagoshima was a great trouble to the Government and that it was deemed advisable to establish another school so that a division might be created in the Private School, and that this should be done in every district in order do away with the sources of anxiety.

I was asked to call again, and repeated my visit on the 29th January. I was then ordered to proceed by the mail steamer leaving Yokohama on the 31st of the same month. I was told that the men of Kagoshima were in such an excited state that it was feared a rising would take place in February or March, and that steps had already been taken by the Army Department for siezing the ammunition at Kagoshima. I was ordered to inform Mr. Ôkubo by post or telegraph of all occurrences of any ordinary nature, but should any kind of disturbance arise, I was to return and give the information myself, as postal and telegraphic communication was likely to be cut off at such a time. I was further told "when an insurrection is expected it is necessary that military preparations should be made, but should such steps be taken before the disturbance breaks out, the people might become alarmed, and thus it is that your information is requisite and you must come with it. Spies from the *Keishichô* (Bureau of Police) of determined courage, have at the risk of their lives, already gone to Kagoshima, and when the rising takes place they will surely accomplish certain objects, more or less important."

From certain expressions I inferred that the object of their mission was to assassinate the leader of the insurgents, to set fire to the magazines and the like, and thinking that such deeds could be carried out, I said I would comply with the order. The sum of one hundred *yen* was then offered to me to defray my expenses and for giving the information. This money I accepted. I was told that what had been said to me must be kept utterly secret, and I was shown the names of the spies who had been sent to Kagoshima, in order that I might become acquainted with them. They were written on *hankiri* (Japanese letter paper) and the list had been sent from the *Keishichô*. On it I saw the names of men belonging to various grades of *Keibu* (police sergeants) and *Junsa* (constables), also certain students and the districts to which they belonged.

I left Tôkiô on the 31st January and embarked from Kobe on the *Kôyô Maru*. On my arrival in Kagoshima, I heard that Nakahara Hisao and others, who had received secret orders from the *Keishichô*, had been arrested. Being acquainted with the whole affair, and hearing of this arrest, I was at my wits' end and could do nothing. I therefore went to Tahata Tsuneaki, and there made a brief disclosure, still keeping the important facts to myself. But I was summoned to the first police station, and during my trial, make the above confession.

Nothing other than truth has been expressed in this statement.

NOMURA TSUNA.
[*Seal.*]

13th February, 1877.

The confessions of *Chu-keibu*, (Police Sergeant) Sonoda Nageteru, a *shizoku* of Ushiyama district, Kagoshima. *Chu-keibu*, Nomaguchi Kane-ichi, *shizoku* of Demidzu disdrict, Kagoshima *ken*. *Chu-keibu*, Suyehiro Naokata, a *shizoku* of Heisa district, Kagoshima *ken*. *Shô-keibu*, Anraku Kane-michi, a *shizoku* of Kiniu district, Kagoshima *ken*. *Shô-keibu*, (Police Corporal) Tsuchimochi Takashi, a *shizoku* of Kaseda district, Kagoshima *ken*. *Chu-keibu*, Sugai Seibi, a *shizoku* of Tôkiô *Fu*. *Shô-keibu*, Takasaki Chika-akira, a *shizoku* of Shirai district, Kagoshima *ken*. *Ittô-junsa*, (Constable) Hiwaki Kensuke a *shizoku* of Nishida district, Kagoshima *ken*. *Nitô-junsa*, Itani Chikatsune, a *shizoku* of Kajiki district, Kagoshima *ken*. Hirata Saishichi, a student, *shizoku* of Taniyama district, Kagoshima *ken*. Oyama Tsunasuke, a student, *shizoku* of Kaseda district, Kagoshima *ken*. Igakura Tamotsu, a student, *shizoku* of Kaseda district, Kagoshima *ken*. Tanaka Chokusai, a student, *shizoku* of Heisa district, Kagoshima *ken*. *Shô-keibu*, Yamazaki Moto-akira, a *shizoku* of Taka-oka district, Kagoshima *ken*.

* Miyazaki *ken* (the province of Hiuga, which was part of the domain of the Lord of Satsuma) was abolished and incorporated with Kagoshima *ken* at the general reform of the *ken* which took place on the 21st of August 1876.—[trans.]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Faom January 1876, we were gradually appointed to offices of *Chukeibu* and the like, and have since been in the service of the Government.

Ôyama Tsunasuke, Igakura Tamotsu, and Tanaka Chokusai, who are students, are our particular friends. During November of 1876, there being rumours of agitation among the members of the Private School in Kagoshima, we received secret orders from *Dai Keishi* (Chief Superintendent of Police) Kawaji Toshisuke, which orders we agreed to carry out.

We also heard about these matters from Ôyama Kansuke. On the 25th December we held a meeting consisting of Nakahara Hisao and fourteen others, and after discussing the matters under consideration, we resolved that we would endeavour to cause a dissension among those who had already entered the Private School and those who were about to do so.

We then decided to meet at a former residence of Kawaji on the following day in the afternoon, and petitioned to be allowed to return home on, on leave, which request was immediately granted. We had another meeting, and a plan of action was laid down which was, to cause a dissension among the members of the Private School, to cajole them to our views, to destroy the Private School, assassinate Saigo during the confusion, and on information of the disturbance being sent to Tokio, a general attack was to be made by the Army and Navy, and all the members of the Private School were to be massacred.

Such were the plans resolved upon. Sonoda and Nomaguchi being of the neighbourhood of Higo, were to go to Kumamoto garrison in haste to telegraph events, all telegraphic messages being arranged in cipher. It was decided that we should start on our mission on the following day, but as it might lead to suspicion were we to travel all together, we agreed that we would disperse and each one go by himself.

By the 28th of December the whole party had left Tôkiô, and by the middle of January 1877, we had all arrived at Kagoshima, but before we could accomplish anything, our plot was discovered, and we were arrested.

By Kawaji Toshisuke's order we have attempted to perpetrate a monstrous crime, of which we now repent with shame.

Nothing but truth has been expressed in the above confession.

Here follow the signature of all the names of those given at the head of this confession, sealed with the thumb nail according to Japanese custom.

dated 7th February, 1877.

The confessions of *Shitô-junsa*, Mayeda Soshi, a *shidzoku* of Kajiki district, Kagoshima *ken*. *Shitô-junsa*, Takahashi Tamekiyo, a *shidzoku* of Chôsa district, Kagoshima *ken*.

Kashiwada Morifumi a student, *shidzoku* of Heisa district, Kagoshima *ken*. *Shitô-junsa*, Matsushita Kanekiyo, a *shidzoku* of Gamô district, Kagoshima *ken*. *Nitô-junsa*, Nishi Hikoshirô a *shidzoku* of Kaseda district, Kagoshima *ken*.

"We have been in the service of the *Keishicho* (Bureau of Police) since September 1876. During December of the same year, hearing, that in consequence of the members of the Private School at Kagoshima shewing signs of great disquiet, *Keibu* Suyehiro Nawokata and others were to return to their homes as spies, we were at once desirous of doing the same. On the 26th of the same month, in consequence of orders received from Kawaji Toshisuke, we requested, through Ôyama Kansuke of our *ken* to be permitted to return home, which request was immediately granted. Ôyama then instructed us to the following effect, "You must with the greatest zeal and energy carry out your duties, which are to cause dissension among the members of the Private School, and those who are about to join it. Your further orders you will receive from Sayehiro, which you must obey.

We had nothing to do with the meetings. We all left Tôkiô by the 28th of December, and by the middle of January had arrived in Kagoshima, but before we could carry any of our plans into effect, the plot was discovered and we were arrested.

We have herein confessed nothing but the truth."

Then follow the signatures and seals of the the above five men.

dated 7th February, 1877.

There are thirty two others who have confessed to their complicity in the plot, but their names are not given.

"Nakahara Hisao, *Sho-Keibu*,* eldest son of Shôbei, *shizoku* of the district of Ishiu-in in the Kagoshima *ken*.

Arrested after search on the 3rd February, 1877. I was appointed *Sho Keibu* on the 4th January, 1876.† Towards the end of November of the same year,—I forget the exact day I went to the house of Kawaji *Daikeishi*,‡ and after learning from him various matters concerning the different *ken*, he ended by telling me that there had been of late indications of disquiet in the Kagoshima *ken*, but said that as General Saigo was residing in the *ken*, he did not think there would be any disloyal and riotous proceedings; he added however, that in case a rising should break out, there was no help for it, but for me to confront Saigo and kill him. I submitted to his order, and subsequently—I do not recollect the exact day—I went to the house of Oyama Kansuke, a *shizoku* of the Kagoshima *ken*, and was told by him, that if Saigo originated any insurrectionary movement he must be killed. I kept these intentions secret, and on the 24th December, Sonoda Nagaten, Suyehiro Nawokata, *Chiu Keibu*,§ came to my house and informed me of their intention to apply for permission to return to their native districts, and of the many rumours in circulation respecting disturbances in the Kagoshima *ken*. Accordingly I expressed a wish to return with them, to which they consented, and left my house. On the following day, the 25th, I saw Kawaji *Daikeishi* for a moment at the Police office, and told him of my intention to apply for leave to return home, and asked him to use his good offices on my behalf. He replied that that was a good thing and urged me to show zeal in the service. In view of what had already passed, as above stated, my resolution became fixed. As I had already made a compact with Sonda Nagateru to meet at his house, I went there at 3 p. m. and there were assembled there, Hirata Saishichi, Nomaguchi Kaneichi, Igakura Tamotsu, Oyama Tsunasuke, Sugai Seibi, Itani Chikatsune, Suyehiro Nawokata, Yamazaki Motoaki, Takazaki Chikaakira. Anraku Kanemichi, Tsuchimoto Takashi, and others. All present exchanged their views on the subject, and it was settled that we should, on our return, urge upon the members of the *Shigakko*‖ from the various districts, and upon other people generally, the impropriety on the part of loyal subjects of exciting a war on no good pretext, and that we should dissuade both those who had already joined the *Shi-gakko*, and those who were thinking of so doing from their hostile views. It was arranged that we should all meet on the afternoon of the following day, at an empty house formerly the residence of Kawaji *Daikeishi*, and applications for leave to return home were sent in, and at once granted. A council was then held at which all attended, and it was there resolved, as the main plan of action, that a division should be brought about amongst the members of the *Shi-Gakko*, that they should be won over to our side, and that the *Shi-Gakko* should be broken up; thus in the event of the rising taking place, Saigo was to be assassinated, and the fact at once telegraphed to Tôkiô; that then a combined attack should be made by the Navy and Army, and the members of the *Shi-Gakko* killed to a man. With regard to the task of despaching to the telegraphic news, Sonoda and Nomaguchi, being natives of the districts on the borders of Higo, it was arranged that they were to hurry to Kumamoto garrison and that the telegram was to be sent from that place. With regard to the receipt and despatch of other information also, a cipher was agreed to be used in every case. After everything had been settled, the following day was fixed as the date of departure from Tôkiô. As it might excite the suspicion of other people if all were to leave in company, it was also settled that each should leave as soon as his preparations were made. The meeting then broke up and all returned to their own homes. On the 27th I left Tôkiô and proceeded as far as Yokohama, where I stayed the night. The following day, the 28th, I went on board of the *Genkai Maru* at 9 p. m. and left Yokohama, but the passage to Kobe was very unfavourable, and the ship had to anchor at several places, and I only reached Kagoshima on the 11th January 1877. I remained on the spot going nowhere, but Suyehiro Takasaki and others came to see me. Before I had commenced any of the detective operations previously mentioned, the secret plot of assassination was discovered, and I was arrested. Now, in consequence of your examination I have confessed that by the order of Kawaji *Daikeishi* I formed a plot to assassinate Saigo *Rikugun-Taisho*, and that I further laid a scheme to create dissension in the minds of the people, for which acts I am truly ashamed. The above statements which I have made are correct."

(Signed) NAKAHARA HISAO.

February 5th, 1877.

There stand the confessions; confessions made, in some cases, voluntarily by the agents employed to carry out the plot, and apparently in no case wrung from them by application of torture, for Nakahara Hisao and others have been received back by the Imperial Government in good health. At present we can add little to our remarks of last week. The confessions must strike every one as being singularly clear, straightforward and coinciding. If they contain the truth and only the truth, they do not contain the whole truth, for the names of only two high officials appear, whereas had it been

* *Shô-keibu* police corporal.

† By a typographical error this date appeared as 1874, in the issue of March 10th.

decided that the Army and Navy were to aid in the general massacre which was to follow the disturbance that it was expected would arise from the murder of the Commander in Chief, it stands to reason that the consent of the members of the Administration must have been obtained, and that the scheme was the result of combined deliberation. While we have no wish to condemn the Government, unheard, as guilty of the shameful crime of intended assassination, we cannot pass over the matter as a monstrous fable. The revelations are too well borne out by many events to permit of its dismissal without comment or enquiry. We do not scruple to say that the Government is gravely compromised by these disclosures, and if it would not lose caste in the eyes of the world, it must lose no time in giving incontestable proofs of its innocence of the foul charge.

Nothing whatever of importance has transpired or is allowed to be published in connection with the civil war in the South. Mere skirmishes, and a few hand-to-hand fights, in which both sides seem to show the greatest pluck, and which result in no advantage to either party, are all the items of intelligence that reach us. In the mean time the belief in the rumour that Kumamoto has fallen seems general, and it is strengthened by the silence of the press on the subject, and the continued sending forward of troops from the Capital.

At the second meeting with reference to the organization of a Volunteer Corps for the defence of the settlement, held on Tuesday last, the Chairman, Mr. Litchfield, remarked that he knew of no British law which forbade British subjects to bear arms. His opinion is entirely correct. There is no law which prevents them from entering into a military organization such as that proposed. General Van Buren, in deprecating the action of the Governor of Kanagawa in protesting against the Consuls of different nationalities giving countenance to the scheme, stated that the British Chief Justice in the East was a member of the Volunteer Corps at Shanghai. Not only was Sir Edmund Hornby Colonel of the Corps previous to 1869, and chief mover in the new force got up during the disturbances in Tientsin, but the same position has been held by both Sir Thomas Wade and Sir Harry Parkes. It is all nonsense to talk about expression of "distrust or unfriendliness" towards the Japanese Government, or causing them "needless and wanton mortification." The promoters of the scheme have no intention of expressing anything of the kind. We are not going to discuss the utility of the movement, but we are quite certain that the Diplomatic corps are for too sensible a body to take any action that will interfere with an organization that has for its chief objects recreation and exercise, and might render some service, however small, in the extremely remote event of its being called upon to do so.

We are happily in a position to place before our readers the very latest particulars concerning the cargo of dead bodies, which, it is so well known, was landed at Shinagawa some few days since. Rumour, with its customary accuracy and minute attention to details, has so carefully described the whole affair, that but for the necessity of correction in a point or two of minor importance, we need hardly have touched upon the subject at all. We have every reasons to believe that the number of bodies, instead of being limited as reported to about thirty, amounted in reality to fully thrice that estimate. That they were lowered into boats by means of straw ropes in the grey of the morning and in many instances two at a time, tied back to back, may be accepted; and that to this half light, and duplication of the defunct, that the incorrect idea of the number landed was in all probability due, we are persuaded. We can in no wise account, however, for the generally accepted statement that they were sent hither for *interment*. Such a disposition of similar remains is wholly contrary to the customs in vogue in this part of the Empire of Japan, and we refuse also to believe that they even came from Satsuma at all. With regard to the sending round of *heads*, it is hardly necessary, we should think, to say that an odd mistake has found its way abroad. The presentation of an entire body we could quite understand, as every body at all conversant with the manners and customs of the Japanese knows that such is not unfrequent amongst friends, and indeed has its pleasant analogue in Western Countries in Christmas hampers and baskets of game. That the *ears* had all been rifled from the bodies and buried at Shokonsha is of course absurd in the last degree. For independently of the fact that such a mutilatiou would have rendered the fish unsaleable, and that no superstitious practices are indulged in at their capture, everyone who has any acquaintance at all with natural history, or indeed who has ever looked into a fish shop, must be quite aware that BONITO *have no ears.*

We recently noticed the Return of the Foreign Commerce and Trade of Japan for the half year ending December 1876, and have now received the Monthly Return of His Imperial Majesty's Customs of Japan for the month of January 1877, published by the order of the Inspector General of Customs, and which it is intended in future to issue every month.

At Niigata there are no arrivals or departures. It seemed a pity that something should not be done to develope the trade of the north-west coast. We must defer remarks on this subject, however, until next week when we hope to find room for the publication of the Consular Trade Report of Niigata.

It can hardly be seriously maintained that to burn one's house down to cure a smoky chimney is otherwise than a clumsy and inconvenient method of abating a nuisance, and it is equally liable to be disputed whether to kill a man is after all the most satisfactory way to purge him of a bad habit. And yet certain over zealous reformers in Tôkiô would seem to be in favour of such an extreme measure towards the Editors of all the daily papers, whom they accuse of a reprehensible partiality, in that they publish nothing in their journals but what is favorable to the Government. *Audi alteram partem* is their motto, and that the public should only hear the half of things is so intolerable to their sense of what fair play requires, that they have been at the pains of composing and sending round a circular to each of the offenders to the effect that unless the rebels are accorded their proper share of glory in their pages they will find themselves reluctantly obliged to

carry off their heads. To this somewhat disturbing threat the *Nisshusha* authorities, with that politeness for which they are almost proverbial, have returned answer by the messenger who handed them the warning, that as their staff is a very large one, should their heads hereafter be required, the reformers had better provide themselves with a handcart for their transport.

The publication of the concluding portion of our review of the Silk Trade of Japan is unavoidably postponed until our next issue.

We have received from Messrs. Sutton & Sons, the well-known "Queen's Seedsmen" at Reading, a copy of a little work called the "Amateur's Guide in Horticulture. We say a little work, because it is put together in a most compact form, and we see that it sells for the small sum of a shilling. Judging it, however, by the amount of its information, it is by no means a small work, but may be regarded almost as a standard book on gardening. We know not how far its teachings in flower and vegetable gardening may hold good in Japan, where the economist, who goes in for raising his own vegetables, generally finds that the expense of home grown cucumbers would have made Crœsus stare, and that only a Rothschild could afford to consume cauliflowers that have cost nearly their weight in *kinsatsu*. The lover of flowers is likely to give up floral pursuits in disgust when he finds that seeds obstinally refuse to germinate, or if they should condescend to "come up," that they utterly fail to fulfil the promises made by their sponsors, the seedsmen, and, instead of giving forth flowers of brilliant colours and fine form, produce a few straggling stalks and leaves; "only this and nothing more." Certainly both vegetable and flower raising in Japan,—we speak of foreign vegetables and flowers,—will prove in any but the ablest hands, and with certain varieties of plants, anything but a remunerative or encouraging amusement. However, there may be some, who, undeterred by the ill success of their friends, are willing to risk the disappointment, and to devote their spare dollars to the purchase of the necessary materials for the production of scraggy flowers and tasteless vegetables. They at least will have the satisfaction of knowing that their efforts will not be altogether thrown away, and that the slug, the caterpillar and the bronze bettle, will come to the banquet in crowds, and rejoice exceedingly. We should recommend all entomologists in Japan to cultivate foreign vegetables and flowers. They will be fully rewarded by the abundance and variety of the creatures that come forth and devour every green thing. How to set to work to stock a garden and to carry on the necessary operations through the various seasons is the object of the little book we have called attention to, and those who find amusement in horticulture will be troubled to find any work where so much comprehensive instruction is conveyed in fewer and simpler words.

THE AMATEUR DRAMATIC PERFORMANCE AT THE GAIETY THEATRE.

Dwellers in Yokohama have for some time been envious of the fortunate people of Shanghai who enjoyed the pleasure of witnessing two dramatic performances in which ladies took part. We can now, however, think of our friends in China with unruffled feelings, as the ladies here have just given triumphant proof of their ability to provide lovers of the drama with the treats for which they have long sighed. A brilliant success was expected, and we are delighted to chronicle the fact that the anticipation has been fully realized. It is only our reluctance to admit that anything in this world can be absolutely perfect that prevents our applying this adjective to the delightful entertainment which gave the audience so much gratification on Friday night.

We would not be supposed for a moment to undervalue the effort of those gentlemen who have hitherto represented female characters in the plays performed on our stage, but they themselves can easily understand that the least harshness of voice or clumsiness of attitude may wholly destroy the effect of the most carefully concerted scenes, and transform what should be the pathetic into the irresistibly ludicrous. No *gracilis puer* can ever rival the lightness and brightness and tenderness of an intelligent and sympathetic woman.

We apply ourselves to the duty of criticism with much diffidence, for however painstaking and honest a critic may be, he is very apt to fall into mistakes, and after exercising the greatest care he cannot help the conviction that undue praise may sometimes be given to what has most affected himself, or some excellence be left unmentioned which quicker eyes might have discovered.

The first piece acted on Friday night at the Gaiety Theatre was the comedietta *To oblige Benson*, by Tom Taylor. Benson is a lawyer with whose wife his pupil John Meredith has fallen desperately in love. We are first introduced to Meredith when he is waiting for Mrs. Benson in her drawing-room, and wondering what answer she will give to a letter he had written and slipped into her glove at a picnic at Bushey Park. While he is waiting Benson makes his appearance, and arranges that that Meredith shall take a cottage at Ventnor for his wife during the long vacation. This and other thoughtful gifts are to come apparently from Meredith, as Mrs. Benson is of a saving disposition and objects to any unnecessary extravagance on the part of her husband. When Mrs. Benson enters she thanks Meredith for his kind presents, and while the three are together Mrs. Southdown arrives, who tells Mrs. Benson that she has come to restore her gloves which she had taken from Bushey Park instead of her own. Mrs. Southdown had thus become possessed of Meredith's note and when opportunity occurs she scolds Mrs Benson for her imprudence, and in order to frighten her out of indiscretions for the future, she resolves to pretend that she has also had an intrigue, and that her easy going husband had found it out and had become a perfect bear in consequence. She also advises Mrs. Benson not to write any more letters to Meredith, and to get back the one she had already written to him. The most amusing part of the play is where Mrs. Southdown, in order to oblige Benson by inculcating a great moral lesson on his wife, instructs her husband to come in while Mrs. Benson is with her, whenever he hears her say the words "Good gracious, here's Trotter," and then rage with demoniacal fury. Southdown does not, of course, know for what purpose he is showing this violent temper, but he is ultimately induced to believe that his wife has been deceiving him, and becomes jealous himself in real earnest. When he gives way to ungovernable fury and smashes the furniture into atoms, Benson, in order to save Mrs. Southdown from his anger, pretends that the fault was his own wife's and that she has confessed it and been forgiven. The letter is ultimately found by Southdown to be in Mrs. Benson's writing, and his jealousy is at length dissipated. Mrs. Benson also discovers that it was her husband who had been really the giver of all the presents she believed Meredith to have lavished on her, and her heart turns again to him from whom she had so nearly been divided.

The play was acted throughout with great spirit. The part of Mrs. Southdown was admirably fitted for the display of the undoubted talents of the lady who undertook the character, the pourtrayal of which is all the more difficult, as she has not the advantage of disguise of costume, which affords so great help to Amateurs. Such a Mrs. Benson would go far to excuse the infatuation of Meredith, and of the performance of both ladies we can only speak in terms of highest praise. They acquitted themselves *à merveille* and richly deserved the rain of flowers that covered the stage in recognition of their success. Nor can too much praise be given to Mr. Bayne, whose presence is enough to make any play successful; or to Mr. Henley, who makes a decided advance in every new character he undertakes. Mr. Pearson's dramatic ambition was entirely satisfied by the part allotted to him.

The second piece presented was a comic drama entitled *From Village to Court*, by John Maddison Morton.

The first scene is in an open place in a village. Jenny, a blooming country damsel, is waiting on Captain Ernest Manheim, commander of the body guard on its way to the palace of a certain Grand Duke. The Captain has been dining, and indulges in some playful badinage with the pretty girl who, after she has been gallantly kissed by the Captain, draws herself up and says, "How I would scream, if I was sure nobody

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

would hear me!" Jenny and the Captain are interrupted by the entrance of the Baron Von Grosenbach, who is the spy of the Grand Duke, and anything but a favourite of the charming Jenny. The Baron is not at first disposed to recognize Ernest, but after being reminded of an unpleasant rencontre at the opera, he grows less forgetful, and condescends to inform the Captain that he is preceding his master, the Grand Duke, who is on his way to visit his royal mother the Dowager Grand Duchess. In taking out his pocket-handherchief the Baron drops a packet which is picked up by Ernest. It turns out to be a royal decree against duelling, which leads Ernest to narrate his last experience in the art. He had been left on the ground with his adversary's sword run through his body, and would probably have died if it had not been for the generous devotion of a young peasant girl, who had him carried to a neighbouring farm where she watched over him with the tenderest care. When his senses returned, his benefactress was gone, and he had never since been able to find her. The Baron makes a suggestion which is singularly appropriate in the mouth of the gentleman who acted the part. "Suppose you advertise for her," he says. Notwithstanding the affection Ernest entertains for his unknown benefactress, he intimates to the Baron that he is affianced to another lady, Bertha de Ransdadt, the owner of a chateau near the town of Varlitz, where three months before his regiment had been quartered. Somehow or other he had come to be betrothed to Mademoiselle de Ransdadt, although he still loved the peasant girl with his whole soul. He is in hopes the brilliant beauty may have forgotten him, and that he may yet meet her who is the queen of his affections. The Baron rejoins that as Ernest sways between these two beauties there is no chance of his losing his heart to any of the fair dames at the Court—not even to the countess of Lindenberg herself, who has most influence over the Grand Duke. And now enters the Countess herself. She had been out riding with the Grand Duke, and when they reached the centre of a forest, two roads had presented themselves. The Duke contended for the road to the right, the Countess for that to the left. The Duke had galloped on his way and the Countess crying "Let those who love me, follow me" had taken hers. The dialogue here is very amusing, for the Countess and Baron are rivals for the Grand Duke's favour, and the Baron can scarcely conceal the feeling that he would not have been sorry if some harm had happened to her ladyship. The Baron refers incidentally to the officer of the second regiment of guards who has just been with him, and the Countess immediately concludes that the young officer is no other than her betrothed. She resolves to meet with him, but she is afraid of it coming to the ears of the Grand Duke. Jenny comes out of the house and the Countess tells her that she will return shortly with a friend, and begs her to guard against interruption while they talk. In the meantime she takes the arm of the Baron and goes to say farewell to the Grand Duke who is about to commence his journey. After they go, arrives on the scene Maximilian Krootz, the cousin of pretty Jenny. He lives in a neighbouring village and proceeds to explain his arrival —that Miss Rose Walstein, who lives in his village, was about to set off for the Grand Duke's palace and he had made up his mind to accompany her. When she got inside of the carrier's cart he got up outside, and being overtaken by sleep, tumbled off the cart and found himself lying on the road when he came to his senses. He is in pursuit of the cart, but Jenny points out that it is just stopping in the Market Place. Presently Rose trips in and embraces Jenny, who asks her what the object of her visit to the Grand Duke's palace is. It seems that she has come to petition the Grand Duke on behalf of her father, who is an old officer and has been deprived of his pension, a fact which Krootz does not regret as it can never now be said that he wanted to marry Rose for her money.

"You marry, Rose," says Jenny, "Ha! ha! ha; how very absurd." Rose intimates that things were not yet gone quite so far as marriage, and Krootz bids Jenny not despair as she may be lucky enough to get him yet, at which Jenny laughs indignantly. Rose now tells Jenny that the object of her journey is to gain admission to Court, when Jenny, to her great joy lets her know that the Court happens to be then at the village, and Jenny promises to use her influence with the Countess of Lindenberg. At that moment Jenny sees her ladyship at the end of an avenue, and Krootz, in spite of all remonstrances, runs off to the Countess to broach the subject of Rose's petition. From the conversation that ensues between Jenny and Rose we find that Rose is the devoted girl who had nursed Captain Manheim during his illness, and who is as much in love with him as we have already seen he is with her. Krootz brings the Countess towards the two girls, and from her soliloquy we gather that the Grand Duke has gone, accompanied by the Baron, and that she is free for two whole days. Rose now intercedes with the Countess, who advises her to draw up a petition for her father, which with the assistance of Krootz she resolves to do. After Rose and Krootz retire to write the petition the Countess abandons herself to regret that she should have encouraged the attentions of Ernest whom she did not really love, while she is afraid of the effect of her inconstancy on his faithful heart. But whatever happens she is resolved to give him up, as her ambition is to become the Grand Duchess. While she thus bemoans the unhappy fix she finds herself in, Ernest enters in obedience to a letter that had been sent him by the Countess. In the interview that ensues he finds that the Countess of Lindenberg is none other than his betrothed Bertha de Ransdadt, who had concealed from him her real rank. The Countess explains to him her present position. Her brother had been involved in treasonable practices against his sovereign, and was condemned to death. She had rushed to the palace, thrown herself at the feet of the Grand Duke and solicited her brother's pardon. She obtained it, but from that time had been compelled to remain at Court receiving the homage of the Grand Duke. They then resolve, as there is great fear of spies, to meet on the following day. As Ernest goes out he is seen by Rose and recognized as the officer whom she had tended and loved. Rose hands the petition to the Countess, who declares it to be quite satisfactory and intimates to Rose that she may return home with the certainty that her father's pension will be restored. Here the Baron unexpectedly makes his appearance. He had only accompanied the Grand Duke a short way, as he had been ordered by the Duke to return to the Countess and follow her like her shadow.

The second act introduces us to the Baron catechizing the ladies of the court with regard to the conduct of the Countess during his absence. After this colloquy is over and the ladies have retired, enter Lieutenant Schwabb, a sub spy of the worthy Baron, from whom he gathers that the Countess is betrothed to Captain Manheim and thereupon resolves to use his knowledge to the detriment of the fair lady. Ernest and the Countess meet as arranged, and the Countess informs him that they cannot see each other in safety and proposes that he shall meet her in a pavilion at the end of the avenue communicating with her apartments. Ernest is doubtful whether his military duties will leave him free to do so, and the Countess then gives him a ring, and tells him that on his return he will find a young peasant girl, on whose finger he must place the ring if he be able to keep the appointment, and if any obstacle to the meeting arise on her side she will present the girl with a bracelet, so that seeing it on her arm he may know that the meeting can not take place. When Ernest comes to keep the appointment he finds Rose at the spot. He does not recognize her as his gentle nurse, and after some playful talk puts the ring on her finger as a sign to the Countess. As to the meaning of the gift Krootz, who had overheard the arrangement between Ernest and the Countess, informs her, and tries without success to press his own suit. Poor Rose is horror struck when Krootz undeceives her and tells her that probably the Countess will make use of her to signalize her wishes, in the same way that Captain Manheim had done, by giving her a bracelet or some other trinket. The Duke returns unexpectedly and thus prevents the Countess keeping her appointment, so she drops her bracelet as if by accident and tells Rose she may keep it. Poor Rose! After the Countess has gone she snatches the bracelet off her arm and hides it in her bosom, in order that the signal may fail. Ernest appears, and not seeing the bracelet on Rose's arm concludes that the Countess will soon arrive. Rose makes herself known as his nurse and rushes away, shedding the bitter tears of disappointed love.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Ernest forthwith writes Rose a letter in which he begs her to become his wife. This letter is taken from Rose by the Countess, who now learns that Ernest does not love her and that her grief for the disappointment in store for him was unnecessary. In the meantime Krootz has given the Baron information of the presence of Captain Manheim at the palace, When Krootz is thereupon upbraided by Rose he does everything he can to prevent the consequences of his indiscretion, but Captain Manheim is eventually caught. When things look darkest, deliverance comes. The Baron orders Captain Manheim to deliver up his sword, but the Countess tells the Baron that it is he who must deliver his to Colonel Manheim, for the Countess has told all to the Duke, and she is going to be married to him. Colonel Manheim marries Rose, and Krootz the charming Jenny.

It will be seen from the above sketch of the story that slight as it is, it was probably better adapted for first appearances than many pieces of far higher merit, and affords considerable scope for the exhibition of histrionic skill. This was fully taken advantage of by Mrs. Brown, as the Countess of Lindenberg, who acted her part with ease and grace, and looked every inch the Grand Duchess she eventually becomes, and we imagine there are few Countesses, either in Germany or out of it, who would not be envious of the superb toilets worn by the lady in question. Miss Teraki, as Jenny, was a charming representative of a bright, pleasant, country girl, and played her rôle with an arch vivacity of action which carried the house with her. Mrs. Arthur as First Lady was faultless, nor must we refrain from rendering our warmest tribute of admiration to the young lady who acted the part of Rose Walstein. Her acting was as natural as the glow of sunrise or the song of birds. It went straight to the heart. She has learnt the difficult lesson that the height of art is to conceal it. Surely nothing could be more touching than the truthful pathos of her farewell to him she had loved so faithfully. The three Court ladies who appeared in the last act added the finishing touch to a picture, which was rendered singularly brilliant by the exquisitely appropriate toilets of the fair debutantes.

Mr. Toddles acted a disagreeable character extremely well, and his performance was marked by that careful attention to detail, and thorough knowledge of stage business, which always distinguish his assumptions. Mr. Savile looked well. Mr. N. Lee rendered the small part of Lieutenant Schwabb very creditably, and Mr. Spurgeon as Maximilian Krootz came up to his usual standard—and we can invent no warmer praise. The scenery was remarkably pretty, and a band of amateurs discoursed some excellent music during the evening. In one word the Ladies' first performance in Yokohama has been attended with complete but well deserved success, and we should like to know who would not be a Spanish widow or orphan to be ministered to by such fair spirits as those whose praise it has been our happy duty to proclaim.

From the "Japan Mail Daily Advertiser."

Monday, 12th.

From the *Hôchi Shimbun* we learn that by the *Tokio Maru* which arrived here on the 7th instant, there came, on their way to Tôkiô, two young students from Satsuma. Their names being Saigo and Kirino, they were most closely watched and strictly examined, and it was only on production of the certificates of the schools to which they belonged in Tôkiô, that they were permitted to proceed to their destination. These young men left Satsuma on the 26th of last month, and report that up to that time some ten thousand of the insurgents had left Satsuma, all of the 'Private School' party having gone. There were still two parties remaining, Shimadzu's and a party called *Churitsu*. The latter are united in feeling with Saigo's party and are guarding the coast of Satsuma, while Shimadzu's party will probably furnish a re-inforcement to Saigo. They state that one of the police agents who recently returned from Tôkiô, betrayed to the 'Private School' some hints of the plot for Saigo's assassination, and that suspicions being aroused, fifty students guarded the General's house every night. One day Saigo discovered some men hidden under the floor of his house, and informing the students of what he had seen, they rushed to the house and surrounded it. Pulling up the floor they found three men concealed there, armed with daggers. One was beaten to death with clubs, another cut down, the third was arrested and examined.

From the *Mainichi Shimbun.*

NOTIFICATION No. 3.

The following is said to have been posted on the placard board near the Osaka *Fu*. "We have commenced a war for the purpose of promoting the welfare of the people, and we therefore intend to abolish all fines and taxes; let all therefore work at their callings, freeing themselves at the same time from all anxieties. Whoever defaces this Notification will be severely punished."

AGENT OF THE PRESIDENT,
At the Branch Office of the New Government.
10th year of Meiji.

The following vessels left Nagasaki on the 7th instant for Kagoshima. The *Seiki Kan* and *Kanagawa Maru* with seven hundred police constables, the *Kôriô Maru* with the Mikado's special Envoy; the *Genkai Maru* with one and half battalion of troops and the *Gembu Maru* with Kuroda. The *Riujô Kan* escorted them.

Tuesday, 13th.

In consequence of the present condition of affairs in the country, the attention of many of the farmers, and others engaged in horticultural pursuits, has been so much attracted towards politics that their lands remain in partial neglect; and we hear that in Tôkiô the price of agricultural implements has greatly fallen.

From the *Hôchi Shimbun.*

The following letter has been presented to the Department of the Imperial Household by Washi-o a *kuazoku*:—There are many men who have striven hard for the Restoration at the risk of their lives, and among them Saigo Takamori. Indeed it was principally owing to the great energy shown by him and some few other *samurai* that order was restored. I myself, having been among the above was amply rewarded, for which I express my warmest gratitude. I have recently heard the order given for sending an expedition for the suppression of the Satsuma insurgents, and that Saigo and others should be deprived of their titles and rank. By this I was given to understand that Takamori had turned a rebel. I cannot understand for what purpose or reason Takamori should so have acted. Although I am convinced that the Government will exercise only strict justice when the rebellion is put down, yet I cannot forget that the rebels are our brethren, and the prospect of their fate causes me great grief. For this reason, though my ability is not great, I am prepared to go to Satsuma at the risk of my life, consult with Shimadzu Hisamitzu (Saburo), seek an interview with Saigo, and enquire what cause can have driven him to rebellion, argue with him if necessary, and correct any wrong impressions he may have. I will then fully inform the Government of the result of my proceedings and wait instructions. Although I am perhaps unfit for such a task yet I am desirous of relieving the mind of the Emperor of anxiety and the people of distress, as some slight return for the favours I have received from His Majesty. I shall therefore be greatly pleased if my wish is approved of and the permission given me to carry it out, and as the present condition of the country is critical I hope to receive this permission without delay.

I present the above in great respect.

WASHI-O TAKA-ATSU, *Shoshii*,
Kuazoku of the 5th Division.

To YAMAOKA TETSUHIRA, *Daijo.*

Acting for Tokudaiji Sanenori, Minister of the Imperial Household.

March 10th, 1877.

A telegram sent by Yamagata, the Minister of War, at 5.10 p.m. on the 10th instant, announces that at 6 p.m. on the 9th instant three batteries of the insurgents, situated at Uchibara on the left bank of the Tawarazaka were taken.

Colonel Takikawa of the Kumamoto garrison has been killed by a shot, and since the 26th of last month nothing has been seen or heard of Colonel Midzuno.

Kawamura, the Vice-Minister of the Navy, has proceeded towards Kawajiri, the head-quarters of Saigo, with the squadron under his command.

Very many telegrams are received by the Department of Home Affairs from Kiushu, but as they cannot very well be made out, two officials of the Department have gone South that more comprehensible telegrams may be sent.

ANOTHER THREATENING LETTER.

The *Nichi Nichi Shimbun* says it is again in receipt of a strange letter as follows :—

To the

Akébono, Nichi Nichi, Chôya, Hôchi, and *Yomiuri Shimbun.*

On account of the *samurai* of Satsuma having taken to arms and thereby turned rebels, the newspapers have sent reporters to various places all of whom are striving to obtain and publish whatever news they can, and compete to publish it without delay. They publish unfounded reports from Kumamoto, or the seat of war, in such manner as though they had seen the events themselves. This may please some young and inexperienced students, but this is all that it can do. You very likely wish to publish only false reports and thereby serve your own interests. Newspaper editors are men who should discriminate between truth and falsehood, do good and avoid evil. Should they not publish truth in an impartial manner, such newspapers could only be termed the newspapers of lies. Telegrams are published by many of them which they profess to have received from this place or that, but which were really fabricated in their offices. This all arises from sheer inability on the part of Editors to properly do the work they undertake. Now you Editors, as you only make false reports we cannot forgive you. We shall assemble a party of those who are of the same mind as ourselves, break into your houses, and finally expose your heads on the Nihon Bashi. Therefore droop your heads and wait for them to fly off with a blow from a sharp sword. If any soldiers should be protecting you we shall kill them together with you. Therefore wash your necks, at once mend your ways, and prepare yourselves for the coming sword, as then no time will be allowed you for repentance. And if you Editors of newspapers profess to be men, act as men and publish this.

SATSU IMORO.

Tôkiô, March 11th 1877.

From the *Nichi Nichi Shimbun.*

The arsenal at Koishikawa, Tôkiô, is now being worked with great activity. Hitherto two hundred and fifty men were employed in manufacturing fifty thousand cartridges per day, but fifty more have now been employed and seventy thousand cartridges are now daily produced, the work being kept on till midnight.

From the *Akébono Shimbun.*

A telegram received during the afternoon of the 11th instant announced that on that day the Imperialists, after a desperate struggle, captured the remaining battery at Tawarazaka.

Wednesday, 14th.

The launch of the *Amagi Kan* took place at Yokosuka yesterday afternoon. She is a gun-boat about 260 feet long and 1,800 tons burthen, being a sister ship to the *Seiki Kan* which was built at the same place some few years ago. Mr. Terashima, the Minister of Foreign Affairs was present on the occasion, accompanied by two young princes of the blood, who are cadets of the Naval College and wore the uniform of that establishment. At four o'clock these distinguished visitors took their seats on a platform which had been erected for the occasion, accompanied by the Superintendent of the Dockyard, Admiral Totaki, and a few Naval Officers. The band of the Marines was in attendance, but there was a notable absence of the ceremony which distinguished the launch of the *Jinkei Kan* in September last, when H. I. H. Arisugawa-no-Miya presided. On this occasion the full evening dress which the Japanese have adopted as official costume was dispensed with, and few uniforms were to be seen, but there was a large crowd of spectators of all sorts, including a few foreigners. Shortly after four o'clock the shores were knocked away and the vessel, which was decorated with evergreens and artificial flowers, glided into the water and the launch was successfully accomplished. She was immediately hauled under the large crane, where her boilers were placed in her in less than half-an-hour after she left the slips. The keel of another vessel of about the same size is laid at Yokosuka, which will be built entirely under native superintendence.

The *Hôchi Shimbun* states that a telegram which left Nagasaki on the 12th instant at 11.05 a.m. announces the arrival and landing at Kagoshima of the Special Envoy of the Mikado. Another telegram from the same place states that the Envoy went to the residence of Shimadzu Saburo, and announcing himself proceeded to perform the duties of his mission. Kagoshima is quiet. As it is reported that ammunition is stored in various places, immediate steps have been taken to gain possession of the same. It is stated that there is a quantity at Kajiki, and two companies of troops and a hundred policemen have been sent in the *Gembu Maru* to that place for the purpose of getting hold of it.

The insurgents comprise men of every age from seventeen to seventy. It was a rule that none above the age of sixty should be permitted a carry arms, but some have done so in spite of the regulations. They have received no pay. It was estimated that it would take fifty-two days to arrive in Tôkiô. It was the general impression that the Kumamoto garrison would surrender on the demand being made, but failing this it was to be taken by force. Osaka was to be occupied within five days.

From the *Hôchi Shimbun.*

The insurgents under the command of Saigo are men who took part in the last civil war, and have been frequently in battles such as those of Fushimi, Toba, Oshiu, Hakodate, etc. Saigo is at present in Kawajiri, but there are prospects of his advancing to Yamaga.

From the *Chôya Shimbun.*

We hear that the Lieut.-General Tani, the Commander of the Kumamoto garrison, is doing all he can to stimulate his men to bravely oppose the enemy, but in vain.

From the *Akébono Shimbun.*

Kawajiri in Higo is a place noted for the wealth of its merchants. Some time ago, Saigo, having learned that they had strongly disapproved of certain orders or acts of the Governor of Kumamoto *ken*, went to them, and by the force of his representations won them over, and received from them several hundred thousand *yen* to enable him to carry out his designs. Since then he has made the place his head-quarters.

Thursday, 15th.

We take the following from the *Hôchi Shimbun* :—

A telegram despatched from Osaka at 11.30 p.m. on the 12th instant, states that advices from Kagoshima announce that the members of the insurgents are gradually falling off. Fuchibé and Kabayama have returned to Satsuma, and are actively beating up recruits for the rebel service and forwarding them to the seat of war both by night and day. Several mortars have also been sent to the front. The reports sent to Kagoshima by the rebels announce continued victories. The Imperialists have discovered and seized a quantity of ammunition.

A telegram despatched from Minaminoseki at 10.40 a.m. on the 13th instant says that on the previous day an engagement took place at Tawarazaka, the rebels advancing from Kichijigoi. Both sides retired after some indecisive fighting. Another engagement commenced at 8 a.m. at Yamaga. The Imperialists advanced from Iwamura and Hirayama, and captured an insurgent battery, but the rebels came up in force from Hasama and after some sharp fighting the Imperialists fell back, but receiving reinforcements advanced again and obliged the insurgents to retreat, after having fired the villaga of Nabeta. The Naval forces also attacked the rebels at Shirahama and Kawatzu.

A telegram which left the seat of war at 3.40 P.M. on the 13th instant announces that at dawn on the 11th instant the Imperial forces took possession of an insurgent battery to the right of Kichiji hill, but they were vigorously opposed by the insurgents. The Imperialists at Tawarazaka carried two of the insurgent batteries, but the enemy attacking them in the rear, they were forced to retire from the position they had gained, this attack having been so rapidly made that the Imperialists were unable for their own defence to strengthen the batteries they had taken. The rebels constantly made the attack in companies of forty men each, but generally about half of their number were killed. The fighting was so close that the faces of each side were clearly discernible. There were enormous numbers of killed and wounded on either side, and the severity of the engagement may be gathered from above statements.

A telegram from Yamagata at 8 p.m. on the 13th instant announces that at 6 a.m. on the 12th a desperate engagement commenced close to Hirayama. Part of the Imperial forces advanced by the Iwamura road as far as Nabeta, and captured an insurgent battery, but the troops which were expected to advance direct from Hirayama could not force their way forward owing to the difficult nature of the country, and fell back to their former position. The insurgents seem to have suffered severely in this engagement, as they retired leaving some of their arms and the killed and wounded behind them.

On the arrival of the Mikado's Envoys at Kagoshima it was discovered that neither father nor son of the Shimadzu family

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

had anything to do with the present insurrection from the very commencement.

From the *Akébono Shimbun.*

Saigo is at Kawajiri, about one and a half *ri* from Kumamoto. He daily baths at the hot spring, plays at chess, writes poetry and follows such like pursuits, as he very likely wishes to show that he is undisturbed by events which are occurring daily.

The Imperialists have constructed a strong battery on the road between the villages of Uyeki and Yamaga, and have thereby cut off the insurgents from communication between those places.

The head-quarters of the Imperialists have been advanced from Minamenoseki to Takase.

From the *Mainichi Shimbun.*

His Excellency Sanjô Saneyoshi has gone to Sakai in the province of Idzumi.

Kuazoku Washio, whose letter to the Imperial Household Department was published two days ago, and Shunamoto Chudô, of Tosa, have for certain reasons unknown been arrested.

From the *Nichi Nichi Shimbun.*

We hear that Tawarazaka, where the rebels are posted, is a very strong position, and is called Harakiri-zaka by the Kumamoto people, for they have a saying that if an enemy should capture so strong a place it would be such a disgrace to the defenders that they ought to commit *hara-kiri* rather than continue war

---

Friday, 16th.

The *Hôchi Shimbun* gives us the following items :—

A telegram despatched from Osaka at 11 p.m. on the 13th instant reports that advices have been received from Yanagiwara, the Mikado's Special Envoy to Satsuma, from Nagasaki to the following effect : "I have, after successfully performing my duties, returned to Nagasaki to-day. I shall start for Kobe this evening by sea."

Some Satsuma boys from twelve to sixteen years of age, armed with swords, arrived at the neighbourhood of Yashiro in the province of Higo, after travelling over very rough roads and asked some of the insurgent chiefs to permit them to join the rebel army, but they being merely boys they were advised to give up all ideas of doing so. They said, however, they would be scolded by their mothers if they were return to home without doing anything, and are therefore wandering about not knowing where to go.

A telegram sent by Kuroda from Nagasaki at 10.45 a.m. on the 13th instant announces that three hundred thousand cartridges, millions of pounds of powder, copper, and lead which were hidden by the insurgents in Kagoshima *Ken*, have been found and seized. It is intended to put the machinery for the manufacture of cartridges on board the *Kagoshima Maru*. It is now the intention to make a general attack on the rebels. The family of Shimadzu with other good families of Satsuma are loyal, and no anxiety should any longer exist about them.

From the *Nichi Nichi Shimbun.*

Lieut. General Ôyama is at Yamaga, Lieut. General Nodzu at Kichiji-goi, Lieut. General Miyoshi at Tawarazaka, and Lieut. General Miura is between Yamaga and Minaminoseki. Miyoshi's wound was only a slight one on the palm of the hand.

From the *Chôya Shimbun.*

On the 16th of February last when Beppu Shinsuke led the van of the rebel troops to Mitsumata, a place distants twenty-five *ri* from Kumamoto, there were varied opinions existing in the Kumamoto garrison, some said that they ought to sally out, meet the enemy and commence war, while others said that there was no reason to obstruct the passage of the Commander of the Army. Others again said it would be advisable for them to remain and defend the castle with the two thousand two hundred men that were in garrison at the time. The *Kencho* was none the less divided in opinion; *Gon-Kencei* Tomioka said that the officials should remain at their posts, and assist the garrison troops in meeting the insurgents, and even offered to go himself to the rebel ranks and reason with them. Some officers of police then said that nothing of the sort should be done, as the Satsuma men had already revolted and it was therefore impossible to soothe them with words, and as it was the duty of the *Kencho* to protect the people, they had better therefore find some way of getting the people into some place of safety, and that the *Kencho* itself should also be removed. At midnight on the 18th of February they all agreed to the opinion of the police officers, and on the following morning the insurgents advanced unopposed as far as Kawajiri.

We take the following from the *Akébono Shimbun.*

A telegram which left Osaka at 9.10 p.m. on the 13th instant announces that Kuroda had returned to Nagasaki from Kagoshima. Nakahara, whose confession appeared in last week's *Japan Mail*, has been put in charge of the police station of Nagasaki.

We hear the rumour that Major-General Kuroda has returned as far as Nagasaki with Oyama, the Governor of Kagoshima. We also hear that he is about to make an attack upon the head-quarters of the insurgents at Kawajiri, with three battalions of troops.

Saturday, 17th.

A short time after midnight a fire broke out in Honmura, not far from the steps of the Daijingu temple. It is said to have originated in an unoccupied house and is therefore attributed to incendiarism. The flames quickly spread among the nest of shanties which occupied that situation, about 300 of which were destroyed before the fire was extinguished. The foreign fire engines were quickly on the spot and a large muster of the fire brigade, as were also several native engines, all of which rendered good service. There is a report that some lives were lost, but this we have not as yet been able to verify. At about half-past two all danger was over and the progress of the flames arrested.

From the *Hôchi Shimbun.*

The six battalions of troops now in Tôkiô will, with the exception of the reserved forces, be despatched for Kobe on the 17th instant.

The number of Satsuma insurgents who have invaded Kumamoto *ken* form in all six battalions. The 1st battalion is commanded by Beppu, the 2nd by Kodama, and these form the van of the insurgent army, Kirino being in chief command of the same. The 3rd battalion is commanded by the youngest brother of Saigo, and the 4th battalion by Saigo himself, who is the Commander-in-Chief of the whole force. The Commanders of the 5th and 6th battalions cannot be ascertained, but Shinowara is probably one of them.

Of the Kumamoto (Higo) *samurai* there are four parties, firstly, the *Bôkan-tô*, who are neutral, numbering between four and five thousand; secondly, the *Kageki-tô*, who have already joined the insurgents; thirdly, the *Kinketsu-tô*, who are loyal and number some five or six thousand, and who say that they would lay down their lives for the Imperial cause. The fourth are the *Churitsu-tô*, who assert that they would espouse the cause of their former Lord even unto death.

The *Mainichi Shimbun* gives us the following :—

We hear that on the return from Kagoshima of Yanagiwara, the Special Envoy, he left some hundreds of policemen and one battalion of troops in order to prevent the insurgents from re-entering that place.

A person who has returned from Minaminoseki informs us that place is in a great state of confusion. The number of spies equals that of the troops. All the reporters (of the press ?) have been driven out of the place.

Another telegram from Fukuoka at 8 p.m. on the 14th instant announces that an attack was made upon the insurgents at Uyeki at dawn of that day. The right section of the insurgent batteries was taken. The rebels fled and have encamped on the other side of the road. There were several tens of men defending the above batteries but they were all killed on this occasion.

Another telegram from Fukuoka at 9.20 a.m. on the 15th instant announces that the insurgents are posted in various positions surrounding Kumamoto castle, but they seem to have exhausted their money and provisions, take food from the farmers by force and do not pay the coolies in their employ. The sympathies of the people are alienated from them accordingly.

At dawn on the morning of the 14th instant an attack was made by the Imperialists on the rebel fortifications at Tawarazaka. A body of Tôkiô police constables calling themselves the *battô* (sworded) band made a desperate attack from a branch road, and after capturing two or three batteries they advanced to the highway where an engagement ensued, but the result is as yet unknown. The main battery has not yet been captured.

A telegram from Fukuoka at 8.05 p.m. on the 14th instant announces that Oyama, the Governor of Kagoshima, has accompanied Yanagiwara, the Mikado's Special Envoy, to Kobe. The Shimadzu family have had nothing to do with the present insurrection and they intend to proceed to Kiôto as soon as they do can affect any good for the Imperial cause.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

A PRIMER OF POLITICAL ECONOMY.

Chap. I. *(continued.)* Protection.

PERIODICAL Literature in the East labours under the disadvantage that the daily or weekly newspaper is, generally, its only form of development. It may be necessary, for the purposes of a publicist, or the exposition of a policy, that an important subject should be treated fully and completely; and, in Europe, or America, there is no difficulty in finding a fit place for such exposition and illustration of an argument, in the pages of a monthly or quarterly Magazine. Such means of addressing the public are wanting here. Fitful attempts have been made, in India and China, to establish such means of communication between author and reader, but in Japan, no such facilities have ever been afforded to a writer wishful to give other than an ephemeral life to his creations.

This is the only excuse we have to give for asking our readers to remember that, on the 10th ulto., we commenced a series of articles on the subject of Political Economy, mainly with the hope that, translated from these columns into the vernacular, correct ideas on the important subject on which we presumed to preach, should reach the minds of Japanese statesmen and journalists, and so defeat the attempt which has been lately begun to check the progress of Japanese commerce by inoculating it with the deadly disease of Protection. In the article referred to, we stated our arguments in refutation of the claim set up by our opponents, that Protection would advantage Japan—by rendering her 'independent of foreign products and manufactures;'—touched, more lightly, the mistake that it would 'compel the development of the country's own resources,' and exposed, in connection with this, the fallacy of Homœopathic Protection, once—in a moment of regrettable weakness,—half-accepted by John Stuart Mill. But our full argument on this head required, correlatively, the consideration of the third section of our subject—the claim that Protection benefits producers or manufacturers by giving them 'the command of their own home markets.' This claim we have now to examine.

We have clearly shown that—if the 'development' of any particular industry does occur under a protective system, it takes place only at the expense of the non-interested majority of the population. But is the industry itself healthily developed? Experience and reason both prove the contrary. Mr. David Wells, writing of the United States, truly says that "one has only to pick out the separate industries which have been especially protected, to find out those which are more especially unprofitable and dependent;" and in the case of England's Australian colonies—as was effectively pointed out by Mr. Shaw Lefevre at the recent Social Science Congress at Liverpool,—New South Wales, which adopted a Free Trade system, has, proportionately to its population and capital, a greater number of manufacturers, in the industries most protected in a sister colony, Victoria, which adopted a very protective system. The fact is that, in shutting out their rivals, protected producers necessarily shut themselves in. They get 'the command of their own markets,' but, as *The Economist* has clearly shown, in an article lately referred to in these columns and audaciously misquoted by the *Tokio Times*, the apparent gain is an absolute loss. Producers or manufacturers, working under such conditions, live in an unhealthy atmosphere. They have none of the wholesome stimulus of competition on equal terms; monopolies arise, and invention and improvement languish; their limited market is alternately gorged and starved;—when production has exceeded demand it cannot flow out to feed other markets, but is forced back on its own, already filled to repletion; prices fall rapidly, panic ensues, sacrifices have to be made, factories are shut up, workmen thrown out of employment, and the industry is paralyzed, until the overplus has been gradually digested. Then commences the reaction. Inflation of the trade sets in, with all the inconveniences of sudden rise in prices, scarcity of the article, and paucity of labour, which has meanwhile been driven to seek employment elsewhere. The valuable quality of elasticity is wanting to the system, and stability of the balance of supply and demand, the most important element of health and well-being, is for any protected industry, totally unattainable. Yet this system is deliberately recommended for adoption in Japan, because, at the Philadelphia Exhibition, American manufacturers showed some articles of hardware as good as English, and slightly cheaper than these, imported under heavy protective duties! But no notice is taken of the cost to American trade at which this result was attained;—and, indeed, the facilities enjoyed by citizens of the United States for beginning life anew under a fresh set of conditions, after failure under the old, are so great, that this cost is, probably, hardly appreciable by Americans themselves. But we know that, shortly before the Centennial Exhibition, crowds of workmen out of work were demanding, in New York, the establishment of national workshops to give them employment, and that many valuable factories, whose first proprietors had been ruined by the gorging of their home market, had changed hands on terms which rendered success a certainty for their purchasers. With wages at starvation point, and plant bought considerably below prime cost, it would be strange if manufacturers could not produce goods from raw material on the spot, cheaper than they could be imported 3,000 miles, under heavy protective duties. But 1875 witnessed, for the first time, the return of a greater number of steerage passengers from the United States than of emigrants thither; and as wages rise again, and machinery requires renewal, American competitors with Sheffield and Birmingham will discover the instability of the advantage which they temporarily enjoy. No victory can be claimed, from the evidence at Philadelphia, of Protection over Free Trade. American manufacturers have to beat England in a neutral market, and in fair competition, before this can be celebrated; and it can only be won by improvement in quality or reduction in price. These elements of success grow only out of acquired skill, proper division of labour, and well-applied inventive power—permitted to reach their full development by steady exercise, uninterrupted by any disturbing cause. English manufacturers have hitherto held their own against their rivals, partly because they got a long start; but mainly, because the elasticity and variety of market, which Free Trade has given them, have reduced to a *minimum* the distressing fluctuations which check progress suddenly and severely in trade confined by protection to the 'command of their own home markets.' If English economists were so morbidly jealous of American progress as they are sometimes represented to be, they would studiously avoid preaching the doctrine of Free Trade to their rivals on the other side of the Atlantic. The qualities essential to success in commerce are eminently noticeable in American merchants and manufacturers, and were they not handicapped by the protection system, they would be backed for even money—to pursue the methaphor—in the race for commercial superiority.

Original from UNIVERSITY OF CALIFORNIA

Besides—as we cannot too often repeat—the courses to be run by America and Japan are in no sense parallel. Those who press on Japan the example of the United States, as an inducement for revision of the Tariff, on a protective basis, surely overlook, altogether, that important element in the discussion—the relative size of the two countries. The evils which press so heavily on American trade would weigh, with tenfold force, on the trade of Japan. That American trade has survived under protection at all, is only attributable to the expansive character of that home market, which it pays so dearly to command. Each successive set of manufacturers,—masters and workmen—who succumb under disaster, can find, at all events, a livelihood by 'going West,' where they become consumers, and extend the market for their successors; and it is the ebb of the tide of labour from the Old World, recently noticed, which political economists in America should regard with greatest anxiety. But Japan has but little scope for expansion of her home markets. The area of these islands, as compared with Great Britain and Ireland is estimated as at about 155 to 131, while the population is nearly the same, and, under the existing improved conditions of life, must be expected rapidly to increase; while the want of colonies, and the traditions and prejudices of the people, put the relief of emigration out of the question. Were Japan a member of a Federal Union, comprising the different countries of Eastern Asia, from Corea to Cochin-China, enjoying Free Trade in the interchange of their own products,—she would not suffer much more than Pennsylvania, under protective duties which excluded the manufactures of the outside world. But to urge their adoption here, on the ground that they would give Japanese producers and manufacturers the 'command of their own home market,' limited and inelastic as there are, is the very worst advice that could be given to the producing and manufacturing classes, or to the paternal Government of this country.

The fallacy that a Protective Tariff would 'give the 'Government such a revenue from the Customs as would 'enable it to reduce excise and other internal taxation,' is perhaps, for the Japanese statesmen, the most dangerous error of all. But its refutation includes the theory of the incidence of taxation, and a statement of the difference between productive and protective duties, not always clearly understood. It will form the subject-matter of our next Chapter.

The establishment of a Government Mint in China might or might not prove a very successful scheme if once carried out; we are inclined to think it would. But it strikes us that the Chamber of Commerce might make a few preliminary enquiries on the subject in a direction which hitherto it appears to have overlooked. It is well, no doubt, to ask the opinion of other Chambers, and also that of the managers of other Mints; but would it not be equally well to take the views of the native bankers upon the subject? Their sole coinage now consists of sycee silver and copper cash; their system of banking is delicate and sensitive to a degree; and they are certainly as much interested in any suggested change as the foreign communities themselves. If our Chamber of Commerce were able to elicit their sympathies and secure their co-operation, we fancy that there would be a greater chance of the project being favourably entertained by the authorities at Peking.—*Shanghai Courier.*

Messrs. Butterfield & Swire received a telegram from Hongkong this morning, stating that the *Ulysses* returned to Singapore on the 23rd February, with her main shaft broken. She left Singapore on the 15th February.—*Shanghai Courier.*

There is rather a strange rumour from Tientsin, to the effect that twelve thousand men have deserted from the forces of Li Hung-chang. The story goes that they were squeezed to the extent of nine mace out of Tls. 4, their monthly pay, and disgusted at the meanness of their officers they have struck work and marched in a body into the interior, headed by Li's lieutenant, General Chow.—*Shanghai Courier.*

A SUMMARY OF THE JAPANESE PENAL CODES.

By Joseph H. Longford, Esq., H. B. M. Legation.

Read before the Asiatic Society of Japan, on the 28th February, 1877.

(Continued.)

Offenders Charged with Two or more Offences.

New Code, "Two Offences divulged at one and the same time."

When two or more crimes on the part of the same person are divulged at one and the same time, proceedings are to be taken against the offender only on account of that which involves the more serious penalty of the two, and, if the penalties for both are alike, one only is to be inflicted. If, again, after a prisoner has been tried and sentenced for any offence, a fresh one committed previous to his trial is discovered, no account is to be taken thereof, unless it be such as would involve a more severe penalty than that to which he has already been condemned. In the latter case such addition shall be made to the first penalty as shall make it equal to that of the more recently discovered offence. In cases where one of the two crimes is such that the offender is entitled to the privilege of commuting the punishment by a money payment, but the other one for which he is liable to undergo the statute punishment, the latter only is to be inflicted, if it be the heavier of the two or if both be alike. If not, a mitigation of five degrees is to be made in the commutable punishment and the balance imposed. For example:—Suppose that it is discovered that a criminal charged with an assault punishable by penal servitude for one year was, before he attained the age of 16 years, guilty of a robbery of 120 *yen*, the punishment of which is penal servitude for ten years but commutable,—the crime having been committed when the offender was of tender years—for a money payment of 30 *yen*. The commutable offence in this instance being the more serious of the two, its penalty is to be mitigated five degrees and the prisoner sentenced to penal servitude for two and a half years, no further account being taken of the charge of assault. If, however, the robbery had been only of such a nature as would have rendered the offender liable to a penalty of penal servitude for 100 days, then, that for the assault being the heavier, is alone to be imposed and no account is to be taken of the commutable offence.

In cases where two or more robberies or other form of unlawful acquisition are together discovered, the amount acquired by the more serious form of robbery* is to be added to the amount acquired by that which is less so, and the offender punished either for the full amount that has been acquired by both offences according to the law of the lighter form of robbery, or for the amount acquired by the more serious form only, if the penalty therefor be heavier than that for the full amount under the lighter form. This may be best explained by the following illustrations:—Suppose an offender to be guilty of the theft of public property to the value of 100 *yen*, the statute punishment of which is penal servitude for 7 years, and also of common robbery of a sum of 200 *yen*. The sum obtained by the first and more serious form of robbery is to be added to that acquired by the latter and less serious, and the penalty for a common robbery of the full amount of 300 *yen* being that of penal servitude for life, and heavier therefore than that provided for a theft of public property to the value of 100 *yen*, it is to be inflicted on

* *i. e.* By the form of robbery which involves the more serious penalty of the two.

Original from UNIVERSITY OF CALIFORNIA

the prisoner. In the case, however, of an offender guilty of embezzlement of 80 *yen*, the penalty for which is penal servitude for 5 years, and also of common robbery of 10 *yen*, the penalty to which he would be liable for the full amount of 90 *yen* acquired by both robberies if treated according to the less severe form being penal servitude for 3 years, and less therefore than that provided for the embezzlement, punishment is to be inflicted for the latter only.

Absconding Offenders.

New Code, "Offenders absconding together."

If two or more persons who have been concerned in the commission of an offence abscond, and one among them seizes and delivers up to the authorities those whose share in the guilt is greater than his own; or, if when all are equally guilty, a minority seize and deliver up to the authorities the remaining majority, he or they so doing shall receive a full pardon, except the offence have been that of killing or wounding or unlawful sexual intercourse. When several persons are implicated in the guilt of one who dies during the progress of his trial, the punishment of those who are guilty by implication only shall be reduced two degrees of severity, and, in all cases, where a pardon or mitigation is granted to an offender on account of his having made a voluntary confession, or of an Imperial act of clemency, a similar pardon or mitigation shall be granted to every person who has been implicated in his offence.

New Code, "Absconding after the Offence has been divulged."

When only one party to an offence absconds, and the remainder who are in custody declare the absconding offender to have been the principal, such declaration shall, in the absence of evidence to disprove it, be taken as true, and punishment imposed accordingly; but should it, on the arrest and trial of the absconding culprit, afterwards appear that the first were in reality the principals, then the balance of punishment which they escaped in the first instance shall be added to their previous sentences. When the relative degrees of guilt of the parties to an offence where one has absconded are clearly and incontestably proved at the trial of those in custody, it shall not be necessary to hold a new trial on the arrest of the absconding culprit, but he may be at once sentenced on the evidence adduced in the first instance.

Relatives Concealing each other's Offences.

New Code, "Relations mutually concealing each other."

Revised Code, Sec. 82.

Persons of any degree of relationship living together, or down to the third degree of relationship though living apart from each other, maternal grandparents, daughter's son, fathers and mothers-in-law, sons-in-law, wives of grandsons, husband's brothers and brother's wives, mutually concealing each other's offences, and also family retainers and servants concealing offences for their masters' sakes shall not be held guilty of any crime for so doing, nor even for informing them of measures that have been taken for their arrest and thus enabling them to conceal themselves or escape. The same immunity shall be extended to persons of a lower degree of relationship, if dependent for their support on the bounty of them whose guilt they cloak, but, if not, they shall undergo the punishment ordinarily inflicted for such offences, mitigated three degrees of severity.

The following Table shews the several degrees of Relationship.

Relations in the first degree	Parents, adopted parents, husband, child, adopted child.
Relations in the second degree	Grandparents, stepmother, uncle and aunt, brothers and sisters, husband's parents, wife, concubine, nephew, grandson, daughter-in-law.
Relations in the third degree.	Great-grandparents, aunt by marriage, husband's nephew, cousin, half brother, husband's grand parents, husband's uncles and aunts, concubine's child, nephew's wife, stepfather.
Relations in the fourth degree	Great-great-grandparents, grand uncle and aunt, second cousin, husband's brothers, brother's wife, cousin's cousin, maternal grandparents, maternal uncle and aunt, wife's child by previous husband, brother's grandchild, cousin's son, sister's child, great-great-grandchild.
Relations in the fifth degree	Wife's father and mother, aunt's son, mother's cousin, great-great-grand child, daughter's child, son-in-law.

Repetition of Offences.

New Code, "Increased Punishments for Second Offences."

A Repetition of the offences of robbery or gambling shall involve an increase of one degree of severity in the sentence in the second instance, but in the event of a third commission of robbery the amount stolen on the three several occasions is to be added together and the punishment provided by the law applicable to the least serious form of the three robberies imposed for the full amount. The punishment shall be imposed, however, according to the most serious form if it was last of the three instances; as, for example, if the three robberies in the order of their commission were, firstly, embezzlement of 10 *yen*; secondly, robbery with violence of 1 *yen*; thirdly, common robbery of 25 *yen*, the offender shall be punished only for a common robbery of 30 *yen*, the punishment for which is penal servitude for 90 days; whereas if in the order of commission, the robbery with violence were the last, he shall be sentenced to penal servitude for life, that being the punishment provided for a robbery with violence of the above amount. The offence of running away from prison, either before or after the offender has been sentenced for the crime on account of which he was in the first instance placed in custody, shall be punished by the penalties provided therefor in the law contained in the chapter on "Arrest," but a prisoner, who having absconded before sentence had been passed on him, is, while at large, guilty of a second offence, shall be sentenced to the punishment provided for the more serious of the two offences, irrespective of whether it was the first or last committed, increased two degrees of severity, and if the offences were those of robbery, the degree of punishment shall be based on the total value of the goods stolen on both occasions.

Offences discovered after the lapse of Time.

New Code, "Preliminary Matter."

In those instances where an offence is only discovered after a period of several years has elapsed since the date of its commission, the circumstances will be taken into consideration, and either an entire or partial remission of punishment granted. If the discovery is made after the lapse of 10 years, a capital sentence (unless the original crime was that of murder) shall be mitigated to one of penal servitude for 10 years; a sentence of penal servitude for life to one of penal servitude for 3 years; and sentences of penal servitude for 10, 7, or 5 years entirely remitted. Entire remission of punishment shall also be granted for offences liable to any period of penal servitude not exceeding 3 years, if they are only discovered when five years have elapsed since the date of their commission, and also for offences liable to a term not exceeding 100 days, if only discovered after the lapse of three years.

CLASS III.—DEFINITIONS.

The third class of the General Laws contains the definitions, or explanations, of the meaning that is to be attached to legal terms that appear from time to time in the general body of the laws, and also certain Miscellaneous Provisions.

Increase and Mitigation of the Degree of Punishment.

New Code, "Increase and Mitigation of Punishments."

Increase or Mitigation of the degree of punishment that is provided in the law applicable to any offence, means that the penalty is to be made more severe or lighter, as the case may be, in the mode that is illustrated in the following example. Where it is stated that a penalty of penal servitude for 80 days is to be increased one degree, it is meant that the penalty which is next in point of severity —*i.e.* that of penal servitude for 90 days—is to be inflicted. If it is stated that it is to be increased two degrees, then the penalty next but one—*i.e.* penal servitude for 100 days—and, if three degrees, then the penalty next but two—*i.e.* penal servitude for one year—in point of severity is to be inflicted. If, again, it is stated that this penalty is to be mitigated one degree it is meant that that immediately below penal servitude for 80 days,—*i.e.* penal servitude for 70 days—is to be inflicted, and if it is stated that it is to be mitigated two degrees, then the penalty next but one below penal servitude for 80 days—*i.e.* penal servitude for 60 days—is to be inflicted. No penalty, however, that is provided in the law applicable to any offence, can be increased such a number of degrees as would render the punishment capital, unless the contrary is specially stated in the law. Thus, though a sentence of penal servitude for 5 years increased four degrees ought to involve the punishment of death, this is not to be inflicted, but penal servitude for life substituted. Although, again, there are three forms in which the punishment of death may be inflicted, all are to be considered as being one degree of punishment, and when, therefore, it is stated that a capital sentence—no matter in which of the three forms it was to have been carried out—is to be mitigated one degree, penal servitude for life is always to be inflicted. The full extent required by the law to warrant an increase in the degree of punishment must always be clearly proved before such increase is permitted;—*e.g.* embezzlement of 30 *yen* is punishable by penal servitude for one year, whereas if the sum be 40 *yen* the punishment is increased one degree, that is to 1½ years, but if the amount fall short of 40 *yen* by ever so small a fraction, the increase shall not take place.

Revised Code, Sec. 84.

Imperial Privileges.

New Code, "Imperial Equipage and Presence."

All laws relating to the Imperial privileges shall extend, not only to the Emperor, but also to the Emperor's father, mother, grandmother and consort, and any punishment provided for violation of the Imperial commands shall, reduced one degree in severity, be inflicted for violation of those of the Emperor's relatives herein mentioned.

Participators.

New Code, "Participators." Revised Code. Sec. 88-89.

Those whom the laws declare to be "Participators in a crime" are to suffer the legal punishment provided for such crime, but reduced one degree in the case of capital offences. Where the laws state that a crime is "the same as" (another) the full legal punishment provided for the latter shall be inflicted. Where the laws state that an offence is to be considered as coming under the category of laws applicable to (e. g.) bribery the legal punishment shall be inflicted, but it is not to exceed penal servitude for 10 years; where, however, a case is referred directly to those laws the full extent of the punishment must always be carried out.

Superintendents and Custodians.

New Code, "Superintendents and Custodians."

Responsible Superintendents are those who have particular departments of the Government under their control; responsible custodians are those in charge of treasures, storehouses and the like.

Family Servants.

Revised Code, Sec. 9.

"Family Servants" include all the employees of every degree in the households of noble, *samurai* and commoner alike.

Restitution and Forfeiture of Goods.

New Code, "Restitution and Forfeiture of stolen goods."

In all cases of transfer of property where guilt attaches both to the giver and receiver, in those of bribery, whether for a lawful or an unlawful object, and in those where a person is found in the possession of prohibited goods (*e.g.* opium), such property, bribes or goods, shall be forfeited to the Government, but goods which have been obtained by one person from another by such unjust means as violence, threats, fraud, extortion or the like, shall be restored to the rightful owner who has been so deprived of them. The proceeds of a robbery—no matter of what nature—that may be found in the possession of the thief, or in that of a person to whom he has transferred them, or who has acquired them otherwise than by purchase in open market at a fair price, irrespective of the number of hands through which they may have passed since the commission of the crime, or to whom they have been given by the thief as gifts or in satisfaction of previous debts, shall in all cases be restored to the rightful owner. Any property, also, that a thief may be possessed of, shall, if he have already made away with the proceeds of the robbery, be devoted to reimbursing the person on whom the robbery was committed. The value of stolen property is for purposes of punishment always to be estimated at its medium market value at the time and place of the robbery.

Revised Code, Sec. 51.

Revised Code, Sec. 53.

Revised Code, Sec. 56-58.

Revised Code, Sec. 55.

Contradictory Laws.

New Code, "Crimes differently described in the Particular Laws."

Crimes to which there is a law in the general body of the codes specially applicable shall always be decided according to such law, even though it may appear to differ from any of the General Laws in this division. When a crime to which there is a law specially applicable is in itself an evidence of a design to commit another and more serious crime, punishment shall be imposed according to the law bearing on the latter and not the former. If an offence is committed under aggravating circumstances of which the offender was himself ignorant at the time of commission, then only the punishment due in ordinary cases is to be inflicted, while, on the other hand, the advantage of any remission of punishment provided by the special law applicable to the offence when committed under extenuating circumstances, shall always be allowed to an offender, even though he may at the time have been ignorant of such circumstances. Examples of these two cases last mentioned are: A nephew striking an uncle from whom he has been brought up apart, and of whose personality he was ignorant, shall be punished only for an assault in ordinary cases, instead of for an assault on Family Seniors; while a father striking his son, though under the impression at the time that the son was a stranger, shall not render himself liable to any penalty.

Determination of Cases to which there is no Law Applicable.

New Code, "Cases to which there is no law applicable."

In case of the commission of any offence to which there can be found no law applicable, the degree of punishment that is to be inflicted for it is to be determined by an accurate comparison of the case with others already provided for in the laws. Such punishment must, however, be reported to and approved of by the Emperor before being carried out. Whenever the special circumstances attendant on the commission of any crime to which there is a law applicable seem to be of such a nature as to render the offender deserving of special clemency, mitigations may be made in the degree of punishment provided in the law, but they must not exceed five in number.

Notification No. 184 of December 18th, 1874.

CHAP. II. DOMESTIC LAW.

The literal meaning of the term in the original which I have translated 'Domestic' is 'House and Marriage,' and the laws contained in this chapter consist for the most part of a very short selection from the three first books of the Fiscal and from the second book of the Ritual Laws in the Tsing code, respectively, entitled 'Enrolment of the People,' 'Lands and Tenements,' 'Marriage,' and 'Miscellaneous Observances.' They are comprised in eleven sections of the New Code, and, thirteen chapters of the Revised Code, and in summarizing them I shall classify them according to the above headings.

Lands and Tenements.

The offences treated of in the laws thus headed are of three kinds: (*a*) Unfair levy or assessment, or wilful evasion of payment of the land tax: (*b*) Fraudulent mortgage or disposal of lands: (*c*) Injuries to crops, etc.; and the following are the punishments respectively provided for them.

New Code, Partial Assessment of Land Tax.

Unfair levy or assessment of the land tax on the part of officials of any grade, penal servitude for 50 days or, if the offence has been committed for a bribe, such heavier punishment as the amount of the bribe, if treated as goods acquired by common robbery would involve.

New Code, "Fraudulent concealment of produce of land."

Misrepresentation of the value of land with a view to evade payment of the land tax and defraud the Government, penal servitude for 30 days, for any extent up to five *se* so misrepresented, one degree of severity being added to this punishment for every additional five *se*, until the maximum penalty, that of penal servitude for 100 days is reached. The land so misrepresented is to be confiscated, and any arrears, of which payment had been evaded prior to the discovery of the offence, are to be collected from the offender.

Revised Code, Sec. 109.

Tampering with the official Land Register, penal servitude for 1½ years, with a similar reservation to that in the first instance in case the offence is committed for a bribe.

New Code, "Theft and sale of Lands and Tenements."

New Code, "Second mortgage or sale of Lands and Tenements."

New Code, "Destruction of implements, plants, or fruit."

Fraudulent disposal in any way or acquisition of the lands or tenements of another, mortgaging a second time land or tenements that have been already pledged to the full extent of their value, re-selling any that have already been disposed of, or wilful destruction of agricultural implements, growing trees, plants or vegetables, shall be treated as common robbery and punished accordingly in proportion to the amount that has been acquired by such fraudulent mortgage, or re-sale, or to the value of the articles destroyed, the punishment being, however, limited in the case of the offence first mentioned to penal servitude for 10 years, and in all cases to be increased one degree in severity if the offence be committed against the Government.

New Code, "Second Mortgage or sale of Lands and Tenements."

Refusal to return land mortgaged on the mortgagors tendering payment of the bond in full at the proper date, penal servitude for 30 days. In the both this and the previous cases the offender is, in addition to undergoing the legal punishment, to forfeit to the rightful owner any gain which he may have unlawfully acquired by his fraud or detention of the land.

New Code, "Destruction of Implements, plants and fruit."

Revised Code, Sec. 110.

Inadvertent destruction or loss of Government property shall be treated as common robbery, but the punishment contained in the law relating thereto shall be reduced three degrees in severity. No penalty shall attach to the inadvertent destruction of private property, unless that of standing crops caused by animals, in which case the persons responsible for the custody of said animals carelessly let loose, shall be punished for Pecuniary Malversation to the extent of the value of the property that has been so destroyed. In all these cases full restitution of the value of the property destroyed must be made to the owner, whether the Government or a private individual.

Revised Code, Sec. 111.

Unauthorised removal of flood gates or dams, or breaking of river embankments shall be punished according to circumstances either as a grave or trivial Impropriety, under the law relating to Improprieties that is contained in the chapter on Miscellaneous Offences.

Enrolment of the People.

The laws comprised under this head also relate to three classes of offences, namely, those connected with Inheritance and Succession, Wanton Disposal of Family Property, and Absconding. The offences described in them with their penalties are as follows:—

New Code, "Violation of Law of Inheritance."

Discarding without due reason the son of a wife in favour of that of a concubine, penal servitude for 90 days, the rightful heir to be reinstated.

Discarding an adopted son, unless in favour of a natural child born after the adoption had taken place, penal servitude for 2 years.

Revised Code, Sec. 112.

Abandoning a natural or adopted child, penal servitude for 100 days, a step-child, penal servitude for year, and a child, adopted for the sake of the money thereby obtained, penal servitude for 10 years.

Revised Code, Sec. 113.

Revised Code, Sec. 114.

Procuring or assisting in any way to procure abortion, penal servitude for 100 days. In none of these offences shall the offender, if a female, be allowed to commute the punishment of penal servitude by the payment of a fine.

New Code, "Unauthorised consumption of property by son or younger brother."

Revised Code, Sec. 115.

Wanton disposal or consumption of the property of a parent by a son, of that of an elder by a younger brother, or of that of any member of a family by a junior member thereof or by a servant, or of that of the superintendent of any religious community—male or female—by the members thereof, penal servitude for 10 days for each *yen's* worth of property so disposed of, the maximum punishment being, however, limited to penal servitude for 100 days.

Revised Code, Sec. 115.

New Code, "Absconding."

Revised Code, Sec. 117.

Absconding from the place of registration, penal servitude for 80 days, but this punishment may be commuted if the offender return and give himself up to the authorities within two years. On every repetition of the offence after the second, an increase of one degree of severity is to be made, until the maximum penalty of penal servitude for 1 year is reached. Increases in the degree of severity shall also be made if the offender be a *samurai* (when he shall be degraded) or if he absconds to foreign countries. Domestic servants of any description absconding from their master's employment shall be punished by penal servitude for 30 days.

New Code, "Absconding of domestics."

Marriage and Miscellaneous Observances.

The offences punishable by the laws comprised under the remaining two headings of this section are—in respect to marriage—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

New Code, "Ejection of a son-in-law and marriage of daughter."

New Code, "Concealment of death of parents or husband."

ejection of a son-in-law without due reason and giving daughter in marriage to a second husband, penal servitude for 90 days, the second husband being considered a participator in the crime if aware of the unjust ejection of the first; engaging in marriage during the period of mourning for parents or grandparents, penal servitude for 100 days; and—in the case of miscellaneous ritual observances—concealment of the death of parents or husband and not going into mourning, penal servitude for 1 year, and falsely reporting the death of parents or grandparents, penal servitude for 100 days.

(To be continued.)

ASIATIC SOCIETY OF JAPAN.

A regular meeting was held at the Grand Hotel, on Wednesday the 14th instant, Sir Harry S. Parkes, the President of the Society, in the chair.

The minutes of the previous meeting held at Tôkiô on the 28th February having been, upon motion duly made and seconded, taken as read, the Secretary announced that he had received from Dr. Geerts two copies of his pamphlet on "The Mineral Waters of Japan." Dr. Stuart Eldridge then read his paper "Notes on the Crania of the Bootans of Formosa," illustrating it with specimens and also with a series of diagrams on a screen, by aid of a large magic lantern.

The President remarked that Dr. Eldridge's paper possessed peculiar interest on account of the novelty of the subject, which related not only to the Bootans but to all the aborigines of Formosa. Of these there are two divisions—those who have been brought under the influence of Chinese civilization, and those who are still in a savage condition. The Bootans form one of a cluster of eighteen small tribes—if tribes they should be called—belonging to the latter division and occupying the extreme south of Formosa. Craniology will be of material assistance in determining from whence the Formosan aborigines came, and Dr. Eldridge, he believed, was the first contributor of evidence of that nature. Language was of course another important guide, and the researches yet made into the dialects of the Formosa aborigines revealed an intimate connection with the Malayan language. The civilized aborigines are fast losing their own language and are replacing it by Chinese. Enquiry into the languages of the savage tribes is in its infancy, but Mr. Bullock and Mr. Steere agree in tracing a distinct affinity to the Malay, while Mr. Thomson believes that they not only resemble the Malay but also the languages of the Phillipines, New Guinea and New Zealand. There is a considerable difference in the dialects of the uncivilized aborigines, but Mr. Steere remarks that they all observe the same custom of tattooing some part of their body and of cutting off and preserving the heads of their enemies.

The President felt that the Society was much obliged to Dr. Eldridge for his paper, and he hoped that he would accept the thanks of the meeting for the trouble he had taken to explain the subject by means of his interesting diagrams.

The meeting then separated.

A new and original idea has been started in London; we do not say that it has been put in practice. It is that of a conversational *ménu* at dinner-parties. "A list of subjects "to be discussed is presented to each of the guests," says *Truth*, "so that the ingre- "dients of the feast of reason and the flow of soul are as clearly "defined as the number of *entrées* and *entremets* composing the "material banquet. The results of such an arrangement must "depend on whether general conversation is insisted upon, or "whether the dinner-party is formed as usual of many pairs, who "carry on a conversational duel under cover of the prevailing buzz. "In the latter case the programme would probably soon be "exhausted, if regard were paid to Lord Chesterfield's advice on "the appearance of a difference of opinion, to bow and change the "conversation; in the former the plan would surely minister to "the apotheosis of some bore." We only wonder that a move is not made to keep a Spelling-bee going all dinner-time. It could scarcely be less irksome than a conversation by rote and rule.—*Shanghai Courier.*

THE VOLUNTEER MOVEMENT.

A meeting of residents was called by of the Committee appointed, in the Grand Hotel on the evening of the the 13th instant, upwards of sixty gentlemen being present.

Dr. Eldridge proposed that, Mr. Dodds should take the chair; Mr. Dodds declined with thanks and Mr. Litchfield was then elected Chairman, and Mr. S. D. Hepburn was requested to act as secretary for the occasion.

The Chairman stated the business of the meeting, which was to hear the report of the Committee appointed at the meeting held last week.

General Van Buren said he had been requested by the Committee to lay before the meeting a report of such proceedings as they have held. He himself had received a visit from the *Gonrei* of Kanagawa, who expressed his disapprobation of the movement. He then wrote the following note to the rest of the Committee.

Yokohama, March 8, 1877.

GENTLEMEN,—This A. M. I was waited upon by Mr. Nomura Yasushi, Governor of Kanagawa, who warmly urged me to abandon the project of forming a Military Company as proposed, saying that he was confident such an organization would create bad feeling among the Japanese people, and be viewed with a great disfavor by the Government.

He was referred to the removal of the Foreign troops and spoke of the universal satisfaction produced by such removal, and said he should greatly regret to see any misunderstanding or jealousy now created by a movement of the character indicated.

I assured him that our purpose was recreation and military exercise, to which he replied that he did not doubt my assurances, but the people could not well be apprized that such was its only purpose, and he again strongly urged me to use my influence to prevent the organization.

I told him that of course if the matter was viewed by his Government and people in the light represented by him, it would not become me, especially while occupying an official position, to persevere in forwarding the movement, and that I would lay his statements before the Committee,

I am Gentleman,

Very respectfully yours,

THOS. B. VAN BUREN.

To Messrs. Keswick, Kraetzer, Zappe, Eldridge, Brewer, and Geoghegan, Committee on organization of proposed Military Company.

Thereupon the committee met, and after some discussion took this action:—

At a meeting of the Committee appointed by the Meeting of Citizens, called to consult as to the propriety of forming a Military Organization for recreation and drill, &c., held at the Yokohama United Club (all the members present), on the 9th March instant, a communication from General Van Buren to the Committee detailing a conversation held by him with the *Gonrei* of Kanagawa, in which the latter expressed his wishes that the project might be abandoned, was taken into consideration. The following resolution was proposed by Mr. Kraetzer:—

"That another meeting of the Community be called for Tuesday the 13th instant at 5 o'clock p.m. at the Grand Hotel, and at that time this Committee tenders its resignation, with a statement of the reasons for so doing.

The General thought that what he had already stated would be sufficient exposition of the reasons the Committee had for wishing to retire, but he desired to say a few more words. During the conversation with the *Gonrei* he (General Van Buren) reminded him of the recent notification issued by the Japanese, warning foreign residents not to be alarmed when the fire-bell was rung to call out the police force in sudden emergency. If this was not a proof that our safety was likely to be endangered through the civil troubles in the land, the speaker hardly knew what would be. When the natives themselves took such protective steps, foreigners could hardly help noticing them. The *Gonrei*, in answer to this, said that at the time this notification was rather out of place; it had, however, been long before resolved upon and had no relation whatever to the present troubles, and was merely a police matter. This was apart from the supposition that the settlement is in any danger; that it was so no one imagined. The speaker then remarked that the action taken by the four Consuls on the Committee could not be gainsayed; their official capacities interfere with that free fulfilment of the duties imposed upon them in getting up this organization.

With regard to the article in one of the evening newspapers, he, (the speaker) thought it right to say he did not quite concur with the remarks made. He did not profess to be well up in British law, but he could not feel persuaded that it in any way prevented British subjects entering into any military organisation. He did not think the statute, if there were any such, referred to subjects residing here, but only reached those in the mother country itself.

The position taken by the Japanese authorities appeared to be altogether an unwise one; it was a pity they should have taken

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it. A tennis club, two race clubs, a cricket club, a Swiss rifle club and many other like associations existed here, yet who could say that the foundations of the Imperial Government were in any ways affected thereby? He apprehended that if at any time 200 of our citizens were to form into a company and pass in array through the streets towards the parade ground, it would cause no more consternation amongst the people than the witnessing of any other of our amusements being carried on. (Applause.) It was stated in an evening paper leader that whichever side in the present conflict might be victorious, the foreigners resident in Japan were very safe, and that if they were not, an armed body like that proposed to be formed could do no good. The first of these statements was rather doubtful; with the second, every one must of course agree. In every one's experience of civil warfare, and in any sudden calamity, there were found to exist a certain class of camp-followers, or pilferers, whose living was made by taking possession of other peoples' property whilst the owners had no time to attend to it, and of how great service might the corps be in bringing about the suppression or extirpation of these gentry? Such were his personal opinions. There was nothing in the movement to alarm the Japanese; he was greatly mistaken of any such idea had been present in the minds of any present at the last meeting. Had the officials left it alone, the orgainzation might have been a success and might have prospered; what it might be now could not tell; he washed his hands of it. The action of the Committee had been such as had described, and must meet with the approval of the meeting.

He would put the following resolution to the meeting:

Resolved—That the purpose of the proposed organization should be military exercise, recreation and rifle practice, and to be called out for the maintenance of order in case of any public calamity, such as a great fire, etc.

The Chairman then spoke a few words in approval of the Committee's actions in the matter and thought it would be a great pity were the movement to fall through on account of their retirement, or any interference on the part of the Japanese. The very idea of this interference should stir up the souls of every man and act as an incentive to the furtherance of this object. The *Gonrei* of Kanagawa was most likely acting on his own account, and without instructions from head-quarters. The Chairman knew of nothing in the British law hindering British subjects from bearing arms and doing with them what they liked. The Chairman called upon the other residents present to give their opinion.

General Van Buren remarked he thought it not inappropriate to state that the British Chief Justice in the East was a member of the volunteer corps in Shanghai.

Mr. Marks proposed that a volunteer corps should be formed in Yokohama. Mr. Drummond Anderson seconded, and the motion was carried unanimously.

Mr. Cobden proposed that the following gentlemen be elected as a committee: Dr. Eldridge, Messrs. Litchfield, Brewer, Goeghegan, Mottu, Evers, and Dames. Mr. Drummond Anderson seconded the proposal, which was carried.

Dr. Eldridge proposed that it should be left in the power of the Committee to elect another member in the event of any vacancy in their number, without reference to a general meeting. This motion was carried, Mr. Newberry seconding it.

This concluded the business, and after a vote of thanks to the Chairman the meeting separated.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Saturday, March 10th, 1877.

REGINA *v.* ELIZABETH SCARFIELD.

The accused is a British subject, and was charged with concealing the birth of her child. She was a servant of a passenger on board the American barque *Annie W. Weston.* The offence was committed on the morning of the 12th of February last, when the vessel was in Yedo Bay, inside a line drawn between the two Points of Sagami and Susaki which form the entrance of the Bay. The case was tried summarily under the provisions of Section 70 of the China and Japan Order in Council 1865. The Counsel for the accused in his defence objected to the jurisdiction of the Court, and the question was whether it was competent for a British Court to deal with the accused.

The Court held that it was competent to do so.

Judgment was delivered as follows:—

In this case the accused is charged with the offence of endeavouring to conceal the birth of her child on the 12th of last month. That the offence was committed is proved, but on account of the question of jurisdiction raised by the Counsel for the defence, it is necessary to go somewhat minutely into the facts of the case. The accused is a British subject. At the time the offence was committed she was on board an American merchant ship. She was not one of the crew of that ship, but was engaged in Cardiff as a servant of the master's wife, who was a passenger on board. When the offence is charged as having been committed, the vessel was on a voyage from Cardiff to this port; she arrived in this port on the evening of the same day. The question of her exact position at the time will be referred to hereafter. The fact that the accused was delivered of a child that day is proved by her own confession, by the evidence of Dr Wheeler who made a medical examination of her, and by the evidence of the master and his wife who witnessed in her cabin traces of a recent delivery. The time at which she was delivered is proved to have been five o'clock that morning; this is proved by her own statement that such was the time, corroborated by the evidence of Dr Wheeler, who saw her on the evening of that day and who is able to say that she was delivered within twenty-four hours at most from the time he saw her. The secret disposition charged in the summons is the casting of the body into the sea. That it was cast into the sea is proved by the accused's own statement, corroborated by the evidence of the master as to marks of blood on the cabin window, and there being no child in the cabin when he visited it with his wife. I find as a fact that the child was dead when the body was so cast into the sea. The evidence on this point is the positive statement of the woman, which is corroborated by the evidence of the master's wife who did not hear the child cry, although her cabin was so close that she would probably have heard such a cry. The time at which the body was cast into the sea, I find as a fact to have been between five and half-past five that morning. The accused stated to the doctor that she kept the child until 8 o'clock, but the child had disappeared before that hour. The body seems to have been passed through the cabin window, and from that window it would seem that it could only be passed into the sea by some person standing outside the window between it and the rail, except when the vessel was lying over on the port tack, when anything thrown out would fall into the sea. The vessel was in this position between five and half-past five, and taking all the circumstances into account I find that the body was thrown out between those two points of time. That the object of so casting the body into the sea was to endeavour to conceal the birth of the child is clearly proven.

Now I find upon the evidence of the pilot that at four o'clock that morning the ship was in Yedo Bay, inside a line drawn from Cape Sagami to Cape Susaki, and that from that hour until her arrival in Yokohama she was not at any time outside that line. At half-past four she was about two miles and a half inside that line; at five o'clock she was right abreast of Kaneda Bay, still further inside that line. At half past five she was over to the eastward—parallel to her position at five—no further in. Yedo Bay is completely enclosed by the land except at the entrance. The points which form the entrance to Yedo Bay are Cape Sagami and Cape Susaki. Cape Sagami is the western head and Cape Susaki the eastern. Sagami point is about twenty miles from Yokohama anchorage—Susaki point about twenty eight miles. The entrance to the Bay is about nine miles across from Sagami Point to Susaki Point. One can see across from point to point if on the land If in a ship on one side one can see the sails of a ship on the other side, but not her hull. From one side one can see the land on the other side.

Upon these facts the question is raised whether this Court has jurisdiction over the offence.

It may be taken for granted that if the vessel at the time this offence was committed had been on the high seas, this Court would not have had any cognizance of the offence. The accused to all intents and purposes would have been on American soil, and although—the accused being a British subject—it is competent for the Parliament of Great Britain to legislate for such offences, so as to render them cognizable by British Courts, wherever committed, it has not done so; and the English Courts of Common Law would therefore have no jurisdiction. But a difference has always been made in the case of a vessel coming within the waters of another State. The vessel and all on board of her are then considered to be subject to the law of the country in whose waters she is, and in the absence of Treaty it is competent for the country in whose waters she is to exercise jurisdiction over her and all on board. Some countries decline to do so, but in the absence of Treaty it is conceded that they have the right to do so, and the question arises—what are the waters within which such jurisdiction will be exercised?

Wheaton says ("International Law," Pt. 2, c. IV, s. 6):—
"The maritime territory of every State extends to the ports,
"harbours, bays, mouths of rivers, and adjacent parts of the sea
"inclosed by headlands, belonging to the same State. The general
"usage of nations superadds to this extent of territorial jurisdiction
"a distance of a marine league, or as far as a cannon-shot will reach
"from the shore, along all the coast of the State. Within these
"limits, its rights of property and territorial jurisdiction are absolute,
"and exclude those of every other nation."

I regret, in dealing with this question, that I have not the benefit of the complete judgment of the Lord Chief Justice in the recent case of the *Franconia.* From the portions of it, however, which are given in the *Mail* newspaper, I am satisfied that it in no way affects the question of jurisdiction over vessels in the "ports, "harbours, mouths of rivers and adjacent parts of the sea inclosed by "headlands," referred to by Wheaton: that it only refers to the waters of the open sea which wash the shore to the extent of a marine league from the coast, with regard to which the judgment, as I understand it, is that while Great Britain has an undoubted right by legislation to give jurisdiction to her courts over foreigners

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

on board foreign vessels at that distance from the coast, she has not done so, and such Courts have no such jurisdiction at Common Law.

With regard, however, to enclosed waters, that judgment, it appears to me, leaves the law as it was. Now, as to the right of a nation to exercise jurisdiction over vessels coming within such places, Sir R. Phillimore ("International Law." Part III, c. VII., s. CC.,) says: "Great Britain has immemorially claimed "and exercised exclusive property and jurisdiction over the bays "or portions of sea cut off by lines drawn from one promontory "to another, and called 'the King's Chambers;'" and the claims of the United States, as stated by Mr Chancellor Kent, cited in the following section, are, as regards the places of jurisdiction, no less extensive. The question then is, what jurisdiction within such places has been actually exercised by English Courts? Upon this subject there is the following passage in "Russell on Crimes, and Misdemeanors" (vol. I, p. 153): "It is clear that upon the "open sea-shore the Common Law and the Admiralty have alternate "jurisdiction between high and low water-mark; but it is sometimes; "matter of difficulty to fix the line of demarcation between the county "and the high sea in harbours, or below the bridges in great rivers. "The question is often more a matter of fact than of law, and deter- "minable by local evidence; but some general rules upon the point "are collected by Mr East. He says, that 'in general it is said that "'such parts of the rivers, arms, or creeks are deemed to be within "'the bodies of counties *where persons can see from one side to the* "'*other*. Lord Hale, in his treatise *De jure maris*, says that the "'arm or branch of the sea which lies within the *fauces terræ*, "'where a man may *reasonably discern* between shore and shore, "'is, or at least may be, within the body of a county. Hawkins, "'however, considers the line more accurately confined, by other "'authorities, to such parts of the sea where a man, standing on "'the one side of the land, *may see what is done on the other*. "'And the reason assigned by Lord Coke in the Admiralty case in "'support of the county coroners' jurisdiction, where a man is killed "'in such places, *because that the county may well know it*, seems "'rather to support the more limited construction. But at least, "'where there is any doubt, the jurisdiction of the Common Law "'ought to be preferred.'"

Subsequent cases appear to have decided that in such places, the Admiralty and the Common Law Courts have concurrent jurisdiction. But however that may be, the case of R. *v.* Cunningham (28 L. J., M. C., 66) decided in 1859, is an authority for the exercise of jurisdiction by the Common Law Courts in any of the places above referred to. That was the case of a felony committed by American citizens in an American ship in the Bristol Channel. They were tried at the Assizes for the county of Glamorgan and convicted; and, upon a case reserved for the consideration of the Court of Crown Cases Reserved, it was held that the conviction was good. In view of the terms of the judgment, it is only necessary to say that the spot in question was in the Bristol Channel between the Glamorganshire and Somersetshire coasts inside of two islands which had always been considered part of the parish of Cardiff, and about ten miles or more from the opposite shore of Somersetshire. That from the place where the ship was, people on board could see the coast of Somersetshire on a clear day. In delivering the judgment of the Court, the Lord Chief Justice (Cockburn) says:—

"In this case we are of opinion that the conviction is right. The "only question with which it becomes necessary for us to deal is, "whether the part of the sea on which the vessel was at the time "when the offence was committed forms part of the body of the "county of Glamorgan; and we are of opinion that it does. The sea "in question is part of the Bristol Channel, both shores of which "form part of England and Wales, of the county of Somerset on the "one side, and the county of Glamorgan on the other. We are of "opinion that, looking at the local situation of this sea, it must be "taken to belong to the counties respectively by the shores of which "it is bounded; and the fact of the Holms, between which and the "shore of the county of Glamorgan, the place in question is situated "having been always treated as part of the parish of Cardiff and as "part of the county of Glamorgan, is a strong illustration of the "principle on which we proceed—namely, that the whole of this inland "sea between the counties of Somerset and Glamorgan is to be con- "sidered as within the counties by the shores of which its several "parts are respectively bounded. We are, therefore, of opinion that "the place in question is within the body of the county of Glamor- "gan."

Now in the present case there was no evidence as to any part of Yedo Bay being treated as belonging to any province or district on shore, but I understand the reference in the judgment to the place being treated as the parish of Cardiff to have been made, as there stated, by way of illustration and for no other purpose. The principle of the judgment would be the same if no evidence had been given on that point. The principle is that the Bristol Channel between the two counties formed part of the counties on either side, and therefore of course that it formed part of the realm. That principle is not at all shaken by the subsequent case of R. *v.* Anderson (L.R., 1, C. C. R., 161.) which was the case of an American citizen serving on board a British ship causing the death of another American citizen serving on board the same ship, under circumstances amounting to manslaughter, while the ship was in the river Garronne within French territory. The Court of Crown Cases Reserved held that the ship was within the jurisdiction of the Admiralty and that the offence was triable in England, but all the judges in giving their decision admitted that the French Courts might have exercised jurisdiction if they had thought fit.

The situation of the place in which the ship was in the present case would, I consider, have brought the offence within the principle of R. *v.* Cunningham if the land surrounding the bay were British soil. The case of the United States *v.* Wiltberger, it appears to me shows that the United States Law is the same, for although the law as laid down in that case appears to have been altered by Act of Congress, such alteration is only so far as to give jurisdiction to American Circuit Courts over American ships in foreign tidal rivers, and not to take away the jurisdiction of State Courts over all ships in the tidal rivers within such State (Kent's Commentaries, 363).

Such being the law in England and the United States, we have to consider what is the law when the case happens in Japan. By International Law as recognized by Great Britain and the United States, Japan would, in the absence of the Treaty, have cognizance of the offence. The question then is, what is the effect of the Treaties which she has made with Great Britain and the United States. The words of the Treaty with the United States (of the 29th July 1858) are: "Americans committing offences against Japanese shall be "tried in American Consular Courts, and when found guilty shall "be punished according to American Law." In the Treaty with Great Britain (of the 26th of August 1858) the provision made is. "British subjects who may commit any crime against Japanese "subjects or the subjects or citizens of any other country shall be "tried and punished by the Consul, or other public functionary au- "thorised thereto, according to the laws of Great Britain." The effect of these Treaty stipulations and their interpretation as evidenced by usage, is that Japan has left to the two countries complete criminal jurisdiction over their subjects and citizens. She has retained no part of that jurisdiction herself. The only question is how much has she given to each. Now, before the Treaties Japan would have had the same jurisdiction over an offence committed by a British subject in an American ship in her waters as she would have over an offence committed by a British subject on land. It is impossible to bring any evidence as to the actual exercise of jurisdiction, for there was no foreign intercourse before the Treaty upon which any such case could arise. In a Treaty then, granting jurisdiction over British subjects in general terms—for the treaty does not say anything about the place of the commission of offences—it appears to me that it is to be inferred that she gave jurisdiction over offences as well when committed in her territorial waters as when committed on land, and that Great Britain has now all the jurisdiction over offences committed by British subjects that, were it not for the Treaty, Japan herself would have had. This does not in the least derogate from the jurisdiction which the United States would have over the offence as being committed on board an American ship. The jurisdiction of the United States over such an offence is unquestioned and unquestionable. Just as in R. *v.* Anderson, English Courts exercised jurisdiction over Americans for offences committed in a British ship within French territory while admitting that the French Courts could also have have exercised jurisdiction, so the American Courts could exercise jurisdiction over British subjects for offences committed in American ships in Japanese waters without denying that British Courts (taking by Treaty the place of Japanese Courts) might also exercise jurisdiction. There is here no question of dispute between the British Courts and the American Courts. The charge was laid in this Court through the United States Consul-General, and I have the satisfaction of knowing that my colleague entirely concurs in the view which I now take of our respective jurisdictions.

Japan having, according to the view I have taken, conferred jurisdiction in this case upon Great Britain, the question is has it been conferred upon this Court? and I think it undoubtedly has. By section 64 of the Order in Council 1865, it is provided that every Court may cause to be apprehended and brought before it any British subject being within the district of the Court and charged with having committed a crime or offence in China or in Japan, and may deal with the accused according to the jurisdiction of the Court and in conformity with the provisions of this Order. According to the view I have already expressed as to the position of the ship, I am of opinion that the offence was committed in Japan. The question does not arise whether the offence was committed within or without the district of this Court, for, by section 65 of the Order in Council, the Court has jurisdiction to try in either case.

Upon delivery of the above judgment the accused was sentenced to imprisonment for one calendar month in Her Majesty's Consular jail.

Wednesday, 14th March, 1877.

KONDO HIKOYEMON & HAKII SEIJIRO *vs.* J. E. CARTER.

The parties appeared in person.

The defendant stated that he had been this morning to the *Kencho* thence to the *Saibansho*, and back again to the *Kencho*, but did not see Kobayashi Hidetaro.

Mr J. C. Hall mentioned that a Japanese policeman had been sent by the *Kencho* to Kobayashi's house, but he was not to be found, and that the police had orders to keep a strict look-out for him.

Shimidzu Momuke, a Japanese lawyer, warned to speak the truth, said: I was asked on the 4th November by Kondo and Hakii to go to Mr Carter's house to act as interpreter. Kondo there told me to ask Mr Carter to fulfil his contract, but Mr Carter said that Kobayashi and another Japanese ought to be present, and unless they were he could not pay any money, as they had a document to return to him.

Cross-examined by defendant:—You asked me to tell the Japanese to bring the document. I never went to your house afterwards.

Defendant suggested that the case be adjourned until Kobayashi be found.

Case adjourned to 10 a.m. on the 27th inst.

IN THE U. S. CONSULAR-GENERAL COURT.

Before Gen. T. B. VAN BUREN, Consul-General.

Wednesday, March 14th, 1877.

E. B. WATSON *vs.* WALSH, HALL & Co.

This was a case in which plaintiff sued defendant for $16,000 for having delivered a quantity of bags inferior to the quality they were represented to be.

Mr Dickins appeared for plaintiff, Mr Ness for defendants.

Mr Dickins said that this was a case which he should have liked to have settled out of Court. He was sorry it had come into Court and could not understand why defendants had allowed it to do so. It was unnecessary to go at any great length into the circumstances of the case as there were no assessors; but it might be well to state them briefly. Mr Dickins then proceeded to do so. In the pleading, by a slip of the pen, 8,500 bags had been mentioned instead of 28,500. Defendants admitted that the contract was concluded by the letter of the 11th February, 1876. They denied that the bags were not said to be fit for packing rice. They alleged that they were merely agents of other parties and could not be sued in the matter. This is nothing, for until they disclosed their agents they were liable to suits. The samples, they say, were not shown as samples of the whole of the goods. To show the case clearly, Mr Dickins called upon plaintiff to give his evidence.

E. B. Watson sworn:—I carry on business as a merchant at No. 22, Yokohama. This is a copy of my letter to Messrs. Walsh, Hall & Co. of 11th February, 1876 (produced and read). That is the note from Mr Walsh of 5th February referred to in this letter (produced and read). That, also, is from Mr Walsh to me (produced and read) with regard to the letter of the 11th February. On or about the middle of January, 1876, negotiations for the purchase of these bags were commenced. At that time I was overwhelmed with work in my office and at my request Mr Wilkin understook the whole of the transaction from first to last. Occasionally I met Mr Walsh and Mr Gay, but at no time did I interfere in the matter but left it in the hands of Mr Wilkin. At the time of purchase I was not in need of bags having sufficient to meet all my immediate wants; I therefore considered I was doing them friendly offices when I purchased the bags from Walsh, Hall & Co. In the first arrangement I stipulated that I should have the option of taking delivery within three months. I was disinclined to purchase at that time because I could import direct from the manufacturers in Calcutta on terms cheaper that those of Messrs Walsh, Hall & Co. The first price mentioned was about 19 cents each bag all round. This proposal was never for one moment entertained. At that time owing to silver being of low price in India, bags could be laid down here at 12½ cents each, equally good bags for my purpose. I have since improved them at that price. In the rice trade it is important that all bags in one shipment should be the same. After considerable haggling as to the price, I agreed to take them over through Mr Wilkin at a rate slightly over the price at which I could have imported them from Dundee or Calcutta. About 120,000 were in Yokohama, the balance in Kobe, in all 350,000. Defendants promised to bring the bags from Kobe within 3 months should I desire it. Before sanctioning Mr Wilkin to close that arrangement, defendants furnished me with a list of the prime cost of all their bags. In that list it is distinctly stated there were 28,000 second-hand bags, of which a special sample was furnished. Other samples of the balance of the bags were furnished at the same time. The first arrangement was subsequently altered, and it was agreed by Mr Wilkin and ratified in my letter of the 11th February that the bags should be taken over on the terms stated in that letter. Before this letter was written the samples had been carefully examined by Mr Wilkin and myself together; and samples of the 28,000 second-hand bags were undeniably second-hand, but of excellent quality. We decided to accept the second-hand wholly and solely because there were so few. The prices on the list were undoubtedly the value of good new bags at the place and time of purchase. From the beginning to the end the bags were represented by defendants as new bags, except the 28,000, and were so accepted. These representations were made to me and Mr Wilkin to the best of my belief. Defendants knew that I was engaged in rice shipping; it was a matter of conversation between us. They had furnished me with information and advice regarding the best manner of shipping rice. I recognise that letter (shown). These gunny bags were pressed in bales of 500 each. They were covered with double sacking. The final arrangements for payment were as stated in my letter of 11th February. Payments were to be made immediately on delivery, and deliveries were to be made immediately. We took delivery of the bags without examination within two or three days. To have opened the bales would have destroyed their merchantable character. Defendants pressed me to use the utmost despatch in taking those in Yokohama. I was to pay in sterling 4s. to the dollar for those here, but as the taking delivery occupied several days and exchange slightly improved, I, at the solicitation of Mr Gay increased the rate to 4s. 1d. Of the bags taken delivery of here one bale showed signs of external damage and this we declined to receive, but subsequently it was taken over at a reduced price. Of the Yokohama bags some 300 or 400 were injured through unpacking; these we refused. Subsequently defendant had these repaired and pressed us to take delivery, Mr Gay using very high words in the matter. We still refused. The bags in Kobe were taken over by Browne & Co. at my request with all possible despatch, though delivery was retarded by bad weather. They were about a fortnight in taking the whole lot, of which none were opened. During this delay Mr Gay repeatedly complained of Browne & Co.'s slowness, and they as stoutly maintained in their letters to me that no time was lost. Mr Wilkin's written instructions to Kobe were to despatch the bags by first steamer. Payments were made to defendants after all were delivered, as shown by their receipts. I sent the Yokohama bags to Yedo for use; they were there opened as required. In consequence of reports made to me I went to Yedo and examined the bags and found many of the bales short in count, some of them as much as ten, and in the bales some bags were marked with an Asiatic character, showing that they had been used before. These were, however, unstained and in good order, and suitable for my purpose. I immediately reported the circumstances to defendants, but told them as part of the friendly arrangements made with them that I should not mind it unless fresh discoveries were made. This was in personal communication with Mr Gay, who appeared surprised at the report. Shortly afterwards Browne & Co. reported to me in their letters that the bags, when the bales were opened, were in very bad condition. It had been arranged that the bags were to be used in Kobe and a small portion sent to Nagasaki. About 100,000 were of no use for packing rice. I gave notice to defendants at once (letter produced [30th July, 1876] and read). This is is the answer of defendants (letter 21st July, 1876, produced and read).

Recess till 1.30 p.m.

When the sitting was resumed in the afternoon, Mr Watson continued his evidence as follows:—The survey referred to in the letter of the 16th August (shown) was held, and the result embodied in this report (produced). The letter was from R. G. Walsh of Kobe to defendants in Yokohama. (paper shown) That is the report alluded to in the letter. (Mr Ness objected to this being put in because in was a survey taken by Brown & Co., plaintiff's agents, without the acquiescence of defendant.) The letter shows that Mr Walsh was present at the survey. (The letter read and objection overruled).

Defendant's counsel objected to the admissibility of the paper as evidence, on the ground that the party who made the survey should be produced as a witness.

Mr Dickins said that it had never been objected to before on the part of defendants. The survey having been made in the presence of one of the defendants, it was perfectly admissible for what it was worth, and the letter now produced (August, 19th 1876) was evidence to that effect. (The paper withdrawn for the present).

Mr Watson continued:—I do know the result of the survey. (Mr Ness objected to this, on the ground that the source of information was not stated.) I know by the report of the surveyor in Kobe.

Mr Ness objected again on the ground that it was hearsay evidence, and was derived from plaintiff's own surveyor. His Honour said that this report could not be taken in as evidence unless the surveyor were called in person, or his evidence got otherwise. The report was withdrawn accordingly.

Mr Watson continued:—This is a letter (produced) received from my agents in Kobe, dated 15th August, 1876. In consequence of that information I placed the matter before defendants in the most friendly light, but was eventually compelled to refer the matter to counsel. To the best of my belief I suggested, as the best way out of the difficulty, arbitration. The particulars of demand attached to the petition are substantially correct, but may be modified by closed accounts received from Kobe. Previous to the letter of the 11th February defendants did not inform me that they were agents for any company whatever. Only from a written memorandum to Mr. Wilkin did I know that any one else was interested in the matter. Before these arrangements were made, I did not know that defendants were merely agents. I was certainly led to believe that to defendants alone could I look in case of any after dispute. Other parties had never entered into my consideration. Previous to the letter of the 19th August no intimation of the names of any alleged principals were given to me by defendants. If I had known defendants were merely agents for a principal I should never have entered into the transaction at all; it was altogether a personal consideration. The necessary requisites in bags for shipping rice are, firstly, that they should be new, for the following reasons: Any bag, however slightly stained, a ship's captain would not accept and give a clean bill of lading for, nor would an insurance agent grant insurance with average on the cargo. Secondly, should any stain escape the notice of a ship's captain on this side and consequently that of the insurance agents, any such stained bags taken out of the ship at the port of delivery would, as an absolute custom, be condemned as first class ship damaged rice, and be subject to a reduction even though the rice should be uninjured. Thirdly, as cargoes of rice shipped from Japan are generally sold to arrive, on one sample drawn from the bulk of the cargo (a little from each bag forming the cargo) a mixture of marks is of course detrimental to the interests of the parties. Fourthly, had it been known that I had shipped any rice in second-hand bags it would have been prejudicial to my chances of success in the home markets, and would have been in contradiction to a guarantee sent by me to my agent, and published by the authority of the London Rice Association. Fifthly, any other bags but new are unfit for rice cargo, and a clean bill of lading could not be obtained for stained bags. The greatest care has to be taken in loading rice cargo. There is no export of bagged grain except rice from Japan. This paper was received by me from defendants (shown and read). This was before the purchase was completed. The bags are mentioned as grain bags. With respect to exchange there was no other difficulty than mentioned. Rice in second-hand bags incurs a discount of about 40 per cent in the home markets; but here I would never purchase them. Bags which had been used for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

guano could never be used. I have samples of rejected bags sent from Kobe. They have been in the custody of Mr Wilkin.

To Mr Ness:—The samples of the bags on which the whole purchase was made are now in Court, or rather Mr Dickins has them. Mr Robertson of the Oriental Bank never represented me in the matter of purchase of these bags. Before the contract was concluded Mr Robertson did not give me to understand that defendants were part owners of these goods only. He asked me to stretch a point in defendants' favour. Neither directly nor indirectly part of the goods in question were the defendants'. No declaration of agency was made to me. Mr Robertson gave me to understand that others were interested in the matter. At Mr Robertson's request, at the instance of Mr Walsh, two prices were mentioned. Mr Robertson did not tell me that one price alluded to the part belonging to defendants and the other to the part belonging to other persons. Mr Robertson said that the balance of the bags were on consignment. I agreed at Mr Robertson's suggestion, to give an increased price for the bags which were sole property of defendants, stating that I did so solely in consideration of the kindness done me by defendants in giving advice, &c. As a business man I knew the different kinds of consignments, and certainly thought that defendants had at least some share in the venture. The term *on consignment* does not usually signify that the consignee is agent of the consignor. It does not indicate to what extent the consignee is interested. I had reason to believe that in the bulk of these goods some others had an interest. All my communications with Mr Wilkin were verbal. Mr Robertson had spoken to me about the price which was fixed before the date of this letter (produced, February 5th).

Mr Ness here remarked that Mr Dickins was prompting witness Mr Dickins denied this, and said that Mr Ness should not suspect others of doing as he did. Mr Ness should wear spectacles.

Cross-examination continued:—My responsibility commenced with the letter of the 11th February. I received this list or a copy of it before the completion of the contract. It does say "account of W. H. & Co., M. & Co. and L. & Co.," but these initials inform me nothing of the principals; it conveyed no impression to my mind. I did observe that it is stated "grain bags in hands of" defendants, but it conveyed no special meaning. All the other information from Mr Robertson's memorandum threw no light upon the phrase "in hands of," nor did any of the rest of this list do so. I did not take the trouble to look that I only paid 17 cents for the quantity marked W. H. & Co., for I was convinced there was no difference in the quality of the whole. I took care that 17 cents were paid for no more than 74,000. Had I made a careful examination and computation of the numbers opposite to W. H. & Co, I could have ascertained the number claimed to belong to W. H. & Co., and in the same way to L. & Co. and M. & Co. After the discoveries at Kobe I found that L. & Co. represented Levi & Co., and M. & Co. Morrison & Co., for whom defendants were agents. I examined the description of the goods in connection with the samples. I did observe that some were designated "second-hand" some "new" and some without any designation at all. These I thought must be new because the price opposite represented the cost of brand new bags, and because defendants positively assured me of that fact. The prices of Hessian bags are according to the weight and size of the bag. I examined all the samples carefully. A price was not fixed for one particular mark but for all. The price collectively paid for the bags was proof positive to me that the representations of defendants that they were new were true. I did observe that there were six lots of Hessians marked at different prices.

Adjourned till Friday, the 16th instant, at 10 a.m.

Friday, March 16th, 1877.

Mr Ness continued to cross-examine Mr Watson, who said:—The prices were to be paid partly in sterling. I did not suppose defendants had to remit to London with respect to these goods. The suggestion was from myself. Mention was made that defendants had to remit to London and it would consequently be convenient to be paid in drafts at sight. (Samples put in.) There are eleven, but some are in duplicate. I did not particularly know that there were 16 bags. I do not know particularly that only eleven were given by defendants. Only eleven are mentioned in their memorandum to Mr Wilkin who received them. (Memorandum produced.) It is dated, I notice, January 19th, and mentions 19 samples sent me. The other eight are, to the best of my belief, in the possession of Mr Wilkin. I have no positive knowledge that these eight are samples of Yokohama bags; I believe they are. It is stated that the bales marked Nos. 40 and 147 are represented by no samples. That is the sample marked 139 (shown). That is second-hand turned inside out. I examined these samples with what I considered sufficient care. Mr Wilkin was conducting the transaction and also examined them. To the best of my belief I did examine these samples carefully. (Exhibit 4 shown, list of bags.) The description of this sample is "gunny." I believed these to be new. I judged from the sample. There was nothing to indicate that it was second-hand. I know now that it is second-hand because the marking was concealed previously. It is marked inside. The marks are English, and others which I cannot decipher. I see faults which might have been caused by serving or in manufacture, being often loosely made at the top. This string at the top conveys nothing to my mind; it may have been a tag. That also might be evidence of a tag. There might be half a dozen tags at the top. Had they not been marked inside I would have doubted it. That bag has apparently been mended, but for what reason I don't know. From my knowledge of bags it has also been mended there. We do not object to bags because they have been mended. It is certainly difficult to tell the inside from the outside of a bag owing to differences in manufacture. I have never specially noticed a bag with the seam on the inside. Usually the seam is on the outside. It is in the present case on the inside. Defendants and I had a joint survey on the goods in Kobe now complained of. (Paper produced). That is one of the surveys. One of the lots of which I complain is represented by this second-hand sample, 139. The discovery that the lot consisted of second-hand bags was made before bringing the action. The lot 40—147 mentioned in the list is another of the lots of which I complain, so far as the lots is referred to in the survey. In the memo sending me samples this is described as of the same quality as lot 139, the inference plainly is that they must therefore be second-hand also. About one-half of lot 40—137 was taken delivery of, but I do not know positively that they were really good bags. No. 1—51 is also one of the lots of which I complain as being second-hand. The survey report refers to the whole of the contents, with half a dozen exceptions of lot No. 1—51. (Sample of this lot shown.) That is second-hand. It is marked but it may be a fault of manufacture. It is turned inside out; marked inside and the marks concealed. It is easy to see now that it was turned inside out. In dealing with respectable persons such a minute examination was unnecessary. There is no evidence of its having been used before by indications of its having been sewed or hemmed at the mouth. I swear these samples are in the condition in which they were recieived by Mr Wilkin. The lot 1-51 of which this second-hand bag is a sample is described in the list as "fine sacking" only. At the time of purchasing I believed that they were new. I cannot point out positively Lot 1-26, but believe this to be it without a tag attached. It is stained through the cover being exposed. I can't say whether it is a sample or not. This lot 1-26 is described in the list. I now notice that there are other samples without bags. It was not wholly upon the descriptions in the list and the samples furnished that I purchased the bags, but upon the assurances of defendants that they were in fit condition for packing rice. This was the basis of the whole transaction. I am unable to give you the exact date of this assurance. I was told about their quality in most of my meetings with defendants, probably before and after this list was given me. I cannot say positively. I do not recollect any special interview at which this representation was made. I do not remember the words used beyond that they were completely satisfactory to my mind. I stipulated for new bags, perhaps not directly but it was so inferred. A certain number of loose Kobe bags were rejected by my agents, being stained or eaten by rats, I cannot say whether before or after payment was made. This was made in Yokohama on the 6th March for 210,450 bags, and the balance on completion of delivery, about a week or ten days later.

Mr Ness asked for the production of the correspondence in the month of March from plaintiff to Messrs Brown & Co. Mr Wilkin said no letters had been written relative to these bags, but he was willing to produce the whole of the correspondence.

Cross-examination continued. I did reject some of the Yokohama bags before and after payment. The letter from defendants to me dated 28th March requests me to take delivery of a certain number of repaired Kobe and Yokohama bags. Therefore I know a certain number must have been rejected in Kobe before payment. I refused to receive these bags; this was after payment. The last instalment was before the 28th March, I can swear. I cannot swear that the 1,990 bags were rejected before that date. I do not know as a matter of fact that the iron hoops were all off the bales; I should be greatly surprised to know that they were. I positively deny that they were. I did not open one bale and compare the contents with its sample; it would have destroyed its merchantable character. Had I opened a bale I should have ascertained that they were not so new as represented.

Adjourned till Monday, the 19th instant, at 10 o'clock.

REUTER'S TELEGRAMS.

(Viâ Russia.)

AMERICA.

THE CHINESE IMMIGRANT QUESTION.

London, 1st March, 1877.

The Committee of Congress appointed to enquire into the Chinese Immigrant Question have published their report, in which they recommend that the Treaty between America and China should be restricted to commercial purposes and to the regulation and restraint of the influx of immigrants.

London, 3rd March, 1877.

THE CHEFOO CONVENTION.

The Chefoo Convention is not yet ratified.

RECEPTION OF THE CHINESE EMBASSY BY HER MAJESTY.

The Chinese Embassy have attended a levée and [at a] Drawing-room held by Her Majesty the Queen.

RUSSIAN STEAMERS NOT TO PROCEED TO CHINA.

It is announced that Russian Steamers will not proceed to China this season.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ARRIVAL OF THE FRENCH MAIL.

London, 20th Feb., 1877.—Lord Derby has told the Porte that England will not coerce, nor protect against the coercion of others.

Lords Salisbury and Beaconsfield are opposed to coercion.

London, 25th Feb.—Terms have been arranged between the Governments of Turkey and Servia.

The rumours that the crossing of the Pruth by a Russian Army was imminent, are denied at St. Petersburg, and it is stated that the measures taken by Russia are entirely defensive.

Constantinople, 6th Feb.—The negotiations for peace which were entered into by Midhat Pasha, between the Turks and Servians, have been suspended. The direct cause of Midhat Pasha's fall is unknown. Meanwhile, he has been banished.

London, 9th Feb.—In the Lords last night, Lord Granville urged the united action of the European Powers in coercing the Porte to accept the proposals made by the Conference. The Duke of Argyll and the Marquis of Hartington accused the Government with changing its policy.

London, 10th Feb.—Replying to a question in the House of Commons, Sir Stafford Northcote explained that the omission of any allusion, in the Queen's Speech, to the late disastrous Cyclone in Bengal was due to the absence of Lord Salisbury from London.

St. Petersburg, 10th Feb.—The Russian Press considers it would be needless for Russia to wage war against Turkey, whose fall will be quicker through internal anarchy than from any foreign attack.

London, 12th February.—Liberal organs commenting upon a Blue Book on the Eastern Question, approve of the attitude of Government during the Conference; but attack it for now stopping short of a policy of coercion whereby it could prevent the isolated action of Russia. *The Times* in an article on the Eastern Question says that the country will go with Lord Derby in his policy.

Constantinople, 12th February.—Peace negotiations between Turkey and Servia have been resumed, the Turks having withdrawn their demand for guarantees. Midhat Pasha has arrived at Brindisi and in reply to an English deputation, said he attributed his exile to Russian intrigue.

London, 13th February.—In the House of Commons Mr. Gladstone gave notice that on Friday next he would bring forward a motion asking how Government understands treaty engagements, in view of the dispatch sent by Lord Derby to Sir H. Elliot on the 15th of August last, stating, that in case Russia declared war against Turkey, English could not defend her.

Bombay, 6th February.—The Famine report for the week ending 31st shows 30,000 fewer employed on account of the deterrent scale. Expenditure over twenty lakhs. Prices rather lower. The collection of grass fodder is energetically pursued.

London, 15th Feb.—According to accounts from newspaper correspondents generally, the Russian army at Kischeneff is in a splendid condition, and numbers 200,000 men and 720 guns. Everything is said to be ready to cross the Danube.

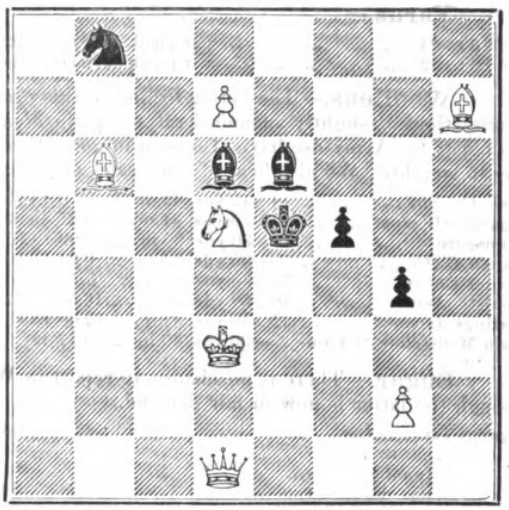
The Khedive has appointed Gordon Pasha Governor of Soudan.

Allahabad, 9th Feb.—Roberts played yesterday at the Allahabad Club giving Colonel Drayson 650 in 1,000, and being beaten by more than a hundred.

London, 16th February.—In the House of Commons Mr. Bourke, replying to Sir R. Anstruther, said that the Sultan of Zanzibar had fulfilled his engagements entered into in a treaty for the suppression of the slave trade.

Belgrade, 15th February.—Prince Milan has despatched envoys to Constantinople to negotiate with the Porte for peace.

Constantinople, 15th February.—The Porte having refused to negotiate with Prince Nikita at Vienna, he has proposed Cattaro, which place the Porte has also declined, and the latter now proposes Herzegovina or Scutari.



London, 16th Feb.—In the House of Commons, the Hon. Mr. Bourke, in replying to Sir Charles Dilke, said the date at which Government would reply to the Russian circular depended on the course of events that might take place, and before expressing its own views Government desired to know the views of other Powers.

The Hon. Mr. Hardy in replying to a motion by Mr. Gladstone respecting the treaty engagements entered into by Government in 1856, said England was not freed from the obligations incurred by the treaties of 1855 and 1871. It would be unjust that Turkey should be left out in the cold, but be saddled with the obligations of those treaties. If Turkey be bound the rest of Europe is also bound. The Hon. Mr. Hardy then said the treaty imposes no duty to wage war for Turkey, but to respect her independence and integrity. He strongly protested against drawing the sword to coerce Turkey into accepting the demands made by the Powers at the conference. The debate was adjourned till Friday next.

PROBLEM.

By C. Bayer.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF J. G. CAMPBELL'S PROBLEM OF LAST WEEK.

White.	Black.
1.—R. to K. B.'s 4th.	K. moves.
2.—Q. to Q. R's 4th.	K. takes Q.
3.—Kt mates.	

Correct answers received from W. B. M. and, W. H. S., Tôkiô, and C. B., Yokohama.

The answer received from C. H. D., Yokohama, is not correct.

Dashing skirmish between Mr. JENAY, one of the finest players in Vienna, and another amateur of that city.

(French opening.)

BLACK (Amateur).	WHITE (Mr. Jenay).	BLACK (Amateur).	WHITE (Mr. Jenay).
1. P to K 4th	P to K 3d	10. Kt to Q B 3d *(a)*	Kt to K Kt 5th *(b)*
2. P to Q 4th	P to Q 4th	11. P to K R 3d	Kt takes K B P
3. P takes P	P takes P	12. K takes Kt	Q to K R 5th (ch)
4. Kt to K B 3d	Kt to K B 3d	13 K to B sq	Kt to Q B 3d
5. B to Q 3d	B to Q 3d	14. B to K 3d	R takes Kt (ch)
6. Castles	P to K R 3d	15. P takes R *(c)*	Q takes K R P (ch)
7. R to K sq (ch)	B to K 3d	16. K to his 2d	Q to Kt 7th (ch)
8. K B to K B 5th	Castles	17. B to K B 2d *(d)*	R to K B sq
9. B takes B	P takes P	18. Q to her 3d	R takes K B P

And Black resigns.

(a) Black prudently abstained from taking the K's Pawn, apprehensive of White's replying with Kt to K's 5th, &c.

(b) Mr. Jenay now assumes the offensive, and keeps up his attack with uncommon ingenuity and spirit to the close.

(c) He had much better have taken with his Queen; he would have gained two Rooks for her, and then, although inferior to White in position, he would have been about equal in force.

(d) He would evidently have been mated on the move if he had moved his King to Queen's 3d.

TRAVELLERS, MISSIONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper, in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, *(Horniman's Museum.)* Forest Hill, LONDON. [ADVT.]

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The improvement communicated in our last report has made further progress and in some articles a fair business has been done at better prices. *Yarns* 16/24 have been sold to a fair extent and quotations show an advance; 28/32 attract a little more notice, but the offers made do not lead to much business; some sales of 38/42 are reported at very low prices. For *Shirtings* there is a small demand at slightly higher rates, but there is as yet no perceptible animation in this important branch of the import trade. For *T. Cloths* and *Velvets* there is some enquiry at current rates; other articles do not attract much attention.

Grey Shirtings:—							White Shirtings:—	
7 lbs.	38½ yds.	39 in.	per pce.	$1.37½	to	$1.67½	60 to 64 reed 40 yds. 35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.55	to	2.20	Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb. 0.60 to 0 87½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55	to	2.35	Black Velvets	7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	1.95	to	2 45	English Drills 15 lbs. 40 yds, 30 in.	2.55 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45	to	1 60	Taffachelass 12 yds, 43 in.	1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25		

Yarns.—

No. 16 to 24	per picul...	$29.00 to 32.50	No. 38 to 42 ... per picul... $33.00 to 38.00
No. 28 to 32	per picul...	$30.00 to 34.00	Reverse Twist 16-24 ,,

Woollens.—The better feeling in this market mentioned in our last has fairly maintained itself, and transactions at slightly advanced rates in plain *Mousseline de Laines* and *Black Orleans* have taken place. *Blankets* for Army use have also been in good demand, and obtained prices ranging from 42 to 47 cents according to weight. We also hear of some sales of *Army Cloth* at advanced rates, but stocks are very small.

Plain Orleans	40—42 yds.	32 in.	5 50	to	7.00	Figured Mousseline de Laine	30 yds.	30 in.	0.25	to 0.30
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.25	Multicolored ,,	30 yds.	30 in.	0.30	to 0.36
Shimagoro	30 yds.	30 in.	4.00	to	5.25	Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80	to 1.20
Italian Cloth	—30 yds.	32 in.	0.24	to	0.31	Presidents	54 in.	to 56 in.	0.60	to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75	to	6.00	Pilots	54 in.	to 56 in.	0.45	to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50	to	17.50	Union	54 in.	to 56 in.	0.60	to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.39	to 0.45
Plain Mousseline de Laine	—30 yds.	30 in.	0.17	to	0.18½					

Sugar.—There is no change to report in White Sugars, and but small business in *Formosa* kinds, though the latter is now in fair demand.

Sugar:—Takao in bag	per picul...	$4.35	China No. 4 Kook-fah	per picul...	$5.60	to	$6.10
,, in basket	,,	$4.15	,, No. 5 Kong-fun	,,	$4 90	to	$5.50
Taiwanfoo in bag	,,	$4.20	,, No. 6 E-pak	,,	$4.40	to	$4.80
do. in basket	,,	$4.05	Swatow Brown	,,			$3.50
China No 1 Ping-fah	,,	$7.60 to $7.80	Daitong	,,			$3.55
,, No. 2 Ching-pak	,,	$6.90 to $7.40	Japan Rice	,,	$2.00	to	$2.20
,, No. 3 Ke-pak	,,	$6.20 to $6.80	Kerosene Oil	,,	$4.40	to	$4.50

Kerosene Oil.—Sales have been made at $4.40 to $4.50 according to brand or quality, at which the market shows no signs of weakness.

EXPORTS.

Silk.—A fall in the rate of foreign exchange and advices reporting a better feeling at home have imparted some activity to this market during the past week. Deliveries since the 9th instant have been about 350 piculs of Hanks, and 100 of Oshius and filatures, the greater part of which is still under inspection. Prices for good Hanks have advanced $20 to $30; Oshius which form the bulk of the stock are firm at the rates quoted in our last.

Tea.—In continuation of last week's advices there is but little to report. The business done has been very unimportant, and transactions since the 10th instant are represented by about 700 piculs of low grades. Arrivals have been very limited, and the market closes quiet at nominally our last quotations, viz:

Common	$8.00 to 11.00	Fine	$23 to $2 7
Good Common	12.00 to 14 00	Finest	Nominal.
Medium	15 00 to 17.00	Choice	Nominal.
Good Medium	18.00 to 21.00		

EXCHANGE AND BULLION.

Exchange.—Sterling rates have recovered slightly from the lowest point touched, but are still rather unsettled looking, with scarcely sufficient business doing to test them.

Rates close as follows:—		On Shanghai—Bank sight	73
Sterling—Bank 6 months' sight	4s. 0½d.	,, Private 10 days sight	74
,, Bank Bills on demand	3s. 11¾d.	On New York—Bank Bills on demand	96½
,, Private 6 months' sight	4s. 1½d. @ ⅝	,, 30 days sight Private	99½
On Paris—Bank Sight	5.05	On San Francisco—Bank Bills on demand	97
,, Bank 6 months' sight	5.15	,, 30 days sight Private	100
,, Private 6 ms. sight	5.25	Kinsatz	409
On Hongkong—Bank sight	¼ % dis.	Gold Yen	407
,, Private 10 days' sight	1¼ ,,

PASSENGERS.

Per *Niigata Maru* for London:—Mr. and Mrs. Simoni and 3 children.

Per Steamship *Menzaleh*, for Hongkong.—Messrs. W. G. Howell, C. E. Vreeland, A. Lemmer, G. H. Coops, Provost, Brun, Unigami Sokitchi, Kitamura Chobei, Long Hing, Tak Saong.

Per Steam-ship *Saikio Maru* from Shanghai and ports:—Paymaster and Mrs. Thompson and 2 children, Mrs. and Miss Fry, Mrs. Ishikawa, Mr. and Mrs. Fujii, Captain Maies, Prince Okudara, Messrs. Kniffler, Lishman, R.N., Duer, Drummond, Isuchiya, Hayashi (2), Marita, Oii, Nakamura, and Yoshimoto; 143 in steerage. For America: Mr. Baldwin. For Liverpool: Messrs. Reid and Leitch.

Per Steam-ship *Oceanic* for San Francisco:—Mrs. M. Bauer and infant, Mr. and Mrs. P. A Ramee, and child. Dr. G. Dodds, wife and 2 children, Mr. and Mrs. P. Shilater, Mrs. A. Grey, Messrs Louis Biakchi, Frank Cheesman, A. Stewart, Claude Rees, G. Hamilton, Nakayama, Nakahara, E. L. Hyde, A. Center, John Heard, R. Lilley, M. Damiat, J. Milian, H. Berker, Teranet, A. A. Kuchmeister, J.M. Jacquemot, R.C. Jacquemot, and 5 Europeans and 416 Chinese in the steerage.

Per Steam-ship *Tanais*, from Hongkong:—Messrs. Roquemartin. Maida. Gordon, H. W. Lyons, U.S.N., F. W, Powell, Deisenheimer, Morton and 1 Chinese.

Per Steam-ship *Belgic* from San Francisco:—For Yokohama: Miss E. Gordon, Messrs. J. F. Wilshire, C.F. Laiesy, J. Giske, C. Richardson, and 1 Japanese in the steerage. For Hongkong: Mr. T. Rice and wife, Archdeacon Gray and Mrs. Gray, and 1 European 66 Chinese in the steerage.

CARGO.

Per Steamer *Menzaleh*, for Hongkong.

Silk, for Marseilles	123 bales	
London	29	„
Total	152 bales	
Waste Silk—Marseilles	10 bales	
Treasure for Hongkong	$27,660	

REPORTS.

The *Forget-me-not* experienced very severe weather after leaving Amoy; on the 6th instant when about 100 miles to the eastward of the Japan Coast a heavy sea struck the vessel on the starboard side, carrying away five stanchions between the main and fore-rigging, together with the rail and all the bulwark, and split the rail on the port side. During the night the parl of the main-topsail yard gave way, through which one of the seaman, a Chinaman, fell from aloft overboard and was drowned.

The *Belgic* reports: Left San Francisco 00.35 p.m. Friday, February 16th. From lat. 36.20 N. and long. 127.22 W., February 17th, to lat. 34.12 N. and long. 142.21 E., March 16th, had continuous heavy S. W. and Westerly gales with very high seas. Crossed meridian in lat. 32.13 N. in a heavy W. S. W. gale. At 11.00 p.m. made the land; at 6.40 a.m. passed Treaty Point and anchored in harbour.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is " Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,
in his work entitled " The Nile Tributaries in Abyssinia," says, " I " ordered the dragoman Mahomet to inform the Fakey that I was a " Doctor, and that I had the best medicines at the service of the " sick, with advice gratis. In a short time I had many applicants, " to whom I served out a quantity of Holloway's Pills. These are " most useful to an explorer, as possessing unmistakable purgative " properties they create an undeniable effect upon the patient, which " satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—" I had with me a quantity of Holloway's Ointment. I " gave some to the people, and nothing could exceed their gratitude; " and, in consequence, milk, fowls, butter, and horse-feed poured " in upon us, until at last a tea-spoonful of Ointment was worth a " fowl and any quantity of peas, and the demand became so great " that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On 17th March, at his residence No. 203 Bluff, the wife of PAUL HEINEMANN, Esq., of a son.

On the 22nd instant, at the British Consulate, the wife of J. C. HALL, of a daughter.

Notes of the Week.

The situation in the South apparently remains unchanged. The Government, regarding its own interests—and of this we certainly have no right to complain—continues to exercise the most rigid censorship over the native press, though it must not be surprised if such enforced reticence leads to the general belief that had it met with marked successes, no time would be lost in proclaiming them. As it is there is the impenetrable fog of mystery and incomprehensibility surrounding the actions of both Imperialists and their antagonists, that always, in Japan, enshrouds even the most commonplace events.

The principal matter of interest that has transpired has been the arrest and imprisonment of Oyama Tsunayoshi, Vice-Governor of Kagoshima *ken*, and this seems to have been conducted in the same unaccountably devious spirit which is so marked a feature in most of the acts of the Government. He appears to have been lured to return to Kiôto by Yanagiwara, the Envoy sent by the Mikado to Shimadzu, and on his arrival in Kobe he was arrested, degraded, and sent to Tôkiô a prisoner, being treated, while on the voyage to this port, with great indignity. Indeed it was only owing to strong representations on the part of the European portion of the passengers, that he was permitted to be removed from the steerage where he had been placed in the vicinity of the cattle, and allowed to receive the commonest elements of comfort. His only crime apears to have been the arrest and examination of the men, who were undoubtedly sent by some one or other to create a disturbance in Satsuma, and either to assassinate those leaders whose principles are too patriotic to suit the present Government, or to involve them in certain schemes so as give a fair excuse for their judicial murder. The *Tokio Times* while admitting that a dark cloud of conspiracy and intrigue now darkens the situation at the South professes itself amazed at the publication of the confessions of Nakahara and his accomplices. It calls them "monstrous" and a "clumsy calumny," but not one jot of evidence does it produce to show their falsity. Contradiction is not proof. Besides we have made no accusation. We are as anxious as even those whose existence depends on the upholding of the present Administration, that it should be proved that no member of the Government is in the least degree involved in this horrible plot. We want to be strictly just and fair, but we unflinchingly maintain that the disclosures which we published are gravely compromising, and must be disproved in the most unanswerable manner. We, like our contemporary, heartily trust that the Government will quickly furnish proofs of its non-complicity, and "that they may be given to the world in a form that shall leave no opportunity for querulous doubts or imputation of concealment." In this connection we may remark that the *Akébono Shimbun* states that Nakahara and all the others who were arrested at Kagoshima, as being concerned in the plot against Saigo, have been placed in charge of their relations. They are permitted to go out to the bath, but application must always first be made to the authorities for permission to extend their walks. They are all to be called as witnesses at the trial of Oyama Tsunayoshi. This seems a remarkably generous spirit for the Government to show towards those who in their confessions accused certain of its members as the plotters of a shameful crime.

From the *Osaka Nippô* we learn some particulars of the life of Shinowara Kunitoshi, who was in command of one of the three divisions of the Satsuma army, and who was killed on the 11th instant in the engagement which took place at the mountain pass called Kichiji-goi. Shinowara, like Saigo and Kirino, belonged to a good Satsuma family. He appears to have been a man of singularly kind and gentle nature, but beneath the calm exterior there existed a spirit of resolute will and dauntless bravery. He was at the same time a brilliant leader and a clever strategist. He was one of the very few men who enjoyed Saigo's complete confidence, and whose advice before that of all others Saigo always sought in moments of difficulty. Even to Kirino, Murata, and other leading men he rarely made his projects known, until his resolutions had been strengthened by the counsel of Shinowara. During his years of strict seclusion Saigo has rarely been known to visit any one else. Shinowara was especially noted for the skill with which his attacks on the enemy were directed, and the personal bravery shewn in carrying them out. When the Imperial troops drove the forces of the Shôgun from Fushimi to Osaka, at the commencement of the revolution which terminated in the overthrow of the Bakufu, Shinowara was at the head of the Satsuma men. Again at the engagement between the two armies at Uyéno, Tôkiô, he several times attempted, at the head of his troops, to force an entrance through the Kuromon, but seeing the positions of danger in which he placed himself, and fearing that his life would be sacrificed to his bravery, his men forced him to retire. Saigo, hearing of the reckless daring of his friend,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

sent a messenger to him to warn him, and to tell him that if he must expose himself, to attack some less dangerous position. Shinowara angrily replied:—"This is unlike Saigo's general method. Does he think me unworthy to lead the attack on this place? It is because it is the most dangerous point that I am here, and here I shall remain.' Saigo seeing that Shinowara was determined to carry out his plans, even though he lost his life in the effort, sent to him his younger brother Saigo Yorimichi, (now Major General) to tell him that there was yet a post of more importance and of greater strength than Kuromon, and that he wished him at once to go and attack it. Shinowara replied:—"If there be a position of a greater strength than this, it would appear cowardice on my part were I not to undertake its attack." He then drew off all his men and proceeded to carry out Saigo's orders. Shinowara performed many meritorious services; and at the end of the war, he was appointed Lieutenant General and Commander of the Imperial Guards. In the sixth year of Meiji when Saigo and Kirino resigned their offices, Lieutenant-General Taneda, (late Commander of the Kumamoto garrison, who was killed by the Jimpu party in October last) and others expressed their great regret at the retirement of so many capable Army officers, but at the same time thought there was no need for anxiety as Shinowara yet retained his position. Immediately afterwards, however, Shinowara also resigned, and his resignation caused the greatest excitement among the Imperial Guards. He seems to have been a man who possessed the power of always gaining the esteem and confidence of those with whom he was brought in contact.

The *Hôchi Shimbun* gives particulars of the life of Oyama Tsunayoshi, the Vice Governor of Kagoshima ken, who has just been degraded from his office, and who was brought a prisoner to Tôkiô by the "*Nagoya Maru*" on the 22nd instant.

He has always shown himself a man of dauntless courage, and is noted for his remarkable skill in fencing. In April, 1862, he accompanied Shimadzu Suburo to Kiôto. At this time there were in Osaka a party of *samurai*—seven of whom were Satsuma men—who were recklessly clamorous for the restoration of the Mikado's Government. In furtherance of their purpose they left Osaka in order to make a night attack on Kiôto. Hearing that they had arrived at Fushimi, in pursuance of their intentions, Shimadzu, fearing they might commit some desperate deed, sent Oyama, Narahara, and two others to reason with them. They found them at a tea house at Fushimi, and sought to turn them from their purpose. The Satsuma portion of the party would not however, listen, to reason, and they were consequently set upon and cut down to a man by Oyama and his comrades. This is was the first action of Oyama which brought him into prominence. At the time of the Revolution he was made Military Adviser to Kujô Michitake; also Commander of the Imperial troops at Oshiu. While in Sendai he had a narrow escape of losing his life. At another time he was closely besieged while commanding the *samurai* of the *Daimio* Satake, but again managed to escape. Under the most adverse circumstances he never despaired, but always fought his way to victory, and gained great distinction. As a reward for his meritorious services he received a pension of eight hundred *koku* of rice, and when the *han* were abolished and the *ken* established he was appointed to the office of Vice-Governor of Kagoshima *ken*, with the rank of *jugoi*.

A correspondent of one of our evening contemporaries, writing under the *nom de guerre* of "Mars," presumes to compassionate us upon the opinions we hold as to the right of British subjects to take part in the Volunteer Movement now being organized within our Settlement. We were perfectly aware of the provisions of the statute from which "Mars" quotes for the purpose of refuting our opinion; but it is plain, from the preamble to that Act, that it was passed to prevent "clandestine and unlawful assemblies to the great terror of His Majesty's peaceable and loyal subjects, and imminent danger of the public peace," and that its operation was confined to the limits of the United Kingdom. The Act is now in part repealed, and must be considered to be rendered a dead letter by the provisions of the Volunteer Acts. Moreover the Bill of Rights confirms to the subjects of Great Britain the undoubted right to bear arms in their own defence, and the Act to which "Mars" refers could only be considered as intended to prevent the abuse of this right, not to destroy it. Such at least is the opinion of the learned editor of Blackstone's Commentaries. The passage which "Mars" quotes from Chitty's Law of Nations—a work, by the bye, not considered of the highest authority on the subject,—is equally beside the mark, and as inapplicable as is the statute he refers to. We have no wish to interfere in the "domestic affairs" of Japan, or to restrain her from "governing herself according to her pleasure," but there is nothing in the conditions of our settlement here to prevent the organization of a military corps, either for recreation or for protection; nothing to destroy the "natural right of resistance and self-preservation when the sanction of society and law are found insufficient to restrain the violence of oppression." Settlers here, contrary to the general rules of international law, are not subject to the laws of Japan, not because any other Power has authority therein, or has any wish to interfere with her independence, but because, as explained by Lord Stowell in an oft quoted and beautiful passage from one of his judgments, "In the East, from the oldest times, an immiscible character has been kept up. Foreigners are not admitted into the general body and among the society of the nation; they continue strangers and sojourners as all their fathers were. *Doris amara suam non intermiscuit undam.* Not acquiring any national character under the general sovereignty of the country, and not trading under any recognized authority of their own original country, they have been held to derive their present character from the association or factory under whose protection they carry on their trade." This holds as true of us in Japan, as it did of the settlers in the East Indies. While nothing doubting that "Mars," like Bottom, is able to play any part, we think that he is better qualified to shoulder a rifle in the ranks of the association, the formation of which he deprecates, than he would be to advise the Japanese Government on the intricate questions of international law. The helmet well becomes his valiant name, but when Mars puts on the forensic wig we cannot refrain from exclaiming "Bless thee! Bottom, bless thee! thou art translated!"

The *Celestial Empire* has an article on the Situation in Japan, in which the views expressed are correct and fair, but we are surprised that a writer, who evidently has given much preparation to his subject, should fall into such easily avoidable errors as are apparent in this essay. For instance he speaks of Yegas instead of Iyeyasu, as the founder of the old feudal system; calls the *Genrô-In* the *Ginsoin*, and makes many similar blunders. This is to be regretted, as a little care or research would have prevented him from falling into errors that detract from the value of a generally well considered article.

From the "Japan Mail Daily Advertiser."

Monday, 19th.

From the *Mainichi Shimbun*

A telegram despatched from Konoha at 1.45 p.m. on the 15th instant, announces that at 6.55 a.m. on the 15th instant the Imperialists were suddenly attacked. The police constables gallantly received the enemy, one sergeant was killed while another was wounded, four constables were killed and over ten wounded. The conflict lasted till about 4 p.m. when reinforcements of police attacked the insurgents with swords and managed to repluse them.

A telegram from Ôwake *ken* (Bungo) at 2.30 p.m. on the 15th instant says that the insurgents have constructed batteries at the Futaye mountain pass which they are defending, but have not yet shown any disposition to attack the Imperialists. Some insurgents are posted between the boundaries of the provinces of Higo and Bungo. The advanced guard of the police force have marched as far as Uchinomaki and have sent spies to various places.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

We hear that on the 10th instant the forces of the Navy landed at Kawajiri and had a desperate conflict at the headquarters of Saigo, the result of which is as yet unknown.

The insurgents are at Kasuga and fire upon Kumamoto castle from Hanaoka-yama, but their shots generally fall short. Some of the Imperialist troops are stationed at Fujisaki and are giving battle to the insurgents.

The *Hôchi Shimbun* learns the strange news that the interest on money lent is to be settled by the Government. All sums not exceeding 100 *yen* are to bear twenty per cent., exceeding 100 *yen* fifteen per cent., and exceeding 1,000 *yen* twelve per cent. per annum.

From the *Akébono Shimbun.*

A telegram was received by Naval Department from Nagasaki on the 16th instant announcing that the fortifications at Kagoshima had been destroyed and thus rendered useless for the future.

The Imperialist were at first greatly annoyed by the attacks with swords from the rebel *samurai*, but are now gradually getting into the way of dealing with them, many of whom are now shot or bayoneted. The enemy still number about ten thousand, and it is believed that an end cannot be put to the war before one half of them at least are killed.

From the *Chôya Shimbun.*

A telegram announces that the rebel commander Shinowara has been killed.

A telegram despatched from Nagasaki at 11.50 a.m. on the 16th instant states that Kuroda intends to start for Yashiro with a squadron, on board which will also be 4,000 troops. The same telegram confirms the report of the death of Shinowara, the rebel leader, and says that his funeral has taken place in Kagoshima.

A telegram on the 16th instant announced that on the 15th instant at 5 a.m. the insurgents attacked the Imperial batteries at Yokohira-yama, but were unsuccessful, though about 5 p.m. the Imperial police force attacked with swords and captured the batteries.

From the *Hôchi Shimbun.*

A person who has arrived from Kumamoto gives us the following particulars :—

The Castle is nearly impregnable, and its defenders have plenty of ammunition and provisions. The Imperialists cannonade the insurgents from all sides but are unable to make any sallies, and such being the case very few of those within the Castle have been killed, while a large number of the insurgents have lost their lives.

Tuesday, 20th.

The following is the translation of a portion of an article from the *Akébono Shimbun*, complaining that the foreign press in Japan publishes false reports concerning the civil war in the South. The writer states that the Government supplies to the native journals the news received from the seat of war, but that great care is taken to "publish only that which is reliable." This is delicious! Considering whence the whole of the news relative to affairs in Kiushiu is derived, the lament over the sinfulness of foreign newspapers seems somewhat out of place.

Those who invent false reports are most hateful. Even in time of peace they put people in a state of excitement: how much greater then are their evil effects in these times of general agitation. We hold the position of reporters to the people of whatever events occur, and such being the case we have always tried to lay correct news before the public. But it is very difficult to obtain correct reports of events which occur some two hundred *ri* from here, so that before publishing any such we closely examine them. Yet at times, we are bound to say, we make mistakes and have even been reproved before the Board of Censors. But of late the Government no longer conceals the telegrams received from the seat of of war, and they are given us that we may lay them before the people. Still we are as careful as ever in publishing only that which is reliable. How is it then that a set of men who disbelieve the true statements which we make, seem to be glad that a civil war has broken out in our country, and are angry at hearing of the victory of the Imperial forces? These are, however, idiots who are unworthy of being mentioned here.* But what must be the feeling existing among the foreign press in Yokohama? Although the present civil war does not concern them in the slightest degree, yet are they not here for the purpose of writing about the condition of country? If they have the slightest feeling of kindness, there can surely be no reason for their being in such a state of joy over the war in our country. They disbelieve the reports that we publish; they give whatever rumours may be current among the know-nothings; such, for instance as that the Kumamoto castle fell into the hands of the insurgents on the 8th instant; that this would be of great advantage to the insurgents, and that the Government hides the fact that the Mikado has sent Special Envoys to ascertain whether Lieut.-General Miyoshi has been killed. They speak in such a manner as though our castle which still stands with all its strength had fallen, or that our Commander, who is now leading his men with great valour, was killed. Such things are indeed monstrous.

* * * * * *

We also have heard a report about Kumamoto castle, but we refrain from publishing the same until further investigation.

From the *Chôya Shimbun* of yesterday we take the following items of news :—

A telegram sent by Mr. Ishi-i at 2.30 a.m. on the 17th instant, announced that the Imperialists were strongly defending the redoubt at Tawarazaka which they captured on the 15th instant. They were attacked by the insurgents early yesterday morning, who advanced toward Yokohira-yama and then made so bold an attack on Futamata and Muramoto that the Imperialists could not resist them and fell back, so that in one hour's time the insurgents obtained possession again of the above mentioned redoubt, but it was subsequently retaken by the Imperialists after a very severe engagement. The rebels, however, were still in possession of a series of batteries at the summit of Tawarazaka, which they had for a long time successfully defended against all attacks, but on the evening of this day a body of infantry advanced against them, while two detachments of police were detailed to out-flank the rebels. After a desperate struggle and a great loss of life on either side, the Imperialist captured the battery on the right of the rebel position. An engagement also took place at Yamaga, but the result of it is not yet known.

Another telegram on the night of the 16th instant announces that the Imperialist at Iwamura, in the neighbourhood of Yamaga, advanced that day towards a hill called Kurumaga-ishi, but while on their way they fell into an ambuscade laid by the insurgents on either side of the road and were severely cut up.

Another attack was made by the Imperialists stationed at Hirayama, who met the insurgents gallantly and caused them to retreat to Sugimura.

Another telegram which left Osaka at 11.55 p.m., on the 17th instant announces that an attack was made upon the battery at Tawarazaka which was captured by the Imperialist on the day previous. The insurgents numbered about three hundred, but were bravely met by the troops, who managed to repulse them. By enquiry of some rebels who were then captured it was discovered that the above body of insurgents were commanded by Kishima, who was formerly the Commander of that division of the Kumamoto garrison force which used to be stationed at Kagoshima. These rebels belonged to the province of Hiuga and were on their march to Bungo, but suddenly changed their minds and came to Tawarazaka.

Major Murata, who is notorious for his skill in rifle shooting, is about to depart for Kiushiu in the service of the Imperial army.

The Governor of Miyagi *ken* has issued the following Notification to the *samurai* of that *ken* :—

The 700 police constables who are to be enrolled by order of the Acting Minister of Home Affairs, will be sent to join the expedition against the southern rebels, and although they are styled policemen will be used as troops of the line, for which reason their enrollment will not be strictly in accordance with the police rules heretofore in existence. Date Munesuke, Ashina Koshu, and other *shizoku* have been appointed to select such recruits as will be likely to be of efficient use in the field. When the country is in danger it is the duty of both *samurai* and *heimin* to render assistance, but the former are under a special obligation to do so, and therefore all *samurai* between the ages of 18 and 50, regardless of their own safety, should come forward to do good service for their country. They should at once attend the temporary depôt at Omachi in Sendai, with all their papers, so that enquiry about than can be promptly made, and those liable to misconduct themselves rejected. Those who are not selected on this occasion should work diligently at their several callings, and patiently await the time when the Government may demand their services.

The above is to be made known to the *samurai* of the *ken*.

March, 1877.

From the *Osaka Nippo.*

About one thousand of the dead bodies of the insurgents are said to have been buried at Kawajiri.

* The writer very likely here refers to those who sent threatening letters to the various journals.

Original from UNIVERSITY OF CALIFORNIA

From the *Mainichi Shimbun.*

We hear that Uyeki is naturally very strongly situated, and a forest close by enables the insurgents to fire upon the Imperialists without exposing their own lives.

A general disturbance has arisen among the farmers of Ôwake *ken* (Bungo).

Wednesday, 21*st.*

In order to give an idea of the pluck of the Satsuma *samurai* the *Mainichi Shimbun* gives the following instance of what is no unfrequent occurrence. Eleven rebels were defending a battery on the Tawarazaka, and there bravely received the onset of the Imperialists. Nothing would induce them to surrender, and it was not until eight of their number had been cut down and the remaining three committed suicide, that the Imperialists became masters of the fort.

From the *Nichi Nichi Shimbun.*

The head-quarters of the Imperialists hitherto stationed at Takase has been removed to Konoha. Yamagata, the Minister of War, is himself there.

Mayebara Ikkaku, the youngest brother of Mayebara Issei who was recently executed for treason, has joined the rebel cause, for which he is fighting desperately and recklessly.

On the 18th instant the Government purchased five hundred Japanese swords at Tôkiô and sent them to the south. A further purchase was made yesterday.

The *Nichi Nichi Shimbun* states that the amount of money that the Government has expended on the Satsuma expedition up to the 12th instant is over 4,113,000 *yen.*

Thursday, 22*nd.*
